LISTS OF ABBREVIATIONS

I. GENERAL

A. H. = Anno Hijrae (A.D. 622).
 Ak. = Akkadian.
 Alex. = Alexandrian.
 Amer. = American.
 Apoc. = Apocalypse, Apocalyptic.
 Apocr. = Apocrypha.
 Aq. = Aquila.
 Arab. = Arabic.
 Aram. = Aramaic.
 Arm. = Armenian.
 Ary. = Aryan.
 As. = Asiatic.
 Assyr. = Assyrian.
 AT = Altes Testament.
 AV = Authorized Version.
 AVm = Authorized Version margin.
 A. Y. = Anno Yazdagird (A.D. 639).
 Bab. = Babylonian.
 c. = circa, about.
 Can. = Canaanite.
 cf. = compare.
 ct. = contrast.
 D = Deuteronomist.
 E = Elohist.
 edd. = editions or editors.
 Egypt. = Egyptian.
 Eng. = English.
 Eth. = Ethiopic.
 EV = English Version.
 f. = and following verse or page : as Ac 10³⁴.
 ff. = and following verses or pages : as Mt 11²⁸.
 Fr. = French.
 Germ. = German.
 Gr. = Greek.
 H = Law of Holiness.
 Heb. = Hebrew.
 Hel. = Hellenistic.
 Hex. = Hexateuch.
 Himy. = Himyaritic.
 Ir. = Irish.
 Iran. = Iranian.

Isr. = Israelite.
 J = Jahwist.
 J" = Jehovah.
 Jerus. = Jerusalem.
 Jos. = Josephus.
 LXX = Septuagint.
 Min. = Minean.
 MSS = Manuscripts.
 MT = Massoretic Text.
 n. = note.
 NT = New Testament.
 Onk. = Onkelos.
 OT = Old Testament.
 P = Priestly Narrative.
 Pal. = Palestine, Palestinian.
 Pent. = Pentateuch.
 Pers. = Persian.
 Phil. = Philistine.
 Phoen. = Phœnician.
 Pr. Bk. = Prayer Book.
 R = Redactor.
 Rom. = Roman.
 RV = Revised Version.
 RVm = Revised Version margin.
 Sab. = Sabæan.
 Sam. = Samaritan.
 Sem. = Semitic.
 Sept. = Septuagint.
 Sin. = Sinitic.
 Skr. = Sanskrit.
 Symm. = Symmachus.
 Syr. = Syriac.
 t. (following a number) = times.
 Talm. = Talmud.
 Targ. = Targum.
 Theod. = Theodotion.
 TR = Textus Receptus.
 tr. = translated or translation.
 VSS = Versions.
 Vulg. = Vulgate.
 WH = Westcott and Hort's text.

II. BOOKS OF THE BIBLE

Old Testament.

Gn = Genesis.	Ca = Canticles.
Ex = Exodus.	Is = Isaiah.
Lv = Leviticus.	Jer = Jeremiah.
Nu = Numbers.	La = Lamentations.
Dt = Deuteronomy.	Ezk = Ezekiel.
Jos = Joshua.	Dn = Daniel.
Jg = Judges.	Hos = Hosea.
Ru = Ruth.	Jl = Joel.
1 S, 2 S = 1 and 2 Samuel.	Am = Amos.
1 K, 2 K = 1 and 2 Kings.	Ob = Obadiah.
1 Ch, 2 Ch = 1 and 2 Chronicles.	Jon = Jonah.
Ezr = Ezra.	Mic = Micah.
Neh = Nehemiah.	Nah = Nahum.
Est = Esther.	Hab = Habakkuk.
Job.	Zeph = Zephaniah.
Ps = Psalms.	Hag = Haggai.
Pr = Proverbs.	Zec = Zechariah.
Ec = Ecclesiastes.	Mal = Malachi.

Apocrypha.

1 Es, 2 Es = 1 and 2 Esdras.
 Tob = Tobit.
 Jth = Judith.

Ad. Est = Additions to Esther.	Sus = Susanna.
Wis = Wisdom.	Bel = Bel and the Dragon.
Sir = Sirach or Ecclesiasticus.	Pr. Man = Prayer of Manasses.
Bar = Baruch.	1 Mac, 2 Mac = 1 and 2 Maccabees.
Three = Song of the Three Children.	

New Testament.

Mt = Matthew.	1 Th, 2 Th = 1 and 2 Thessalonians.
Mk = Mark.	1 Ti, 2 Ti = 1 and 2 Timothy.
Lk = Luke.	Tit = Titus.
Jn = John.	Philem = Philemon.
Ac = Acts.	He = Hebrews.
Ro = Romans.	Ja = James.
1 Co, 2 Co = 1 and 2 Corinthians.	1 P, 2 P = 1 and 2 Peter.
Gal = Galatians.	1 Jn, 2 Jn, 3 Jn = 1, 2, and 3 John.
Eph = Ephesians.	Jude.
Ph = Philippiana.	Rev = Revelation.
Col = Colossians.	

III. FOR THE LITERATURE

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

- Baethgen**=*Beiträge zur sem. Religionsgesch.*, 1888.
Baldwin=*Dict. of Philosophy and Psychology*, 3 vols. 1901-1905.
Barth=*Nominalbildung in den sem. Sprachen*, 2 vols. 1889, 1891 (²1894).
Benzinger=*Heb. Archäologie*, 1894.
Brockelmann=*Gesch. d. arab. Litteratur*, 2 vols. 1897-1902.
Bruna-Sachau=*Syr.-Röm. Rechtsbuch aus dem fünften Jahrhundert*, 1880.

ENCYCLOPÆDIA

OF

RELIGION AND ETHICS

F

FICTION (Primitive, Oriental, and Græco-Roman).—By the term 'fiction' in the literary sense we understand any tale or narrative—whatever its length and whether in poetry or prose—told or written for amusement or for instruction. This rough working definition must, however, receive considerable modification, for the fable and the parable (*qq.v.*) are scarcely fiction in the usual acceptance of the term; nor does the definition seem to account for the origin of fiction, but to apply solely to its later forms and developments.

1. Origin.—The origin of fiction is impossible to determine with certainty. In its earliest known form it may be divided, as by MacCulloch, into Sagas and *Märchen*:

'In the *saga*, incidents are related of supernatural personages, of heroes and heroines, who have definite names and are believed to have once actually existed, while they are also attached to definite places. The *saga* thus is to a large extent equivalent to the myth. In the *Märchen* all is vague, impersonal, indefinite; for, as M. Dozon says, "the absence of names is one of the characteristics of true popular tales" (*CF*, London, 1906, p. 450).

(a) *The Saga*.—This type, represented most familiarly by the bulk of Old Icelandic literature, and also seen, for example, in the *Iliad* and *Odyssey*, the Arthurian cycle (see ARTHUR, ARTHURIAN CYCLE), the Irish *Táin Bó Cúalnge*, the Pāñjābī *Rāja Rasālū*, the European Charlemagne, the Oriental Alexander the Great cycles, etc., is probably historical in origin. There is here, in other words, doubtless a kernel of real events, about which the mythopoeic tendency common to the entire human race has clustered events which may or may not be historic. In the latter case they may have been performed by others than the characters to whom they are ascribed, and to which—in view of changed beliefs and outlook upon life—motives, assisting and thwarting agencies, and even results may be assigned that are radically different from, or even diametrically opposed to, those which were in the original form of the *saga* in question. Thus, the *saga* constitutes the earliest type of history, and it is possible, in great part, to reconstruct a large portion of real history by the excision of material obviously fictitious. Such history can in no case (except where, as in the Alexander cycle, authentic historical materials are elsewhere given) be regarded as other than a more or less close ap-

proximation to the course of events as they actually took place; and the conclusion of the most conscientious investigators will perforce differ widely as regards the historicity of alleged events of prime importance to the credibility of the *saga*. Conspicuous examples of this type are the Malay *Seyaru Malayu* (tr. Leyden, *Malay Annals*, London, 1821; cf. Waitz-Gerland, *Anthropol. der Naturvölker*, Leipzig, 1860-77, v. i. 109-112) and the Maori epics (Grey, *Polynes. Mythol. and Ancient Traditional Hist. of the New Zealand Race*, London, 1855), where the historical basis is readily discernible, despite the legendary accretions. Indeed, there is practically no people which does not possess at least one *saga* as to its origin and history. But, being designed primarily to preserve history, the *saga* cannot properly be classed as fiction.

(b) *The Märchen*.—With the *Märchen* the case is different, although the two are often confused, so that, as MacCulloch says (*loc. cit.*):

'What is told as a *saga* in one country occurs as a *Märchen* in another place. Possibly *Märchen* are the deteriorated form of sagas; on the other hand, a *saga* may merely be a *Märchen* to the personages of which definite names have been given. Hence, we can hardly affirm yet which is the earlier of the two; nor is there any good reason for supposing that both forms of the folk-tale may not have been invented separately. But, judging by most collections of savage folk-tales, the earliest stories must have had more or less of the *saga* form, more especially if we consider *saga* and myth to be closely related. We have seen how many European folk-tale incidents exist as separate stories among savages, but told of this or the other traditional personage. These are sagas or myths. They may, however, be told occasionally of no one in particular; then they are *savage Märchen*. Moreover, where a more or less elaborate story told by savages can be proved to have reached them by diffusion or borrowing, almost invariably the actors in it have become the well-known heroes or divinities of the tribe. In other words, a story told in Europe as a *Märchen* becomes a *saga* when it is adopted by savages.'

The *Märchen* is normally shorter than the *saga*, and it very frequently has a didactic purpose which is foreign to the essence of the *saga*; we may even say that, in its didactic aspect, the *Märchen* is the parent of the fable, the main difference being that in the latter the 'moral' is clearly indicated, while in the former it may be drawn or not, if present, or may be altogether lacking, or may have different morals in different versions. As an instance we may take a story whose earliest known form is found in the *Pañchatantra* (iii. 4).

Here a Brahman secures a goat for sacrifice, and is seen by three rogues, who plan to get the animal. Standing at intervals

along his road, the first asks him why he carries a dog, the second a dead child, and the third an ass. The Brâhman, thinking his goat is a demon, throws it down and runs away, while the rogues enjoy a feast. The moral here given is: 'Rogues gifted with much understanding, with good discrimination, and superior in strength, are able to deceive.' In the *Hitopadsha* (iv. 10) the moral is: 'He who, with himself for a standard, judges a knave to speak the truth, is deceived by him'; and in the *Kathâsaritsâgara* (x. vi. 61-68) that: 'Numbers conquer in this world.' In the *Decameron* (ix. 3) the rogues make Calandrino believe that he is with child, and conspire with a physician to extort money from him for an abortion; no moral is given. In the *Gesta Romanorum* (cxxxii.) three physicians so convince their rival that he has leprosy that he contracts the disease, the three physicians being 'the lust of the flesh, the lust of the eyes, and the pride of life,' or the world, the flesh, and the devil, who often corrupt the good physician, i.e. a prelate or confessor, so that he is driven from the Church (for further parallels, see Benfey, *Panischatantra*, Leipzig, 1859, II. 355-367; *Gesta Romanorum*, ed. Gesterley, p. 733f.).

Many of the *Märchen*, as is clear from MacCulloch's masterly *CF*, are the *deitritus* of older sagas; and a still greater number are distinctly ætiological in character, as in our familiar story of how the robin got its red breast, although the latter category more properly comes under the rubrics of myth and folklore (*qq.v.*); and a third class represents primitive religious beliefs, as in Puss in Boots, Beauty and the Beast, Bluebeard, Jack and the Beanstalk, etc. In all these cases—historical, mythical, and survivalistic—the original motive was profoundly serious. Indeed, the present writer is inclined to believe that primitive man did relatively little for mere amusement (cf. above, vol. iv. p. 868).

Yet this statement obviously demands much qualification. Men may be profoundly in earnest, and yet the necessity for relaxation and the capacity for enjoyment of it are innate in primitive man, as in the most highly developed of modern humanity. Just as we may read fiction of the most superficial character for the sake of recreation, or may turn to a psychological or problem novel or to a historical romance for delineation of character or for a reconstruction of bygone times, and derive a true Aristotelian *katharsis* and elevating stimulus and joy from the reading or the hearing of the tale, so it doubtless was with primitive man. And, just as children delight in hearing stories to-day, so early man (and early child) found joy, after the day's work was done,¹ in similar recitals. Only, what to us are fairy stories and palpable fictions were to him very real and entirely possible.

Thus, then, amusement and recreation, if not the prime factors, soon came to be potent agencies in fostering the growth of fiction; nor is there any reason why amusement and recreation should not be combined with history, myth, and folk-belief. Indeed, there must be some element of pleasure if the tale is to survive, this pleasure being of every type, from mere amusement or frank ribaldry to the highest intellectual *katharsis* or minute dissection of character. In the early stage the hero must be the embodiment of all the popular virtues, and must be victorious over every obstacle; later, as in the *Morte d'Arthur*, temporal success is unessential, more stress being laid on nobility of soul; finally, in some types of fiction it becomes possible for the hero not only to meet defeat, but also to be characterized by ignoble qualities, so that the novel becomes a study of degeneration, not of progress, as in Harold Frederic's *Damnation of Theron Ware* (1896; known in Britain under the title of *Illumination*). Yet the last-named type of fiction can scarcely hope to be popular; for the middle classes,

¹ The time at which sagas and *Märchen* are preferably told is at night, as among the Amer. Indians and Micronesians (Waitz-Gerland, III. 234 f., v. li. 81), Guiana Indians (Im Thurn, *Among the Indians of Guiana*, London, 1888, p. 216), Africans (Nassau, *Fetichism in W. Africa*, London, 1904, p. 330; Struyl, in *Anthropos*, III. [1908] 742), Hindus (Steel and Temple, *Wide-awake Stories*, Bombay, 1884, pp. vii, 2-8; *Vāṇavadattā*, tr. Gray, New York, 1912, p. 96), Persians (*The Thousand Nights and One Night*, Introd.), and Europeans generally (*CF*, 2).

whose mental attitude represents the national standard, are insufficiently developed to appreciate a novel which is wholly 'unpleasant'; although it can scarcely be doubted that such fiction, when seriously undertaken, is perfectly legitimate, and that the horror which it excites arouses an ethical resolve to endeavour to avoid becoming such a person as is portrayed in it.

Whether, at the first, there was 'make-believe' seems questionable, and yet at a very early time there must have arisen a fund of anecdote which formed the genesis of a short form of fiction—of which all traces have long since vanished—precisely as so much of our own fiction is more or less drawn from real types, so that we must say, if it is to meet with approval, *se non è vero, è ben trovato*.

(c) *Diffusion*.—The problem of the diffusion of fiction-incidents is extremely involved. The story-telling instinct is universal, and the widely divergent national types—to which attention will be devoted below—show that various peoples have independently developed their own classes of fiction in accordance with their distinctive modes of thought. It is possible, however, that the question is somewhat more complicated than it seems. Attention has been called by Mrs. Flora Steel and Sir Richard Temple (*Wide-awake Stories*, 387 f.) to the fact that, 'since the incidents are more apt to retain their stock forms than the plots, they make up the most important portion of a tale from the investigator's point of view.' In some instances the incident is so unusual that borrowing would be the first thought, were not the difficulties in the way of such an hypothesis so great as practically to forbid it (cf., also, *CF*, 23, 458 ff.). Elsewhere the process of borrowing is evident, as in the African story of *Brer Rabbit* and the *Tar-Baby* (Harris, *Uncle Remus, his Songs and his Sayings*, New York, 1881, pp. 23-25), which appears, with the substitution of a Frenchman for *Brer Fox*, in a Biloxi (Louisiana) tale (*47 Bull. BE* [1912], pp. 13-15). While we must recognize that inter-communication was probably more extensive than is commonly believed (cf. Hirt, *Indogermanen*, Strassburg, 1905-07, pp. 317 ff., 395 ff.), and that in this way there was a very general transmission of folk-tale incidents, it is safest, in our present state of knowledge, to adopt a conservative position, and to hold, unless there is positive evidence or very strong probability to the contrary, that these incidents are derived from similar experiences and from the essentially uniform psychology common to the entire human race.

(d) *Earliest form*.—The ordinary speech of man is in prose, and we may accordingly be certain that the most primitive *Märchen*, as recorded, for instance, among the N. Amer. Indians, were also in prose. The same was probably the case with the saga. Yet, while prose is easier for normal conversation, it is less easy to recollect and repeat accurately than poetry. Accordingly we find that there was a tendency, when the sagas and such *Märchen* as were deemed of greater importance developed to considerable length, to recite them in verse. In other cases, as in Old Irish, or in the Pañjābi Rājā Rasālū cycle, there is a commingling of prose and verse, the *cante-fable*, in which the speeches of the principal characters, quasi-summaries of the tales, or indications of especially important situations are given in verse, the bulk of the narrative being in prose. As a matter of fact, the co-existence of poetic (bardic) and prose (folk-tale) versions of the same theme may be found in N. India to-day, and it is well known that the former type preserves the text much more faithfully than the latter, where the resultant record is usually the form most in vogue. In the case of

commingled prose and verse, the latter is retained faithfully, and may even serve as the nucleus for a new folk-tale. Moreover, there is a tendency for the bardic element to break down into the folk-tale and for the poetry to be turned into prose, to the detriment of faithful transmission, but to the encouragement, it may be suggested, of transfer of incident. The Rāja Rasālū cycle is a case in which these processes may be witnesses in actual operation (Temple, *Legends of the Panjāb*, Bombay, 1884-1900, i. pp. v-vii; Swynnerton, *Romantic Tales from the Panjāb*, Westminster, 1903, p. xxix). The *cante-fable* may be in part a degeneration of the bardic poem, and in part a transition from the primitive prose *Marchen* or *saga* to the poem, in both cases standing midway between the two; and in the break-down of the bardic poem into the prose folk-tale we may see yet another instance of a course of development forming a complete circle and returning to its starting-point, which, in the special case under consideration, seems to have been prose (cf. *CF*, 480-482).

2. History.—(a) *Primitive*.—A charming picture of the mode of presentation of primitive types of fiction is given by Alice Fletcher and Francis La Flesche, himself an Omaha, in their record of the Omaha Indians (27 *REBEW* [1911], p. 370):

'Story-telling was the delight of every one during the winter evenings. It was then that the old folk drew on their store of memories; and myths, fables, the adventures of the pygmies and of the *gajazhe* (the little people who play about the woods and prairies and lead people astray)—all these and also actual occurrences were recited with varying intonation and illustrative gesture, sometimes interspersed with song, which added to the effect and heightened the spell of the story or myth over the listeners clustered about the blazing fire.'

The Amer. Indian stories cover a wide range, as was noted in 1802 by Waitz-Gerland (iii. 232-235). Since the time of Waitz almost every volume of the annual reports and the bulletins of the Bureau of American Ethnology adds new material.

Where there is such wealth of material, selection is both difficult and invidious, but particularly excellent collections are to be found, among more recent works, in Rand's *Legends of the Micmacs* (ed. Helen Webster, London, 1894); Cushing's *Zuñi Folk-Tales* (New York, 1901); Grinnell's *Pawnee Hero Stories and Folk-Tales* (do. 1889); and Rink's *Tales and Traditions of the Eskimo* (London, 1875).

The same general observations apply to the primitive fiction of the Oceanic region, though here there is a richer fantasy than in America. The Polynesians have not merely a large number of elaborate sagas and myths, but are also expert in the telling of *Marchen*, their attainments being thus summarized by Waitz-Gerland (vi. 98 f.):

'Neben diesen ersten, epischen Erzählungen pflegten und pflegten sie auch sonst sich gern durch Erzählungen zu unterhalten, oft aus dem Stegreif, wo sie dann ernstes, schreckliches, komisches, oft auch nicht sehr dezentos, oft aber auch sehr anmutiges vorbringen. Gute Erzähler sind sehr beliebt und daher sehr gesucht (Moerenhout, *Voyages aux Iles du Grand Océan*, Paris, 1837, ii. 51). In Tonga bilden häufig Besuche in Bulotu und Schilderungen der Götterhelmat, oder erdichtete Reisen ins Land der Papalagi, der Europäer, das mit den tollsten Uebertreibungen, aber oft aufs witzigste geschildert wird, den Inhalt dieser Erzählungen (Mariner, *Tonga Islands*, London, 1818, ii. 126, 834). Auch den Europäern erzählen sie, anfangs wohl unbehagen, solche Geschichten, womit sie sich zu unterhalten pflegten; als sie aber sahen, dass jene manches davon für baare Münze nahmen, so reizte sie das immer mehr, da Andere zu necken ihnen grosse Freude macht und sie erzählten immer ausdauernde Dinge.'

For collections of Oceanic sagas and *Marchen*, reference may be made to such works as K. M. Clarke's *Maori Tales and Legends* (London, 1896); Gill's *Myths and Songs from the S. Pacific* (do. 1876); and K. L. Parker's *Australian Legendary Tales* (do. 1896). Similarly Africa, though more distinguished for its *beast-fables*, possesses many *Marchen*, as is shown by such collections as Béranger-Féraud's *Contes de la Sénégambie* (Paris, 1885); Callaway's *Nursery Tales, Traditions, and Histories of the Zulus* (London, 1868); Chatelain's *Folk-Tales of Angola* (Boston, 1894); Ferrand's *Contes populaires malgaches* (Paris, 1894); Jacottet's *Contes populaires des Ba-Soutos* (do. 1895); Steere's *Suahili Tales* (London, 1870); and Schönharl's *Marchen und Fabeln . . . der Bue-Neger von Togo* (Dresden, 1909).

(b) *Egyptian*.—Turning from the primitive peoples, whose rudimentary fiction is also repre-

sented by such collections as Chamberlain's *Aino Folk-Tales* (London, 1888), to nations possessing a developed literature, the most ancient specimens of fiction are to be found among the Egyptians, whose romances are most conveniently collected by Maspero (*Contes populaires de l'Égypte ancienne*, Paris, 1906). To this category belong the famous *Tale of the Two Brothers* (XIXth dynasty) and the almost equally well-known *Tale of King Khufu and the Magicians* (XVIIIth dynasty)—the latter the earliest instance of the 'box arrangement' of stories within stories, which is later found in the Greek and Sanskrit romances, *The Thousand Nights and One Night*, the *Decameron*, etc. Both these Egyptian romances belong to the *Marchen* type, or to fiction in the real sense, as do the *Story of a Salt-Maker* (XIIIth dynasty), the *Adventures of Sātī-Khāmōis* (Ptolemaic period), and a fragmentary ghost-story (XXth dynasty). The favourite type of Egyptian fiction seems to have been, however, the historical romance, specimens of which survive in the *Adventures of Sinuhit*, *How Thutii took the City of Joppa* (XXth dynasty), *The Daughter of the Prince of Bakhtan*, *The Predestined Prince* (XXth dynasty), *The Story of Rhampsinitos* (Saite period), *The Seizure of the Cuirass*, and *The Story of a Sailor* (Ptolemaic period).

The general type of Egyptian fiction is so simple as to be almost jejune, but for that very reason it bears a stamp of veracity so plausible that only exact knowledge can in some instances distinguish fact from romance; and, as being the earliest example of literary fiction, the Egyptian romance possesses a very deep interest for all students of the subject. Its worst defect, from the modern Occidental point of view, is the monotonous repetition of the speeches placed in the mouths of the characters, so that frequently the framework of the story itself becomes almost negligible.

(c) *Arabic*.—Of all Oriental fiction unquestionably the most familiar to us is the Arabic, thanks to the *Arabian Nights*, more accurately known as *The Thousand Nights and One Night*. Introduced into Europe by Galland in 1704-08, this famous collection, the full history of which has still to be written (cf. Brockelmann, *Gesch. der arab. Lit.*, Weimar, 1898-1902, ii. 58-62; Chauvin, *Bibliog. des ouvrages arabes ou relatifs aux Arabes, publiés dans l'Europe chrét. de 1810 à 1885*, Liège, 1892-1909, iv.-vii.), formed the basis of a series of imitations in France, such as Gueulette's *Mille et un quart d'heure*, *Contes chinoises*, and *Sultanes de Guzaratte*; and Caylus's *Contes orientaux*. Yet *The Thousand and One Nights*, of which countless expurgated translations have appeared (notably by Lane [London, 1841]), besides two masterly complete English versions (by Burton, 13 vols., Benares, 1885-88; and Payne, 12 vols., London, 1882-84; the French version of Mar-drus, 16 vols., Paris, 1899-1904, must be used with caution), is not Arabic, but Indian, in origin, and is derived immediately from a lost Pahlavi version. The very composite character of this collection is well summarized by Huart (*Hist. of Arabic Lit.*, London, 1903, pp. 400-402) as follows:

'To begin with, there is an ancient ground-work, probably of Indian origin, marked by much indulgence in phantasmagoric description, as the tale of the *Fisherman and the Genius*. Then, at Bagdad, we have love stories, and adventures in the bazaars. . . . Into this cycle of popular tales some literary excerpts have slipped, such as the story of the Omeiyad Caliph 'Umar ibn 'Abd-al-'Aziz and the poets. A third and more recent group is formed by the adventures in Cairo, grouped about the characters called Ahmad al-Danf and Dalila. These are fantastic and supernatural stories, some of which would appear to be a survival from ancient Egyptian days. Others, such as the story of Bulūqiyā, inserted into that of Hāsib Karīm al-dīn, . . . are decidedly Jewish in their origin. . . . A further and, as might almost be said, a forcible introduction into this collection of popular tales (necessitated by an adherence to the number of one thousand and one, to which the prologue bound the compilers) is that of certain romances of chivalry, such as the story of 'Umar al-Nū'mān, and even of a romance of adventure by sea, the story

of Sindbad the Sailor, the origin of which goes back to the palmy days of trade in the Persian Gulf and the Indian Ocean, and which was probably composed at Bassora during the tenth century. The book, as we now possess it, must have been drawn up in comparatively recent times, for it contains the stories of Qamar al-Zaman and the Jeweller's wife, of Ma'rid and his wife Fatima, both of them belonging to the sixteenth century, and also the tale of Abū Qir the Dyer and Abū Sir the Barber, the most modern of all.

The great national Arab romance, however, is the *Romance of 'Antar*, which, in its present form, dates from the period of the Crusades. It is in simple style, and is of value for its pictures of the life of the desert Arabs (cf. Caussin de Perceval, *JA* II. xii. [1833] 97-123, xiv. [1834] 317-347; and Lane, *Manners and Customs of the Modern Egyptians*, London, 1871, pp. 103-144, where the Arabic romances are summarized and estimated; partial Eng. tr. by Hamilton, 4 vols., do. 1820). Here must be included also the great cycle of the *Banū Hilāl* (summary by Huart, 405-407), the *Romance of Saif dhu'l-Yazan* (Fr. tr. by Ali Bey, Constantinople, 1847), and the *Saif al-Tijān*.

(d) *Syriac, etc.*—In this literature, besides the story of Ahiqār (q.v.), the department of fiction may be regarded as including the romance of *Julian the Apostate* (ed. Hoffmann, Leyden, 1880); the *Cave of Treasures* (ed. and tr. Bezold, Leipzig, 1888); and the cycle of the *Seven Sleepers* (cf. Guidi, *Testi orientali sopra i sette dormienti di Efeso*, Rome, 1885).

In *Babylonian and Ethiopic* no works of fiction are recorded, and the instances of *Märchen* in the OT alleged by Gunkel (*Kultur der Gegenwart*, Leipzig, 1906, i. vii. 73)—Am 5¹⁹, Ezk 16, Is 5¹, Jonah—can by no means be assigned unhesitatingly to this class. In the NT some of the parables of our Lord may have been taken by Him from *Märchen* (e.g. Mt 18²³⁻³⁴ 22²⁻¹², Lk 15¹¹⁻²¹); and to the same category may belong a number of the Talmudic and Midrashic parables and illustrative stories (see art. PARABLE). At the same time, it is obvious that the lack of written fiction does not imply that *Märchen* and sagas were not current in great numbers; Armenian literature, for instance, is devoid of the romance, but the folk-tale is very popular (cf. Chalantian, *Armen. Märchen und Sagen*, Leipzig, n.d.).

(e) *Indian*.—The *Märchen*-literature of India is enormous, and is represented in Sanskrit by such collections as the *Kathāsaritsāgara* (Eng. tr. by Tawney, Calcutta, 1884-87), *Kuthākosa* (Eng. tr. by Tawney, London, 1895), and *Sukasaptati* (Germ. tr. by Schmidt, Kiel, 1894, Stuttgart, 1898). The oldest formal Indian romance is Dandin's *Daśakumāracharita* (Germ. tr. by Meyer, Leipzig, 1902), a capital romance of roguery, written about the 6th cent. A.D., and the only Sanskrit romance which can lay claim to general interest. Following this, every device of the highly artificial Sanskrit *kāmya* style was called into requisition by Subandhu (between A.D. 550 and 606) in his *Vāsavadattā* (Eng. tr. by Gray, New York, 1912); and he was quickly imitated by his avowed rival, Bāna, the author of the equally artificial romantic *Kādambarī* (Eng. tr. by C. M. Ridding, London, 1896), and *Harṣacharita* (Eng. tr. by Cowell and Thomas, do. 1897). In these three romances matter is everywhere sacrificed to form; learned allusions, elaborate paronomasias, and well-nigh cloying descriptions of scenery and natural phenomena abound; and there is neither analysis of character nor interest in action. The majority of Sanskritists utterly condemn the Indian romance, but the present writer has ventured to find

'true melody in the long, rolling compounds, a sesquipedalian majesty which can never be equalled save in Sanskrit; and the alliterations have a lulling music all their own to ears weary of the blatant discords of vaunted modern "progress." There is, on the other hand, a compact brevity in the paronomasias, which are, in most cases, veritable gems of terseness and twofold ap-

propriateness, even though some are manifestly forced and are actually detrimental to the sense of the passages in which they occur. Yet in judging Subandhu for his faults, it must be remembered that he created, at least so far as we now know, a new literary genre in India; and, if this fact be borne in mind, his blemishes appear to be marvellously few. In estimating his literary merits, special stress should be laid on his descriptions. These are, it must be confessed, cloying from their abundance. They form the preponderating part of the entire romance, and the slender framework of the story is well-nigh lost beneath them. Yet, despite this tropical luxuriance, the descriptions are not without beauty and appropriateness, whether they set forth the charms of mountain, forest, and stream, or portray the raja's valour and the loveliness of the heroine herself. The entire romance may, in a sense, be likened to India's own architecture, where the whole structure is so overlaid with minute detail that the eye forgets the outlines of the building in amazement at the delicate traceries which cover it' (*Vāsavadattā*, p. 27).

Another Sanskrit romance of much interest, but as yet untranslated, is the 10th cent. *Yasastilaka* of Somadeva (analyzed by Peterson, *Second Report of Operations in Search of Sanskrit Manuscripts in the Bombay Circle*, Bombay, 1884, pp. 33-49). This treats of the conversion of Māridatta, king of Rājapura, from Brāhmanism to Jainism, and is of value not only to students of the latter sect, but also because of its allusions to other Sanskrit authors.

There are many romances also in the various vernaculars, and in the 19th cent., under Occidental influence, a number of novels of superior merit have been written by the Bengali Bankim Chandra Chatterji, such as his *Kopala Kundala* (Eng. tr. by Phillips, London, 1885), *Biśa Brikkā* (Eng. tr., *The Poison Tree*, by Marian Knight, do. 1884), and *Kṛiṣṇa Kanta's Will* (Eng. tr. by Marian Knight, do. 1895; summaries of Chatterji's novels in Frazer, *Literary Hist. of India*, do. 1898, pp. 421-428); while, in S. India, O. Chandu Menon composed in Malayalam his *Indulekha* (Eng. tr. by Dumergue, Madras, 1890; summary in Frazer, 435-439). More recently still, the writing of English fiction along Indian lines has been inaugurated by the Anglo-Indian, Buin, in a series of volumes beginning with *The Digit of the Moon* (London, 1899).

It has been held by Peterson (*Kādambarī*, Bombay, 1889, Intro. pp. 101-104), Weber (*SBAW* xxxvii. [1890] 917), and Goblet d'Alviella (*Ce que l'Inde doit à la Grèce*, Paris, 1898, p. 136) that the Indian romance was directly borrowed from the Greek. This is denied by Lévi (*Quid de Græcis veterum Indorum monumenta tradiderint*, Paris, 1890, p. 60); and the present writer, after carefully considering all the parallels between the Greek and the Indian romance, is constrained to hold:

'All these parallels, and many more which might be cited, seem to me to prove nothing. In the first place, a large number of them can be considered parallels only by straining the sense of the term; and, in the second place, they are obviously the out-working of independent, though partially similar, processes in the development of Greek and Sanskrit literature respectively, and should be interpreted accordingly. But, even were an essential resemblance granted, it would still be difficult, I think, to prove the dependence of the Sanskrit romance on the Greek, the latter being, of course, the earlier. The romances of the two peoples are totally different both in plan and in spirit, as even a cursory reading will show. The least part of the Sanskrit romance is the thread of the story or the adventures of its characters; all the stress is laid on rhetorical embellishment, minute description of Nature, detailed characterisation of exploits and of mental, moral, and physical qualities. In the Greek romance, on the other hand, as in Latin (if we may judge from the *Satira* of Petronius), the story is everything. The reader is hurried from adventure to adventure, the wilder and more improbable the better; fine writing is practically disregarded; description and appreciation of Nature are, to all intents and purposes, non-existent. The only Greek romance, it seems to me, that can, by the utmost stretch of imagination, be compared even superficially with the works of Subandhu and Bāna is the *Ποικυλικά* of Longos; but even there the sole real similarity is a longing for Nature rather than for feverish adventure, a longing which may be traced back to Theokritos, Bion, and Moschos on the one hand, and to Bhartṛhari and his congeners on the other. Even the *Daśakumāracharita*, which, as a picturesque romance, one might be tempted to compare with the works of Achilles Tatios, Heliodoros, and Chariton, has a totally different plan from any Greek romance, tracing its "box arrangement" of stories to the peculiarly Indian scheme which may be seen, for instance, in the *Pañcatantra*, the *Kathāsaritsāgara*, or the *Jātakas*, and which was later carried

to Persia, where it was incorporated in *The Thousand Nights and One Night*, ultimately appearing in the Occident in the *Decameron* of Boccaccio. The adventures narrated in Dardin's romance of roguery, moreover, bear no resemblance, either in plot or in episode, to the amorphisms of Eustathios and his fellows. To sum up, the spirit of the Sanskrit and of the Greek romances is as divergent as the audiences of scholars on the one hand, and of weaklings on the other, for whom they wrote; nor can any real affinity, much less any direct connexion, be traced between the romances of India and of Greece' (*Vāsavadattā*, 36-38).

(f) *Persian*.—To the Pahlavi period, besides the lost version of the *Iluzār Afsāna*, the immediate source of *The Thousand Nights and One Night*, belongs the single extant Middle Persian romance, the *Kārnamak-i Artaxsir-i Pāpakān*, dating from about the 6th cent. (Eng. tr. by Darab Peshotan Sanjana, Bombay, 1896; Germ. tr. by Nöldeke in *Beizenberger's Beiträge zur Kunde der indogerm. Sprachen*, iv. [1879] 22-69).

In modern Persian the romance begins with Firdausi's *Yūsuf ū Zālīsā* (Germ. tr. by Schlecht-Wesselrd, Vienna, 1889), and is continued by such poets as Nizāmi (*Lailā ū Majnūn*, Eng. tr. by Atkinson, London, 1836) and Jāmi (*Lailā ū Majnūn*, Fr. tr. by Chézy, Paris, 1805); while among prose writers may be mentioned Muḥammad Kāzīm (*Qissa-i Kāmūp*, abridged Eng. tr. by Franklin, London, 1793), the anonymous *Qissa-i Amīr Hamzah* (analyzed by van Ronkel, *Roman van Amir Hamza*, Leyden, 1896), and *Qissa-i Hātim Tā'i* (Eng. tr. by Forbes, London, 1830). There are a host of other romances, untranslated and even unedited (for a convenient survey, see Ethé, *GrP* ii. [1904] 239-254, 317-334; and for specimens, see Clouston, *A Group of Eastern Romances and Stories, from the Persian, Tamil, and Urdu*, London, 1889).

Though frequently prolix and repetitions, the Persian romances are filled with lively descriptions and vivid fancy, while the love of Nature gives these works an added charm. They are infinitely more attractive than the Indian romances; they rank, indeed, among the best that the Orient has ever produced. Among the literatures whose romance has been deeply influenced by Persian should be mentioned the Georgian (Fink, in *Kultur der Gegenwart*, i. vii. 306; Wardrop, *Georgian Folk-Tales*, London, 1894).

(g) *Malay*.—The Malay literature is derived mainly from Javanese, Indian, and Arabic, with an admixture of Siamese and Persian elements. The difficulty, already noted, of distinguishing between fact and fiction meets us again in such Malay works as the *Seyarū Malayu* (to which reference has been made above), *Hikāyat Sultān Ibrahim*, *Isma Yatim*, *Taju al-Salatim*, and especially the *Hong Tuah* (on this class of works, see especially Hollander, *Handleiding bij de beoefening van der land- en volkenkunde van Nederl. Oost-Indië*, Breda, 1861, i. 154 ff.; Newbold, *Account of the Brit. Settlements in the Straits of Malacca*, London, 1839, ii. 317 ff.).

(h) *Chinese*.—The novel was introduced into China in the Mongol period, although its real origin is unknown.

'It probably came from Central Asia, the paradise of story-tellers, in the wake of the Mongol conquest. Three centuries had then to elapse before the highest point of development was reached. Fables, anecdotes, and even short stories had already been familiar to the Chinese for many centuries, but between these and the novel proper there is a wide gulf which so far had not been satisfactorily bridged. Some, indeed, have maintained that the novel was developed from the play, pointing in corroboration of their theory to the *Hsi Hsiang Chi*, or *Story of the Western Pavilion*. . . . The Chinese range their novels under four heads, as dealing (1) with usurpation and plotting, (2) with love and intrigue, (3) with superstition, and (4) with brigandage or lawless characters generally' (Giles, *Hist. of Chinese Lit.*, London, 1901, p. 276).

The first class—historical romance—begins with Lo Kuan-Chung's *San kuo chih yen i*, based on the wars of the Three Kingdoms for supremacy in the

3rd cent. B.C., and includes the *Lieh Kuo Chuan*, covering the period between the 8th cent. B.C. and the union of China under the first Emperor. The romantic novel is represented by the *Yü Chiao Li*, written in the 15th cent. (Fr. tr. by Rémusat, *Les Deux cousines*, Paris, 1826); the *P'ing Shan Leng Yen* (Fr. tr. by Julien, *Les Deux jeunes filles lettrées*, 2 vols., Paris, 1860); and the 17th cent. *Hung Lou Meng* (Eng. tr. of bks. i.-ii. by Joly, Hongkong, 1892-93). To the third class belongs the interesting *Hsi Yu Chi*, 'Record of Travels in the West,' based on the Indian travels of Hiuen Tsiang and imitated in a Japanese adaptation by Kiokutei Bakin in 1806; and the fourth, or 'picaresque,' type finds illustration in the *Shui Hu Chuan*, ascribed to the 13th cent. Shih Nai-an; while the 16th or 17th cent. *Erh Tou Mei*, 'Twice Flowering Plum-Trees,' may be described as 'a novel with a purpose, being apparently designed to illustrate the beauty of filial piety, the claims of friendship, and duty to one's neighbour in general' (Giles, p. 324).

There are, moreover, numerous collections of novelettes, such as the *Chin Ku Ch'i Kuan*, 'Marvellous Tales, Ancient and Modern,' and P'u Sung-Lang's *Liao Chai Chih I* (Eng. tr. by Giles, *Strange Stories from a Chinese Studio*, 2 vols., London, 1880). Among other Chinese romances of which translations are accessible, mention may be made of the *May Yu Lang Tou Tchen Hoa Kouei* (Fr. tr. by Schlegel, *Le Vendeur d'huile*, Leyden, 1877), Tsai Tsen's *Hao Kiu Chuen* (Fr. tr. by d'Arcy, *La Femme accomplie*, Paris, 1842), and the *Pe Che Tsing Ki* (Fr. tr. by Julien, *Blanche et Bleue, ou les deux couleurs-fées*, do. 1834); while Pavie published a *Choix de contes et nouvelles* (do. 1839), and d'Hervey-Saint-Denis, *Trois nouvelles chinoises* (do. 1885). The number of Chinese novels in non-literary style is very large.

Chinese fiction is exceedingly prolix, and has scant regard for probability; and much of it is morally objectionable. It is held in contempt by the cultured, who, however, really read it with avidity, and its value for a knowledge of Chinese life and thought cannot easily be over-estimated (see, further, Candlin, *Chinese Fiction*, Chicago, 1898).

(i) *Japanese*.—Unlike Chinese fiction, the romance in Japan is highly esteemed, here occupying a place analogous to that which it enjoys in India. Japanese fiction begins about the 10th cent. with the Märchen-like *Taketori Monogatari*, 'Story of the Bamboo-Heaver' (Eng. tr. by Dickins, *JLAS*, 1887, pp. 1-58), in which there are many Chinese elements, together with strong Buddhist and Taoist influences. To the same period—probably in part by the same compiler—belongs the similar *Utsubo Monogatari*. The next type of fiction to attract attention in Japan was the realistic novel of popular life, represented by the *Ise Monogatari*, dating from the same period as the two *Monogatari* just considered, and soon imitated in the inferior *Yunato Monogatari*; the *Genji Monogatari*, by a lady known as Murasaki no Shikibu (early 11th cent.), which is one of the works which mark the highest point attained by the literature of Japan (Eng. tr. of the first 17 chs. by Kinchō Suematsu, London, 1882), and which was imitated in the 11th cent. *Sagoromo Monogatari* of the authoress Daini no Sammi, the 19th cent. *Inaka Genji* of Tanahiko, and the 11th cent. *Torikayebaya Monogatari*; Jippensha Ikku's *Hizakurige* (1802-22); and the 19th cent. *Mume Koyomi* and *Shunshoku Tatsumi no Sono* of Tamenaga Shunsui. The development of the historical novel was very late in Japan,—not until the 19th cent.,—the chief specimens being the *Oka Seidan* and Shunsui's *Iroha Bunko*, a version of the favourite

Japanese cycle of the revenge of the forty-seven Rōnins (Eng. tr. by Saito and Greey², New York, 1884). To the same general category belong imaginary travels, best represented in Japanese by the *Wasōbiyō* (1774; Eng. tr. of the main portion by Chamberlain, *TASS* vii. [1879]), and by Bakin's *Musōbiyō Koshō Monogatari* (Eng. tr. by Mordwin, Yokohama, 1881). To the earlier period of Japanese fiction belong such collections of *Märchen* as the *Uji Monogatari* of Minamoto no Takakuni (usually known as *Uji Dainagon*), who died in 1077; and in 1810, Bakin, in his *Shichiyō no Kura*, 'Pawnbroker's Store,' gives an interesting 'box arrangement' in which each of the pawnbroker's pledges tells its own story.

In the older fiction of Japan, as in India, the authors were of the higher classes, some of them, such as Murasaki no Shikibu, Daini no Sammi, and Minamoto no Takakuni, belonging to the Court circles, while the *Yamato Monogatari* is ascribed by some authorities to the Mikado Kwazun. But in course of time fiction degenerated, and was eclipsed between the 11th and the 17th century. When fiction was revived, its entire spirit was changed. The audience sought was no longer the higher classes, but the common people; and, as Aston says (*Hist. of Japan. Literature*, London, 1901, p. 267 f.),

'under the Tokugawa régime (1603-1867) the city populations enjoyed great material prosperity. But their moral standards were not high. Naturally quick-witted, and educated up to a point which may fairly be described by our own slang phrase, "the three R's," they had little real culture or refinement. The many-headed beast had, however, learned to read, and demanded an intellectual pabulum suited to its tastes.'

The authors, in like manner, were no longer men of culture, but the off-scourings of the population, such as Iwano Saikaku († 1693), Santō Kiōden (1761-1816), and Jippensha Ikku († 1831). Apart from collections of children's tales, like *The Rat's Wedding*, *The Battle of the Ape and the Crab*, *The Old Man who made Trees to Blossom*, and *The Hare's Revenge* (for the tr. of many of these stories see Mitford, *Tales of Old Japan*, new ed., London, 1890), only too large a portion of the Japanese fiction of this period is pornographic and distinctly immoral in tone, as in the 17th cent. *Mokuzu Monogatari*. The reason for this flood of pornography was, as Aston points out (p. 304), that the social relations of the sexes were very like those of ancient Athens.

'There was no social intercourse to speak of between men and women of the better class. Whenever reasons of economy did not stand in the way, the women lived a very secluded life, seeing no men but their near relations. Their marriages were arranged for them, and romantic attachments were extremely exceptional. The manners and customs of the respectable classes of society were therefore not a promising field for the writer of fiction. He preferred the freer atmosphere of the *Kuruwa*, to which pretty gardens and handsome buildings, with the showy education and gay costumes of their inmates, lent a superficial appearance of elegance and refinement. The element of romance in the lives of these women was perhaps small, but it existed; and it was far more natural to credit them with romantic adventures and passions than their more immaculate sisters. And if the novelist's description of these places as the home of wit and jollity, and the natural resort of all young men of spirit and fashion, had a tendency to corrupt public morals, it is also to be remembered that the class of readers whom he addressed were not particular in these matters.'

The great contribution to Japanese fiction of the later period was the romantic novel, inaugurated by Kiōden, among whose many works special mention may be made of the *Inadzuma Hiōshi* and the *Honchō Suibodai*. Kiōden was, however, completely eclipsed by the most famous of all the novelists of Japan, Kiokutei Bakin (1767-1848), the author, among countless other works, of the *Yumibari-tsuki* (1805), the *Okoma* (Fr. tr. by Regamey, Paris, 1883), the *Kuma no tayema amayo no tsuki* (Eng. adaptation by Greey, *A Captive of Love*, Boston, 1886), and the *Hakkenden*, 'Story of the Eight Dogs' (1814-1841).

About 1879, European influence began to make itself felt in the romance, as in the political novels of Sudō Nansui (e.g. *Ladies of the New Style* [1887]). The worst defect of the Japanese romance, apart from its pornographic and immoral tone, is its gross improbability (which it shares with Chinese fiction) and—to Europeans—its inordinate length and repetition.

(j) *Greek*.—The Greek romance begins, properly speaking, with the *Cyropædia* of Xenophon, for in this alleged account of Cyrus the Great the author's real purpose was to set forth the character of the ideal ruler and the nature of the ideal State. This romance is significant as being, in reality, an amplification of the Utopia ideal presented in Plato's concept of Atlantis, the Meropis of Theopompus (4th cent. B.C.), the Hyperboreans of Hecataeus of Abdera (a contemporary of Alexander the Great), the Panchaia of Euhemerus of Messene (3rd cent. B.C.; cf. art. EUHEMERISM), and the mythical travels of Iambulus—a category which was unsparingly ridiculed by Lucian of Samosata in his *True History*. We have, moreover, in this type of Greek fiction the combination of discontent with things as they were with the vague knowledge of foreign lands gained from travellers' and merchants' tales. The element of romantic love is, however, lacking in these works, as it is, indeed,—at least as a main factor,—in older Greek literature as a whole. Yet love was, of course, present in fact; and in course of time the influence of this passion, whether for good or (as in the poets is more usually the case) for evil, was bound to gain public recognition. This recognition became possible largely through the breakdown of the old Greek State and of the aristocratic mode of life, with its rigid exclusion of women from the outer world. Furthermore, the merchant classes became dominant; and there was a resultant demand—very much as was the case in the later period of Japanese fiction—for a type of literature which should appeal to the *bourgeoisie*. It was, indeed, probably the women of the middle classes for whom the Greek novelists primarily wrote, and they very wisely contrived to unite the theme of love with the older romance of travel. At the same time, there was still a considerable amount of seclusion of women; and, as Warren (*Hist. of the Novel previous to the Seventeenth Cent.*, New York, 1895, p. 44 f.) remarks:

'That the novelists were aware of these restrictions is clear from the conventional way in which they first bring their couples together. The meeting takes place generally in a temple, as the only spot where both sexes could properly meet. And when the wanderings begin, it is almost always by violence or accident that the girl is exposed to the adventures she undergoes. . . . But, the proprieties being once satisfied, and the heroines safely embarked on their wanderings, the novelist gives free rein to his fancy and puts their reputation as travellers on the same plane as the fame of his heroes. But these continued peregrinations must have been, unnatural except with women of degraded life, and . . . there are many instances in the novels where the heroine is reduced to slavery, or at best to a kind of servitude, and she is held in very light esteem by her captors and persecutors, escaping the common consequences of their contempt only by the display of extraordinary talents, or by the sudden appearance of the hero. So it is quite plausible to suppose that in this reduplication of dangers surrounded by members of the gentler sex, there is a deliberate purpose on the part of the novelist to cater to the prejudices of his public, and that . . . these historians of a lower social caste had in mind the cloistered families of the great merchants, and indulged the secluded readers of their times with the tales of woman's freedom—though in danger—and her reliance on her own talents and energy. . . . The wives of the commercial princes of Syria and Egypt delighted in the freedom which their fictitious adventures granted them in common with their seafaring masters.'

This combination of love and foreign adventure, which is the distinctive characteristic of the Greek novel, finds its earliest formal expression in the *Tā ūrēp Θούλην ἀνίστα* of Antonius Diogenes (before the second half of the 2nd cent. A.D.), a novel in 24 books, an outline of which is preserved by Photius

(*Bibl.* clxvi.). To this same period belongs the 'Oros of Lucian (imitated and expanded by a number of episodes, including the beautiful tale of Cupid and Psyche, by the African Apuleius, in his *Metamorphoses*), in which the transformation of the hero, by magic, into an ass opens the way to a rather indecent romance of roguery.

But, though in the 'Oros magic plays a part, this is not the key-note of the Greek romance, which, like the Norse romance (see the following art.), is completely overshadowed by the goddess Tyche (see artt. FATE, FORTUNE; and, for the Greek novel, Rohde, *Die griech. Romanen*², Leipzig, 1900, pp. 296-304), so that mankind is but the sport and the puppet of the gods. We must also note that the Greek romance is pre-eminently the work of the Sophists. As Warren says (p. 29 f.):

'All internal evidence goes to show that the teachers of rhetoric, the dialecticians of antiquity, were the makers of the literary form of the [Greek] novel. The themes given out for practice in their schools were on such subjects as are most frequently amplified in the romances, such as descriptions of nature and natural phenomena, verbal reproductions of paintings and statuary, fusions of mythological legends with tales of humble life, dramatic plots, outlines of orations, folk-lore, traditions, and whatever might lend itself to rhetorical ornamentation. . . . Besides the many correspondences of manner and subject already pointed out, there may be cited as proofs of their handiwork the pathos of the harangues, and the elaborate expressions of the letters inserted in the narrative' (cf. also, with full detail, Rohde, 310 ff.).

Before we turn to the ordinary type of the Greek novel, a word should be said of the fragments of the one Hellenic romance of chivalry, a tale of the loves of Ninos and Semiramis (on which see especially Wilken, *Hermes*, xxviii. [1893] 161-193; Piccolomini, *Rendiconti della r. accad. dei Lincei, Classe di scienze morali*, etc., v. ii. [1893] 313-332; Warren, 24-28). This romance, probably written in the 1st cent. B.C., is knightly in tone, as distinguished from the *bourgeois* novel of the later period, and Warren (p. 27) very plausibly suggests that

'its kind descended from the old epic poetry by the intermediary of prose versions; that in these versions, destined wholly for popular use, the element of love played a constantly increasing part, in accordance with the trend of sentiment among the people; and that, when one day some literary man of talent looked about for a new theme to introduce into literature, he found these traditional narratives awaiting his pleasure. It would be no difficult work to give them a literary finish, to expand certain descriptions in the rhetorical manner of the time, and to add certain details which would make the production more artistic and more vivid. The story of Nimrod would then be an imitation of one of these romances founded on national legends, substituting for them similar traditions of another race. They would, therefore, appeal to the readers of Alexandria and the cities of Syria as an acceptable departure from the time-worn paths of Hellenic story.'

The history of the Greek romance has been so thoroughly discussed by Rohde, in the work already mentioned (cf. also Warren, 21-81), and collected editions of all these writers are so readily accessible (by Hercher, 2 vols., Leipzig, 1858-59, and by Hirschig, Le Bas, Lapaume, and Boissonade [with Lat. tr.]², Paris, 1885) that it will be possible to dismiss them very briefly. The earliest of the *bourgeois* romancers was Iamblichus, a Syrian of the second half of the 2nd cent., whose *Babyloniaca* is extant only in the summary given by Photius (*Bibl.* xciv.). He was followed, probably late in the 2nd or early in the 3rd cent., by the Ephesian Xenophon, the author of the *Ephesiaca* (Germ. tr. by Krabinger, Munich, 1831; and by Bürger, *Sämtliche Werke*, Göttingen, 1844, ii. 436 ff.), recounting the loves of Anthia and Abrocomas. Then came, between the second half of the 3rd and the second half of the 4th cent., Heliodorus (probably a Neo-Pythagorean, rather than the bishop of Tricca with whom he was formerly identified), whose *Æthiopia* (Eng. tr. by R. Smith, *Greek Romances*, London, 1855, pp. 1-260), treating of the loves of Theagenes and Charicles, was imitated, in the 12th cent., by the Byzantine Theodorus Prodromus in his romance of *Rhodanthe and*

Dosicles, which, later in the same century, was in its turn utilized by Nicetas Eugenianus in his versified *Drosilla and Charicles*. To the second half of the 5th cent. belongs the Alexandrine Achilles Tatius, the author of the romance of *Clitophon and Leucippe* (Eng. tr. by Smith, pp. 349-511), which was imitated, probably early in the period of the Comnenæ, by Eustathius, in his *Loves of Hysmine and Hysminias*. The last of the Greek romancers proper was Chariton, whose home and date are alike unknown, and whose *Chareas and Callirrhoe* shows the utter decay of the Greek novel.

These novels, filled with wild adventures, and with tedious prolixity, are scarcely to the taste of the modern reader. There is, however, one Greek romance which has justly received admiration. This is, it need scarcely be said, the pastoral romance of *Daphnis and Chloë* of Longos, who flourished after the 2nd cent. (Eng. tr. by Smith, 263-347). With all its defects, such as the insipidity and the incredible innocence of its hero and heroine, the pastoral expresses a love of Nature which still makes appeal to the modern mind.

Some of the Byzantine authors of romances have already been mentioned (for further details, see Krumbacher, *Gesch. der byzant. Lit.*², Munich, 1897, pp. 641-643, 854-872; Rohde, 554 ff.), and we may note that during this period the romances of Western Europe were laid under requisition by Byzantine romancers, thus marking the close of the native novel of Greece.

(k) *Latin*.—The existence of *Märchen* and children's tales—of which all trace has long since vanished—is hinted at by Persius, when he describes the old nurse quieting the fretful child (*Sat.* ii. 35-38):

'Tunc manibus quatit et spem maerorū supplice voto
Nunc licet in campos, nunc Crassi mittit in ædes;
Hunc optent generum rex et regina; puella
Hunc raptant; quicquid calaverit hic, rosa fiat.'

We also know that Sennus (110-67 B.C.) translated the indecent *Milesiaca* of Aristides, apparently a collection of brief anecdotes of low life in Miletus (Rohde, 584-587; the ten scanty fragments ed. Bücheler, *Petronii Satiræ*, Berlin, 1882, p. 237 f.); and attention has already been directed to the *Metamorphoses* of Apuleius (ed. Hildebrand, Leipzig, 1842). By far the most important monument of Latin fiction, however, is found in the *Satiræ* of Petronius (1st cent. A.D.; Eng. tr. by Kelly, London, 1856, and of the episode of Trimalchio's Supper by Peck, New York, 1898). This grossly immoral novel is realistic to the last degree, but only one episode has survived with any completeness—the 'Supper of Trimalchio,' a rich *parvenu*. Apart from its description of low life, the romance is more interesting to the student of folk-Latin than to the historian of fiction. To the decaying period of Latin literature belong a series of historical romances which are either known or suspected to be translations from Greek originals. To the former category belong the *Res gestæ Alexandri Magni* of Julius Valerius (end of the 3rd or first third of the 4th cent.; ed. Kübler, Leipzig, 1888), a version of the Alexander-romance of the pseudo-Callisthenes (on whom see especially Rohde, 197-203; ed. Müller, Paris, 1846), and the 6th cent. *Historia Apollonii regis Tyri* (Rohde, 435-453; ed. Riese, Leipzig, 1871); while the second class includes the legends of the destruction of Troy ascribed to Dictys of Crete (second half of the 4th cent.; ed. Meister, Leipzig, 1872), and Dares the Phrygian (second half of the 5th cent.; ed. Meister, *op. cit.*; on all these authors see Teuffel-Schwabe, *Gesch. der röm. Lit.*², 1890, pp. 86 f., 922 f., 743-748, 1006 f., 1272-1274, 1075-1078, 1209-1211).

In the mediæval period, Latin fiction consists solely of short *Murthen*, frequently collected for the purpose of edification, elaborate morals being very often appended, as in the famous *Gesta Romanorum* (ed. Oesterley, Berlin, 1872; Eng. tr. by Hooper, London, 1894), other collections being the *Disciplina clericalis* of Petrus Alphonsus (ed. Schmidt, Berlin, 1827), the *Historia septem sapientium* (ed. Buchner, Erlangen, 1889), the *Dolopathos* of Johannes de Alta Silva (ed. Oesterley, Strassburg, 1873), the *Exempla* of Jacques de Vitry (ed. Crane, London, 1890), and the *Tractatus de diversis materiis predicabilibus* of Etienne de Bourbon (Lecocq de la Marche, *Anecdotes historiques, légendes et apologues* . . . d'Etienne de Bourbon, Paris, 1877; for a good general collection of specimens of this literature, see Ulrich, *Proben der lat. Novellistik des Mittelalters*, Leipzig, 1906). But to all intents and purposes we pass, with the close of the Greek romance, directly to the fiction of mediæval and modern Europe.

LITERATURE.—This is given in the course of the art. and in the bibliography appended to the following article. Copious extracts from the Chinese and Japanese romances are given by Giles and Aston in the works mentioned above, and exhaustive summaries and analyses of the Greek romances are to be found in Rohde, Dunlop, and—more briefly—Warren.

LOUIS H. GRAY.

FICTION (Mediæval and Modern).—When we pass from the Greek romances to the earliest essays in fiction among the modern nations, or, at least, the earliest which have been preserved to us, we find the great majority of them first sung, and then written, in verse; nor need we, as Dunlop arbitrarily did in the history which has been so often referred to in modern discussions of the novel, exclude metrical narratives from our survey. In the Middle Ages there was no marked dividing line, as to content and spirit, between tales in verse and tales in prose. It was not until the Renaissance had re-discovered the ancient models that the verse-tale developed, formally and artistically, away from prose, with methods and standards of its own.

1. The oldest extant works of fiction which come to us from the Dark Ages belong to the Teutonic races: the Romance languages were slow to develop pure literature in the vernacular, because Latin was still so familiar to those who cared for literary form. The primitive beginnings of fiction among the northern tribes can only be conjectured. We can see how it may have passed from mere boastful recital of the warlike exploits of a tribal hero to half-conscious, emulous exaggeration of them; and then, when the warrior's victory over all human foes had become so much a matter of course as to pall upon the hearers, the story-teller had recourse, in the oldest extant specimen of Teutonic narrative, going back probably to the 6th century—in the *Beowulf*—to the introduction of superhuman foes to be conquered by sheer strength and courage. The plot is scarcely more than a succession of events; of emotional expression there is little, of character-study almost none, except in the episode of Wiglaf (possibly, for that reason, of later date). But the very exclusion of purely magic elements leads in a modern direction; and, far removed as the rude barbarism of the setting is from courtly knight-hood, the description of the old king rejoicing, as he dies, because he has won great treasure not for himself but for his people, already contains the inmost essence of chivalry.

In a number of the northern sagas, and most fully of all, perhaps, in the *Nibelungenlied*, an unconscious advance towards the unity which more civilized standards of art require is the result of the gloomy fatalism of the northern nations. Over all the action broods the shadow of Fate, *Wyrd*, huge and inexorable; the hero is doomed, his destiny is

predetermined (see DOOM, DOOM MYTHS). In the *Nibelungenlied* the tragic end is kept in view with an almost Sophoclean consistency. Here again the singer or singers pushed magic into the background, using it chiefly for omens and unheeded warnings of doom, and told a simple tale of the tragedy of human life, making the characters act (so far as the traditional outline of the story allowed) as men and women would be likely to do.

2. Although the best French scholars, such as Gaston Paris (*Romania*, xiii. [1884] 610) and Léon Gautier (in Petit de Julleville, *Hist. de la langue et de la littérature françaises*, Paris, 1896-99, i. 53), admit that the French epic is of Germanic origin, the French were the acknowledged masters of the metrical romance in its later form. The oldest monument of their fiction, the *Chanson de Roland*, is composed of elements that do not differ very widely from those of the Norse sagas; but the long series of verse-tales, which for two or three centuries delighted courtly audiences, interwove, in a way which must have been highly entertaining at the time, the three great interests of the Middle Ages—battle, love, and religion. Love had scarcely suggested itself to the older 'makers' as offering scope for literary treatment. Fighting and feasting were men's chief employments in those days, and the staple of their songs: even in the 11th cent. *Chanson de Roland* we are told that the hero's betrothed fell dead of grief on hearing of his death, but otherwise she contributes nothing to the story. With the development, however, of an elaborate code of chivalrous behaviour, those who, like Spenser long afterwards, sang 'of knights' and ladies' gentle deeds' had abundant material for their portrayal of the life which was familiar to their audience; for, whether they sang the story of Thebes or the fall of Troy, the exploits of Charlemagne and his peers, or the fortunes of Arthur and the Round Table, all alike visualized their heroes—Greek or Trojan though they might be—as knights of their own day.

3. After the grave, majestic, national epic, with something of the austere aloofness of religion in its spirit, came (about the beginning of the 12th cent.) the light, bright courtly romance, delighting in the description of tournaments and pageants, and full of the passion and the subtlety of love—a school of perfection for women, an inspirer of valour and all chivalrous qualities for men. The whole story of the Grail (*q.v.*)—in the hands, *e.g.*, of Chrétien de Troyes, or as it was worked over by Wolfram von Eschenbach in his German *Parzival*—was full of suggestion of a wistful longing for superhuman holiness and beauty, which made it an excellent example for those who gave it such devout credence. When, in the 16th cent., the purblind Ascham (*Scholemaster*, bk. i.) could see nothing but 'open mans slaughter and bold bawdrye' in Malory's exquisitely beautiful prose version of the Arthur story (finished about 1467, first printed by Caxton in 1485), it only showed how the Renaissance standards had blinded the eyes of their enthusiastic converts to the simple beauty of mediæval life. The moral sweetness of the best of these romances of native English workmanship, *Sir Gawayne and the Green Knight* (13th cent.), is one of its many special charms.

4. The mediæval habit of vivid personification of virtues and vices as unseen allies and adversaries in the spiritual combat led, in the same century, to the rise of allegory. The most famous and notable type of this is the great *Roman de la Rose* (begun c. 1235 by Guillaume de Lorris, finished c. 1275 by Jean de Meung). Those who cannot appreciate this work need never hope to understand the spirit of the Middle Ages. About the time, a century later, when Chaucer was translating it into English, William Langland was using the same sort of

allegorical machinery to deliver his message to the common people in *Piers Plowman*.

The 13th cent. also saw the rise of a considerable body of prose versions of the same material—besides some admirable specimens, like *Aucassin et Nicolette*, of the short prose tale in which the French were afterwards to hold such high rank. The great *Lancelot* in prose (compiled c. 1220) became the definite type in France of these chivalrous tales, which they followed until, in the 15th cent., printing gave them a new lease of life.

5. Before we pass to the development which the romance of chivalry had in Spain, it will be well to realize that, as happened in that country in the 16th cent., so in France, before the close of the Middle Ages, the common people, wearying of a type of fiction which seemed to touch so little the life and the interests they knew best, created, by their demand for other kinds of tales, a new style of literature. That such people are not necessarily averse from reading about the doings of those above them in the social scale is evident enough from the vogue enjoyed by stories of the type offered in England by the *Family Herald* and in America by the novels of several writers whose public is found exclusively among the humbler classes. But the romances of chivalry were so oblivious of the life of the commons that they could not make any very wide appeal; and so by degrees, especially as the towns grew larger and the *bourgeois* class became more numerous, they asked for a livelier, more humorous treatment of life on its lower levels. Thus grew up many of the large class of stories to which the name of *fabliaux* is applied in its stricter or more modern sense—short tales in verse dealing, for the most part from the comic point of view, with incidents of ordinary life, moving, on the one hand, into moral apologies and, on the other, into sentimental legends. Their usual characteristic of unvarnished realism has been attributed, by those who hold the theory of an Oriental origin for most of them, to the necessity felt by their Western adapters of studying the manners of thought and speech prevalent among their audience. The *fabliaux* are, as a rule, intended to cause laughter, which sprang up easily in the Middle Ages: frequently cynical, sometimes satirical, usually coarse. They are the poetry of the market-place, existing (1150–1350) contemporaneously with the soaring idealism of the kind which offers so complete a contrast, the poetry of the castle.

The people have less time to sit still and listen to a story than the nobles; and therefore, as they begin to have more to say about the making of fiction than before, there is a tendency to desert the interminable length of the romances for a variety of short, pithy tales, of which what we may call the germ appears in the universally popular *Gesta Romanorum*. There is the new love for fables after the manner of Aesop; growing out of them there is the interesting class of animal stories of which *Reinhart Fuchs* and the French *Roman de Renard* are the types, resembling, in their *naïveté* and their shrewd philosophy, rather the stories of 'Brer Fox' and 'Brer Rabbit,' which have delighted a recent generation, than the sophisticated echo of E. Rostand's *Chantecler*; and in Italy especially there is a large number of short stories, then and there called *novelle*, carrying on (much in the spirit of the *fabliaux*) the tradition of Boccaccio and Sacchetti, through Masuccio and Pulci in the 15th cent., to the *novellieri* of the 16th century.

6. It is much less possible in the Middle Ages than later to make a sharp distinction between the literary style of the nascent modern nations, owing to the cosmopolitan or 'universal' character of the education of those who had the development of letters in their hands. But the case is different

when, in our historical survey, we reach *Amadis de Gaula*, the first and best of the great body of *libros de caballerías*, or romances of chivalry, which formed for a century or more the favourite literature of the Spanish people and stood in the direct line of descent towards the modern novel. Whatever its primitive sources—going back certainly to the 13th century—it took its final shape from the hands of Garcia Ordoñez de Montalvo, probably between 1492 and 1504, though it is not known to have appeared in print before 1519. Although this famous story and the class which it heads are not of Spanish origin, and although they inherit their material and take their spirit from the rather universal *chansons de gestes*, through the *romans d'aventures*, yet it was in Spain, and as stamped with a Spanish character, that they acquired their importance in the development of prose fiction. Montalvo's prototype was followed by a long series of successors and another almost equally famous family, that of the Palmerines, the best known of these being the *Palmerin de Inglaterra*, probably written by Luis Hurtado de Toledo. Most of these stories are anonymous or of uncertain authorship; they were really the creation of the age which devoured them so eagerly—almost literally devoured them, for of most only a few worn copies exist to-day.

That, as has been often said by those who take Cervantes' half-humorous boast too seriously, these romances were killed by *Don Quixote* may easily be disproved. It was precisely because their popularity was already waning, and because by the end of the 16th cent. their reproduction of the mediæval attitude was out of harmony with the age, that the brilliant burlesque of Cervantes made such an appeal to the new generation. Montesquieu's jest that Spain had produced only one good book, which was written to prove the absurdity of all the others, is merely a flippant statement of the truth that the one Spanish book which the whole world has taken to itself is *Don Quixote* (1605). That 'rare combination of the permanent with the individual,' to which Coleridge attributes its phenomenal popularity, is important for its bearing on the question of the realism and idealism to be discussed later in this article.

7. But the romances of chivalry were in any case, as has been said, nearing the close of their career. Their place was to be taken by a form of fiction which, however little worthy of respect it may be in the abstract, was destined to have greater influence on the modern world. 'The fate of the *novelas de picares*,' says D. Hannay (*The Later Renaissance*, Edinburgh, 1898, p. 136), 'is one of the most curious in literature. But for them, and their popularity outside of Spain, there could not well have been any *Gil Blas*; and without him the history of modern prose fiction must have been very different.' Like the *fabliaux*, they represent a revolt of the common, ordinary, more or less discontented humanity of the day against the endless iteration of the aristocratic adventures and high-flown sentiment of the 'chivalry way of writing.' By a definite reaction they substitute the poor man for the knight, and low or sordid motives for the high. As monotonous as the kind they replaced, often silly in their farcical fun, and no more true to life as a whole than the heroic tales, they had from the first an immense popularity, both in the land of their birth and in other countries. Discarding tradition and imagination in favour of observation as the source of their material, they gave to realistic fiction both its method and its point of view, substantially as they are at the present day. Only, the Continental followers—Le Sage, Balzac, Tolstoi—saw, like their literary ancestors, chiefly the evil in the world of every day; it was reserved for some happy, healthy Englishmen (Fielding, Thackeray)

to paint the triumphs as well as the trials of the common man.

The first in this epoch-making series of picaresque romances (Span. *picaro*, 'rogue') was the *Vida de Lazarillo de Tormes* (author uncertain; first known edition 1553). Extending to no more than fifty pages of ordinary print, it was a small thing to produce such marked results; but it soon had a host of imitators. The next was larger, the *Guzmán de Alfarache* of Mateo Alemán (1599), which was at once translated into every language of civilized Europe, including Latin. Five years before its publication, Thomas Nash brought out in England a book with a strong similarity to *Lazarillo*—*The Unfortunate Traveller*, which has been called, from another point of view, the first English historical novel. J. J. Jusserand (*The English Novel in the Time of Shakespeare*, p. 347) goes even further, and says that Nash first pointed out the road that was to lead to the true novel, in that he was the first 'to endeavour to relate in prose a long sustained story, having for its chief concern the truth.' The time was scarcely ripe, however, for the picaresque novel in England; and, when Defoe took up this model, it was Le Sage who taught him.

While his French contemporaries were looking towards England, Le Sage, as a loyal subject of Louis XIV., forgot that the Pyrenees existed, and reproduced the Spanish setting so exactly that some critics of that nation have even set up a theory that he was a mere translator. But, though his characters wear the Castilian costume, they have a French wit and vivacity—and the passions of humanity. The master of Defoe and of Fielding, and to no slight extent the inspirer of Dickens, Le Sage shows in *Gil Blas* (1715–24–35) absolute truth to human nature, as distinct from truth to this or that national characteristic; and it is precisely this quality which he brought into novel-writing that constitutes his principal claim to high rank as a contributor to the development of prose fiction.

8. We have now traced one line of descent down to the realist Fielding, and it will be necessary to go back and follow the course of another, parallel in time, though not in direction, since it leads to quite a different conclusion. This is the **pastoral romance**, which had its origin in Italy, though it, too, attained its most characteristic and influential form in Spain. Two famous Italian works—both mingled prose and verse—stand out prominently among the models: Boccaccio's *L'Ameto*, written in 1341 or 1342; and Sannazzaro's *Arcadia* (1504). Although to both the pastoral form was a venerated inheritance through Vergil from Theocritus and the other Greek idyllists, there is a marked difference in the appeal which it makes to each. Boccaccio, writing in 'the first fine careless rapture' of the Renaissance, was as full of hope for the perfection of humanity as was Sir Thomas More in his *Utopia* (whose date, 1515, is not far from corresponding with the effective beginning of the English Renaissance in the same proportion as Boccaccio's with that of the Italian); by the time Sannazzaro wrote, the dawn-flush of hope had died away, and the disillusioned world turned to the simple pastoral life as an escape from unpleasant reality, charmed by the contrast, as were Louis XVI. and Marie Antoinette when they escaped from Versailles to play shepherd and shepherdess at the Trianon. It is in this spirit that Sidney's *Arcadia* (1590; begun 1580, when he was banished from court) is written. In the allegorical pastoralists, from Vergil to Spagnuoli, the note of longing for escape to an ideal life is scarcely heard; in Sannazzaro the desire of freedom from reality is strong.

The most important contribution made by Spain

to the pastoral romance was the *Diána* of Jorge de Montemayor (c. 1560), which not only furnished a model to Sidney and a plot to Shakespeare (*Two Gentlemen of Verona*), but holds a place in the evolution of the modern novel second in importance to that of *Amadis de Gaula* alone. Here the adherence to the circumstances of actual life is closer than in Italy; it is modified to some extent by elements borrowed from the older chivalric tradition; and it leads directly along the road to the fashionable pastoral of France. Of this the most consummate example is Honoré d'Urfé's *Astrée* (1612). Literature still was, in the main, the possession of the privileged classes; and the movement in France towards a greater refinement of speech and manners which, not long after the publication of d'Urfé's romance, centred in the Hôtel de Rambouillet was of a kind to make fashionable throughout the century the high-blown sentiment of such writers as Mme. de Lafayette and Mlle. de Scudéry. The outcome of this succession was slow in making itself apparent.

9. The conventional grace of the pastoral could offer no material to the realistic novel; but, when the tide of sentimentalism at last broke through the restraining barriers—when, after two generations of Cartesianism and scepticism, the emotional soul of Jean Jacques Rousseau was aroused to action by the kindred sentimentality which went out to meet him from the pages of the *Astrée*—the true career of the Spanish pastoral had begun. The melancholy of unrequited love, and the sad complaints of Sireno, are repeated in the longings of Saint-Preux and in the despair of Werther. The sentimentality of *Diána* developed into the sensibility of *La Nouvelle Héloïse*.

The influence of the Puritan middle class in England had a marked effect on the 18th cent. history of fiction there. Imbued with the idea of the paramount importance of saving their souls, and of the difficulty of the task, they thought it at best a sinful waste of time to read tales of amorous or martial adventure for mere diversion; and the greatest English story-teller of the early years of that century, Defoe, was obliged to conform to this prejudice by giving his tales a colour of truth. His success may be judged by the unfriendly criticism of a contemporary who speaks of 'the little art he is so truly master of, of forging a story and imposing it on the world for truth'; and how long this unreasoning prejudice continued may be realized by those who will recall the frequent occurrence in novels of the first half of the 19th cent. of the footnote 'A fact,' which was still supposed to add value to the incident related. Defoe, then, wrote fictitious biography with a lifelike reality never surpassed; the element of plot was at hand in the love-stories drawn from contemporary life which formed the staple of the popular drama; and Addison was already, in the *Spectator*, showing himself a master in the subtle delineation of character. It is not surprising, therefore, that, before the century was half over, Richardson had produced the first English novels in the full or strict sense of the word—perhaps we may say the first novels, dismissing the claims made by the French, with pardonable patriotic pride, for Prévost and Marivaux—*Pamela* (1740), *Clarissa Harlowe* (1748), and *Sir Charles Grandison* (1753).

In his object, which he declared to be 'to promote the cause of religion and virtue,' Richardson was in line with the Puritan tradition; and of his notable achievement, the production for the first time of a work of non-dramatic prose fiction guided throughout its course by a single motive, in which all the incidents serve to bring about a definite result, he does not seem to have been conscious himself. He calls *Clarissa* 'a dramatic narrative';

and, since here, as in the other two books, the entire story is told by means of letters, the characters speaking for themselves as on the stage, we may understand that what he really intended to do was not to create a new genus in literature, but to write what should be practically a 'pocket play.' Hence the presence of a plot, which, from the Renaissance down, the English drama had known how to offer, all the while that the romances were as loose and formless as ever. Fielding, a more conscious artist (he speaks of himself in *Tom Jones* as 'in reality the founder of a new province of writing'), calls the novel a comic epic in prose; as the epic is an enlarged tragedy, so this new form of his is an enlarged comedy. Among the principles he lays down for it are that it is to show real life, in contrast to the old romances at which he jeers, and that it must aim to show people the folly as well as the wickedness of all dishonesty.

The time was now at hand when a more decided place than ever before was to be given to emotion or passion. Emotion had been deliberately suppressed by the Neo-Classic literary leaders; in Horace's vivid phrase (*Ep.* i. x. 24), they had thrown it out with a pitchfork—and the hour was now approaching when, as he predicted, it should return. It is the vindication of the place of emotion which explains the extent of Richardson's fame in his own age—a fame that was not confined to England, but spread to France, where Diderot ranked him with Euripides and Homer, and to Germany, where the greatest writers seized on his design. The reaction from the conventional suppression of feeling swung to the opposite extreme. Sterne, Rousseau, and Goethe the unchained sentiment and allowed it to rush into every imaginable excess. *La Nouvelle Héloïse* (1756), *Tristram Shandy* (1760), and *Die Leiden des jungen Werther* (1774) showed this impulse, and carried it further. The *Sentimental Journey* (1768) speaks in its very title of the quest of feeling, not merely the surrender to it; and Goethe's melancholy hero was the idol of an enthusiastic young generation, reproducing himself west of the Rhine in Chateaubriand's morbid *René* (1801).

10. A similar reaction to that which brought about the reign of sentiment accounted for the popularity of the mediæval or Gothic romance in the closing years of the 18th century. The first specimen worth noting was Horace Walpole's *Castle of Otranto* (1765), in which he tried to paint the life and manners of the feudal period, 'as agitated by the action of supernatural machinery such as the superstition of the time might have accepted.' The classical age had thrust out the supernatural too, or at least kept it rigorously in its place; and now it also was revenging itself. Beckford's *Vathek* (1784), Mrs. Radcliffe's *Mysteries of Udolpho* (1794), and Lewis's *Monk* (1795) are the most famous of this class.

11. The last named professed no other purpose than the amusement of their readers; but there was another side of the Romantic Movement which employed the novel for quite other ends. The earliest notable example of what we now call the novel of purpose is *Caleb Williams* (1794), in which the revolutionary philosopher William Godwin set forth his principles of social justice. It was to have a number of greater successors—although, perhaps from the difficulty of giving a definitely didactic purpose to a work of art, the number is not large. But that the kind exists as a recognized class is significant of the immense broadening of the scope of the novel which constitutes the most obvious difference between that of the 18th and that of the 19th century. The greatly increased complexity of life was one reason why the drama could no longer be, as in the Elizabethan age, the

characteristic literary form. Something more flexible was needed, and something which (with the vast growth in the number of those who demanded mental food) could be carried into a million homes remote from cities and theatres. The novelists of the 18th, or even of the early 19th, cent. did not dream of the expansion which their form was to acquire. To realize the extent of the change, it is only necessary to imagine the puzzled amazement with which Sir Walter Scott would read one of Mrs. Humphry Ward's sociological novels, such as *Marcella* or *Sir George Tressady*. This sort of novel has been written principally by English and American authors, and in the last half-century by the Russians; while, in his novels dealing with the Modernist controversy, Fogazzaro in Italy reminds us again of Mrs. Ward's *Robert Elsmere* and its sequel of thirty years later.

12. As *Caleb Williams* was the forerunner of *Uncle Tom's Cabin* and *Oliver Twist*, so the extravagant mystery tales of Walpole and Mrs. Radcliffe developed, with the growth of a more accurate knowledge of the life of the past, into the historical novel. The first successful practitioner in this form (after vain efforts which may be said to cover two thousand years, if we stretch the definition to include Xenophon's *Cyropædia*) was, by common consent, Sir Walter Scott. Avoiding the stiff pedantry of reproducing with antiquarian accuracy the exact speech and manners of the period in which his scene was laid, and the obvious absurdity of using those of his own day, he created, with the instinct of genius, a symbolic medium which should give the flavour of the old times without repelling the ordinary reader by its unfamiliarity. The thing once done, a host of others followed along the same road. In English the height was reached in Thackeray's *Henry Esmond*; in France the splendid achievement of Dumas was, by his own confession, made possible only by the example of Scott. The Germans, represented, for instance, by Georg Ebers, have had a tendency to display too much of that devotion to scientific accuracy which so honourably characterizes their work in other fields, and to allow their facts to be fused too little in the fire of the imagination.

13. Towards the middle of the 19th cent., as a conscious theory first in France, realism came to the front. It was partly nourished on a Romantic inheritance—the love of exact detail learned from Scott in the novel and from the Germans in the drama, and the interest in the humblest humanity taught by Dickens. Balzac—a materialist at heart, for all his authoritarian proclamation of religious principles—studied French life in the spirit of a naturalist, a zoologist; the novel with him became an auxiliary to history instead of a work of imagination and passion. Realism in literature does not always explain itself by the same philosophy; but in the 19th cent. it was the child of sensualism (in the philosophic meaning of the word) of two different kinds—the simple traditional sensualism of Condillac, which served Gautier and Flaubert as a basis for their theory of 'art for art's sake'; and the scientific sensualism established by Comte under the name of Positivism (*q.v.*), which inspired the utilitarian realism of Zola. The art of Flaubert, a development from Balzac, carried realism, if not in *Madame Bovary*, at least in *L'Education sentimentale*, as far as it could well go without ceasing to be art. It was the boast of Zola that he had taken the thing up where Flaubert left it, and that he had carried it to its logical conclusion. The experimental novel (as he chose to call it, taking the name of a book of Claude Bernard, *La Médecine expérimentale*)

'is a consequence of the scientific evolution of the age; it continues and completes the work of the physiologist . . . it is

the literature of our scientific era, as classical and romantic literature corresponded to an age of scholasticism and theology' (*Le Roman expérimental*, p. 22).

But, with all his pride in his theories, Zola did not see what a fatal admission he had made when he said (*Le Naturalisme au théâtre*, 1881, p. 111): 'The realistic novel is a corner of Nature seen through a temperament'—'through a formula' would perhaps more aptly describe the result in his own case. He sees in humanity simply *la bête humaine*—the beast in all its transformations, but only the beast. This rather common characteristic of what is called 'realistic fiction' may, one supposes, be explained by the fact that we are more easily convinced by the verisimilitude of evil than by that of good: if a saint is described from exact observation, the reader will be instinctively inclined to credit the description to the idealistic imagination of the writer.

The term 'realism,' of course, has been used in various senses—now as opposed to conventionalism, now to idealism, now to the imaginative treatment, and again to sentimentalism. Bliss Perry's definition may be quoted: 'Realistic fiction is that which does not shrink from the commonplace or from the unpleasant in the effort to depict things as they are, life as it is' (*A Study of Prose Fiction*, p. 229). If literature is to be a transcript of actual existence, if books are not to be, as the invalid Stevenson said of them in a wistful mood, 'a mighty pale and bloodless substitute for life,' there is much to be said for truthful portraiture; and it cannot be denied that much of the effect of the most famous work of the earliest master of English prose fiction, *Robinson Crusoe*, comes from its wealth of exact and vivid detail.

14. But in the broadest sense of the question, from the ethical standpoint, which rather than the purely technical must of necessity be that of the present article, there seems little doubt that the idealistic treatment, within reasonable limits, is to be preferred. If fiction is read for mere distraction and relief, we see enough of real life, in all its sordid, unpleasant detail, to be glad, when we take up a book, to find our feet set on some pavement pleasanter to tread than even the most faithful reproduction of an exceedingly muddy street. And, now that the old Puritan scruple against spending time in the reading of fiction has almost vanished, and the circle of readers has widened to include those who are most in need of encouragement for their better impulses, it cannot be questioned that the kind of reading which provides them with high examples is the best in its effect. The lady who wrote under the name of 'Ouida' used to be considered eminently unsuitable for admission to Sunday-school libraries; yet there is a very definite sense in which at least the greater part of her many books may be called far less immoral than most of Dickens', in whom a young man might search long before he found proposed to him any example of life so lofty and edifying as the (perhaps unduly handsome and impressive) hero of *Under Two Flags*. So, in the *Waverley Novels* 'life is seen at its bravest and its best; and the young man who takes them as his guide to conduct stands small chance of playing cripple or coward in human affairs.' We may not be fortunate enough to number among our acquaintances so noble a gentleman as Colonel Newcome; but there is none of us who will be the worse for passing an hour or two in his society by the help of *Thackeray*.

'I have no brain above the eyes,' Thackeray himself modestly said; 'I describe what I see'; and his contemporary Balzac, the author of the modern idea of the novel as a 'human document,' might more truly have said this. But Thackeray

undervalued his own powers—or else his vision was able to penetrate beneath the superficial appearances in a way that the realist seldom does. It is the ability to do this which makes the work of the idealist so much more abiding than that of the opposite school. They who depend (in Coleridge's judicial phrase) on 'the mere manners and modes of the day' will find their popularity waning—as that of Dickens has waned—when people are no longer able to be amused by recognizing the minute veracity of their portraiture. Thus we dismiss an old photograph after a cursory glance, and return to spend hours in gazing at the Sistine Madonna, true to the highest part of human nature after four hundred years. Thus Ben Jonson is read only by professed students of literature, while Shakespeare enters into the daily life of the whole English-speaking race.

15. Yet after the Romantic Movement, itself a reaction, had spent its force, it was only natural that naturalism should set in as a protest against the exaggerated idealism into which the Romantics sometimes ran. Still, in the first quarter of the 19th cent. Jane Austen had begun her career as a novelist by opposing to the extravagant sentiments and impossible situations of the 'Gothic' school her humorously sensible pictures of life as she saw it. And so throughout Europe, from the middle of the century, the French influence has been felt, and many of the best known novelists have been thorough-going naturalists. In Spain, Pereda was the father of the movement: Juan Valera, though not technically a realist, was no less real; Emilia Pardo Bazán (Señora Quiroga) and the later Valdés have followed the same path. In Italy, Fogazzaro, Mathilde Serno, and d'Annunzio have been the most widely known representatives of the modern tendency. In the Scandinavian north, Bjornsen and Strindberg have won their renown under the same banner; while another Swede, Ahnqvist († 1866), had already anticipated some of the problems and contentions of the realists of the last quarter of the century.

The case of Russia is somewhat different from the others. The first novel in that language was published only in 1799, but a generation later begun, with Gogol, the sudden efflorescence which startled and in no small degree influenced the Western world. As a matter of fact, though most of the results we have been considering were of French origin, Gogol had distinctly formulated the theory of the human document before the days of the Goncourts. One reason why Turgeneff and Dostoyevski and Tolstoi have made so deep an impression outside their own country is that the Russian novel is the novel of uncivilized people giving us their impressions of civilization, trying to find out the meaning of life as if no one had ever thought about the matter before; but a reason deeper still is the burning charity for suffering humanity which pervades their books. None of them has purely literary aims—they seek truth and justice: the difference between them and some French realists is the difference between the curious peeping visitor to a hospital and the man who comes aching to bring comfort and healing to the sufferers.

Into Germany, realism came from both sides, from France and from Russia; but the unconquerable idealism innate in the German character made this no thoroughly congenial soil for its growth. Max Kretzer promised to be the leading German realist, but supernaturalism took hold of him. Even Sudermann has not been consistently realistic; and Hauptmann, in spite of some pieces of brutal naturalism, has shown a tendency, which has also appeared in other quarters, to regard phenomena (found unsatis-

(lying in themselves) merely as symbols of deeper spiritual realities which are just as true and even more worthy of study.

16. In any survey of the fiction of the last fifty years, a special note must be made of the way in which some of the greatest writers of fiction have used the deeper, or at least more scientific, study of psychology which marks our modern age, thus giving rise to the **psychological novel**. It is this which gives to Browning's poetry a part at least of its great value; but a wider use of it has been made by the novelists. George Eliot wrote her novels even more with her psychology than with her ethics, and attained a vividness in portraying the inner life which the novel had not yet seen. But she did not stop with the individual analysis; she strove to make her case typical, and to show the working of the laws of the spiritual world, as immutable as those of the physical. The character-plot has tended to become the favourite form of the serious literary novel. Most of the noted writers of recent years, Turgeneff and Tolstoi and Dostoyefski in Russia, Meredith and Hardy in England, Henry James and Howells in America, Bourget in France, Bjørnsen and Sudermann in the north, Valdés and d'Annunzio in the south, have attained their principal effect by the penetrating subtlety of their character-studies.

17. Yet in the fiction of the last twenty-five years, especially in English, there has been a significant reaction against the attempt to limit the purpose of the novel first to a painstaking study of phenomena and then to a deep analysis of their underlying causes. Suggested itself by Meredith's *Harry Richmond*, exactly a quarter of a century ago Stevenson's *Prince Otto* gave the signal for a new exodus into the 'by-path meadows' of romantic fiction, followed soon by Anthony Hope with his Zenda stories, and then by a host of minor romancers. Their number and their popularity, whether they have gone back for their subjects to the days 'when knighthood was in flower' or have laid their scene in some imaginary principality, are sufficient evidence of the existence of a large number of people prepared to welcome an escape from the increasing strenuousness of life into a world of play.

The main body, nevertheless, of the most important modern fiction, has been distinguished by a high seriousness not unbecoming to a branch of literature which is assuming such a predominant place and appears likely to keep it. The novel, from its flexibility best adapted to deal with the complexity of modern life, and as a pre-eminently social form of literature answering to the general tendencies of the age, has become the prevailing and characteristic literary form of our period; making its way against prejudice, and without assistance, it has supplanted the epic and the romance, it has taken precedence over the drama, over lyric poetry, and over the essay. When Dante mirrored the world of the Middle Ages in the *Divina Commedia*, says Arthur Symonds (*Studies in Prose and Verse*, London, 1904, p. 5),

'poetry could still represent an age and yet be poetry. But to-day poetry can no longer represent more than the soul of things; it has taken refuge from the terrible improvements of civilization in a divine seclusion, where it sings, disregarding the many voices of the street. Prose comes, offering its infinite capacity for detail; and it is by the infinity of its detail that the novel, as Balzac created it, has become the modern epic.'

The increasing democratization of literature, allowing many a man to write with a slender equipment of education in the French sense, and often with only too little in the English, and giving a thirst for reading to thousands with almost none of either, constitutes a grave danger. The money rewards of the successful novelist allure to the profession not a few men destitute of any sense

of responsibility for the use of their gifts; and the fact that these rewards are often to be won by pandering to the unrefined or actually base tastes of the multitude throws a temptation in their way which some otherwise well-endowed writers have not been able to resist. But in the right hands the novel, by the very fact of its being so closely in touch with actual life, has a magnificent opportunity to take a large share in moulding the thought of the new age. It will do well if it listens to the suggestion of Matthew Arnold's often-quoted definition of poetry, and takes as its mission the offering of a constructive criticism of life.

FIJI.—I. GEOGRAPHY, ETHNOLOGY, AND HISTORY.—The Archipelago of Fiji is one of the largest in the Pacific Ocean. The group comprises 154 islands lying between the latitudes of 15° and 19° S. and the longitudes of 177 E. and 178 W., of which about 70 are inhabited. Vitilevu, the largest island, is about 80 miles long and 55 wide. It is drained by four rivers, which, owing to the heavy rainfall and the formation of the watersheds, are disproportionately large for the size of the island. The scenery is infinitely varied and beautiful. Some of the islands are volcanic mountain masses clothed with timber to their summits; others are upheaved coral reefs with precipitous cliffs, honeycombed with caverns; others are low-lying, with palms growing to the water's edge. There are streams of limpid water everywhere, and in the larger islands are rolling plains of grass dotted with clumps of timber, as in an English park. The climate is tropical, but in the hottest months the temperature rarely reaches 90°. The soil is very fertile, and to an expert gardener like the Fijian it yields abundance of food for a very small expenditure of labour. There are no dangerous animals, and even the risks of navigation are minimized by the fact that all the larger islands may be coasted in smooth water within the barrier reef.

These facts have had their bearing upon the character of the natives, who are of Melanesian stock, strongly modified by the blood of Polynesian immigrants from Tonga and Samoa. They are a fine, muscular people of a dark-brown colour, inclining in individuals to the light red of the Polynesian. The custom of bleaching the hair with lime and frizzing it out like an enormous wig adds inches to their apparent stature. In heathen times

their abundant leisure from the business of food-planting was occupied in incessant warfare, which led to the formation of powerful confederations under a single chief, the weaker tribes enrolling themselves as his subjects in return for protection. As ancestor-worshippers they deserted their own discredited ancestor-gods in favour of those of their protector, whom they regarded as the incarnation of deities able to protect them from injury. Successful expeditions were always followed by cannibalism; the bodies of the slain were offered to the gods before being eaten, and there appears to have been a religious significance in the practice, which raised it almost to the status of a rite. But, with all their ferocity in war, the Fijians are a courteous and rather timid people, hospitable to visitors, anxious to please, ceremonious in their manners. They have a strong feeling for aristocratic institutions, which even the introduction of Western competition has failed to eradicate.

The islands came somewhat late into the field of colonization. Though they were sighted by Tasman in 1642, it was not until the middle of the 19th cent. that Europeans acquired much influence. By 1874 the majority of the natives had nominally adopted Christianity, either as Wesleyans or as Roman Catholics. In that year the most influential chiefs, acting under the pressure of claims for compensation by the United States, ceded the group to Great Britain, and Fiji became a British Colony. Unfortunately annexation had scarcely been proclaimed when an epidemic of measles swept away 40,000 natives out of a total population of 150,000. Since that date the population has declined year by year to a total of 87,000 in 1911. It now seems to be stationary. The natives are sharing, not altogether to their moral advantage, in the material prosperity of the islands, having leased their superfluous lands to Sugar Companies for a substantial rent. Nevertheless, many of their old superstitions are still cherished in secret, and are certain to influence them if there should ever be dangerous discontent with their alien rulers.

II. *RELIGION*.—The Fijian deities fall naturally into two great divisions, the *Kalou-Vu*¹ (root or original gods), and the *Kalou-Yalo* (spirit gods, i.e. deified mortals).

1. The *Kalou-Vu*.—There is reason to think that the *Kalou-Vu* were of Polynesian origin, brought to Fiji from the east, and imposed upon conquered Melanesians in addition to their own pantheon of deified mortals. Whether the *Kalou-Vu* ever existed as mortals is uncertain: at any rate, their mortal career was very remote. The Melanesians were ancestor-worshippers, and their religion was so closely interwoven with their social polity that it is impossible to disentangle them. The Melanesian idea was that the spirit of the ancestor was inherent in his descendant, the chief of the tribe, and in the smaller communities the chief was both spiritual and temporal. He was saluted in the same way as the spirit which was present in the temple, and the firstfruits (*q.v.*) were brought to him as representing the god of increase. As the community grew in importance by conquest or intrigue, the wielding of the temporal power became irksome, and tendency was for the chief to delegate the executive duties of his office, while reserving for himself the dignity and emoluments due to his spiritual rank. Thus, in all the large confederations in Fiji except Rewa there was a spiritual *Roko Tui* and a temporal *Vunivalu*,

who were the analogues of the *Mikado* and the *Shogun* of Japan.

Not every chief was deified; the weak and vacillating or lethargic chief might have offerings made to his *manes* for a few months after his burial, but he was soon forgotten. In moments of danger or difficulty men would go and weed the grave of a powerful chief, and deposit offerings upon it because he was remembered by tradition as the protector of his people, and he remained the *Kalou-Yalo* of the tribe until the death of one of his descendants whose reputation overshadowed his.

(1) *Ndengei*, the most important of the *Kalou-Vu*, was an exception to the rule that the *Kalou-Vu* were Polynesian importations. The sagas relating to him prove clearly that he was a Melanesian ancestor, perhaps among the first Melanesian immigrants into the group (see *ERE* i. 443*). *Ndengei*, in the form of an enormous serpent, was believed to inhabit a cave in the mountains of Vitilevu behind Rakiraki, at a place near Kuvandra. When the earth quaked the people said: 'Ndengei is turning over.' The people of the neighbourhood were severely taxed in offerings to him; every year several hundred hogs and turtles were carried to the mouth of the cavern, which the priests approached on knees and elbows. One of them ventured into the cave to proffer the request. If the prayer were for a good crop, he would reappear with a piece of yam in his hand which the god had given him; if for rain, he would be dripping with water; if for victory, a firebrand would be flung out in token that the enemy would be consumed, or the clashing of clubs would be heard, one for each of the enemy who would be slaughtered. *Ndengei* was not actually worshipped beyond the limit of his own district, but his reputation extended over all parts of the group except the eastern islands. His influence was probably declining before the arrival of the missionaries, for there is a humorous song in which Uto, his descendant, is represented as visiting the public feasts for the god's portion, and returning with the rueful intelligence that nothing but the under-shell of the turtle was allotted to him.

In some versions, *Ndengei* appears as the creator of mankind; but he has no emotions, sensations, or appetites, except that of hunger. Others have it that his son, *Rokomautu*, created the land: he scooped it up from the ocean-bed, and, where his flowing garment trailed across it, there were sandy beaches; where his skirt was looped up, the coast was rocky. It was he who taught men to make fire. The people of Rakiraki thought that the missionaries had come to teach them some variant of their own cult: 'Ndengei,' they said, 'is the true God, and, if Jehovah is also the true God, then Jehovah is another name for Ndengei.' Many years afterwards, during the heathen relapse under *Navosavakandua*, the same argument was used to show that his teaching did not clash with that of the mission, but was merely a newer revelation.

The great saga of *Ndengei* is too long to give within the limits of this article; it recounts how the god, then merely an irascible old man, as no doubt he was in his earthly career, had a tame pigeon which used to awaken him from slumber; how his two grand-nephews, from whom he had taken the bird, killed it with a bow and arrow and defied him to punish them; how they took refuge with *Rokola*, the chief of the Carpenter clan; how there was war in the sacred mountain, and the Carpenter clan were besieged by *Ndengei* in the fortress of Kuvandra; how, after many stratagems, in the end they were flooded out, and how the two young men escaped the deluge in a canoe, and sailed away to the far West. Fijian myth has it that some day they will come again, bring-

¹ The word *kalou* is used as an adjective for anything superlative, either good or bad. Probably the word was originally a root-word implying wonder or esteem. It is sometimes used as an expression of flattery—as 'You are *kalou*,' or 'a *kalou* people,' applied to Europeans either in polite disbelief in some invention or piece of mechanism, or as a disclaimer of any wish to imitate them. On *vu* see Codrington, *Melanesians*, 123, 170.

ing the millennium with them. When Europeans first arrived in the group, they were said to be the descendants of these two young gods.

This belief in the second coming of Ndengei's grand-nephews may reappear whenever there is political unrest among the Fijians. It was cleverly turned to account in the Tuka heresy in 1885, when Ndungumoi, a native of Nandraumi-ivi, a village very near Nakauvandra, went through the mountain district secretly preaching a religion which was a compound of the Ndengei cult and Christianity. He had with him consecrated water which conferred immortality (*tuka*) upon all who drank of it, and his followers were instructed in exercises which were midway between a native war-dance and European military drill. Recognizing that the Christian missions had too firm a hold upon the natives to be openly defied, he declared that Nathirikaumoi and Nakausambaria, the twins who had made war against Ndengei, were in reality the gods whom the white men called Jehovah and Jesus, being unable to pronounce their native names. There was some controversy about the identity of Ndengei, some holding that he was identical with the Christian God; others that he was Satan, since Satan also assumed a serpent form. Biblical names were given to the places near Nakauvandra. The twin gods were about to revisit Fiji with all the dead ancestors in their train; the white men were to be expelled, and the tribal lands were to be shared out among the faithful. A day was fixed for the arrival of the gods; and there can be no doubt that Europeans living in remote districts would have been massacred if the prophet had not been arrested and deported to Rotuma. In 1892 the heresy broke out afresh under a new prophet who had been Ndungumoi's lieutenant, but the movement was promptly suppressed by the Government.

It was evident from the behaviour of the converts that the heresy satisfied a religious craving for the occult, which is not appeased by the Wesleyan mission. Ndungumoi dealt in miracles; his water of immortality, his power to confer perpetual virginity, his communings with the gods behind a curtain in the temple of Valelembu, and his presages of the early coming of the ancestors and the expulsion of the foreigners kept the people in a simmer of excitement, which was in attractive contrast with the dull round of church-going and tax-paying imposed by the foreigners. This new form of ancestor-worship had much in common with the outbreak of Hauhaism among the Maoris during the Maori war, and it might well have been as dangerous to the safety of Europeans.

(2) Next in order to Ndengei is *Ndauthina* (the torch-bearer), the god of the seafaring and fishing tribes. These tribes own no land, and from the fact that they all worship the same god it may be inferred that they had a common origin. By the nature of their occupation, fishing tribes are prone to scatter widely, and the fact that they are landless seems to show that they are late arrivals, who attached themselves to the chief for protection. Such a people would naturally disseminate the traditions of their gods widely throughout the group. *Ndauthina*, though probably a foreign importation, had temples in various places. He was the fire-god; when he was small, his love of light prompted his mother to bind lighted reeds upon his head, and now he roams the reefs at night, crowned with a flaming brazier. He loves night attacks, and flashes light on the defences as a beacon to the besiegers; in human form he sells fish to the doomed garrison, who, smelling fire, know that *Ndauthina* has been among them, and that they will not see another sun. His pranks are past reckoning; when men are hatching plots against his favourites, a voice cries 'Pooh' through the reed-walls, and he flies off to warn his friends of the impending treachery. He tempts warriors to embark in rotten canoes which he himself buoys up, in order to put them at the mercy of their enemies. He is the god of adulterers, whom he helps by tempting the object of their desires. Only his worshippers, the fishermen, are safe from his tricks.

(3) *Ratu-mai-mbulu* (Lord from Hades), though worshipped as a local divinity in eastern Vitilevu, is also, no doubt, of foreign origin. Through him the earth gives her increase. In December he pours sap into the fruit-trees, and pushes the young shoots through the soil. Throughout that month it is tabu to beat the drum, to blow the conch, to dance, to plant, to fight, or to sing songs at sea, lest the god should be disturbed and quit the earth before his work is finished. At the end

of the month the priest sounds the consecrated conch, the people raise a great shout from village to village, and work and play begin again. *Ratu-mai-mbulu* lies in serpent form in a cavern near Namara, whither food is carried to him once a year. Unlike the other gods, he drinks no *kava*; the noise of the wind and the blast of the conch are meat and drink to him.

(4) *The shark-god*, who is the tutelary divinity of many tribes unrelated to one another, probably had his origin in totemism. Waterhouse gives the following list of names under which he is invoked: 'He-who-is-outside-the-Canoe'; 'Circumnavigator-of-Yandua'; 'Feeder-of-Fishes'; 'Lover-of-Canoe-Spars'; 'Waylayer'; 'Rover-of-the-Mangroves'; 'Expectant-Follower'; 'Ready-for-Action'; 'Sail-Cleaner'; 'Lord-Shark-that-Calls'; 'Tabu-white'; 'Tooth-for-Raw-Flesh.' Tribes that worshipped the shark under the same title had a common origin, but those who knew him by different names acknowledged no such bond. Thus, a tribe that called him 'Outside-the-Canoe' recognized no tie with those who invoked the 'Circumnavigator-of-Yandua.' As in other totemistic systems, the shark-god is beneficent to his worshippers who, in their turn, are forbidden to eat his flesh.

Mana, a native of Soru, capsized in the open sea, called upon 'Outside-the-Canoe' to save him, and a shark rose and towed him safe to land by his back fin. During the invasion of Nataka in 1848, a shark jumped across a war-canoe, turned over to show the tattooing on his belly, and leaped back into the sea to lead his votaries to the attack.

Though the attention paid to the shark-god almost entitles him to rank as a *Kalou-Vu*, he is probably no more than a totem, like the hawk, the eel, the lizard, and the prawn—all recognized as having a tutelary position with certain tribes, who nevertheless had erected temples to ancestor-gods (*Kalou-Yalo*). Totemism in Fiji did not affect the social system in any way; it had no influence on the marriage laws or on the belief in a future state.

2. *The Kalou-Yalo*.—It has been explained that most of the tribes in Fiji admitted a more or less close relationship to a tribe that worshipped the same ancestor-god; the tie was called *tauru* ('the same root'). (See *ERE* i. 443^b.) It does not follow that the god to whom the tie of *tauru* was traced had a temple and a priest in both the communities. In most cases, some later chief of strong character had monopolized the religious instincts of his descendants, and much depended upon the priest, for the chief exercised no sacerdotal function himself, but was content to stand aside, and leave this rather menial office to the professional priesthood.

That the origin of the temple was to be found in the tomb was shown in 1895, in the little native revolt at Scankanka, in Vanualevu, where the first act of the insurgents was to weed the grave of the late chief and present *kava* to his spirit, imploring his aid in the revolt; the next was to kill and eat a native Government official, cannibalism having a religious significance. From weeding a grave it was but a step to building a temple for the shelter of the spirit.

3. *Priests and oracles*.—The practical application of the Fijian religion lay in the oracle; there was no ritual except in the presentation of offerings, and everything depended upon the support of the high chiefs. Whether they believed in the inspiration of the priests, or whether the priests believed in their own inspiration, it is not easy to say, but there was certainly an understanding between the two orders; the priest depended for subsistence upon the offerings made to the god, and the priest whose oracles were unfavourable to the chief's policy saw his temple falling into decay and his larder empty. On the other hand, unfavourable oracles, especially in time of war, had so depressing an influence upon the common people that the chief had the best reason for keeping the priest in

good humour; both knew that neither could stand firm without the support of the other.

Williams (in his *Fiji and the Fijians*) relates how the king of Thakauandrove, on the eve of a warlike expedition, allowed one of the gods to be put off with a single pudding, instead of the turtle which the priest had expected in the division of the feast. That night the god visited the priest, and foretold defeat, and, as a consequence, the king decided to abandon the expedition. In another case, however, matters took a different turn. 'Who are you?' asked the chief angrily; 'Who is your god? if you make a stir, I will eat you.'

The priesthood itself was hereditary, though any clever rogue who could simulate inspiration and make a lucky forecast of events might obtain recognition. He had, however, to brave the opposition of the hereditary priests, who looked very coldly upon the amateur. The priests were not always the chief's tools; sometimes they gave expression to popular discontent at some act of tyranny: 'The famine is devouring you, because you gave the great canoe to Tonga instead of to Mbau'; 'This hurricane was sent to punish you because you refused the princess to the king of Rewa.'

The priests ranked according to the importance of the god to whom they ministered; they were generally of humble birth, though in Rewa, a few years before the arrival of the missionaries, the chiefs had found it necessary to disestablish the whole of the priestly caste on account of their arrogance, and to pretend that members of the ruling family had themselves received inspiration. The disestablished priests immediately fell into their proper place, a very humble one.¹

4. **Gods of the after-world.**—Besides the *Kalou-Vu* and the *Kalou-Yalo*, there was a class of gods who had neither temples nor priests. They haunted well-known spots on the road by which the shades passed to their last resting-place; but, as they left the living unmolested, there was no need for propitiatory offerings (see *ERE* i. 444). The following is a translation of a fragment of the poem in which these beliefs are preserved. It is put into the mouth of the shades newly arrived in the presence of the gods at Nakauvandra:

'My Lords, in ill fashion are we buried,
Buried staring up into heaven,
We see the scud flying over the sky,
We are worn out with the feet stamping in the earth,
The rafters of our house [the ribs] are torn asunder,
The eyes with which we gazed on one another are destroyed;
The nose with which we kissed has fallen in;
The breast to which we embraced is ruined;
The thighs with which we clasped have fallen away;
The lips with which we smiled are decayed;
The teeth with which we bit have shivered down;
Gone is the hand which threw the *tinka* stick,
Rolled away are the hawks' stones [*testiculi*],
Rolled away are the blunters of razors [the pubes were shaved].

Hark to the lament of the mosquito:
"Well it is that they should die and pass onward,
But alas for my couch-shell [the ear] that they have taken away!"

Hark to the lament of the fly:
"Well it is that they should die and pass onward,
But alas for the eye from which I drank!"

Hark to the lament of the black ant:
"Well it is that they should die and pass onward,
But alas for my whale's tooth [the male organ, the most vulnerable point of attack for that insect when a native sits down] that they have taken away!"

The Fijian's dislike of their own burial custom of stamping the earth into the grave was shown in the case of the chief of Lakemba, who begged the missionaries to give him a wooden coffin to be buried in, that his body might not be trampled on.

With all its crudeness and simplicity, the story of the *Salaniyalo* (the Path of the Shades) is not without beauty and pathos. There is, it may be remarked, a suggestion of Greek myth in the ghostly ferryman and in the Water of Solace, by which the Fijians, whose emotions are transient, excuse the shortness of their mourning for the dead.

¹ For the manner of approaching the gods, see COMMUNION WITH DEITY (Fijian).

When the shade drinks from this spring, he forgets all the sorrows of his life, and ceases to weep; 'all his friends also ceased their weeping, for they forgot their sorrow and were consoled.' There is pathos also in the episode of the shades of little children, hanging like bats from the branches of a tree, waiting for their fathers or their mothers to come along the road, and rejoicing when the shade tells them that the hair of their mother has turned grey, and the smoke of her cooking-fire hangs along the ground, for they know that she will soon be with them.

The poem throws light upon the moral ethics of the Fijians. The most heinous crimes are cowardice and idleness, and their passport to Bulotu is a life of rapine and a violent death. So contemptible was a natural death that the shade was commanded to re-enter the body, and die respectably. Seeing the misfortunes that overtook the spirit in its last journey, it is surprising that the shades do not all obey Taleya when he offers to let them return to life.

Light is also thrown upon the fact, which filled the early missionaries with surprise, that the widows of a dead chief insisted upon being strangled at his funeral, although it was notorious that they did not love him. It was their good name that was at stake; for we read that, when a shade threw his whale's tooth at the pandanus tree and missed his aim, and knew thereby that his wives would not be strangled, he went on his way weeping, for he had now a proof that they had been unfaithful to him in life.¹

5. **Witchcraft** (*ndraunnikau*, lit. 'leaves').—The practice of witchcraft, which controlled the sanitation and medical treatment of the Fijians, had its root in their religious beliefs. Their reasoning on the subject of disease is common to all primitive races. Health being the normal condition of all except the very aged, they argued that sickness and death must be the work of some malevolent agency, Divine or human. Instead of 'Whom the gods love die young,' primitive man reads: 'An enemy hath done this.' It did not need any special skill to practise as a wizard, although certain persons of both sexes acquired a sinister reputation, and took fees for this kind of murder. All that a professional wizard required was something intimately connected with the person of the victim—a lock of his hair, a scrap of his food, or a garment that he had worn. These things, together with certain herbs, would be stuffed into a hollow bamboo, with or without the uttering of a spell, and hidden in the thatch of the victim's house, or in the grass of his bed-place; in a little while he would begin to refuse his food and to pine and sicken, and, unless something were then done in the shape of counter-spells to reassure him, he would die from sheer fright.

The terror of witchcraft was never absent from the mind of the Fijian. The sceptic who laughed at the pretensions of the priests trembled at the power of the wizard, who was not necessarily a priest. It was a lucrative but a dangerous profession, for the transaction could never be kept quite secret, and the wizard had to brave the resentment of the victim's family. The fear of witchcraft led men to bury or burn offal and refuse, which might give the wizard his opportunity, and consequently it ensured a rough system of sanitation. When it was believed that a sick man had been bewitched, every effort was made to find the magical bamboo; for, if it could be discovered and destroyed, he would recover. Failing this, another wizard was hired to make a counter-spell, which was often effective through the fresh hope which it infused into the sufferer. If the victim died, the wizard would

¹ For *kalou-rere* and *mbaki*, see COMMUNION WITH DEITY (Fijian).

claim his reward by attending the funeral with a blackened face; and bold indeed would be the employer who dared to withhold the promised payment. In some places, any sudden death being ascribed to witchcraft, a professional wizard, though entirely innocent of the black art on this occasion, would appear at the funeral with a sooty face, in the hope that some one who had an interest in the death would pay him the fee he had never earned. In some cases, where the bewitched person obstinately refused to fall ill, secret murder might be done. Many of the European residents believe that poison is used in such cases, but in one notable instance—the murder of the chief of Mbureta in 1884—the wizard had earned his fee by cleaving the chief's skull with an axe from behind.

The Fijians seem to have a definite belief that the bewitched person is possessed by an evil spirit, and some of the old practitioners use the operation of massage to drive this nimble spirit into one of the extremities, from which it can be drawn out by the fingers and flung away.

Besides the wizards who practised the deadly art of witchcraft, there were others who specialized in the detection of crime. When property was stolen, the owner took a present to the seer, and told him of his loss. Bidding the man pronounce the names of all those whom he suspected, the seer fell into deep abstraction, and presently stopped the man at a certain name, announcing that an itching in his side or in one of his fingers or toes proved that the name just uttered was that of the thief. If the seer belonged to the same village, and knew all the people, he would dispense with the names; his body began to twitch convulsively, and he himself would call out the name of the thief. If he was lucky enough to hit upon the right man—and an intimate knowledge of his fellow-tribesmen often set him upon the right track—the offender would confess, for to brazen out a theft against the evidence of a wizard's little finger demanded an impudence which no Fijian could aspire to. The proper course for a person wrongfully accused by a wizard was to pay a fee to a rival seer to 'press down' the fee paid to the other; his great toe would then begin to tingle in his client's favour.

A case of this kind occurred in 1885, when the chief of Yasawa was wrongfully accused of embezzling the district funds, and, upon the evidence of a seer, he prosecuted his slanderers in the provincial court.

An even surer method of detecting crime was by *yakoraki* (soul-stealing). It was the mildest form of trial by ordeal ever devised, but no boiling water or hot ploughshare could have been as effective. The suspected person was summoned to the presence of the chief, who called for a scarf; usually the man confessed at the bare mention of the instrument; but if he did not, the cloth was waved over his head until his *yalo* (spirit) was entangled in it, and the cloth was then folded together and nailed to the prow of the chief's canoe. The man then went mad, for the insane are understood to be those whose souls have been stolen away.

BASIS H. THOMSON.

FILIAL PIETY.—1. Definition and scope.—Filial piety is distinguished from filial obedience by the fact that it is incumbent even upon those

VOL. VI.—2

who have, according to our ideas, passed beyond the duties of childhood; it differs from family piety, which attaches to all the members of the family; and, again, it differs from piety in its older and more general sense, which may exist in every possible relationship involving authority or dependence. Filial piety is accorded to parents, or to those who take their place, and in a metaphorical sense it may be extended to the Deity, should the latter be thought of as father or mother; here, however, filial piety becomes reverence (*q.v.*). An evidence for this double sense of the term lies in the fact that the family relationship and the religious relationship are found combined in various ways.

2. Among non-Christian peoples.—(1) Amongst many *savage peoples*, filial piety can hardly be said to exist, the aged being simply put to death, or forced to commit suicide, as having survived their usefulness (see art. **ABANDONMENT AND EXPOSURE, OLD AGE**). Leaving such barbarity out of account, however, we generally find filial piety allied with ancestor-worship. The dead ancestor is revered as a spirit; and, while the worship of the dead not seldom originates in the fear that the spirit may work harm to the survivors, or in the wish to keep it at a distance, we must, nevertheless, not ignore the other side, viz. belief in the interest and sympathy of the departed, the desire of winning their favour, and the hope of securing their aid. That the ancestral spirit frequently coalesces with the death-god needs no explanation, nor is any needed for the fact that he sometimes becomes the hero who instructed his people in the various useful crafts, such as boat-building, etc., or, again, that he is merged in the Creator, the 'Great Spirit' who takes a fatherly interest in the welfare of the tribe. From this we may infer that filial piety was originally a blending of the religious and moral affections that cluster round the natural fact of a common descent, the descendants not only finding in their reverence for their ancestor a bond of union, but also feeling a certain common dependence, not unmingled with awe, and suffused with a moral element, though, of course, selfish motives might also be present. The object of such piety is the ancestor, who is at once the hero, the death-god, and the Creator-god, but who at the same time is the head of the tribe or family, and is regarded as a higher being, to be treated with all reverence. Here we see a synthesis of religion and piety; and similar conceptions will be found everywhere, even in the highest forms of religious life. The manner in which piety towards ancestors or parents is figured amongst the various peoples is as varied as the character of the peoples themselves. On the lower planes of thought, religious reverence and reverence for the head of the family are not as yet disengaged from each other, and piety at this stage rests upon natural feeling rather than upon distinct conceptions. But, as soon as the idea of a comprehensive order makes itself felt in the religious consciousness, ancestor-worship and family piety are each assigned a place in this order, and are clearly discriminated.

(2) In *Egypt* there existed a widely diffused worship of the dead, which, however, was distinguished from piety towards parents, the latter being strongly emphasized as a duty, both falling under the law promulgated by the priests.

(3) In *China* the law of superordination and subordination is deemed to be the supreme law of heaven, and finds its specific expression in piety. Confucius (*q.v.*), indeed, insists so strongly upon the cardinal importance of piety, more particularly as shown towards parents, that he values ancestor-worship simply as a means of fostering it. This

piety is itself a form, in fact the chief form, of subordination. Cf. ETHICS AND MORALITY (Chinese) and FAMILY (Chinese).

(4) Among the *Brāhmins* a special motive for marriage is the desire to bring up a son who shall one day be able to make the appropriate sacrifice to the *manes* of the father. The main responsibility in the matter of filial regard thus rests with the male, and piety stands in the closest connexion with worship of the dead.

(5) Among the *Persians*, a very different view of things appears in the later *Gāthās*. Among the supreme duties of believers are reckoned the service of Ahura Mazda and the worship of the Earth, the mother who bears mankind—a point of special significance, since this mother ranks as the head of all women. This view is intimately allied with the idea that the life-giving power as represented in motherhood, and the veneration and homage accorded to it, form one of the most effective means of overcoming the *daēvas*, or demons.

(6) Among the *Romans*, filial piety was based upon different grounds altogether. They likewise, it is true, worshipped the *manes*; but the reverence which they accorded to the *paterfamilias* had really a legal basis. According to the XII Tables, the father had absolute authority over his children, and it was this legal relationship that provided the foundation for filial piety. Even a son of mature age was still under paternal jurisdiction in family affairs, and could not possess, or acquire, anything on his own account so long as his father lived. The father had the right to sell his children; he had even the 'power of life and death'—a prerogative, however, which was subsequently circumscribed by use and wont, and was finally abrogated in the Imperial period. The XII Tables, nevertheless, left a door open for the son's emancipation, the procedure being that the father sold the son three times to the *pater fiduciarius*, who on his part had promised not to retain possession. The predominantly legal character of filial piety among the Romans is thus quite unmistakable, though the sentimental side was by no means excluded, as appears, e.g., from the fact that in 603 A.U.C. a temple was erected in honour of *Pietas*, the occasion being that a daughter had preserved the life of her father with milk from her breast while he lay in prison under sentence of death by starvation. It is an evidence of the decay of filial piety in Rome that the *neniae*, originally composed or sung by relatives of the deceased, were latterly delegated to mourning women, and thus at length fell into discredit.

(7) In *Greece*, the father in his old age had a claim upon his son for support, except in the case of his having criminally neglected the education of the latter. Next to the worship of the gods, and to the obligations towards the dead and the fatherland, the honouring of one's parents was generally accounted the highest of duties. In Athens those who were about to enter on office were required to show that they had discharged the duties of children towards parents, as it was believed that unfilial persons were incapable of offering such sacrifices as would be acceptable to the gods. A son was certainly entitled to appeal against his being disinherited by a father who had become weak-minded, but the moral judgment of the public appears to have been averse to such appeals. Though filial obedience was not exacted in the case where a father made an unjust demand, it was, nevertheless, regarded as seemly that children should be silent as to the errors of their parents. Finally, there are many instances of piety towards the father, in the sense of obedience, being accorded a higher place than affection for the mother.

(8) The sentiment of filial piety was strongly

developed also among the *Semitic* races. Nothing in the nature of worship of the dead, indeed, is found amongst either Jews or Muhammadans; and, as piety towards parents is here associated with religion, it is accounted a Divine ordinance, obedience to which wins God's blessing, as disobedience evokes His wrath. In Islām, moreover, and more decidedly still in Judaism, piety towards the mother is specially enjoined. The Qur'ān prescribes a submissive love towards father and mother, and demands that they shall be well cared for in their old age. Grown-up sons must show respect to their fathers, and children must be obedient to their parents. The life of the *harim*, however, deprives this formal obedience of any proper emotional basis. In Judaism, likewise, filial piety is a commandment, obedience and disobedience to which have the sanctions of promise and curse respectively; but respect for one's parents, as also reverence before God, assumes here a more emotional character. Thus, while it is decreed that the son who manifests a disobedient and obstinate spirit towards his parents shall, upon their accusation, be stoned to death by the elders of the city (Dt 21^{18f}), the normal relationship of the child to the parent is not one of bare servile constraint, but rather one of tender human feeling, such as finds a beautiful illustration in the Book of Ruth; and fidelity conjoined with reverence to parents, like fidelity to the covenant God, was viewed as the proper attitude of spirit.

3. *Christian*.—Christianity, in giving love the central place, wrought a change in the conception of filial piety. The new relation between man and God which Christianity made possible assumed the form of that between child and parent, and this in turn reacted upon the natural relationship itself. Though the attribution of fatherhood to the Deity was not a new idea, yet the implications of the term 'fatherhood' as thus applied were enriched in so far as the emphasis was now laid, not upon the child's dependent and subject position, but upon his unconstrained affection, so that fear for the first time became reverence in the true sense. The love in question is certainly unequal love—a love, that is to say, which exists in a relationship of inequality; but this inequality, again, is so far adjusted that man knows God not simply as a Father with authority over him, but as the Divine Spirit within him, and thus participates in the freedom of the children of God. Now, the same thing holds good of the relationship of filial piety. It is no longer merely the obedience of those who are under age—an obedience based upon authority; it is trust, and rests upon love. For the mature individual, moreover, there presents itself a new condition, which was dealt with by Greek philosophy, viz. that there are certain spheres of human life in which personal freedom must be maintained. That the family ties, as a natural growth, must be subordinated to the demands of religion is most emphatically asserted by Christ in the words: 'If any man cometh unto me, and hateth not his own father, and mother, and wife, and children, and brethren, and sisters, yea, and his own life also, he cannot be my disciple' (Jk 14²⁶). Here the limits of filial piety are laid down in the most rigid manner. The individual person meets with responsibilities in regard to which he must decide for himself, and parental authority becomes null and void. With filial piety Christianity thus combines the prerogative of personal freedom. As in relation to God men are no longer slaves but free, all the more is this the case in relation to their parents. Hence also the Apostle's warning that fathers must not exasperate their children, or provoke them to wrath (Eph 6⁴). This all-important stand-

point, however, which does justice to the individual person, involves also a transfiguration of the instinctive love of child to parent, in virtue of the definite bent now given to the filial spirit. The childlike spirit being looked upon as the condition of entrance into the Kingdom of God, filial piety itself assumes a new dignity, inasmuch as love to God may manifest itself in reverential love to parents—never, indeed, becoming identical therewith, as in ancestor-worship, while the autonomy of the individual is always preserved. Thus, however, arises a new problem, which, in the process of Christian development, has increasingly pressed for solution—the problem, namely, of reconciling filial piety with personal freedom. The difficulty is not felt so much during the tender age of the young as during their adolescence and eventual maturity. In the less responsible years of children, the quality of their obedience is gradually transformed, under parental management, as the parents' respect for the moral personality, i.e. for their child as intrinsically a child of God, exerts an influence—vaguely felt at first, but with time more and more fully realized—upon the young mind, so that mere submission gives place to an obedience freely rendered and animated by love.

Hence piety is not always of one and the same type. It varies, for one thing, in its relation to religion. Thus we find in its early stages an identification of the ancestor, or the head of the family, with the Deity; next it takes the form of a commandment and ordinance of God; while, finally, as reverent love to God, it likewise becomes the wellspring of filial piety in the stricter sense; but the differentiation between the Deity and the human parent, and the recognition of man's ethical personality, have as their result that the liberty of the individual, expanding with the years, becomes combined with reverence. Again, however, piety *per se* is of various kinds. It may be the immediate expression of a natural feeling of dependence and attachment; it may be the most prominent mode by which the Divine order of the world finds expression in the social hierarchy—or essentially a subordination based upon a legal arrangement; it may be a phase of the belief that rests upon authority; or, finally, a spontaneous and love-begotten reverence. We must not exclude any one of these various types. The natural basis of filial piety will, of course, remain, for it also is a manifestation of the universal order, while it likewise presupposes a legal relationship; nor can the authoritative factor be left out, though it must at length become permeated with the qualities of free affection, reverence, and devotion. As in general Christianity has emphasized the moral contrasts of life and at the same time wrought for their adjustment, and as the Christian world has assimilated all the results of human development in purified form, the same processes have been going on in the particular field under consideration.

First, then, as regards the natural basis of filial piety, we note that in primitive Christianity, and more particularly in the attitude of Christ, the natural side of the relation between child and parent was often strongly disparaged in comparison with the religious interest. Christ seems to set little store by the instinctive attachments of family life (Mt 10³⁷ 12^{48f.}, Jn 2¹, Lk 2^{48f.}), and it was this tendency which, ostensibly making for the disengagement of the moral and religious element from the natural, specially asserted itself during the Middle Ages. The monk severed himself from his family, and so did the spiritual dignitary, even, as in the case of the Pope, giving up his family name. Here we find the individual withdrawing himself from family bonds in order to gain admission to a higher fellowship. At the

Reformation, however, this separation of the ethical from the natural was vigorously combated, and the moral life was once more established upon the substructure of nature. Especially did Luther urge the importance of family life, maintaining that in relation to children, parents are the representatives of God, and must as such receive due honour. In opposition to the extreme individualistic standpoint, moreover, modern times have witnessed the vigorous advance of the view that the place of every man in the grand process of human history is due to his parents, that each is a link in the chain of generations, and must so utilize what has come down from the fathers as to make it his own—a view which cannot but foster piety towards the preceding age.

The conception of piety as an expression of the universal order was likewise less prominent in primitive Christianity; for the personal relation of man to man must always take the central place where the infinite value of personality is so forcibly insisted upon. The conception in question, while in no sense repugnant to the Christian view, first won full recognition in modern times, when men began to speak of a cosmic order, whether natural or ethical. It was not promulgated, of course, in the form given to it in the ethics of Confucius, according to which moral life is possible for man only as a member of the social hierarchy; the subjective and individual aspect is now too strongly emphasized to permit of that. But it is a commonplace of recent thought that a man ought to act as the organ of an objective moral order; and filial piety is based upon the objective order of family authority, although the problem of reconciling the latter with the growing or complete independence of the moral personality is raised by Christianity.

The legal aspect of piety, which in Rome involved the absolute authority of the *paterfamilias*, was also left unchanged in primitive Christianity, as the new faith in general avoided any direct attempt to alter the law. But the recognition of the infinite worth of every human being was certain in the end to have an influence upon the legal system. The limitation of the parents' disciplinary authority by the legal protection of the child's health, and the enforcement of school-attendance, even, if necessary, against the will of foolish parents, have probably not exercised so strong an influence upon piety as has the recognition of the legal independence of the adult offspring in founding a new family or in choosing a religious creed, or the recognition of the child's legal claim to a course of instruction in keeping with his station. Such enactments, indeed, may to some extent have a detrimental effect upon piety, as filial gratitude would appear to become necessarily attenuated where the young may actually advance claims in law, and as respect for the parents' will is apt to be diminished where the child's liberty is guaranteed by statute. But, while piety may have suffered as a result of this emancipation, such impairment was only a transitional stage towards a higher form of the filial spirit. It was rightly pointed out that, when the young realize that their legal claims find their final warrant in their own ethical standing as responsible personalities, their piety may well undergo a change, but need not cease to exist. A piety built upon such a foundation of law may even be of higher moral quality, so long as it is rendered without compulsion; and, if parents discharge their duty towards their children to the best of their knowledge and with sympathy, the gratitude and piety of their offspring will not be diminished by the children's being aware that their parents are legally bound to render them certain services,

FILIAL PIETY

and may be compelled to recognize their liberty. This view has been extensively adopted throughout the civilized world.

These conclusions become clearer still when we consider the case where piety is based upon the authority of the parents. That there is a legitimate side to this is self-evident. In relation to this view, nevertheless, a peculiar attitude was taken by primitive Christianity, as, on the one hand, it enjoined the obedience of children, even as Jesus was subject to His parents (Lk 2⁵¹); while, on the other, it conferred upon the adult the full liberty of responsible manhood, which Jesus laid claim to in plenary measure, and which Paul concedes to the Christian (1 Co 2¹⁶). When Christianity, however, at length took the form of a religion of authority, freedom disappeared, and the parents' will frequently set itself in opposition to the free development of the child, or was sometimes superseded by the power of the confessional, as specially developed among the Jesuits, who discussed casuistically even the case of the parricide. The fact that the Reformers were well-disposed towards the natural relationships had at first merely the result that parental authority was once more drastically insisted upon, the parents being regarded as representing God. But the liberation of the individual in the interests of his salvation was certain in the end to bring about the recognition of his independence on reaching the stage of maturity. His right to form his own religious belief, to select his profession, to please himself in the choice of a wife, and, in general, to decide for himself in all questions of public or private life—these rights, based upon the implications of personal responsibility, came at length into collision with the older theory which made parental authority supreme, and obedience the child's paramount duty. But the resolution of this antagonism did not bring about the dissolution of piety. For, while every person as such must eventually become fully accountable, and while youth, holding a brief for the future, stands for other views than age, yet, precisely on the ground of a mutual recognition of ethical freedom, a certain mutual toleration is also possible. We must also bear in mind the riper experience of the parents, and all else that gives them a claim to the gratitude of their children. The relation of subjection which belongs to immaturity may thus pass into one of friendship, qualified on the children's part by feelings of gratitude and reverence, and, on the parents', by considerate kindness and loving sympathy with the children's welfare and interests. Should the children feel themselves hampered by their parents, it indicates on their own part some misuse of that perfect freedom which is so sure of itself that it can respect views that would obstruct it, or some deficiency in that necessary breadth of view which can put itself in another's place, or in the will to follow the well-weighed counsel of those whose right and duty it is to give counsel; or else, on the other hand, there is in the parents a lack of that tolerant wisdom which is often infringed by a solicitude, well-meaning and kindly indeed, but defective in its regard for independence. Confidence on either side, and especially on the side of the parents, is the foundation of true piety. Such is the modern view, which welds piety and freedom into unity.

It would appear, accordingly, that from an instinctive attachment and dependence, an inchoate feeling of regard for parents which is still vaguely blended with the religious emotion, there is evolved a filial piety, which, as an unconstrained virtue, transfigures its natural foundation; a virtue which definitely disengages itself from reverence to the

Deity, and yet goes hand in hand with religion; which, precisely because of the substratum of legality which is the bulwark of personal freedom, may itself become all the more noble and free; which maintains personal responsibility in the face of mere authority, yet without violating respect, gratitude, or reverence; and which, the more that is conceded to it, grows ever the more expansive and ever the more intense.

A survey of the historical development of the quality shows us that piety, in the form of obedience, has been regarded as much more incumbent upon women than upon men. This seems to be so far justifiable, as the home is much more the focus of female than of male activities. Goethe has said:

'Nach Freiheit strebt der Mann, das Weib nach Sitte,'

and again:

'Dienen lerne das Weib, durch Dienen kommt sie zum Herrschen.'

Nevertheless, fairly considered, it is impossible to see why women should be deemed less responsible for their conduct than men. The tyranny still inflicted in many homes upon the daughters, who, perhaps from the excellent motive of safeguarding them against evil, are watched over like children, even when they have reached maturity, is a violation of personal responsibility; and, if such a surveillance, which as a rule does more harm than good, should appear necessary, it is a sign that our education of girls is at fault, and that it fails in due and timely consideration of the end involved in womanhood. More and more does the conviction gain ground that with daughters as well as with sons, piety must be harmonized with the status of an independent moral personality.

4. Modern aspects.—Filial piety is a virtue which becomes fully intelligible only when it is placed in the larger economy of moral life as a whole. In more recent times it is being brought under the theory of development. On the one side stands tradition, transmitted custom and transmitted creed, as represented, in the main, by the older generation; and on the other the innovations which are advocated by the ardent spirit of the young. Such antagonism is necessary if mankind is to make progress. There is, on the one hand, the tendency to hold fast what has been won; on the other, the desire to transcend it. A progress which does not build upon what is already attained, but is always breaking fresh ground, is no progress at all, but simply change, while mere constancy to custom issues in torpor. Now, as we cannot dispense with either aspect, the problem can be set in its true light only by reference to the experience of generations. In this way the injunction that demands piety towards parents takes a much wider range: it is now made to cover respect even for the particular views of the parents, or of the older generation, in the most various departments of life, and may thus become a mere encumbrance—the ally of prejudice, preconceived opinion, and rooted tradition, however preposterous. This conservative tendency, in fact, demands adhesion not only to family tradition, family property, and custom, but also to the time-honoured laws of State and Church. At this stage the innovator is always regarded as lacking in piety towards the preceding generation. Naturally such a one-sided point of view evokes and intensifies the opposite tendency—that, namely, which urges the necessity of reform, and refuses to be content with the simple development of traditional institutions. The reforming spirit, in fact, insists upon the right to submit all things to a thoroughgoing test as the necessary condition of all real improvement, and the younger generation is often harshly denounced for advocating that right. Quite unjustly, however; for piety does not consist in clinging to

the old, or in reluctance to put existent conditions to the test, but rather in the respect which we accord to the labours of our forefathers, and which really involves criticism thereof. Nothing of a spiritual character can be mechanically appropriated; spiritual things can be assimilated only after they have been personally analyzed and sifted to the bottom, and it is precisely in this conscientious scrutiny that true piety stands revealed, just as parental advice is really respected when it is conscientiously weighed.

Moreover, though every generation has its own task, yet fundamentally one and the same process is common to all. Each generation confronts an older, to which it owes a dutiful regard, and which it must in all reverence criticize; but it likewise begets a younger, from which it *claims* a dutiful regard, and must expect a reverent criticism. That this circumstance is the source of many misunderstandings between old and young may be gathered from the life-stories of nearly all great men. In the dissensions which thus arise, the young sometimes let their piety take the sinister form of humouring the old, of dissembling a little with them, and pensioning them off, so to speak, with a genial show of respect. But a policy of this kind manifestly fails to do justice either to the dignity of age or to the obligation of veracity, and is justifiable only when the old have fallen into the state of incipient torpor, and set themselves, without sympathy or intelligence, against every new movement. It must, nevertheless, always remain the more excellent way to seek, wherever practicable, for a mutual understanding, as there is a much higher degree of genuine piety in a modestly expressed opposition to the opinions of the aged than in ignoring them altogether; while, again, the very endeavour to reach an understanding implies a partial recognition of the older point of view. Every single generation of men is an end in itself, something far more than a stage of transition to its successor. Just as children must not be treated as purely dependent beings, but as responsible personalities, who, as ends in themselves, have a specific right to free self-expression; so too are parents ends in themselves, and fail in their duty when they omit to bring—along with and in their parental love—their own standing as ends in themselves to the notice of their offspring. This prerogative, indeed, must be fully recognized by the younger generation, just in order to conserve their filial piety, even amid diversity of opinion and tendency. To parents is due, not only gratitude for all that they have been and done on the children's behalf, but also respect, as ends in themselves, and as having the same claim to deferential recognition of their standpoint as the children have in regard to theirs. It is precisely the profound sense of the worth of personality that begets the mutual recognition of the right of unfettered judgment, while this again carries with it the true piety; so that the young who possess this quality still recognize, amid all zeal for their own convictions, the equal right of parents to theirs, since, as a matter of fact, had the parents not possessed such convictions, the children could never have won their own, and this recognition, moreover, they naturally combine with sentiments of gratitude and reverence.

In this discussion the individual factor must certainly not be ignored. In the first place, human beings do not all develop at the same rate, and the transition from simple obedience to spontaneous piety does not occur at the same age in all; while, again, men are variously constituted by nature, some having a predilection merely to carry on what has been begun, a congenital bias towards the ancient and the traditional, others being naturally

inclined to criticism, or gifted with creative power. Now, the former class, as compared with the latter, will discharge the duties of piety all but instinctively, simply because they more easily avoid collision with parental authority. Yet it would be radically wrong to regard them as of superior worth. Some natures develop most fully when stimulated by harsh opposition; others reach maturity by a gentle process and without special incitation. All will agree that a judicious training must allow for such inherent differences of temperament. The genuine piety will be the fruit of a right education. Nor must we demand the same outward manifestation of piety from both types of character. The withholding of the requisite liberty or of a large-hearted confidence will be much more keenly felt by some than by others. The more diffident spirit will sink to a state of mere servile submission, while another will avoid a too harsh infringement of piety by resorting to insincerity, or will ruthlessly assert his liberty and become totally estranged. From the moral point of view the right policy in the former case is to intensify the desire for freedom without diminishing his piety, and in the second virtually to emancipate him, so that his candour may be preserved, and that he may see in his parents a corrective influence, disposing him to discretion. The piety of the one will show a proclivity to subordination, that of the other will tend more towards a free recognition of the parents' personal worth. The former must temper his bias towards dependence by his sense of what personal responsibility involves; the latter must qualify his bent towards liberty by keeping his dissentient views apart from his personal relationships, and by habituating himself to yield the same respect for others' opinions as he claims for his own.

A specially trying situation is brought about when the children, with a wider experience of life, grow out of their parents' circle of thought and pass beyond their spiritual horizon. In such a case piety may manifest itself more in the form of gratitude, adjusting itself in word and act to the mental perspective of the parents, so as to yield them all affection, yet without insincerity. Here, if anywhere, a certain indulgent treatment of the old is necessary, such as could not be vindicated were parent and child at the same stage of culture and intelligence.

Again, piety is variously estimated according as the particular family in which it is manifested inclines towards the aristocratic or towards the democratic point of view. In the one case, piety preferably expresses itself as a recognition of family traditions; in the other, it can have no support but freedom, the unforced honouring of one's parents. The aristocratic type of piety tends to find its object in the family and the family bond, while the democratic centres rather in the individual. The former tends towards an exclusive family pride more readily than the latter; it is prone to become egoistic and illiberal, as it ignores the due limit of family interests. For family piety in no sense implies that we shall think less of those who are not our own kith and kin. Such a spurious family pride sometimes asserts itself very unpleasantly in marriage, as, e.g., when one of the parties belongs to a family whose piety has degenerated into mere arrogance. A high appreciation of one's own lineage has an adequate warrant in the ethical obligation under which a man stands to his family, and to his parents in particular, as also in the natural relationship which manifests itself specially in personal attachment; but neither of these provides any justification for the disparagement of other families.

These considerations go to show not only that piety may be modified in various ways in virtue of individual conditions, but also that it has its limits,

since it must neither violate the freedom of fully responsible individuals, nor detract, through exclusiveness, from the respect due to persons or families not of one's own kindred.

The contrast between the older and the more recent conception of piety may be gauged from the circumstance that, whereas formerly the faith and customs of the fathers formed a kind of rallying-cry, it is now a common practice to describe an objectionable view as 'behind the age.' This changed attitude is largely due to the spread of the evolutionary idea. Nowadays men often lament that piety is on the wane. Such a complaint, however, would be justified only if the personal relation towards parents, or towards superiors generally, were wanting in dutiful regard, or if respect for what has been bequeathed to us by the older generation were becoming extinct; but it is not justified by the mere fact that the younger generation strives to assert its independence, even in a critical spirit. On the contrary, a radical criticism is the condition of all progress. If, nevertheless, owing to the inability of the older generation to sympathize with the innovating tendencies of the day, conflicts cannot always be avoided, piety still demands that the young should temper their behaviour towards their parents with all due reverence and gratitude, and strive so to mitigate the inevitable differences by kindness that a rupture may be avoided, wherever possible, without any sacrifice of conviction.

Lastly, as regards the filial relation to God. Like all metaphors relative to Deity, that of sonship is susceptible of various interpretations. We may conceive of it as implying the dependence of a child who yields a trustful obedience. Divine sonship in this sense will consist in a man's renunciation of his own will, so that in perfect trust he may obey the Divine commandments alone. But the question then arises, Whence do we derive our knowledge of these commandments? If we depend in the last resort upon an infallible revelation, with either the Scriptures or the religious community as the channel thereof, it is obvious that we are not yet of age in spiritual things. It is a commonplace of history that the theory of authority has found acceptance even in Christendom. But, if no such blind acceptance be required, then the sacred book or the community does no more than provide the stimulus towards personal experience and personal thought, and, accordingly, we dare not evade the duty of examining the commandments we are required to obey. In this way the Divine sonship passes into its voluntary form: the man to whom it is vouchsafed is exalted by his knowledge thereof to a position of freedom, nor does the reverence before God which is conjoined with this knowledge collide with his sense of moral freedom, just because the Divine sonship harmonizes with his inmost nature, and because the Spirit of God, far from destroying his personal activity, rather anneals it to the highest issues. Thus is brought about a consenscence of theonomy and autonomy, of the desire to do God's will and the desire to know how we must act, of the knowledge of Divine law and the knowledge of moral obligation. Our freedom reaches its perfection in our sonship; our spirit, apprehended by the Divine Spirit, and in no other way, is raised to a state of complete independence of the world and full self-activity, and in its own worth and responsibility feels itself enlarged to the utmost. One who is animated by this spirit of Divine sonship will also maintain his filial piety towards his parents unimpaired, and without surrender of his independence.

A. DORNER.

FINNO-UGRIANS.¹—The Finno-Ugrian family of languages is probably of cognate origin with Samoyed, and possibly with Turkish as well, although the linguistic affinities of the so-called Ural-Altaic group cannot yet be regarded as established. The original seat of the Finno-Ugrians seems to have been in the eastern part of Central Russia, between the Volga and the Southern half of the Ural range; and here, if we may judge from a number of loan-words in their languages, they must have lived in proximity to a people of the Indo-European stock. The Finno-Ugrian family of languages has branched out towards east and west, forming the following divisions: (1) the Ugrian group; (2) the Permian group; (3) the Volga group; (4) Lappish, and (5) the language of the Baltic Finns.

1. Of the Ugrians the most southerly ramification, the Magyars, migrated to the lands lying upon the Danube. The Ostiaks and Voguls, on the other hand, were driven towards the north and east, the former crossing the Ural Mountains into Siberia.

2. The Permian group is composed of the Votiks in the district adjacent to the upper Kama and the Vyatka, and the Siryans who settled to the north of that region.

3. The Volga group comprises the Cheremisses and the Mordvins.

4. The Lapps are believed to be an Arctic people of unknown origin who adopted a Finno-Ugrian tongue.

5. The Baltic Finns migrated westwards to the vicinity of the Valdai Hills, and thence moved gradually towards the Baltic, which they appear to have reached in the first half of the 1st cent. A.D. In the course of their migration they came into contact with Lithuanian, Teutonic, and Slavic tribes. Of the Baltic-Finnish tribes the Vepses in the southern part of the Government of Olonetz and the northern part of that of Novgorod, the Votes living to the east of the town of Narva, and the Livonians in the northern extremity of Courland now survive in inconsiderable numbers only. The Estonians inhabit Esthonia and the northern part of Livland. The Finnish population of Finland is descended from two groups of immigrants from different points—one from Esthonia, which crossed the sea into south-western and western Finland, and the other from Ingria, now the Government of St. Petersburg, to Karelia. The great mass of the Karelians migrated in a north-easterly direction into the Governments of Olonetz and Archangel, while a considerable proportion of the Finnish Karelians subsequently found their way to the same districts in the 17th century. The Karelians in the Valdai region and the Government of Tver had their origin in immigrations from Ingria, Finland, and Olonetz, which took place c. 1650.

LITERATURE.—The first sketch of a Finno-Ugrian mythology was given in the masterly lectures on Finnish mythology delivered by M. A. Castrén in 1853, and published in Swedish and German in his *Nordische Reisen und Forschungen*. A work dealing with the heathen worship of the Finno-Ugrian peoples, edited from the posthumous papers of Julius Krohn, and containing supplementary matter by Kaarle Krohn, was published in the Finnish language in 1894; a Hungarian translation, with further additions by A. Bán, appeared in 1908. This work contains a survey of the sources, and four chapters dealing respectively with (1) sacred places, (2) idols, (3) magicians

¹ This article is mainly intended to supply the ethnographic details necessary for the artt. following, which will deal with the religion, etc.

and sacrificing priests, and (4) sacrificial rites. In 1895, Matti Waronen published a dissertation in Finnish dealing with the worship of the dead among the ancient Finns and taking cognizance of all the Finno-Ugrian peoples, and three years later this work was augmented by a thorough investigation of the various feast-days observed by the Finns in honour of the dead. In 1913 the firm of Werner Söderström began the publication of a great series (in Finnish) which will deal exhaustively with the mythology of the Finno-Ugrian peoples.

KAARLE KROHN.

FINNS (Ancient).—1. Sources.—Bishop Michael Agricola, the reformer of Finland, in the preface to his Finnish translation of the Psalter (1551), composed in verse a list of the deities worshipped by the Finns in heathen times. This list was modelled upon the catalogues of classical muses and other deities given in the versified grammars of the Middle Ages. The idea of giving an account of the ancient Finnish deities, however, arose independently in Agricola's mind, and had no connexion with the attempt of Johannes Magnus to construct a Scandinavian mythology, as found in his *Historia*, published three years after Agricola's book. In the 17th cent., Agricola's list was translated into Latin, Swedish, and German, and until the middle of the 18th cent. was appealed to—apart from a few meagre notices from mediæval times—as the only source for Finnish mythology.

But a new and singularly copious source was disclosed in H. G. Porthan's *de Poesi Fennica*. On the basis of the epic and, above all, the magic songs of the Finns, Porthan's pupil, Christian Lennqvist, published in 1782, under his master's guidance, a dissertation entitled *de Superstitione veterum Fennorum thetica et practica*; while in 1789, Christfrid Ganander, Porthan's friend and fellow-worker in this field, issued a *Mythologia Fennica*, dealing with the mythological names in alphabetical order, and this was reprinted and issued in a German edition in 1822 (J. H. Rosenplänter, *Beiträge zur genaueren Kenntniss der estnischen Sprache*, xiv.).

After the publication of the *Kalevala*, compiled by Elias Lönnrot from Finnish folk-songs, in 1835, and of the fuller recension in 1849, this great epic was used as the principal source for Finnish mythology. The names of the gods and other data furnished by Agricola were now set aside as less reliable and to a considerable extent unintelligible. But the recent study of the *Kalevala*, inaugurated by Julius Krohn, has created a revolution in Finnish mythology. From the printed editions of the epic, scholarship has turned to the manuscript drafts of the songs in their manifold variants, and the folk-songs have been critically studied with reference to their geographical distribution. These investigations have made it clear that the epic and magic songs of the Finns are largely of mediæval origin, and that their mythological elements, as in the case of the Edda, are permeated by Christian ideas. A further result is that nearly all the names given by Agricola have received a satisfactory philological explanation, and that the value and trustworthiness of his evidence regarding the actual paganism of Finland—which forms the subject of the present article—have been recognized and appreciated. The poetic mythology of the Finnish songs will be dealt with in the art. KALEVALA.

2. The objects of worship.—(a) *The dead*.—The cult of the dead, which is found among all the Finno-Ugrian peoples, is, as elsewhere in this race, the earliest traceable form of religion also among the Baltic Finns.

The Finnish language has retained words which, according to E. N. Setälä (*Finn.-ugr. Forsch.* xii. 170), go back to Finno-Ugrian terms for the spirits of the dead, as, e.g., Finn. *koijo*, 'evil spirit'; and even to roots common to Finno-Ugrian and Samoyed, such as *kalma*, 'corpse,' 'grave,' 'spirit of the dead,' 'death.' The Finn. *marras* or *maria*, 'a dead person,' was bor-

rowed from some Indo-Iranian language in the Finno-Permian period (Skr. *mr̥tas*). In the specifically Finnish epoch the term *kouko*, 'ghost,' was taken over from the Lithuanian (Lith. *kaukas*, 'one under the earth'). Most of the Finnish names for the dead have been borrowed from Teutonic dialects, as, e.g., *vainaja*, 'one dead' (Goth. *vainahs*, 'wretched'); *peikko*, *peijakas*, or *peijanen*, 'ghost,' 'evil spirit,' and *peijaiset*, 'funeral feast' (O. N. *feyr*, 'fated to die, Scots 'fey'); *tuoni*, 'a dead person,' and 'death' (cf. Swed. *dana-arf*, 'an inheritance falling to the State'); *kyöpelä* or *kopeeli*, 'ghost' (cf. Germ. *Kobold*), etc.

Agricola refers to the Finnish worship of the dead as follows: 'Food was taken to the tombs of the departed, and there the people mourned, wailed, and cried. Likewise the *Menninginen* [cf. Germ. *Erdmannchen*] received their oblations when the widows married again.' Until quite recently the Finns in Ingria observed the practice of placing in the tomb a vessel filled with pease, flesh, bread, butter, and the like. Among the Karelians of the Greek Church it is still the custom to take food to the grave on certain anniversaries, and to entertain the dead in mournful songs to partake thereof. After a while the food is distributed among the beggars who happen to be present. In Lutheran—formerly Roman Catholic—Finland, the so-called feast of *Kekri* was held annually on the 1st of November. In the dwelling-house, on the eve of the celebration, a table was spread, as at a funeral feast, in honour of the former master and mistress; the bathing-house was heated and supplied with all requisites for washing. Sometimes a dressed straw doll with a painted mask was set up in the corner where the stove stood. According to Agricola, *Kekri* 'promoted the growth of cattle.' The word *kekri* is also used in the sense of 'ghost,' but it has not yet been explained etymologically. Long before the festival of *Kekri* came to be formally conjoined with All Saints' Day, it was associated with an indefinite period in autumn, as appears from the Finn. name *Marraskuu*, 'month of the dead,' for November, and the Esth. *Hingekuu*, 'month of souls,' for October. Moreover, in keeping with Scandinavian ideas, but more especially in West Finland, visits from the dead were expected also during the Christmas season.

(b) *Household spirits*.—As a further result of Scandinavian influences, the worship of local guardian spirits, which sprang from the cult of the dead, became diffused also among the Finns. The Finn. word *haltija* (from *hallita* [a Teut. loan-word], 'to rule over'), corresponds to the Swed. *rå*, *rådande*, 'to be able.'

The *talonhaltija*, or guardian spirit of the home, usually represents the person who had been the first to kindle a fire, or, by other accounts, the first to die, in the house. The two views are combined in the statement that the first fire was made by the earliest representative of the family; it is often said, indeed, that the *talonhaltija* is the spirit of the first master or mistress of the house. The appearances of this domestic spirit usually precede a death or other misfortune; it is kindly disposed, interested in the welfare of the house, and does not like to be startled.

From the domestic spirit is to be distinguished the capricious *tonttu* (Swed. *tömte*)—who, according to Agricola, controlled the household—although the two are often confused. The *tonttu* must be brought from the churchyard, and a special apartment with a well-provided dining-table must be prepared for him. In the matter of offerings he is very exacting, but he enriches the giver with corn and money. Besides the *tonttu*, Agricola mentions the *kratti* (O. N. *skratti*), who 'took care of property,' and who is recognized more particularly in Esthonia, where he is also called *puuk* (O. N. *pūki*), *tulihäänd*, 'fiery tail,' 'shooting star,' and *piuhänd* (cf. Swed. *tömte-bise*). A special type of the domestic spirit among the Finns, and likewise of Scandinavian origin, is the butter-bringing *para* (Swed. *bjåra*).

From the household spirit must also be distinguished the earth-spirit, *maanhaltija*. When a house is to be built, the consent of the latter must first of all be obtained by dreams or divination. The people then make an offering to him by planting a tree, with which he thereafter maintains a special connexion.

When the custom of burying the dead in the vicinity of the dwelling-house gave place to interment within and around the church, a tutelary spirit of the church or churchyard was found in the *kirkonhaltija*, or the *kirkkomaanhaltija*, the first person buried there, with his subject spirits, the *kirkonväki*, or 'church-folk.'

Besides the spirits of the dwelling-house there are also guardian spirits of the bathing-house, the granary, the threshing-barn, the stable, and the cattle-shed, some being called *haltija*, and some *tonttu*. The smithy likewise may be provided with protective spirits, the *pajanväki*, 'smithy-folk,' especially by bringing thither a little earth from the churchyard.

(c) *Forest-spirits and water-spirits.*—The guardian spirits and the 'people' of the forest (*metsänhaltija*, *metsänväki*) and of the water (*vedenhaltija*, *vedenväki*) are unmistakably localized spirits of the dead. They have the same form, the same character, attributes, and functions as the latter, and are occasionally even called *manalaiset*, 'those under the earth.'

One of the forest-deities specified by Agricola is *Liekkio*, 'the flaming one,' who 'presided over plants, roots, and trees'; he was the soul of a child who had been buried in the forest, and appeared as the *ignis fatuus*. *Hiisi*, who 'bestowed victory upon those dwelling in the forest,' is mentioned by Agricola also in the sense of a place, viz. a sacred grove, and the word still bears this meaning in Esthonian. As the sacrificial groves occupied the site of ancient places of habitation and burial, *Hiisi*, as the guardian spirit of the sacrificial grove, can be traced to an origin in manistic ideas. In Western Finland the departed are spoken of as 'Hiisi's folk.' But *Hiisi* is more commonly thought of as a giant of ancient times, and a further designation of this giant given by Agricola is 'the son of *Kaleva*.' *Hiisi* is also identified with the *Vuori-peikko*, the mountain-ghost, and, topographically, with the mountain itself. The 'people' of the mountain, the *vuorenväki* or *kallionväki*, are of the same type as the 'people' of the church, the forest, and the water, and belong to the group of localized spirits of the dead; the idea that mountains were the abode of the dead was taken from the Scandinavians. Finally, under the influence of Christianity, *Hiisi* came to bear an evil repute, being personified as the Devil and localized as Hell. From a diminutive form of his name, viz. *hitto*, is probably derived the word *hittavainen*, signifying the spirit that 'brought hares out of the thicket' (Agricola).

The word *Tapio*, denoting the deity who 'provided prey' for the hunter, was, like *Hiisi*, applied originally to a locality, probably to the hunting-ground; as a spirit, it is invoked, together with the *metsä*, 'forest,' in the magic poems. *Viran-kannos*, who 'guarded the oats,' is akin to *Viran-akka*, the Lappish goddess of hunting, and, as regards his name, is merely a tree-stump (*kanto*) combined with a snare (*virka*). *Nyrkes*, again, who 'supplied squirrels from the wood,' is neither more nor less than St. George (*Jyrki*). The *metsanneito* of Western Finland is represented as a forest nymph, beautiful in front, but hollow behind, and was adopted from the Swedes in modern times. The bear, on the other hand, the worship of which is closely connected with the worship of the dead, is a very ancient divinity of the forest.

As regards water-spirits, Agricola makes mention

of *Veden emo*, 'the mother of the water,' who 'guided fish into the net,' and *Ahti*, who 'brought fish out of the water.' Probably *Ahti* likewise is not a proper name, but a general term for a guardian spirit, since it may be applied also to the spirits of the forest and the earth (*metsänahhti*, *maanahhti*). To the class of water-spirits must also be assigned *Väinämöinen*, who 'fashioned songs.' The word *väinä* signifies the still water at the mouth of a river. The gift of music and poetry is generally assigned to the spirits of the dead, and especially to those who inhabit the water (cf. the Swedish *Näck*, which is well known also among the Finns [*näkki*]).

(d) *The thunder-god and other agricultural deities.*—Of the agricultural deities the most important was the god of thunder, whom the Finns found both among the Litu-Slavs (as *Perkunas*, *Perun*) and among the Scandinavians. The Finnish names *Perkele* and *Piru* now denote the Devil, but in an Esthonian dictionary of 1660 the expression *Perkun nool* is given as equivalent to 'thunderbolt.' The Esth. *kõuke*, *kõu*, 'thunder,' must be regarded as cognate with the Lith. *kaūk-spennis*, 'thunderbolt,' and O. Pruss. *cauz*, 'devil.'

The battle-cry of the Esthonians c. 1200 was *Tar-abitha*, 'Tar-help!' which points unmistakably to the Norse Thor. According to Agricola, the god *Turisas*, 'father Tur,' conferred victory in war. As a rule, however, the Finns designate the thunder-god by their equivalents of the Swed. terms *Gogubben*, 'good old one,' and *Gofar*, 'little father,' 'gaffer,' viz. West Finn. *Isanon*, 'little father,' East Finn. *Ukko*, *Ukkonen*, 'old man,' 'grandfather.' The Finn *Aijo*, 'the old one,' likewise was formerly used as the name of the thunderer, as appears from the Esth. *ai*, 'thunderer,' 'devil'—the latter sense being retained also in the Finnish songs.

Of the worship of *Ukko* among the Eastern Finns, Agricola writes as follows:

'Ukko's goblet was drunk at the sowing of the spring seed; Ukko's chest was also brought, and then maid and wife drank to excess, and, moreover, many shameful things were done there, as was both heard and seen. When Rauni, Ukko's wife, raved, Ukko breathed vehemently from the ground (or, from the North?), and this brought thunder-showers and the year's harvest.'

A still extant petition from peasants in E. Finland, written in Swedish and dating from Agricola's time (1545), mentions the fine exacted for drinking *Thornd's gildhe*. A reference to *Ukon vakat*, 'the chests of Ukko,' occurs also in the report of an ecclesiastical inspection held in 1670. Vestiges of this sacrificial feast have been noted within modern times. According to one account, the best sheep was selected from the flock, and slaughtered on a given day. Its flesh was boiled, and a little of this and of various other kinds of food was put in chests of birch-bark, and carried to the sacred mountain of Ukko (*Ukon vuori*). The victuals, together with a large quantity of beer and spirits, remained on the mountain overnight. Such portions of the food as were found there in the morning—Ukko being supposed to have taken a share—were eaten by those who took part in the festival, but a little of the various liquors was poured upon the mountain, to the intent that the summer might not be too dry.

According to another account, the people, when they thought that the drought had lasted too long in spring, placed vessels containing rye or barley on the roof of the dwelling-house of a particular homestead selected by lot. The god was supposed to know why this was done, and caused it to rain, so that the grain might be moistened. This was then made into malt, and beer was brewed therefrom. The day of prayer in June—the time of drought—was celebrated out of doors. All the

men and women of the village, and especially the older people, assembled at the homestead. The people partook of the beer, and of various foods, and prayer was made for the kind of weather required. No one who came to the festival of the *Ukon vakut*, 'the chests of Ukko,' brought provisions for himself, as it was considered an honour to the homestead that the celebration should be held there. Lots were cast at the close to decide where the feast was to be celebrated the following year.

The various acts of exposing to the rain the corn from which Ukko's beer was brewed, of making a libation of beer on Ukko's mountain, and, according to an Ingrian account, of washing the beer-barrels, as also, according to Agricola, of drinking beer to the stage of intoxication, were all designed as magical devices for bringing thunder-showers in the time of drought.

To *Rauni*, the consort of Ukko, whose name occurs in the songs as *Röönnikkä*, corresponds the Finno-Lappish *Raudna*, to whom were consecrated the berries of the mountain-ash. In Swedo-Lappish, in fact, *raudna* denotes the mountain-ash, and, as E. N. Setälä has shown, it is a Scandinavian loan-word (Icel. *reynir*, Swed. *rönn*, cf. Scots 'rowan'). The Finns also regarded the mountain-ash in their courtyards, and especially its berries, as sacred. The idea that Ukko and Rauni were husband and wife finds its explanation in the close relations which both Teutons and Litu-Slavs believed to subsist between the god of thunder and the oak. In all likelihood the worship of the oak pertained properly to the acorns, which in remote times had served as human food.

At the Ingrian festival of Ukko, songs are sung about a deity called *Simpä* or *Pellervo*, who is first of all raised up—though to no purpose—by the son of Winter, and then at length brought hither by the son of Summer, so that he may speed the growth of the corn. In Finland this god was represented as being conveyed from an island—sleeping upon a corn-ship, or else riding in a coloured sledge, with his mother as his wife. These ideas emanate from the Scandinavian cult of Frey, which found its way also to the Lapps. The term *Simpä* (a Teut. loan-word (Germ. *Simse*, *Semse*, 'bulrush')) signifies a species of fodder-grass (*Scirpus sylvaticus*, the wood club-rush), one of the earliest products of spring, which is gathered for the cattle when the snow melts, and the roots of which are readily eaten by children. In Ingrian songs, *Pellervo* is used as equivalent to *pellava*, 'flax,' although it may possibly be derived from *pelto*, 'field.'

Among the gods of the various kinds of grain, as recorded by Agricola, *Rongoteus*, 'who gave rye,' is to be identified with the *Runkateivas* found in the songs as the god of rye; the name occurs also in the abbreviated form *Rukotivo*. It is a Teut. loan-word (cf. Icel. *rúgr*, 'rye,' and *tívar*, 'gods'). *Pellon Pekko*, 'the Pekko of the field,' who 'furthered the growth of barley,' is still recognized among the Estonians of the Greek Church. A large wax figure, bearing the name *Peko* and belonging to the village as a community, was kept in a corn-chest and entrusted to the care of a peasant chosen every year, and was invoked at seed-time. The name *Pekko* is to be traced to the same Scandinavian word from which *Byggjiror* or *Byggvir*, the name of Frey's servant, and the Swed. *bygg*, 'barley,' are derived. The etymology of the name *Egres*, denoting the deity 'who created peas, beans, and turnips, and brought forth cabbage, flax, and hemp,' has not yet been ascertained. A deity of turnips called *Agräs* has quite recently come to light among the Greek-Orthodox Finns on the Russian frontier. This name is given to a turnip—latterly also a potato—formed of two that have

grown together. With feigned difficulty such a root is carried on the shoulder to the storage-pit. The bearer falls three (or ten) times to his knees or at full length, saying, 'I cannot carry it, holy Agräs; it is too heavy for me.' The prayer to Agräs is in these words: 'Holy Agräs, provider, cause to grow hundreds and thousands of the same sort; bring us turnips as thou comest to the pit.' According to another account, Agräs is entreated to bring the worshipper a certain quantity of turnips from the storage-pits of others.

Still another agricultural deity is mentioned by Agricola, viz. *Köndös*, who made 'reclaimed lands and tilled fields.' According to E. N. Setälä, the name is derived from a Finno-Ugrian word meaning 'seed-corn,' 'grain.'

(e) *Deities of the air and the sky.*—*Ilmarinen* (from *ilma*, 'the air'), who, according to Agricola, 'gave calm weather and bad weather, and furthered travellers,' is to be regarded as a Finno-Ugrian god of the air. The name *Ilmar*, applied to the supreme deity of the pagan Votiaks, corresponds phonetically to *Ilmarinen*. But the position assigned to *Ilmar* is to some extent due to the influence of the conception of deity current among the neighbouring Christian and Muhammadan peoples. *Ilmarinen*, again, can hardly be without some connexion with the Scandinavian *Njord*, who reappears with Thor and Frey in Lappish mythology. The figure of *Ilmaris*, 'the ruler of the storm and of bad weather,' has been found, together with that of the thunder-god, on the magic drum of a Finnish Lapp.

The Finnish word *Jumala*, which is found in Icelandic literature as early as 1026 (*Jómali*), and is now used by the Finns not only of the Christian God, but for 'god' in general, is supposed by some to mean 'heaven,' being explained either as a Finno-Ugrian root conjoined with the Samoyed *Num*, or as an Indo-Iranian loan-word (cf. Skr. *dyumant*, 'clear'). Others, again, regard it as connected with the Vogul *jomas*, Hung. *jó*, 'good.' *Jumala* would in that case signify the possessor of the good, of happiness, i.e. 'the blessed one' (cf. Slav. *Bog*, 'God,' and *bogatyi*, 'rich'; also Skr. *bhaga*), and, applied originally to the 'blessed' dead, would come to denote deity in general, and at length, under the influence of a higher religion, to serve as the specific designation of the one supreme God.

Agricola refers, finally, to the worship of 'many others—of stones, stumps of trees, the stars, and the moon.' But the statement is made purely for the purposes of his scheme. Among the Finns there is as little evidence for the worship of the heavenly bodies as for fetishism. There is no trace here of the sun-worship which the Lapps adopted from the Scandinavians. Agricola's references to the moon, viz. that *Rahkoi*, 'hoar-frost,' 'makes the moon black in parts,' and that *Kapeet*, 'the animals,' 'ate up the moon,' simply reflect popular notions regarding lunar markings and lunar eclipses.

3. *Sacrifice.*—It has been asserted that the Finns did not practise blood-sacrifice; but this is a false inference from the circumstance that such oblations are not mentioned in the epic and magic poems. There is evidence to show that about the end of the 12th cent. the Estonians were in the habit of sacrificing oxen, goats, dogs, and even human beings. The Karelians, who were governed from Novgorod, were in 1534 formally accused of sacrificing oxen, sheep, and birds, and even of immolating their children in secret. Until quite lately the Greek-Orthodox Karelians on either side of the Finnish frontier used to perform communal sacrifices of oxen and rams beside their churches, these celebrations having been described and portrayed as recently as 1890. In the most northerly part

of Russian Karelia it is the practice, on the 15th of August (O.S.), to bring a number of votive wethers from a fairly large surrounding area to the village church. In the woodland before the church a fire is kindled early in the morning; a cauldron is scoured, and water poured into it. The slaughterer takes one sheep after another beneath the penthouse, in the flooring of which there is a hole with a lid, and presses the animal's neck upon this hole. Then, calling on an assistant to hold the sheep fast by the feet, he runs his knife into its throat, and lets the blood flow down under the flooring. The animal is next flayed outside the enclosure. The fleece also falls to the church, but the owner of the animal may redeem it for a small sum. The flesh is then cut in pieces and boiled in the cauldron. The head and feet of the sheep thus slaughtered are burned in the fire. The boiled flesh is put into large boxes of birch-bark, and carried outside the enclosure. The broth is made into a gruel with peeled barley collected from the villagers, and into this the fat of the animal is stirred. The people then hold united prayer in the chapel, and the sacrificial feast begins. First of all, the meat, which has been fumigated with incense, is eaten. Every donor of a sheep brings a loaf with him, and the villagers also contribute. Meanwhile the pottage is ready, and is put into similar receptacles of birch-bark. Only the men—with heads uncovered—take part in the ceremony, the women and children being present merely as spectators. Bones and dropped fragments of meat are gathered up and placed in a covered box made of knee-pine chips, and this is bound with a rope to which a stone is attached, and cast into a deep pool near at hand, for nothing must be left to be eaten by the dogs.

4. **Magic.**—Another popular but equally erroneous idea is that the magic of the Finns rests upon a fanciful belief in the power of the 'word.' As a matter of fact, our earliest record of a Chudic magician—in a Russian Chronicle of A.D. 1071—tells how he summoned up spirits while lying dumb, i.e. in the ecstatic state. The sacrificing priest of the Estonians passed beyond this primitive shamanistic stage, and (c. A.D. 1200) became what the Latin Chronicle of Henry the Lett speaks of as a *harioius*. The practice of divining by means of a horse—by observing which foot it lifted first, as described by that Chronicler—was adopted by the Estonians from the Slavs or Lithuanians. The heathen priests of the Karelians are called *arvui* (*arvoja*, 'one who knows the art of casting lots') in the official Russian libel of 1534. A specially popular practice among the Finns, even in recent times, was divination by the sieve, which came to them by way of the Scandinavians and the Russians. Finnish magicians probably uttered prayers at their sacrifices even in heathen times. The sacrificial prayer of an Estonian priest of the thunder living in 1644, and the Ingrian song of Ukko which tells of Sämpsä, may perhaps date from the heathen period. But it was only under the influence of the mediæval spells of Christian origin current among the Scandinavians that the Finnish magicians composed and elaborated their magic songs.

LITERATURE.—The main sources are indicated in § 1 and in the art. FINNO-UGRIANS. KAARLE KROHN.

FIRE, FIRE-GODS.—The discovery of a method of making fire may be described as the most important step in progress ever made by the human race. To dilate upon the obvious reasons for this description is unnecessary. The history of fire-making alone would fill a volume. Consistent with its cultural importance is the voluminous mythology and ritual concentrated upon fire in early

civilization; the modern anthropological literature of the subject is scarcely less voluminous.

Previously to the scientific development of the 19th cent., the general view was that fire-making, together with all culture, was a quite recent achievement of mankind. Stories of contemporary savage tribes to whom fire was unknown are still discussed as possessing a possible foundation in fact.¹ But recent calculation places the knowledge of fire-making as early as the Second Inter-glacial epoch, approximately more than 400,000 years ago. The Krapina men possessed the knowledge of fire-making, and there is no reason to suppose that the early Palæolithic period failed to evolve the art. In all likelihood the first suggestion came neither, as Peschel thought, from volcanic fire, nor, as others have thought, from forest fires or trees struck by lightning, but from the inevitable sparks produced in the manufacture of flint implements.

1. **Fire-making.**—The chief primitive methods are frictional, percussive, compressive, and optical. The modern is chemical. Among barbarous peoples of to-day the frictional is the most used; the compressive method comes next. The percussive—probably the oldest—lasted the longest. Mechanical inventions making it efficient were responsible for its remaining in use till a century ago. Optical methods have been rare, as is natural; chemical methods are barely a century old.

(a) The simplest frictional method is the *stick-and-groove*. A blunt-pointed stick is run along a groove of its own making in a piece of wood lying on the ground.² It is a method chiefly obtaining among the South Sea natives. The Central Australians employ it as well as the 'fire-drill.' Hard wood is used for the moving component, soft for the stationary. In the Arunta tribe

'two men will sit down opposite to one another, holding a shield steady on the ground between them by means of their feet; then taking one of their spear-throwers they will each of them, holding on to one end, pass it vigorously backwards and forwards with a sawing motion over the shield, the surface of which soon becomes marked by a groove. The fine powder, which is separated off very soon, often in less than a minute, begins to smoulder, and then by careful blowing a flame is soon produced in the dry tinder amongst which it is placed.'

A variation is used by the Warramunga tribe; in a cleft stick of soft wood a hard stick is smartly rubbed.³

The *fire-drill* has a wide range: Australia, Tasmania, Malaysia, Kamchatka, ancient India, Ceylon, Europe, Africa, Central, South, and North America,⁴ show it to be the most generally diffused method, and no doubt it was independently evolved by various peoples. Captain Cook described its simplest form as used by Australians:

'They produce fire with great facility, and spread it in a wonderful manner. To produce it they take two pieces of dry soft wood; one is a stick about 8 or 9 inches long, the other piece is flat: the stick they shape into an obtuse point at one end, and pressing it upon the other, turn it nimbly by holding it between both their hands, as we do a chocolate mill, often shifting their hands up, and then moving them down upon it, to increase the pressure as much as possible. By this method they get fire in less than two minutes, and from the smallest spark they increase it with great speed and dexterity.'⁵

As with the fire-saw, so with the fire-drill, two workers are essential. The latter method is even more laborious⁶ than the former, and its wider prevalence is due chiefly to mechanical improvements. The Australians cut a notch extended to the edge of the stationary wood, to admit the twirled stick and to allow the powder to fall out. Knowing that the twirling must be absolutely continuous, they always employ two men who

¹ E. B. Tylor (*Early Hist. of Mankind*?, London, 1870, pp. 231-239) criticizes elaborately these stories, with a conclusion generally unfavourable to their credibility.

⁵ *First Voyage*, iii. 284, quoted in Tylor, 240 f.

⁶ Long practice is necessary, for the muscular effort required is enormous.

relieve each other.¹ This familiar 'fire-stick,' twirled between the palms of the hands, is the predominant form of fire mechanism in art and mythology.

The principle of the carpenter's brace is a simple improvement, possible with a bent or elastic stick, and so used by the Gauchos of the Pampas. The operator presses one end of the stick on his breast and 'the other (which is pointed) into a hole in a piece of wood, and then rapidly turns the curved part, like a carpenter's centre-bit.'²

A cord wound round the drill is still used in India. The method is familiar to various peoples from the Eskimos to the Maoris.³ A cross-piece is used to keep the spindle steady and in its bearings; this is held by a second person, or the operator holds it in his teeth.

'To substitute for the mere thong or cord a bow with a loose string, is a still further improvement, for one hand now does the work of two in driving the spindle.'⁴

Ancient and modern Egyptians used this method for drilling holes. The North American Indians employed it for fire-making. A variation is the *pump-drill*, in which the cross-piece moves up and down, winding and re-winding the cord. This is found in Samoa, in a few South Sea Islands, and among the Iroquois.⁵

(b) In Borneo, Sumatra, and parts of Eastern Asia, fire is occasionally made by *striking* together two pieces of split bamboo.⁶ The siliceous coating makes this possible, but it is a precarious method. As for the use of flints, the Fuegians strike sparks with flint upon iron pyrites.⁷ The method is attested for Neolithic Britain.⁸ Eskimos and North American Indians employ it.⁹ Its obvious advantage over friction of wood is that the latter depends very much on the dryness of the atmosphere. 'The flint and steel may have come into use at any time after the beginning of the Iron age.'¹⁰ Employed in ancient Greece, Italy, and China, it became the universal method in Western civilization from the Roman Empire to the 19th century. The invention of fire-arms assisted to perfect the method, the hammer and trigger mechanism of the pistol being very convenient. Modifications of the fire-arm, attached to a candlestick, were in general use throughout Europe for centuries. Chalcedony was often used. For tinder, burnt-linen rag was the staple article. The modern chemical method was indirectly due to this, sulphur-tipped matches being first employed to get a reliable flame from the tinder. The precursors of the modern match were numerous and curious.¹¹

(c) *Compressive* and *optical* methods have never been commonly employed. A tube 'closed at one end, into which a packed piston is sharply forced down, thus igniting a piece of tinder within the tube,' is used in Malaysia and Burma. The use of a lens was known and practised in ancient Greece and Italy; China and Siam to-day are familiar with it.¹² The Spanish accounts of the Peruvian method of lighting the sacred fire by a lens, as also of the virgins of the Sun who guarded the fire, are at least doubtful, owing most of their details, as Tylor has shown, to Plutarch's account of the Vestal Virgins of Rome and the sacred fire of Vesta.¹³

There does not seem to be any regular course of

evolution in fire-making implements. The use of the fire-drill does not necessarily precede or lead up to that of the flint and steel. Nor has the simplest frictional method led to anything of real economic value. The 'fire-saw' and the 'fire-plough' are merely extensions of that method. The cord, centre-bit, and pump-drills are applications to it of simple mechanical expedients. But there is a tendency for drills to predominate in dry, hot climates; flint and steel are limited by the presence or absence of suitable percussive minerals. Savage life shows that fire is rarely made, for it is very easy to secure a permanent supply.

2. **Social regard for fire.**—The myths of the invention of the art are numerous. The process is one to appeal to the imagination. Their chief characteristics are the ascription of the invention to a bird or bird-hero, and the personification of the implements. Thus in China a myth recounts how

'a great sage went to walk beyond the bounds of the moon and the sun; he saw a tree, and on this tree a bird, which pecked at it and made fire come forth. The sage was struck with this, took a branch of the tree and produced fire from it, and thence this great personage was called *Suy-jin*.¹ *Suy* is the drill or the speculum. *Suy-jin-she* is the 'first person who procured fire for the use of man.'² The Sanskrit name for the *arati*-spindle, *pramantha*, is probably connected with the name of the Greek fire-giver, Prometheus;³ the *vápθῆ* in which he stored the fire stolen from heaven is repeated in savagery by the stalk or reed whose dry pith forms smouldering tinder.⁴

A simple form of regard shown in maintaining fire, to avoid the inconvenience of re-making it, is connected, directly or indirectly, with the religious cult of the perpetual fire.⁵

The Tasmanians never let their fires go out.⁶ The house-fire, as in Korea,⁷ is never extinguished. European peasantry, as the South Slavonians and Calabrians, elevate the rule into a ritualistic principle.⁸ The Israelites carried their fire with them on the march.⁹ The Russian peasant carries his fire to his new house, where he deposits it, saying: 'Welcome, grandfather, to the new home.'¹⁰ The old Norsemen 'marched round the land with fire, claiming the area they could walk round carrying fire, from sixtin the morning to six in the evening.'¹¹ Various tabus have been enforced in early culture upon the tending and carrying of fire. These follow the lines of similar regulations.¹²

Two poles of sentiment are fear of the destructive power, and gratitude for the comfort and usefulness, of the element. An extensive series of myth and metaphor is evolved from these. The general importance of fire in human life is shown by the way it enters into social symbolism and nomenclature. There are Fire phratries and Fire totems.¹³ Fire is placed on the grave to warm the dead.¹⁴ The Calabrians take an oath by nipping a flame between the fingers and swearing 'by the light of God.'¹⁵ Australian boys at initiation receive a fire-stick, ceremonially presented by the mother of the future wife.¹⁶ Fire and sunshine are permanently connected in the social imagination. Both are avoided by persons under tabu, especially girls during their first menstrual period. Impreg-

nation by fire is a common notion connected therewith.¹ Circumcision among the Australians is performed by means of a fire-stick.² The newly initiated boy is placed by women on a fire.³ Here we approach the purificatory idea. A connexion with the principles of 'rites of passage' is shown in the formal extinction of fire on a death, and the making of new fire on certain occasions of social crisis and change.⁴ In the Warramunga and Mara tribes of Australia, the co-operative totem system is applied, one moiety making fire and handing it over to the other.⁵ The idea of fire as a purifier is universal.⁶ Connected with this is its power to expel evil or to bar its approach.⁷ Many peoples throw food and drink to the fire before meals.⁸ Fire tends to develop 'sacred' associations.⁹

3. Fire-ritual.—Fire-worship proper will be discussed below in §§ 6 and 7. The ritual of perpetual fire can hardly be regarded as fire-worship. Sacrifice by fire, and various ceremonies in which fire is used, show it as a means and not as an end of the rite. Frazer's theory of the common origin of the Greek *prytaneion* and the Italian temple of Vesta, from a pre-historic custom of the tending of the common fire in the chief's round house by the chief's daughters, involves the general principle of the superposition of religion upon custom.¹⁰ Farnell objects to this theory, and maintains that optical methods were employed at Athens, the primitive fire-sticks being used only at Rome, and that women, in historical times, were excluded from the *prytaneion*.¹¹ He accordingly regards the Roman ritual of Vesta as not secular but religious in origin.

The Damaras of South Africa possessed a ritual of the perpetual fire well developed, though neither magical nor religious. The fire was tended by the daughters of the chief—an anticipation of the Vestal Virgins in appearance if not in evolutionary fact. When the Damaras built a new village, the fire was supplied from that of the old one.¹² The extinction of the sacred fire at Rome was regarded by the superstitious as a national calamity, as the extinction of the village fire in any early community would be regarded as at least an inconvenience.¹³ A perpetual fire, sacred to St. Bridget, is said to have been extant in the 16th cent. at Kildare.¹⁴ The perpetual fires of the Iroquois and Natchez were in all probability little inferior in ritualistic observance to those reported of Mexico and Peru.¹⁵ At Cuzco the daughters of the Inca tended the fire. In the great temple at Mexico there was, it is said, a sacred perpetual fire before each chapel. In all these Central American cases, virgins were the keepers of the fires. Chastity was obligatory; infraction of the rule was punished with death. In Peru the fire was re-kindled by a concave mirror; in cloudy weather by fire-sticks. The Spanish chroniclers certainly have embellished their accounts in order to enhance their claim for the new world to be a second Rome.¹⁶ The theory that the perpetual fire cult was an Indo-European institution similarly demands considerable limitation.¹⁷

The ritual of purification and sacred burning is linked to a sequence of very widely spread and influential ideas. The simplest of these, though

apparently complex, may be found in savage ceremonies of renewal and removal of old things. The kindling of the new fire follows the expulsion of evils and the putting off of the old life. In the mere instinct for change and renewal we may find the key to many 'rites of passage' in which fire plays a more or less literal rather than a symbolic part. Such rites often include a formula of social reunion.

The *Engwura* of the Central Australian tribes is an elaborate service of regard for society. Its central feature is the Fire Ceremony. Women and men dance round separate fires. There is a Saturnalia of increasing licence, the tabus being relaxed one by one. Huge torches are carried, and a pole, 20 feet high, the *wintari*, is a central object whose function is doubtful but possibly is merely centralization. The principle of the ceremony is well brought out by the way in which it bears upon private relations. Two men who have quarrelled previously now fight it out with flaming sticks, after which the ill-feeling is never resumed. A general mêlée with torches concludes the ceremonies; part of this is sexual, men and women attacking each other.¹

From such conceptions and realizations it is no long step to the elaborate philosophizing of Iamblichus, who held that fire burns all the mortal parts, leaving the immortal behind, or to the practice of burning the dead, and the connected principles of burnt sacrifice. In ancient theory, burning made its patient divine.² The passing of children through the fire is probably due in part to these ideas, and is paralleled by the Greek stories of burning children to render them immortal.³ The remarkable series of legends of which the figure of Cræsus is the type is a proof how in Asiatic and Semitic religion the idea of burnt sacrifice dominated the imagination of kings and priests. In the 19th cent. offerings to dead Rabbis were still burned at Maron in Galilee.⁴ In the 20th cent. the Catholic Church retains the belief in the purificatory fires of Purgatory, and the eternal fires of Hell. There can be little doubt that the fires of the *auto-da-fé* were kindled in consequence of a theory of purification by fire. They were thus the logical sequence of universal notions which retain their harmless realization in the fire-festivals of European peasants.

4. Fire-gods.—The fire-deity often reported for uncivilized communities is generally a vaguely envisaged *daemon* hardly emerged from fluid animism.⁵ In all cultures the fire-god proper appears to be an exception, and not a regular member of the pantheon. The history of religion practically includes only two genuine fire-gods—Agni of Hinduism, and Atar of Zoroastrianism. Fancy everywhere locates the source of fire in various natural objects, as the sun, or the kangaroo (Australian)⁶, or the oak, or any material from which it may be artificially or naturally produced. The divine person who invents fire-making or reveals its secret to mankind is no fire-god necessarily, but a culture-hero. Such was Prometheus. Nor can even Hestia-Vesta be claimed as a fire-goddess. Farnell has shown reason for regarding her essentially as a hearth-goddess—the personification, not of the fire, but of the hearth-stones.

Fire-worship may be practised without any hard and fast personification of the element. A case in point is the comparatively modern cult of the natural fires at Baku, whither pilgrims resort and make expiation for sin. Similar was the ancient worship of natural fires in Cappadocia.⁷

5. Fire in Hebraism.—Mention of fire and fire-ritual is remarkably rare in the Hebrew books,

though the principle and practice of burnt-offering are ubiquitous. The man who was 'gathering' (*m'kōshesh*) sticks¹ probably intended fire-making by friction of wood. A possible reference is the 'two sticks' mentioned in 1 K 17¹². Legend tells that the fire-drill was given and the method explained by Jahweh to Adam and Eve. Flint and steel are mentioned in 2 Mac 10³, and the fire-stone (*hallāmish*) was used in historical times.² Fire for domestic use was forbidden on the Sabbath. In common with other early culture, Hebrew economy rarely used fire for the heating of dwellings. There was a Mosaic ordinance forbidding the use in the sanctuary of 'strange fire,' or 'fire of commoners,' explained as newly kindled fire, or that taken from profane hearths.³ Rabbinical lore stated that fire was created on Monday or the Sabbath eve; when Adam was overwhelmed by the first darkness, the Holy One gave him two 'bricks' for the production of fire. These he rubbed together, and fire came forth.⁴ The holy fire of the Hebrews was of Divine origin.⁵ From the fire Jahweh spoke to Moses.⁶

6. Fire in Brāhmanism.—Fire is the first of elements; it was produced from the *Sat* or *Brahman*.⁷ Manu held that it sprang from water; the Vedānta Sūtras from air; the Upanisads say it produces water.⁸ Gold is its first-born.⁹ In union with air it warms the ether. Its subtlest component becomes the speech of men, and man's breath is merged in it at death.¹⁰ The Upanisads speak of the seven tongues of fire.¹¹ Fire resides in the right ear of the goat, the right hand of a Brāhmana, in water, and in *kusa* grass.¹² The digestive process is identified with the action of fire, *vaiśvānara*.¹³ Philosophy elaborated the cosmic relation of the self to Brahman by means of fire and its symbolism. Sparks and fire, according to the Upanisads, are to one another as individual souls are to Brahman.¹⁴ The self is compared to fire produced by the two *araṇi*-sticks. The process of fire-production with the *samidhs*, kindling-sticks, the 'churning of fire,' is an act of generation: the drill is male.¹⁵ In the theory of the 'three fires' these are the three worlds.¹⁶ A trace of primitive magic is to be seen in the account of the *agnihotra*, 'fire-offerings,' in the *Śatapatha Brāhmaṇa*. If these are not offered, the sun will not rise.¹⁷ In the *Jaina Sūtras* there occurs the curious notion of 'fire bodies.'

¹ Some beings, of various birth and origin, come forth as fire-bodies in the manifold animate or inanimate bodies of movable or immovable creatures.¹⁸

The rules to be observed in connexion with the sacred fire are numerous.¹⁹ Sacred fire was kindled at weddings. At funerals the sacred fire for the burning of the body was carried in the procession to the *śmaśāna*, or 'burning ground.' A heap of fire-wood was piled, and the lender of the ceremony kindled three 'sacred fires.' The spirit of the dead person, 'invested with its incombustible subtle frame, was supposed to rise along with the smoke to heaven.'²⁰ The householder re-kindled his fire when religious rites were performed. The clay hearth was termed *grihyāgni*, 'household fire,' and 'was sufficient for all domestic ceremonies, *smārta*-

karman.' A more elaborate arrangement was used in the *homa śālā*, or room for fire-ritual. Here fire was kindled in three different receptacles, each fire having a different name, *Ahavanīya*, *Gārhapatya*, *Dakṣiṇa*. Each morning the family assembled round the fire, saying: 'We approach thee, O fire, daily with reverential adoration in our thoughts.' It was then 'fed' with bits of consecrated wood, *samidh*, from the *palāśa*-tree. The smouldering embers of the sacred element were not allowed to be extinguished. If this occurred,

'the whole household fell into confusion. Everything went wrong until an expiatory ceremony, *prayaścitta*—sometimes consisting of a solemn fast observed by both husband and wife—had been performed, and the fire was re-kindled.'¹

The daily fire service is the *Homa* ceremony.

The Fire-god Agni.—The god Agni is the most perfect instance of a divinized personification of fire, and perhaps the only genuine instance. The three great Vedic gods—the Fire-god, the Rain-god, the Sun-god—were born respectively from the earth (Agni), the air (Indra), and the sky (Sūrya), one representing each of the three worlds. Agni was 'god on earth,' and more accessible. He took precedence over all others in sacrificial ceremony. His triple form was of terrestrial, celestial (lightning), and solar fire.² Agni

'was manifested by the friction of the two pieces of the sacred fig tree called *Arāṇi*, and consequently always to be found at hand. He was visibly present in every household. He was man's domestic friend, the father of the sacrifice, the mediator between men and gods, the bearer of hymns and prayers from every family altar upwards towards heaven.'³

He is sage, priest, king, protector. His origin is threefold—from air, water, and the 'mystic double Arāṇi.' He is the giver of immortality, and purges from sin. After death he burns away the guilt of the body, and carries the immortal part to heaven, to dwell with the righteous.⁴ Fire is male, and water female.⁵ Agni is lord of the elements, and is all the deities.⁶ He is the god of the house, and of the clan. As priest he superintends his own sacrifice. The focusing of religious sentiment upon Agni is well illustrated in the Vedic hymns:

'Agni *Vaiśvānara*, the other fires are verily thy branches, O Agni. In thee all the immortals enjoy themselves. Thou art the centre of human settlements; like a supporting column thou holdest men. The head of heaven, the navel of earth is Agni; he has become the steward of both worlds. Thee, a god, the gods have engendered, O *Vaiśvānara*, to be a light for the Ārya.'⁷

The hymns and the *Śatapatha Brāhmaṇa* have the fullest account of Agni. The sun first appeared when Agni was born. He had long remained hidden, till the gods discovered him and revealed him.⁸ Agni is the essence of earth, squeezed from earth. He is produced by attrition by ten young women, the fingers. Firewood is his food. *Ghi* is sacred to him, and his offerings are cakes and butter. The bricks of the fire-altar are his limbs; he has three heads and seven rays (or reins).⁹ He is the object of the daily worship of the fire (*tejas*, or *jyotis*, fire as the element).¹⁰ To poke the fire wounds him, and is sinful. To spit before the fire is a sin.¹¹ Generally he is the protector against evil; he repels the *Rākṣasas*, and wards off evil from both gods and men.¹² He is, further, invoked by lovers, to produce magical intervention in their love. Women belong to him. The menstrual blood of women is Agni.¹³ Men invoke him for virility.¹⁴

Sometimes Agni is theriomorphic, identified with the white horse led in front of him.¹ At another extreme he is the object of the Brāhmaṇa's meditations as universal spirit, Brahman.²

7. **Fire in Zoroastrianism.**—The two chief differences between Indian and Persian fire-worship are (1) the abhorrence in the latter of burning the dead, and (2) the imperfect personification of Atar as compared with Agni. Some deny that fire is personified at all in Zoroastrianism.³ Whereas the worship of Agni and the ancient ritual have degenerated in Hinduism, one Brāhmaṇa sect alone keeping up any appearance of the cult, the modern Parsis practise a very conservative form of the ancient fire-ritual.

Fire is the earthly form of the heavenly light, the eternal, infinite, divine. The life of all creatures is vital fire.⁴ Fire is the son of Ahura Mazda. The infant Zarathustra was taken out of fire, like King Arthur. Ahura and his Fire and Mind protect Zarathustra.⁵ Fire is diffused through the 'six substances.' It is the 'Good Diffuser' in men and animals. It is of five sorts. Ahriman mingled darkness and smoke with it.⁶ Signs from the holy fire are invoked by prayer to Ahura. Atarō assists Ahura in his conflict with Angra Mainyu. Atarō also fights against Azi and Angra Mainyu. Again the Fire Vazist fights the demon Apāōh. There is also the Fire Frōbā. The Fravashi of fire is worshipped.⁷ The Avesta and the Pahlavi texts reiterate the duty of worship, simpler in details than the Vedic ritual.⁸ The priests are the protectors of the sacred fire, which may not be extinguished. To allow it to be extinguished is a sin. For the sun to shine upon it is a sin.⁹ Before the ashes are removed they must be cold.¹⁰ The Persian horror of the contamination of death, the *Druj*, naturally is very explicit here. If a man or dog died where the holy fire was, the fire had to be removed for nine nights in winter and a month in summer. Death was the penalty for casting a corpse, or even cow-dung, into the fire; even for breathing upon it.¹¹ No offering might be made without looking at the sacred fire. Three times a day the archangels form an assembly in the fire-temple. The prayers and the morning service resemble the Vedic,¹² but throughout the tendency is towards a somewhat impersonal realization—at any rate, a much less anthropomorphic realization than was the case in India.

LITERATURE.—To the authorities cited, add the articles 'Prometheus,' 'Hestia,' in Roemer, and for N. America, W. Hough, 'Fire-making Apparatus in the United States National Museum,' in *Report of the National Museum*, Washington, 1890, pp. 531-587.

A. E. CRAWLEY.

FIRE-WALKING.—This is an ancient as well as a modern rite, and is practised in various parts of the world. It is ostensibly an exhibition of supernatural power, and may be either an act of devotion or an ordeal designed to test the purity of a woman, the truth of a sworn statement, etc. Its earliest application may have been magical, to make the sun-fire shine in spring-time. The Semitic rite of passing children through fire, though sometimes connected with 'fire-walking,'

is really sacrificial, since the children were offered to Molech; whereas in fire-walking the object is to pass through fire without loss of life. As fire is a natural means of purification¹ and is regarded by most savages as a defence against evil spirits, one of the early forms of fire-walking was probably to ward off and cleanse from evil, such as the evil of drought, imagined to be a spirit. This motive would easily unite with that of aiding the sun to shine. Yet a distinction should be made between the mere kindling of fires and walking through fire or over fiery stones, the former not necessarily implying the rite of coming into bodily contact with fire.

The earliest recorded case of fire-walking is from India; but here the object is to establish the superior holiness of a priest. In the *Tāndya Brāhmaṇa* of the Sāmaveda (c. 800 B.C.) it is said that two priests walked through fire to prove which of the two was 'the better Brāhmaṇa'; and of Vatsa, the successful candidate, it is reported that 'not a hair of his head was burned.' This story, however, is still more ancient, as a brief allusion to it is found in one of the *Saṁhitās* (of the Tāittiriya, c. 1200 B.C.). The case forms also the basis of the later (c. 300 B.C.) legal enactment that, when the word of a witness is doubted, he shall undergo the same test, or a modification of it, in holding hot iron. Another early case in India is that of Sita, the wife of Rama. According to the *Rāmāyaṇa*, after appealing to the fire-god to attest her wifely innocence by not injuring her, Sita passed through fire and was not burned. A passage sometimes cited from Vedic literature (*Atharvaveda*, ii. 12) as evidence of the fire-ordeal is doubtful; but a hot-iron test is spoken of in *Chhandogya Upaniṣad*, vi. 16; though neither of these implies walking through fire. The rite of passing through fire is still practised in India, to exhibit 'control of fire.'

In Europe, in classical times, the Hirpi, or 'Wolf clan,' of Mount Soracte walked through fire to propitiate the goddess (of fire or of wild beasts?) called Feronia. The god within the performer is said by Iamblichus, in his statement as to fire-walking (see A. Lang, *Magic and Rel.* p. 293), to guard the walker from harm. Strabo (xii. 2. 7) mentions a case where the ceremony was performed by women.

These instances from antiquity are corroborated by modern practices as found among savages and even civilized peoples, and are illustrated also by the usage of European rustics in leaping over fires as a ceremony. Thus, in the last century, a family in Spain possessed the 'hereditary power' of walking through fire unharmed. The Nistinares of Bulgaria dance in the hot embers of a fire and utter prophecies. Savages of the Pacific islands and elsewhere are wont to walk over red-hot stones to show their power. In India, China, Bulgaria, and some other places, the practice is connected with vernal observances—a circumstance which adds weight to the theory that it may originally have been a rite to induce sunshine. A number of instances of the modern practice have been collected by A. Lang (see Literature below), who has shown that no artificial preparation for the feet of savage fire-walkers is necessary. As practised in Mauritius, Fiji, the Society Islands, etc., the rite consists in walking deliberately and unscathed over an oven of hot stones, to which the feet are exposed,

¹ It is interesting to note in this connexion that, when, according to Parsi eschatology, the earth shall be covered with molten metal, 'all men will pass into that melted metal and will become pure; when one is righteous, then it seems to him just as though he walks continually in warm milk; but when wicked, then it seems to him in such manner as though, in the world, he walks continually in melted metal' (*Bundahish*, xxx. 20, tr. West, *SBF* v. [1880] 126).

without protection, for about half a minute at the most, or time enough to pass over the glowing stones or embers for a distance of from 12 to 60 feet. In the case of red-hot or white-hot stones, the distance is usually 12 or 15 feet; in the case of hot embers, 60 feet appears to be the greatest recorded distance. The god is sometimes, as in Honolulu, invoked to temper the heat. The Maoris of New Zealand, who still practise the rite, claim that it was performed by their remote ancestors. But the reason for the custom is not made clear by any of the modern performers; nor is it yet understood how the participants escape injury. Civilized performers in Japan have the sophisticated explanation that through the rite a good god shows his power over the evil element of fire. Under native guidance some Europeans have successfully imitated savages in walking unharmed over the hot stones. The rite has been performed in modern times in Japan, China, Southern and Central India, Bulgaria, Spain, Trinidad, the Society Islands, Fiji, the Straits Settlements, Mauritius, New Zealand, etc.; and as a means of purification and of testing virginal innocence it was practised in Central and North America in the form known in ancient India, that is, as a passing through flames rather than a passing over hot stones.

LITERATURE.—J. G. Frazer, *GB* 2, London, 1900, iii. 305 ff.; A. Lang, *Modern Mythology*, do. 1807, and *Magic and Religion*, do. 1901, where will be found full references to the classical authorities and to preceding modern literature, to which may be added S. P. Langley, 'The Fire Walk Ceremony in Tahiti,' in *Nature*, Aug. 22, 1901 (reprinted in *Smithsonian Report*, 1901, pp. 539-544). E. WASHBURN HOPKINS.

FIRST-BORN (Introductory and primitive).—

1. Special rites at birth of first-born.—Among both savage and civilized races the birth of children is associated with many rites, the main purpose of which is to protect them or to free them from the tabu incident to such a crisis in life as that of birth (see BIRTH). There is some evidence that these rites are more carefully observed in the case of the first pregnancy, the first confinement, the birth of a first child; or that certain ceremonies are peculiar to these events. This is only natural, since anything occurring for the first time is apt to be considered of great importance,¹ and in many quarters a certain sacredness attaches to the first child, the idea of sacredness, however, as so often happens, sometimes taking the form that the child is unlucky either in itself or in its relation to others.

In Motlav (Melanesia) there are special feasts and rites after the birth of the first-born, the women of the village sleeping and feasting at the house for 20 days and decorating themselves differently every day. On the 20th day the father's sister brings the child out of the house, hands it to each woman in turn, and then carries it four times round the circle (Rivers, *FL* xxi. 1910) 48). In Mota a little bow is put in the child's hands, and the mother's brothers shoot at it with blunted arrows. Then the father's sister holds it with arms straightened till they tremble, repeating a verse regarding the future of the child and its wife (*ib.*). Among the Southern Massim (New Guinea) the umbilical cord of a first-born is placed in the sheath of a leaf growing near the base of a banana. The produce of this tree then forms the material of a series of feasts given, only in the case of a first child, by the maternal uncles. In such a case the father remains in the *potuna* for 6 months, and must abstain from certain foods, nor must he touch the child until it is about 8 months old, else it would turn ill. A first-born is called *halefuau* (the others are called *halebrafa*), and certain foods are forbidden to it until it is 2 or 3 years old (Seligmann, *Melanesians of Brit. N. Guinea*, Camb. 1910, p. 486 ff.). Among the Northern Massim the father sleeps in the verandah of the house before and after the birth of the first child, but not in the case of other births (*ib.* 704). A Basuto wife must leave her husband a month before the birth of a first-born, because it must be born in the house of her parents, else it would not live. If it is a boy, there is dismay, a girl being eagerly looked for on account of the dowry which she will bring to the family at marriage. When it is weaned, the child is taken to the grandparents and remains with them; they also receive the dowry in the case of a girl (*FL* xv. [1904] 249 f.). Among the Washambala, at the birth of a first child the happy father presents

a bullock to his wife's father (Steinmetz, *Rechtsverhältnisse von eingeborenen Völkern in Afrika und Ozeanien*, Berlin, 1903, p. 232). Among the Caribs, at a first birth the father was wounded and the child baptized with his blood. He had also to undergo a long and strenuous fast (Müller, *Amer. Urrelig.*, Basel, 1855, pp. 212, 214). Similarly, in India, where the ancient ritual in connexion with impregnation, quickening, and birth is still in vogue, some of it is confined to the birth of a first child, e.g. the *simantonayana*, or hair-parting rite, performed on the woman (see Monier-Williams, *Rel. Thought and Life in India*, London, 1883, p. 355 f.; *ERE* ii. 650b). In the Panjab there are great rejoicings at the birth of a first-born male, and in Kangra there is a pilgrimage to the family-god, a he-goat being let loose in his honour, and another sacrificed; and a feast is given (Rose, *JAI* xxxvii. [1907] 224).

In many instances the marriage is not regarded as complete until the birth of the first-born, this constituting the final ceremony of marriage—a natural belief, since the appearance of the child is at once a certificate of the parents' union and a kind of covenant token between them. Occasionally the husband lives with his wife's people until the child is born, or there is a second ceremony of marriage before the birth (see Rose, *FL* xiii. [1902] 278 f.; Crawley, *Mystic Rose*, London, 1902, p. 432 f.). Among the Zulus the woman is not called 'wife' until she has given birth to a child (Shooter, *Kafirs of Natal*, London, 1857, p. 74). This is akin to the Hindu belief that 'he only is a perfect man who consists of three persons united—his wife, himself, and his offspring (Manu, ix. 45 [*SBE* xxv. 335]), and to the saying that 'immediately on the birth of his first-born a man is (called) the father of a son and is freed from the debt to the manes' (Manu, ix. 106; see below, § 5).

Again, there is a wide-spread custom of the parents calling themselves by the name of the first-born, as among the Malagasy, *Raini Soa*, 'father of Soa,' *Ren'i Soa*, 'mother of Soa' (Ellis, *Hist. of Madagascar*, 1838, i. 154). This custom is found in many parts of Indonesia, Australia, among the Bechuannas, and elsewhere (see instances in Crawley, 428 f.; Merker, *Die Masai*, Berlin, 1904, p. 59; Van Gennep, 67), and is akin to the Hindu custom just referred to. It probably originated in the natural pride of the parents at the birth of a child in whom they were now content to merge their personality.

2. Superstitions regarding the first-born.—The sacredness attaching to the first-born is seen also in certain superstitious beliefs of which various examples from different parts of the world and different levels of culture may be cited.

Among the Semang of the Malay Peninsula the souls of first-born children are believed to be young birds newly hatched, offering of the bird which contains the soul of the mother. These birds obtain souls from Kari, the thunder-god (Skeat-Blagden, *Pagan Tribes of the Malay Peninsula*, London, 1906, ii. 4). In the South Sea Islands, where a peculiar sacredness enwraps the first-born, whether male or female, no one must pass through the door by which he or she enters the father's house (Gill, *Myths and Songs from the S. Pacific*, London, 1876, p. 46). In the Panjab a lock of hair cut from a first-born is taken by barren women to wizards, in order that the principle of life immanent in the first-born may be extracted from it (*FL* xiv. [1903] 102). The first-born is there held to be uncanny, subject to magical influence, and endowed with supernatural power. He can stop hail- or dust-storms, and snakes are torpid before him. When the first-born is a girl, this is particularly ill-omened. Muhammadans in N. India think that a first-born can stop excessive rain by certain rites (Rose, *FL* xiii. 63, 278). In N.W. India it is believed that, if two first-born persons stand together in a thunderstorm, they will be struck by lightning (Crooke, *ib.* 188). Generally in India the first-born is regarded as peculiarly sacred. Among the Negroes of Jamaica it is considered of good omen if a first-born strike his right foot against a stone, but of ill omen if it be the left foot (*FL* xv. 450). Coming nearer home, we find in Devon the belief that the first-born cannot be overlooked by a witch, and in Buckinghamshire that he cannot see ghosts (*FL* xix. [1908] 340, 342). In various parts of England it is considered unlucky if the first-born is a boy, whereas a girl is lucky (*FL* viii. [1897] 195).

3. Killing or sacrifice of the first-born.—Much discussion has taken place regarding the Hebrew Passover rites, the redemption of the first-born, and the instances of the sacrifice of the first-born (2 K 16³ [? first-born, cf. 2 Ch 28³], Jer 19⁵ 32³⁵ [sons

¹ See Van Gennep, *Les Rites de passage*, Paris, 1909, p. 249 f.

and daughters], Ezk 16^{20, 21} 20²⁸, Mic 6⁷). Frazer considers that behind the Passover rite lies an ancient custom of sacrificing the first-born, mitigated by the custom of redemption, but apt to recur sporadically (*GB*² ii. 43 ff.). There is, however, no real evidence that the later instances of sacrifice of the first-born had any connexion with the Passover rite. Rather were they adopted through imitation of similar Canaanite (probably Phœnician) sacrifices in times of danger and under false notions of what was pleasing to Jahweh (cf. König, *Gesch. der alttest. Rel.*, Gütersloh, 1912, p. 325 f.). The Hebrew customs regarding the first-born are the subject of a separate article. Here we discuss the evidence for the sacrifice of the first-born elsewhere, since upon it the theory of the early Hebrew sacrifices is sometimes based. It should be observed, first of all, that in some instances there is no sacrifice, but mere killing, usually for some superstitious reason associated with a first-born.¹

In New South Wales first-born children are said to have been slain and eaten by the tribe as part of a religious ceremony, but the evidence is weak, and in any case there is no sacrifice (Brough Smyth, *Aborigines of Victoria*, Melbourne, 1878, i. 311). A similar rite of killing and eating the adult eldest son is reported from Khamui, China; but no reason is assigned for it, and it is probably mythical (de Groot, *Rel. Systems of China*, Leiden, 1892 ff., ii. 679). In S.E. Africa, should a man die in battle and his wife marry again, the first child born after the marriage is slain, otherwise accident or death would befall the man and barrenness the woman. It is called 'child of the assegai' (Macdonald, *Light in Africa*², London, 1890, p. 156). Probably it is regarded as the property of the dead father. In Uganda in many cases the birth of a first child to a chief was awaited with anxiety, because the birth of a boy meant that the father would die. Hence, if a male, it was strangled by the midwife, who then announced that it was born dead, thus ensuring the chief's life (Roscoe, *Baganda*, London, 1911, p. 54).

We next turn to cases where a child born to a woman hitherto barren is devoted to a god for life or occasionally sacrificed to the god. In the latter case the reason is that, by the willing sacrifice of what was granted by the god and what is obviously his, the woman will henceforth be fruitful.

Thus, when an Otchi negress has prayed to a fetish for a child, the child is considered the property of the fetish and is called a 'fetish-child' (Ploss, *Das Kind*², Leipzig, 1884, i. 437). Among the Ewe, when a child has been born as a result of prayers to Agbasia, chief of the Earth-gods, it is dedicated to him and called 'slave of the Earth-gods.' If it is a girl, she is married to the priest's son; a boy must serve the priest till his mother has borne a girl (Spieth, *Die Ewe-Stämme*, Berlin, 1906, p. 448 f.). In Uganda, parents who prayed to the god for children promised to devote them to him if he granted their request. If a girl was born, as soon as she was old enough she was brought to the temple enclosure and lived there as a vestal attendant on the god (Roscoe, 278). Many Hindu women propitiate the deity by vowing that the first-born will serve as a water-carrier in the procession of the Tazia until he comes of age or is of a certain age. Such sons wear the green uniform during Muharram till they attain that age, but return to Hindu usages as soon as Muharram is over (Rose, *JAI* xxvii. 224). In Central India, barren women vow their first-born to Omkar Mandhata, and this vow is the first knowledge imparted to the child. This is so impressed upon him that 'years before his death he seems like a man haunted by his destiny' (J. Malcolm, *op. Crooke*, *PR*², 1896, ii. 169). Among the Syrians a first-born child is vowed to a saint or to a mosque, but is redeemed with an offering (Curtiss, *Prim. Semitic Religion To-day*, London, 1902, pp. 167, 167, 201). In some cases the child was sacrificed. In India a childless woman would vow to offer her first-born at Gangā-Sāgar or some such holy place, in confidence that the offering would secure a numerous family to her. But this was spontaneous and confined to the lower orders, and was condemned by Hindu religion (Wilson, *Essays*, London, 1862, ii. 167). A similar custom, however, is met with in folk-story (see *ERE* iii. 541*). Among the Kutoṅga the mother prays to the sun: 'I am with child. When it is born I shall offer it to you. Have pity upon us' (Boas, *5th Rep. on N.W. Tribes of Canada* [*Brit. Assoc. Report*, 1889], 52). Here, however, the sacrifice is less in gratitude for fulfilment of a vow than for benefit to the family. Not impossibly the child, born of a god's intervention, is dedicated or even sacrificed to him because he is supposed to be its father.

¹ Elsie W. C. Parsons (*The Family*, New York, 1906, p. 49) says that it is sometimes customary to kill the first-born child or children born before the mother has reached a certain age or has been married a stated time. This is sometimes done because of the belief that children of very young mothers are weakly.

The custom of sacrificing or dedicating a child to a divinity after a promise made and the removal of barrenness, must have been a usual one, to judge by a *Märchen* cycle, of which there are a large number of variants, European and Asiatic, *Märchen* incidents usually reflecting what had once been customary (see MacCulloch, *CP*, London, 1906, p. 410 ff.). Cf. also an instance in the *Atareya Brāhmana* where Harischandra prays to Varuṇa for a son, promising to offer him as a sacrifice. When the child is born, he evades the promise for years, and is finally about to sacrifice a starving Brāhman's son instead, when the latter is miraculously set free.

In another group of instances the sacrifice is perhaps made because the first-born, having a certain sacredness, was the most valuable offering which could be made, the end usually aimed at being benefit to his kinsmen or the propitiation of a deity angry with them (cf. Mic 6⁷). In some cases there may even have been the idea of a thank-offering for the gift of life and health to the kinsmen (cf. Baudissin, *Adonis und Esmun*, Leipzig, 1911, p. 60), or for the gift of fecundity to the parents, as in the sacrifices just considered.

The custom occurred sporadically on the American continent. Among the Salish Indians of British Columbia the first-born was sometimes sacrificed to the sun for health and good fortune to the family (Hoas, 40). The Indians of Florida sacrificed their first-born children to the sun or to the chief as child of the sun (Strachey, *Hist. of Trav. into Virginia Britannia*, ed. London, 1840, p. 84; Müller, 58). Among the pre-Inca people of Quito, the sacrifice of the first-born was a regular custom until it was abolished by the last royal dynasty (Müller, 335, 377; Velasco, *Hist. du royaume de Quito* [in Ternaux-Compans, *Voyages*, Paris, 1837-41, xix., i. 106]. Among the Senjero, E. Africa, many families must sacrifice their first-born son, because once, when the seasons were mixed up and fruits would not ripen, the soothsayers advised the king in future to pour forth human blood on a certain pillar (Krapf, *Travels . . . in E. Africa*, London, 1860, p. 691, reported at second-hand). The Nairs formerly sacrificed a first-born son to Mātū, the smallpox goddess (Sherring, *Hindu Tribes and Castes*, Calcutta, 1872-81, iii. 66).

In India, first-born or only children were sometimes enclosed in walls or foundations to prevent the building from falling (*PR*² ii. 174; *FLR* iv. [1881] 186)—an example of the wall- or foundation-sacrifice like that perhaps adumbrated in 1 K 16²⁴, 'he laid the foundation thereof in Abiram his first-born.' Among older races the heathen Russians are said to have sacrificed their first-born to the god Perun (Mone, in Frazer, *GB*² ii. 52). Of the human sacrifices to Cromm Cruich in pagan Ireland, elsewhere exaggerated, the *Dindsenchus* relates that they included 'the firstlings of every issue and the chief scions of every clan' (*RCel* xvi. [1895] 35). Certain branches of the Semites sacrificed their children, either as a regular custom or on occasions of great danger,¹ but it is only sporadically that the first-born is expressly stated to have been the victim. The analogy of Mic 6⁷ and Ezk 20²⁸ has, however, suggested that the first-born was the usual victim, being at once the most sacred, the dearest, and perhaps the most difficult to part with, and therefore most calculated to appease an angry god. Among the Phœnicians and their colonists the Carthaginians, child sacrifice was so common as to excite horror in the Greeks. Porphyry says they sacrificed one of their dearest (probably the first-born) to Baal (*de Abst.* ii. 56). Philo of Byblus (frag. ii. 24) relates that the native Phœnician Kronos once in time of danger offered his only-begotten son in sacrifice. Kronos is here euhemerized into a king, but the evidence is none the less valid. Of Meshu, king of Moab, it is said that in face of defeat he offered his eldest son as a burnt-offering on the wall (2 K 3²⁷).

Sayce (*TSA* iv. [1875] 29, *Rel. of Anc. Egypt and Bab.*, Edinburgh, 1902, p. 467 f.) claims that a certain text proves that the first-born was sacrificed for the life of the father. But his translation has been controverted (Ball, *PSBA* xiv. [1892] 24; R. C. Thompson, *Semitic Magic*, pp. 210, 224), and it does not appear to refer to human sacrifice. There is no certain evidence

¹ See the evidence in *GB*² ii. 43 f.; Münter, *Religion der Karthager*², Copenhagen, 1821, p. 17 ff.; W. R. Smith², 1894, p. 362 f. note; 2 K 17³¹ [Sepharvites], 2 K 8²⁷ [Moab], Lv 18^{21, 24}, Dt 12³¹, 18²⁶, Ps 106³⁸ [Canaanites]; cf. also *ERE* i. 891*, iii. 187*.

for human sacrifice (*q.v.*) among the Babylonians and Assyrians. The Shepharvaim of 2 K 17:34³¹ is now seen to be not Sippar in Bab., but probably a Syrian town.

While the sacrifice of children is an ominously wide-spread custom, it cannot be said that the first-born were the only victims offered, and it is only occasionally that this is stated to have been the case. Inference may suggest it in other instances, but we can deal only with actual facts.

The sacrifice or slaying of the first-born may, in some instances (certainly not in all), be explained by a prevailing theory that the father is re-born in the son, and presumably therefore should cease to live. He would then slay his first-born to save himself. This re-birth idea is most clearly expressed in Hindu belief: 'The husband, after conception by his wife, becomes an embryo and is born again of her' (Manu, ix. 13 [*SBE* xxv. 329], cf. *SBE* xxx. [1892] 211). This resembles the Egyptian belief that the son of a god is his image, and will take his place when he dies. For American Indian and Australian instances, see Powers, 'Tribes of California,' *Contrib. to N. Am. Ethnol.*, Washington, 1877, iii. 299; Howitt, *Nat. Tr. of S.E. Aust.*, London, 1904, p. 255. For a similar ancient Celtic belief embodied in the mythic Óchullainn, 'his rebirth would be of himself,' see E. Hull, *Cuchullainn Saga*, London, 1898, p. 60. These beliefs have led to the suggestion that the first-born son might be thought to endanger his father's life, and hence should be put to death (Westermarck, *MI* i. 459; Hartland, *Primitive Paternity*, London 1910, i. 160 f.). This is supported by the fact that in some cases it is thought that if the father's name were given to the son, the father would die, name and person being identical. The instances from S.E. Africa and Uganda cited above might also support the theory, though a belief in re-incarnation is not connected with them. Other cases seem also to support it: e.g., among the Fulani of Hausaland the first-born lives with his mother's people till his father dies and is called his 'father's shame' (*kinnya*) (Fraser, *Totemism and Exogamy*, 1910, ii. 602). In some parts of India the father, being re-born in his son, is supposed to die at his birth, and funeral rites are performed in the 5th month of the mother's pregnancy (Rose, *PL* xiii. 278 f.).

4. Right of succession of the first-born: primogeniture.—Among peoples with whom descent is counted through females, property is not inherited by the sons, but as a rule by the father's brothers or his sister's sons. Yet even here the natural superiority of the eldest is seen in the frequent practice of making him the sole or principal heir (eldest brother or eldest son of eldest sister) (Ellis, *Tshi-speaking Peoples*, London, 1887, p. 298; M. H. Kingsley, *W. Afr. Studies*, do. 1897, p. 485 f.; Bosman, in Pinkerton, 1808-14, xvi. 421 [Guinea]; Proyard, in Pinkerton, xvi. 591 [Loango]; MacLennan, *Prim. Marriage*, London, 1865, p. 188 [Nairs], *ib.* 293 f. [Tibet]; Steinmetz, *Rechtsverhältnisse*, 413 [Nissan Islands]). But in patriarchal societies there is also a tendency, at all events at lower levels, to recognize the superior position of the eldest son. Frequently, it is true, there is an equal division of the property, yet even here there may be certain domestic religious duties adhering to the eldest son, or the succession to chieftainship and the like may be vested in the first-born. There remain a large number of cases in which the first-born receives the whole of the estate or property, or the largest share of it, or the immovable part of it, or certain things which are regarded as of supreme importance. The following references give examples of the first three cases from the lower culture:

Greenland (Cranz, *Hist. of Greenland*, London, 1820, i. 176); Ossetes of Caucasus (Eckert, *Der Kaukasus*, Leipzig, 1887, p. 115); Kumls (Köhler, *ZVRW* ix. [1890] 330); Kukis (Soppitt, *Short Account of Kuki-Lushai Tribes*, Shillong, 1887, p. 16); Kandhs (Macpherson, *Mem. of Service in India*, London, 1865, p. 62); many tribes in Deccan (Köhler, *ZVRW* viii. [1889] 131); Rajputs (*ib.* 102); Igorrot (Jenks, *Bontoc-Igorrot*, Manila, 1905, p. 166); Batakas (Fryer, *Khyang People of Sandoway Dist.*, Calcutta, 1875, ii. 147); Ogan-Ulu and Komerig-Ulu (Post, *Grundriss der eth. Jurisprudenz*, i. 217); Nias (*ib.* 221); Tonga (Mariner, *Natives of Tonga Islands*², London, 1818, i. 84, 91); Kingmill Islands (Wilkes, *U.S. Explor. Exped.*, New York, 1851, p. 656); Bogos (Munzinger, *Die Sitten und das Recht der Bogos*, Winterthur, 1859, pp. 69, 781); Masai (Johnston, *Uganda Protect.*, London, 1902, ii. 828; Hollis, *Masai*, Oxford, 1905, p. 809); Nilotic Negroes (Johnston, *ib.* 794); Nandi (Hollis, *Nandi*, Oxford, 1909, p. 78); Gallas (Paulitschke, *Ethnogr. Nord-afrikas*, Berlin, 1898-6, p. 792); many other African tribes (*Post, Afr. Jurispr.*, Oldenburg, 1887, i. 12, 18); Wadshagga (Volgens, *Der Kikimandcharo*, Berlin, 1897, p. 258); Bakwiri (Steinmetz, 20); Fida (Bosman, 480); S. African tribes (Mac-

donald, *JAI* xix. [1890] 277; when there is only one wife, the first-born inherits civil and material rights and a proportion of the moveable property); Hottentots (Kolbe, in Walckenaer, *Coll. des relations de voyages*, Paris, 1842, xv. 380; Thunberg, in Pinkerton, xvi. 142).

In a few cases, under polygamy the eldest son of the chief wife is heir, but he need not be the first-born of the children of all the wives. Thus in S. Africa the chief wife's first-born is heir, but the first wife's first-born has a superior claim to sons of subordinate wives (Macdonald, *JAI* xix. 278). But as a rule the first wife is the chief wife in polygamous societies.

Of the fourth method of inheritance, the following are instances. Among the Zulus the property is equally divided, but the eldest son gets coral, white shell and turquoise necklaces, and ear-rings (*23 REEW* [1904] 291). In Bengkulen the sons obtain equal parts, but the eldest gets also the house and *pusaka* (Post, i. 220). In Halmahera the plantations are divided among the children, but the eldest son obtains the household furniture (Bastian, *Indonesien*, Berlin, 1884-99, i. 72).

Among higher races, especially in ancient times, an equal share among the sons was generally favoured. This was the case in Egypt, although in noble families the son of the eldest daughter was heir (Wilkinson, *Manners and Customs*, ed. London, 1878, i. 320; Erman, *Life in Anc. Eg.*, Eng. tr., London, 1894, p. 156). In Babylon the Code of Hammurabi shows that the sons shared the estate and the household goods equally (§§ 7, 165), but 'from other evidence it would appear that the eldest brother was entitled to a larger share' (Cook, *Laus of Moses and Code of Hammurabi*, London, 1903, p. 139; Sayce, *Babylonians and Assyrians*, do. 1900, p. 31). Among the Greeks and Romans, though de Coulanges thought he saw traces of primogeniture in earlier times (*La Cité antique*, Paris, 1864), yet in the historic period it did not exist at all, and in Greece, at least, the sons took an equal share (Pétitus, *Leg. Att.*, Lyons, 1738, bk. vi. tit. 6; Maine, *Ancient Law*, London, 1861, p. 227). Primogeniture does not appear to have existed among the Celts of Gaul, and it was unknown in ancient Ireland and Wales (Roget de Belloguet, *Ethnogenie gauloise*, Paris, 1858-75, iii. 398; for the Irish and Welsh systems, see Maine, 240 f.; Cecil, *Primogeniture*, p. 12 f.). Among the Teutons, primogeniture did not exist, except among the Tencteri, with whom the eldest son inherited all but the warhorse, which went to the bravest (Tac. *Germ.* 32).¹ But there was an approach to it in the fact that in the case of the *allod* or *terra salica* (the household property as apart from the communal property), which was the joint-property of the father and sons, the eldest son succeeded to it when his father died, but the brothers might build dwellings upon it, forming a house community. The *allod* was thus not divided as a rule (Maine, 228; Laveleye, *De la Propriété*, Paris, 1874, p. 95). In India, the great object of a man being to have a son who may perform the due funeral rites, the first-born has always been regarded as peculiarly sacred; and after his father's death he was the natural head of the family, while even before it he was manager of the whole patrimony (Manu, ix. 105 [*SBE* xxv. 346]; cf. *FAMILY* [Hindu]). The earlier law-books announce that the property should be divided equally—a method insisted on in *Apastamba*, ii. 6, 14 ff. (*SBE* ii. [1897] 133 ff.)²—or that the whole should go to the first-born, while he should support the rest as a father (*Gautama*, xxviii. 1 ff. [*SBE* ii. 302 ff.]; Manu, ix. 104 f. [*ib.* xxv. 345 f.]). 'The primogeniture of the ancient Hindus was much more a headship than an ownership' (West and Bühler, *Hindu Law of Inheritance*³, Bombay, 1884, pp. 69, 737). At the present time there is an equal division in the case of estates held in severalty, but property which is in its nature impartible descends usually by

¹ It has been inferred from this passage that primogeniture obtained among other tribes also (Hearn, *Aryan Household*, London, 1879, p. 80; Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, p. 193). The inference is doubtful.

² Cf. *Gautama*, xxviii. 1 ff. (*SBE* ii. 302 ff.), 'in partition there is an increase of spiritual merit.'

strict primogeniture (Mayne, *Hindu Law and Usage*¹, Madras, 1906, pp. 731, 733). Maine points out that, 'wherever public office or political power devolves at the decease of the last Incumbent, the succession is nearly universally according to the rules of Primogeniture' (*Anc. Law*, 233). In Muhammadanism all sons inherit equally, but in the case of chiefships the eldest usually succeeds, if he is fit (Hughes, *DI*, London, 1895, p. 129; cf. *LAW* [Muhammadan]). In China, property is divisible among the sons, the eldest becoming trustee of the sacred, inalienable portion. But frequently brothers give him their share for the glory of the house. He also receives the furnace, cooking range, and cooking utensils (Doolittle, *Social Life of the Chinese*, London, 1866, ii. 224; Simon, *La Cité chinoise*², Paris, 1891, p. 39; see below, § 5).

Since neither Greeks, Romans, Teutons, nor Celts had a system of primogeniture in the sense of the eldest son succeeding to property, it is a curious problem why, on the break up of the Roman Empire, this system should have appeared and have spread so rapidly. Maine has traced it to the system of 'benefices' or grants of Roman land given to the invading chiefs on condition of military service. These gradually became hereditary, the rules of succession being various, but ultimately regarding only the eldest son. The reason of this was that, though property had not descended to the eldest son, the administration of family government did, or had recently done so. 'The lord with his vassals, during the ninth and tenth centuries, may be considered as a patriarchal household, recruited, not as in the primitive times, by Adoption, but by Infuedation; and to such a confederacy, succession by Primogeniture was a source of strength and durability. Meanwhile the lord invested with the inheritance had no advantage over his brethren and kinsfolk in occupations, interests, or indulgences (Maine, 236). But Roman jurisprudence 'looked upon uncontrolled power over property as equivalent to ownership.' Thus the eldest son ultimately became legal proprietor. Probably the sacredness attaching to the eldest son, his position as head of the family who took the father's place in looking after the others, the one who performed the ancestral worship, also all had their place in establishing this new rule of succession, as they had in savage societies where primogeniture ruled. Under feudalism, also, it was better that one person should succeed to the rights and duties of the tenancy (see Pollock and Maitland, *Hist. of English Law*³, Camb. 1898, ii. 274).

The custom of the youngest son inheriting all or some important part (e.g. the homestead) exists as a fossil usage where primogeniture is well established, e.g. in Kent ('Borough-English'), in Armorican Brittany, and Picardy (*Juвеigneurie*, *Maineté*), in Flanders, Alsace, Switzerland, Wurttemberg, Westphalia, Finland, Esthonia, Livonia, etc., and it is the custom with some savage peoples—Scythians (Herod. i. 5, 10), N. Chude, Nagas of N.E. India, Bos, Mrus of Aravak, Kukis, Khyngs, and some Eskimos. Many explanations of the custom have been offered. Possibly it dates from the time when the matriarchate was giving way to the patriarchate, the youngest son in nomadic societies being chosen as heir because he was nearer his father in time, especially if the elder sons had already swarmed off.⁴ In more settled societies the eldest would have the natural pre-eminence. This is suggested by instances where eldest and youngest obtain more than intermediate brothers (Singpos, Bataks, Hill tribes of Arakan). The custom has given rise to a multitude of *Märchen* in which the youngest son is the hero (see Ernout, 'Du Droit de Juвеigneurie,' *La France judéolaire*, vii. [1882-3] i. 518; Elton, *Origins of English History*, London, 1882, p. 195 f.; Letourneau, *Property, its Origin and Development*, 318, 325; MacCulloch, *CF*, ch. 12, 'The Clever Youngest Son').

5. Privileges of the first-born.—As soon as the patriarchal form of the family is well established,

the natural pre-eminence of the first-born becomes an accepted fact, whether he is made sole or principal heir or not. Hence certain privileges become his. Even among the Arunta, on the death of a parent the eldest son takes charge of the ancestral *churinga*, which must descend in a certain line (Spencer-Gillen⁵, 616). Among the Veddas the eldest child takes the leading part in the distribution of the father's property (Seligmann, *The Veddas*, Cambridge, 1911, p. 118). In Polynesia, where the first-born was sacred, no one else was allowed to enter by the door through which he or she entered the paternal dwelling (Gill, *Myths and Songs*, p. 46). Among the Navahos the eldest son comes next to the father in authority and succeeds him as head (Matthews, *JAFI* xii. [1899] 9). The Aleuts hold that the eldest brother should be respected as a father when the latter is dead (Petroff, *Tenth Census of U.S.*, Washington, 1884, p. 155). In China the eldest son has a distinct place apart. The younger sons are expected to obey the elder, and the *Li Ki* refers approvingly to this submission (xxi. 16 [SBE xxviii. (1885) 230]). The eldest son of the chief wife, if he predeceased his father, was to be mourned by him as the eldest would mourn the father (de Groot, ii. 509). As worship of the dead father is customary, the eldest son has a leading place in the long funeral ceremonies, and it is he who invites the soul of the father to enter the tablet which will henceforth represent him. This tablet he receives, preserves, and worships, and he also erects tablets in memory of both parents and worships them. None of the younger sons may do this (de Groot, i. 94-212; Doolittle, ii. 224). In India, where the cult of ancestors was a sacred duty, the place of the first-born was one of honour. At his birth the father discharged one of the three debts due to the ancestors, and he obtained immortality when he saw the face of a living son. In him he was born again, and the birth of other sons was of no account (Manu, ix. 106 f. [SBE xxv. 346]; *Inst. of Vignu*, xv. 45 [SBE vii. (1900) 65]; *Apastamba*, ii. 9. 24 [ib. ii. 159 f.]). At the father's death the first-born pronounced the funeral prayer as a right, because he had come into the world first; he was also domestic priest. Real independence belonged to him alone, and he was to be respected as equal to a father (*Nārada*, i. 31 [SBE xxxiii. (1889) 50]; Manu, iv. 184, ix. 108 [ib. xxv. 158, 346]). The younger sons must not marry before him, or begin the performance of the *agnihotra* or offer a *śrauta* sacrifice before him. Any precedence of a younger over an elder brother must be expiated in due form (Manu, iii. 154, 171-2, xi. 61 [SBE xxv. 104, 108, 442]; *Atharvaveda*, vi. 112 [ib. xlii. (1897) 184 f.]; *Baudhāyana*, iv. 6. 7 [ib. xiv. (1882) 329]). The Hindu right of primogeniture has already been noticed. In the Mandæan sacred writings it is similarly said that the elder brothers are to be honoured like the father (Brandt, *Mand. Schriften*, Göttingen, 1893, p. 64).

6. Thus in most parts of the world there is evidence of the superiority and sacredness ascribed to the first-born, whether this results in honours, privileges, or actual primogeniture, while it has hedged him about with a variety of curious customs, and has even led, on occasion, to his being sacrificed as the nearest and dearest on behalf of his family or of a yet unborn progeny. See also INHERITANCE.

J. A. MACCULLOCH.

¹ Cf. the Zulu belief that the first- and second-born sons should not inherit because 'they are sons of the womb' (Arbousset and Dawson, *Exploratory Tour*, Eng. tr., Capetown, 1846, p. 149).

FIRST-BORN (Hebrew).—The term *b'khôr* (בְּכוֹר), which is applied to the first-born of men and the firstlings of cattle, is from the same root as *bikkûrtm* (בִּקְרִיּוֹת, 'firstfruits' (*q.v.*), and *bikkûrah* (בִּקְרָה, 'the early fig.' The technical phrase *kol pe'er rehem* (כָּל פֶּעַר רֶחֱם, 'all that opens the womb,' is also applied to man and beast (Ex 13¹², 15 34¹⁹, Nu 18¹⁸, Ezk 20²⁰), standing sometimes in opposition to *gôr* (גֹּר, Ex 13², Nu 3¹²). *Rëshith* (רִאשִׁית), the first and best (LXX ἀρχή), is commonly limited to fruit and grain, but occasionally used of the first-born male (Gn 49³, Dt 21¹⁷). The *b'khôrâh*, or right of the first-born, entitled the eldest son to privileges of which he was not to be dispossessed. He received a double portion of the patrimony (Dt 21¹⁷). It was, indeed, always in the father's power to take the birthright from the first-born and bestow it upon a younger son (Gn 49⁴, 1 Ch 5¹, 1 K 1¹¹⁻¹³), but custom did not approve of the passing by of the eldest son, and the Deuteronomist seeks to guard against the abuse of the paternal prerogative, enjoining that the first-born of a 'hated' wife is not to be disinherited in the interests of the later-born son of a favourite (Dt 21¹⁵⁻¹⁷). To despise and barter one's birthright, as Esau did (Gn 25²⁹⁻³⁴), or to be deprived of it for misconduct, like Reuben (1 Ch 5¹), was a deep disgrace. 'First-born' became an honourable title conferred upon Israel (Ex 4²²) and Ephraim (Jer 31⁹). The Jews interpreted 'first-born' in Ps 89²⁷ as a designation of the Messiah, and *πρωτότοκος*, the LXX equivalent of *gôr*, is applied to Christ in Ro 8²⁹, Col 1¹⁵, He 1⁶. See, further, art. INHERITANCE (Heb.), and cf. the preceding article.

The law regarding the dedication of the first-born of men and animals to Jahweh varies greatly in successive ages. (i.) The Jahwist and Elohist preserve the primitive usage. While the shepherd Abel brings an offering 'of the firstlings of his flock, namely of their fat-pieces' (Gn 4⁴ [J]), Cain's gift is analogous to the firstfruits of Hebrew ritual. The greater acceptability of the former offering probably reflects the view prevalent in the early days of the settlement of Israel in Canaan, when the animal sacrifices of the nomadic religion were still regarded as superior to the vegetable offerings to the Canaanite *ba'als* (Skinner, 'Genesis,' ICC, 1910, p. 106). In Ex 13¹² and 34¹⁹, (both J), it is enacted that the first-born males are to be Jahweh's. The first-born among men are to be redeemed: the redemption price is not fixed, and probably it varied with the position and circumstances of the individual. The firstling of an ass, as an unclean animal (originally tabu), is either to be redeemed with a lamb or else to have its neck broken, i.e. to be killed without the shedding of blood. The other firstlings are to be sacrificed. The *Book of the Covenant* provides that the firstling of a cow or sheep is to be offered to Jahweh on the eighth day after birth (Ex 22³⁰ [E]). The law implies that an altar was everywhere near at hand at which the sacrifice could be made. It would have been wholly impracticable to undertake a journey to a distant central sanctuary every time a firstling was born. (ii.) According to Dt 15¹⁹, all first-born males of the herd and the flock, if free from blemish, are sacred to Jahweh. The command not to do any work with the firstling of cattle or to shear the firstling of the flock (v. 19) indicates that the animal need not be offered (as in JE) on the eighth day. It is set apart for a sacrificial meal at the central place of worship, which is now the only legitimate shrine. The flesh of the firstlings is to be eaten by the owner and his household, the priest, of course, receiving his usual share. The dedication is still an offering in the strict sense, not the mere payment of a tribute to the priest. (iii.) In the *Priestly*

Code there is an entirely different disposition of the firstlings (Nu 18¹⁸⁻¹⁹, Lv 27²⁷). The redemption price of first-born sons is now definitely fixed at five shekels a head. The flesh of the animal victim no longer belongs to the owner and his family, but is a perquisite of the priest. Offerings have been transmuted into taxes. While Ezekiel demands for the priest 'the first of all the firstlings of everything' (44³⁰), P claims not merely a portion but the whole of the firstlings of all clean beasts; and the firstling of an unclean animal, if it is not sold for the benefit of the sanctuary, is to be valued, and redeemed at a fifth more than its valuation (Lv 27²⁷). These laws evidently regulate the procedure of a later period.

The origin of the practice of dedicating the first-born can only be conjectured, and the significance of the rite naturally changed with the changing conceptions of the Deity. Benzinger (*EBi*, 3594) thinks it 'probable that the custom of offering the firstlings was only a secondary extension of the practice of offering the fruits of the field,' in which case the custom did not exist before the immigration of Israel into Palestine. But it was probably more primitive. Among the ancient Semites, according to the theory of W. R. Smith (*Rel. Sem.*, 1894, pp. 463-5), while all domestic animals had a certain intrinsic holiness, the first-born were holy in an intensified degree. Their supernatural qualities or associations made it unsafe to use them for common purposes. There was originally no thought of offering a gift or tribute to the Deity; the firstlings were sacrificed, and eaten for the purpose of strengthening the bond of kinship between Him and His commensals (see SACRIFICE). Similarly it is surmised that 'all the prerogatives of the firstborn among Semitic peoples are prerogatives of sanctity; the sacred blood of the kin flocks purest and strongest in him' (W. R. Smith, *id.*).

After the settlement in Canaan, when Jahweh came to be regarded as the *ba'al*, or lord of the land, and the old idea of holiness as a tabu became unintelligible, the firstlings of animals were offered as 'the expression of thankfulness to the Deity for fruitful flocks and herds' (Wellhausen, *Hist. of Israel*, Eng. tr., Edinb. 1885, p. 88), perhaps with the added idea of sanctifying all subsequent births from the same animal (Dillmann, *Ex. und Lev.*, Leipzig, 1897, p. 139). Philo describes the firstlings offered to God as 'thank-offerings for fruitfulness whether already enjoyed or expected' (*de Præmis Sacerd.* [Mangey, ii. 233]).

The claim of the first-born sons for Jahweh (Ex 13¹², 22²⁹, 34²⁰) has a history which is somewhat difficult to trace. Wellhausen (*Hist.* 88) regards it as 'merely a later generalisation which, after all, resolves itself merely into a substitution of an animal offering and an extension of the original sacrifice.' It may, however, go farther back, and be rooted in the primitive conception of the sacredness of all animals. It is difficult to believe that the law, 'the first-born of thy sons shalt thou give unto me' (Ex 22²⁹ b), is unrelated to the ancient Semitic practice. It is certain, on the one hand, that human sacrifice was always repugnant to Jahwism, the distinctive religion of Israel, and that the prophets were right in denouncing it as a mere heathenish horror. But, on the other hand, it is unquestionably the custom among many uncivilized peoples to sacrifice and eat the first-born (Frazer, *GB*, 1900, ii. 51 ff.); the practice not improbably existed among the Hebrews before their separation from the common Semitic stock; the numerous skeletons of jar-buried infants

¹ This does not imply that at one time the Hebrews sacrificed all their first-born sons, but only that, if sacrifice was to be made, the first-born were 'the best and fittest, because the holiest, victims' (*Rel. Sem.*, 466).

recently found in Palestine indicate that the old Canaanites were in the habit of sacrificing their children, perhaps their first-born (Driver, *Schweich Lectures*, London, 1909, p. 68; Marti, *Rel. of the OT*, London, 1907, p. 84); and in the last days of the Hebrew monarchy, when ordinary means seemed too weak to appease the Divine wrath, recourse was had to the sacrifice of first-born sons (Mic 6⁷). In the injunction, 'thou shalt set apart unto Jahweh all that openeth the womb' (Ex 13¹²), the verb (רצח) is the term regularly used of devoting (*causing to pass over*) children by fire (2 K 16¹⁷ 21⁶ 23¹⁰ *et al.*), and in reference to human sacrifice Ezekiel (20²⁶) uses the words 'in that they *caused to pass over* (EV 'caused to pass through the fire') all that openeth the womb.' The Hebrew law, based on prophetic teaching, thus seems to stand in pointed contrast with the old Semitic practice, to which the nation, in imitation of the Phœnician or Canaanitish ritual, was faithlessly reverting. The same antithesis is skilfully embodied in the story of the offering of Isaac, where an animal sacrifice is accepted in lieu of a human. 'As often happens in the history of religion, there is a "substitute" for an old practice which has now become impossible, while in *theory* the old still remains valid' (Gunkel, *Genesis*, 1901, p. 220). While the Israelites devoted their first-born as truly as any of their heathen neighbours (e.g. Mesha, king of Moab, 2 K 3²⁷), how much more reasonable and spiritual their service ultimately became! When the historical origin of the practice was forgotten, or seemed no longer credible, 'a theological explanation' (Driver, *Exodus*, Camb. 1911, p. liv) was found in the thought that it was because Jahweh slew all the first-born of the land of Egypt (Ex 13¹⁵ [JJ]). In the *Priestly Code* this theory is complicated by another pragmatic section, to the effect that the Levites were taken by God in lieu of the first-born of all the tribes (Nu 3¹¹⁻¹³). It was the view of later Judaism (Targ. on Ex 24⁸; Mish. *Zebah*, xiv. 4) that the dedication was for the Temple-service, but this was a wide divergence from the ancient idea.

JAMES STRAHAN.

FIRST CAUSE.—Every real entity is a cause, and every entity—the First Cause alone excepted—is also an effect. It is with the conception of *efficient* cause that we are here concerned, and that conception implies an Agent which is the possessor or the vehicle of force, activity, or power. The efficient cause is outside of the effect, while it really contributes to its production. Indeed, to make a thing or effect *actual* is the very end and function of an efficient cause. Philosophically to define *cause* is a matter of proverbial difficulty, but the best idea is probably that of *producing*, wherein something real passes from the efficient cause into the entity of the effect. Indeed, the cause passes into the effect, which stands over against it; this, in virtue of the causal relation being one in which the same fact appears, now as cause, and now as effect. The existence of the causal link is a fact we perceive, and yet it does not admit of demonstration. Therein lies the trouble; it is seen by reflexion rather than established by argument. To ask for proof of a first principle is absurd. Minds so different as those of Kant and Herbert Spencer have taken causality to be such a principle. The causal concept becomes doubly difficult when the efficient causality has relation to spiritual beings, the First Cause being thus the supremely difficult instance. Active power or force is presupposed in the cause, so that

the cause is independent of the effect, and, *qua* cause, is prior to it in respect of nature. It does not follow from this that causality need be successive in *time*, for cause and effect may be synchronous. The cause is but the logical *prius* of the effect. To describe the precise nature of the causal influx is quite another thing from affirming the evident fact. The effects of causation are continually present in our own experience, and the need spontaneously arises to postulate some adequate Source or Ground of ourselves and the world. We are dealing with the metaphysical idea of cause, not with the scientific tendency to treat causes as mere antecedents. All science is based on the belief in invariable and orderly sequence. Real causes are unknown to science, which, in reality, deals only with *occasions*; causations are to science only transformations. It is, however, no impeachment of the causal principle that it has thus no place in the scientific realm, for efficiency preserves its validity and worth in its own proper, non-phenomenal sphere. In the phenomenal sphere, a First Cause would be inconceivable, no interruption of the sequence of equivalent changes being admissible. Scientific method, then, excludes all notion of a First Cause. If the intuition of causation seems to demand the postulation of a First Cause, the exigencies of science can meet this demand only by breaking away from its own method, which is confined to changes caused by forms of energy previously existent. With the scientific centres of such forms of force and energy, lying open to observation and experience, we have here nothing to do, save only in that important respect whereby the cosmical result to which they unitedly give rise is one which demands another and deeper kind of cause than any known to strict scientific method. That truer—and, indeed, only real—conception of cause is will. That deeper cause, as the cause of all inferior or secondary causes, is the First Cause, to which, by the need for self-subsistent being or principle, we are ultimately, but nowise arbitrarily, driven. God, as the First Cause, is the Ground and Cause of all secondary beings or causes, without whom these could not subsist or be. God is the First Cause, all things craving His immediate causality. The quest for such First Cause is, we have seen, but an application to the world *in toto*, as a unity, of the law of causation. But the cause of the universe, as actually existing, can, *qua* cause, by no possibility exceed or transcend the effect—the universe itself. Because the effect so measures the cause, the universe as an effect cannot, in its finitude, yield us the First Cause. Hence the chief defect in the presentation of the First Cause argument, especially in the hands of British and American philosophers and theologians, has been the frequent and persistent tendency to rest in what could be inferred from the law of causation as applied to the phenomena of the universe, and the failure to pass from the dependent or contingent character of these phenomena to the postulation of an Absolute Ground. The argument is really drawn, as Leibniz properly divined, from the contingency of the world, which reveals, in its dependence, a Primal Power, or Cause, on which it so depends. If the First Cause were finite, there would then be an Infinite Uncaused beyond it. Belief in a First Cause rests on no foundation of authority, but is a necessity of thought, in view of the world's contingency.

It is an inaccurate mode of speaking to say that God is the cause of Himself. God is His own sufficient reason, and all that we can say is that He is self-existent.

The First Cause argument is, properly, not an

inference from effect to cause—since this would never take us beyond the really finite—but from effect to ground. But, in the favourite form of seeking a First Cause, the argument has taken a Deistic character, with the need of showing that the world had a beginning, and the result of leaving the Divine relation one of pure transcendence. The issue for Theism could be only very partial and incomplete. The attempt in this connexion to think an absolute beginning, or First Cause of all things, was a futile or impossible one, and was strangely unperceived to be so. In the long chain or process of cause and effect, the First Cause was antecedent to the process, without its being perceived that thus it really stood outside the process, and that the leap to it was illegitimate. In other forms of the argument, such as from the contingent to the necessary, or from the finite to the infinite, we do not escape the necessity of a leap at last, for the conclusion is infinite, which the data never can be. But the appeal may here be deeper—to the necessities of thought or reason.

There must be a sufficient reason for every existing thing, and for the universe as a whole. Such reason our argument seeks. Everything is, in its turn, conditioned by something else, and is made what it is by its relations to other things. The number of its relations is indefinite, and the complete rationality of such relations, as a system, is past finding out. While an underlying *nexus* of force makes everything also causal in its turn, yet there is no trace of existence, independent and non-conditioned. We know limitation as surely as we know being. Parts of existential phenomena, everywhere throughout the universe, depend upon other parts not less dependent in their turn. Not a single causal agency known to science bears the stamp or mark of self-subsistence, and the same thing is true of our personal and finite existences. No aggregation of such finite agencies and existences can possibly make an independent and unconditioned universe. Clearly, a universe so finite and dependent must have its Cause or Ground beyond itself. As a whole, it must have an independent, self-existent Cause, as the necessary correlate of its finitude. Even by those who take the creation of matter to be eternal, such a World-Ground is felt to be necessary. For even then—and the same holds true if the world be but one of an endless series of universes—an eternal and unitary Ground and Cause is needful as explanation of the vast successions of phenomenal changes and dynamic activities that make up the universe. Yes, needful as explanation of their persistence, no less than of their production. Clearly, an adequate cause is required for the world's being eternal rather than of time. The eternity of the world is not synonymous with its necessity. Matter may very well be the eternal effect of an eternally producing Cause. Even if matter be taken as eternal, the question still remains whether it has in itself—or from without—the principle of its existence. The Cause or Ground is, in such a case, related to no past creative activity, but is claimed as the centre and soul of present cosmic reality. What, however, does exclude anything of the nature of real effective causation is a merely pantheistic evolution. What theistic philosophy does postulate is that, in respect of all causal effects whatsoever, the First Cause was free in His self-action; that His activity in the use of causal power had no need to be eternal, however the power of such causative action might be eternal.

The more assured conclusions and better established theories of science alike point to the finitude and dependence of the universe. But, if we summed no First Cause as the Source of trans-

forming causal energy to the world, science itself would be reduced to illusion. For no link in the infinite chain of secondary causes would then originate but only transmit causality, and yet there would—the First Cause being wanting—be no causality to transmit. To deny a First Cause would be to deny all secondary causes and the reign of causation within the sphere of experience. The need for a First Cause, in the sense of a self-moved Mover, has been felt from Plato to Hegel and Martineau, and may, for all practical purposes, be taken as universally admitted. But the need is even more pressing for a First Cause which is the present Ground and Cause of the whole concatenation of causes now at work in the ordered universe. Underlying all that has been advanced is the principle that what does not exist as of absolute necessity is merely contingent, else there would be a violation of the principle of causality, and we should have existence without cause. The same violation would likewise result if the cause were not adequate or proportionate. It may be here observed that the argument, taken in the customary form as being from effect to cause, can infer existence of the First Cause only in so far as it is a cause; for the world, as an effect finite and conditioned, could never give a cause infinite and absolute. An efficient cause may conceivably exist, as being or entity, without any effect. It would not then, of course, be the First Efficient Cause, since nothing had been caused or created, but would be the absolutely necessary Being. The weakness of the argument to a First Cause, in the customary form of inferring it from effect to cause, is lack of some clear and valid explication of the sense in which an extra-mundane Power can be a cause. For the usual presentation makes the world, as created by the First Cause, something separate from, and outside of, the Creator. But, if outside of Him, then He is finite. And, if the First Cause and the caused world be not so separated, then there is pantheism. We are not, therefore, driven, as Royce and others, to make the Creator or First Cause 'identical with His products.' Why this inability to grasp the really inspiring truth that Deity transcends His own works—as we transcend ours—while He immanently lives in them? The weakness in the whole case is escaped only by allowing the principle of causation, in its quest for an ultimate, to rest in an Absolute World-Ground. Otherwise, the principle of causation, taken strictly as such, can never conduct us from the world to God. For the argument therefrom is clearly one from the world as the physical effect to a cause as the physical correlative. But the whole force and value of the argument to a First Cause lie in another direction—in an ascent from the swift successions and changeful phenomena of Nature *in toto* to an ultimate and self-existent Ground and Cause, in which these all find possibility, reality, and permanent base or support. Strictly taken, our principle—that of Causality—does not undertake any categorical affirmation as to existence, either of its subject or of its predicate. It is content to affirm, conditionally, that, if contingent being exists, its Efficient Cause must exist. But, inasmuch as the world is taken to exist as contingent being, it proceeds to set forth its argument for the world's necessary and sufficient First Cause. So doing, it seeks not a mere foundation of Being in the abstract, but a real, actually existing, primitive Ground (*Urgrund*) of all reality. It could not possibly find satisfaction in any form of First Cause whose relations to the world should be mainly antecedent to the world, or, for the most part, separate from it. It seeks, through all sequence and dependence of phenomena, some

continuous and persistent dialectical core of being, and rests not till it finds it in the *ens realissimum*—the Absolute Life.

No attempt will be made within the limits of the present article to deal with the subject in its historic developments. It must suffice to point out that modern metaphysical thought has moved far from the position of being content with any First Cause conceptions that treated God as a mere supernumerary spectator of the world-machine's operations, instead of the present and ultimate Ground of all things.

The all-destroying Kant is chiefly responsible for the depreciatory views of the First Cause conception. For he gave men to understand that the causal principle could not carry us beyond the sphere of sensuous experience, and that a First Cause was reached only by a final and unwarrantable leap from the last link in the infinite chain of intermediate causes. It ought to have grown much more evident than it has done how weak the Kantian procedure is, for the essential point in the argument to a First Cause is that the whole chain of causes, and every single link in the chain, are contingent, and depend on self-existent Being or Cause without and beyond them—this, though the First Cause is immanent, while thus transcendent. The creative process is not only conditioned by God, but is in Him; yet He, as the Absolute, Unconditioned Reality and Ultimate Cause of all things, is more than the universe, and for ever transcends it. For transcendence in Deity is just what the First Cause argument, in its true form, gives: it is a recognition that Deity, on whom the world depends, is more and greater than the universe. Absolute as may be the Deity's knowledge of the world He has called into being, what good reason can be suggested why He should not yet distinguish Himself from the world He so perfectly knows? The transition from the world as, *in toto*, a known effect to a World-Ground as its First Cause is a rational and necessary one. This persistent demand of rational thought for an adequate Cause of the world's phenomena has not been at all invalidated by Kant's criticism, which was sharp but not deep. The mind's quest for Primary and Ultimate Cause is satisfied only by the postulation of God as the First Cause, or present and perpetual Ground, of all things finite, in their dependence and contingency. Of course, the postulation of such a Ground or Cause depends on the compelling power or assent of Reason, but what we necessarily think we cannot but accept as true. It is this necessitated thought, or inherent necessity of reason, that gives the argument its cogency, carrying actuality in its bosom, Kant notwithstanding. By such necessary truths—truths of reason—do we live: originating, as they do, in the subject and not in the object of experience, the objects of experience must conform to them, or existence is no longer rational, and the universe no more determined by universal reason. Such truths of reason are part of our nature, axioms that cannot be resisted; they are such grounds and supports of our thought as make them the criterion of truth. Of course, a necessity of thought does not mean a necessity of existence, but the refusal of such a necessity of thought as we have here remains absolute and irrational scepticism. Such a causal judgment carries for us, necessarily, objective validity because of the inconceivability of the opposite; wherefore the judgment is affirmed because we can do no other in the interests of what we feel to be the truth. Even Kant himself does not pretend to find a full explanation of phenomena in natural causality: he says: 'Phenomena must have their grounds in that which is not a phenomenon' (*Kritik d. reinen Vernunft*, ed. Harten-

stein, Leipzig, 1853, p. 400). Precisely; but Kant falters and fails to take that further step towards Reality or Ground beyond experience; the Reality is there, but he thinks it not theoretically knowable by us. 'The causality of the necessary cause of the changes, and *therefore also the Cause itself* [*italics ours*], must belong to time, and to phenomena in time' (*ib.* 348). So says Kant, and beyond this craving for a positive explanation he does not rise. Such an application, however, of the idea of causality, in reference to the Supreme Cause or Primal Ground, as we have ourselves now made may be taken as *a priori* inherent in mind, and the conviction arising from what is a necessity of our rational nature is one which, it may be remarked, becomes greatly heightened when the essential element of the ontological argument is allowed to mingle and fuse with the cosmological principle. In this way the stock objection—to which Goethe gave classic utterance—as to the First Cause acting upon the world as on a thing external loses point and relevancy.

More recently, the positions of Mansel and Hamilton, and, still more, the attitude of Herbert Spencer, as to the Unknowable, have tended to the same depreciatory result. It is pertinent to observe that Spencer's treatment of the Absolute Force, as the 'Unknown Cause' of all phenomenal manifestations, has deepened the impression that a First Cause cannot be reached or known. But the First Cause is not a product yielded by those causal antecedents which are all the Spencerian philosophy can give us; it is the deeper product arising from the intuition of cause in the mind. The concepts of cause and effect by no means arise, in Humian fashion, by way of mere empirical observation, even though it be in experience that, through the data of perception, we come to fashion the concept of cause; they much more arise, like other fundamental concepts, through abstraction of the understanding, which abstracts from the sensuous. The *a priori* character of the causal principle is not doubtful. If we compare the concepts cause and effect, in our thought, we conclude that every effect presupposes a cause; and the very analysis of these concepts conducts us to the principle of causality. This, recognized as an *a priori* analytic principle, is objectively real, like other *a priori* principles, and is fitly conditioned in its rise by experience, in connexion with the abstracting power of thought. The inner *nexus* between cause and effect is not something which our subjectivity transfers to them, but is something objectively existent before our thought and independently of it. Hence the causal connexion early came to be taken as a dynamic one, even though human knowledge does not yet understand the working of the forces involved. This reality of cause, as of force and every other form of power, Spencer explicitly affirms, but not in any real objective sense, only as subjective affection in its ultimate expression. That is to say, there *is* cause, but as to what it is we are completely in the dark. States of consciousness, produced by the inscrutable cause, are all we know. There is still room for what is true and needful in the principle enforced by Hume and Kant, namely, that the real connexion between cause and effect is determinable only through experience, that is, in empiric and synthetic fashion by means of the events of uniform sequence; but a truer and larger place must be found, in connexion therewith, for the working of thought, which, though not independent of the perceptive elements, yields to experience a necessary connexion of effect with cause which experience could not itself offer. In regarding this necessary connexion of cause and effect as an essential feature of their relation—that is, in recognizing the relation as one of real depend-

ence—Kant and Schopenhauer must be allowed to have shown deeper insight than Hume and Mill. Spencer is himself obliged to admit that our conception of the 'Unknown Power' is fashioned after that of our own mind's causal activity. The efficient power presupposed in the Cause of all phenomena becomes intelligible only as so conceived, and absoluteness can be rationally attributed only to a First Cause which is absolute *existence*, not, Spencer-wise, to unknown *force*. Spencer's position in relation to the First Cause is far from self-consistent; for, admitting causation in Nature, he yet assumes absolute power or force for which there is no antecedent cause, although he has himself said that to admit anything uncaused is to take away the need to assume a cause for anything. In speaking of the Absolute Force as unknowable, Spencer fails to perceive that an existent cannot even be thought as unknowable, unless it is either known or continuous with the known. Thus the existent, being something for knowledge, cannot be unknowable existence. The nature of knowledge saves real existence from being unknowable. Spencer's First Cause is an 'Incomprehensible Power,' of which he will not allow us to know anything; but, if such Power must be taken as the First Efficient Cause, it can be no other than a Supreme Mind or Intelligence, since that of which it is the First Cause is a cosmos—not blind and brute chaos. Mind in experience always goes before matter or mechanism, building up our knowledge of the latter. It is unthinkable that anything save Supreme Mind should, as First Cause, precede the world's vast and interminable mechanism.

Certain of the more extreme forms of Idealism expressly disown the idea of First Cause. Because first causes in the world of experience seem to them an illusive quest, God is dispensed from being the First Cause of the world of appearances in any real sense, and the mind is turned from seeking any First Cause of the causes and phenomena of experience. God is, to such forms of Neo-Hegelianism, the only metaphysical principle or cause, and anything like real or distinct causality is denied to individual men. Causation is for such forms of thought, according to Royce, 'a very subordinate idea in philosophy'; and this, apparently, despite all it has been for the history of philosophy (J. Royce, *The Religious Aspect of Philosophy*, Boston, 1885, p. 477). Now, one may very well be idealist enough to maintain the world to be, in the end, a mental construction, but it is quite another thing 'when causal explanation is dropped,' and we are not allowed to hold the world of reality to be such an active and honest world as is involved in its causal determination of our discriminating and constructive consciousness. To divest the Divine mind of all causality, and to throw it, in Royce's fashion, merely upon perfect correspondence of its consciousness with things as they are, is to exhibit it as a monstrosity of reason, and a paralytic in will. The finite is, in Neo-Hegelian thought, taken up organically into the Infinite, and finds, in this undifferentiated unity, not a cause in time, but a ground of all that happens, or is supposed to be 'given.' The real objects of Nature are, on this view, resolved into mere modes of our conscious thinking, and the element of causality or dynamic energy disappears from things and selves. But this whole assertion of identity is so arbitrary and fictitious as to form no solution of the world-problem, the world being a real and concrete system, with mighty causal energies whose efficiency rests at last upon the sole originating or Uncaused Cause. This applies to much that J. H. Stirling wrote of identity as the solution of causality—a too facile, over-confident, and not very satisfactory solution, since it is certainly desirable that we recognize the Cause as

a fact, and a determining fact; that we recognize the effect as a fact—a fact determined; for only mischievous error can be the result of the denial of causes, or of their identification with effects. It must be remembered that the identity principle is not confined to Neo-Hegelian philosophers. But it is an idle postulation, of purely mechanical and abstractionist character, wherever found. An external world is presented to thought for interpretation of its relation to a transcendent First Cause, so far as revealed to, and in, experience. The abstract necessities of reason, as presented in forms of idealism to which thought is the sole reality, can be no substitute for the causal realities of experience in time. Thus, while the inadequacy of the conception of God as the Cause, in the usual form of presentation, is to be acknowledged or maintained, we have still to do with God as the Ground of the world of space and time, within which He is, in this sense, still and always operative.

Certain scientific influences also have depreciated the First Cause conception. Scientific monism of a pantheistic and materialistic type thinks to dispense with a First or transcendent Cause, the Absolute being to it identical with the universe. There is, in Haeckel, no lack of acknowledgment of the causal principle, but it is 'mechanical causation' which for him controls the universe. But such mechanical or scientific causation is never the simple and ultimate thing which it is often taken to be. Haeckel himself recognizes the world to be a unified whole, but does not apprehend the need for ultimate or metaphysical explanation of such a world-whole, as something non-phenomenal which underlies the whole field of scientific causation, with its mere antecedence and sequence. Haeckel, however, fancies he has found a sufficient cause for the universe in the law of causality, taken in conjunction with the supreme law of substance. From the monistic side, it is asked why the first principle of movement cannot be found in matter, since matter appears an inexhaustible reservoir of energies. But modern metaphysics has replied that matter not only supplies, but is, energy and force; and that such conception of force or energy can be construed only in terms of Will. In the final quest of physics even, an unchanging substantive cause, amid the changes wrought of force, is sought as a real, though unconscious, result of a metaphysical craving. The very place and purpose of the First Cause argument is to combat the position of monistic theories of a purely mechanical sort, and this it does by bringing out the essentially limited, conditioned, and dependent character of the universe as we know it. It is this conditioned character of the universe that makes it an effect. If there is one thing which the most thorough science of the time does, it is to reduce the category of cause to the universal law of conditions, whereby all phenomena are joined together in an order of dependence. It appears to the present writer no longer possible for theology to ignore, as it has so persistently done, those dynamical explanations of the world which, with their increasing tendency to drop the causal element, have found so much favour in the recent history of science. This dynamical account of the universe is still a quasi-metaphysical one, with which the view of First Cause, as here presented, is believed best to agree. What, of course, is most immediately given us in experience is the changeableness of the world and its unsatisfying character, but inferentially we soon reach far beyond this. If it be said that the universe cannot be taken as an effect unless it can be proved to have had a beginning, it is then to be remembered that causal agency can be inferred without the need of being observed, and that a Ground of existence, not a mere *prius* in time, is our real need and quest. The

universe may wear the character of an effect, and, indeed, the increasing knowledge of it by science makes it always more certainly known as an effect. Even its ordered character implies its dependence. Everywhere the forces of the universe seem to make for change, as geology and astronomy remind us. The whole world is seen to be in a state of change; in the world of appearance a mechanical connexion is everywhere observable; the self-sufficiency of the world is only apparent, and the cosmos is surely advancing towards a state in which its energy will be transformed into heat, and its life and movement will cease: thought necessarily concludes to a single ultimate Cause, which grounds and regulates the whole world-connexion, imparting to it order, law, and coherence. For there is a law of dynamic continuity running through the whole world of modern science, in virtue of which we see the change from cause to effect to be one of form rather than of substance. No rational foundation for a philosophy of Nature seems possible save with the Being of the Absolute as a primal datum. Not even Spencer got beyond the need of a First Cause as a datum of consciousness, and no scientific hypothesis, however ultimate—whether primal energy or other—can take us to a beginning of things that is really self-explanatory. There is, in reality, nothing arbitrary in our postulation, for such a First Cause can never properly be reckoned a term among causes that began to be. Indeed, the principle of causality is wrongfully applied only when it is sought to foist it upon a Being which never began to be. This uneffected Cause accounts for all else, is sufficient in itself, and is without relation of effect to anything else.

But one may still ask, as to the ultimate elements whereof things are composed, whether they may not have in themselves sufficient reason for their being and for the law of their combinations. Clearly, thought has no right to overlook that the contingency of the world may very well be—and has been—denied on its noumenal side, not in its phenomenal aspect. Certainly, we are bound to grant force to the agnostic contention that our knowledge of the world is still superficial, and confined to the phenomenal, rather than the noumenal, aspect of things. The insufficient character of the reasons adduced for the contingency of the world may very well be set down to the insufficiency of human knowledge. However matter or the ultimate elements may elude us in their noumenal or substantial aspects, we yet feel drawn, as by a necessity of thought, to postulate a Ground or Cause, of whose existence they are dependent manifestations, that Cause being to us the Ground of the possibility of all things. But, when the contingent and dependent character of the world is taken to be most established, there springs out of that very fact a weakness which, strangely enough, is often overlooked. It is that the stable conclusion to God, as the Absolute Cause, is based upon the unstable or contingent character of the world, which might conceivably be a wholly unreal foundation. The trouble is that thought may sometimes be in danger of finding it easier to conclude, from the world's imperfect character, to the world as unreal and illusory, than to rise to an Absolute Reality that shall be perfect and complete. Yet such an absolutely perfect Reality is the goal of all our thinking—thought's imperious demand—difficult as it may be to harmonize with the facts of our imperfect moral experience.

And, if the world be taken as real, a type of pantheistic thought is possible which may professedly disclaim the need to go beyond the world itself, as its own Evolving Cause. But no such self-evolving world is to be thought of save as the result of Will and Reason, immanent in the evolu-

tionary process, and creative of its unity. Mind must, then, fall back, in a way dependent on the energy of thought and its necessities, on the need to postulate absolute and necessary Being, which, in the presence of the world, with its inert matter and blind energy, must be set in causal relations to it.

Science is finding the unity of Nature suggested by the unities everywhere perceived—unities of process and development, and unities of organization and expression. Do such unities—do evolutionary and molecular theories—suggest nothing of the nature of an effect, nothing of the presupposed Ground and Cause of the whole? Does the sum of scientific knowledge—the observed, and inferred, unity of Nature—not suggest a First Cause, on whose transcendent causal energy the world depends, and by whose power it lives? If such World-Ground or First Cause be God, the effects of His causal power cannot conceivably continue without Him; His presence is after no quantitative mode, but is that of essential causality. It is, of course, not consonant with the ideal of science to seek an extra-mundane Cause, or with the method of science to seek anything save equivalent antecedent phenomena in terms of law. But it is perfectly rational to find the sum of scientific knowledge, with its explanation of the world for ever incomplete, suggest or point to some deeper cause—present to, and in, creation—than any open to the ways and instruments of science. The root difficulty of an evolution, which is simply a conditioned series in time, clearly lies in our claiming any right to attribute absoluteness—absolute initiative—to any particular term in the causal series; and hence rational insight finds itself driven, as we maintain, to ground the causal series in relation to an absolute or transcendent Ground. Without such a single ultimate Cause, which eternally grounds the whole evolutionary process, the entire train or chain of the developmental series must clearly appear as no better than a play of accidents. Thus we leave behind the old difficulty as to Deity working upon a Nature external to Himself—a conception that made the Infinite power finite, both because there was something outside of it, and because its working on the external must be conceived as subject to law or conditions.

On Efficient Cause, science does, and must, remain soundly agnostic. When, to the considerations already offered, is added the fact that science has no manner of solution, from powers or qualities of matter known to it, for free self-conscious beings, a new demand arises for a First Cause that shall be free, intelligent, and self-conscious. For, between the effect and its cause there must be neither inadequacy nor disproportion. So, though the effect not only may, but must, be different from the cause—else there were no causation—yet the Primal Cause must be such as can produce the total universe. Hence we see why the First Principle of all things cannot be, as the monists wish, impersonal. No impersonal cosmic processes can possibly furnish a World-Ground for such a being as man. The First Cause must be at least personal as we are, however much more He may be. This is an inexorable demand of our thought, which absolutely refuses to be content with anything less, as First Cause, than a Being endowed with plenitude of ethical life, intellect, and will. For God is not the First Cause in the ordinary sense of cause, whose relation to effect is properly physical, not ethical, and necessary, not free. In this strict sense, the world is *not* an effect; and no cause, in this sense, can form the *rationale* of the world. More than its First Cause, in this aspect, is God: causality is an element in His relation to the world, but *cause* cannot be the principle of thought respecting One who is its free

Originator, the self-determined action of whose Will is really the ultimate principle of the cosmos. The laws of Reason and of Morality, found in the world, must be accounted for, since neither the universe nor the human mind can be their cause. These laws are of a character so absolute and unconditional that they cannot be conceived otherwise than as true and existing, were there neither universe nor human mind; hence an argument for a First Cause has sometimes been founded on these necessary truths alone. Their cause can be nothing either irrational or non-moral, and so there arises a call for a Rational and Moral Intelligence, distinct from the world and man's mind, in whom they are grounded. The First Cause is First Cause of an ordered and intelligible world, with harmony in its causes in relation to their effects, and that First Cause must be not only the Supreme Intelligence—Universal Mind—but equally the Ground of all things in virtue of its ethical moment. This the best metaphysical thought now fully realizes. The First Cause or Ultimate Ground of all reality must be uncaused, and such Cause or Ground can only be One Eternal Mind or Spirit, by whose will all things are. To such unity of the First Cause we are led by the principle of Parsimony, which would make more than one unphilosophical, and by the unities which mark alike the laws of the universe and the necessary laws of reason. Thus is met the demand of those who, speaking from the scientific side, insist that

'the character of the First Cause cannot be judged from the mode of action of any secondary agencies. One mode of action is as mysterious as another, so far as any relations to a First Cause are concerned. The intelligence of the First Cause can only be judged from the result' (J. P. Cooke, *The Credentials of Science the Warrant of Faith*², London, 1893, p. 252).

While the scientific view must restrict itself to the actual universe, it is yet a thought suggestive and worthy of consideration that the causal principle in the human mind presses on, by inherent impulse, from actual being to that which is possible and conceivable. Thus it has been attempted to found an argument for the First Cause on this aspect alone. In our treatment, however, the stress has been laid upon the contingency of the actual universe. An absolute and intensive infinity is here maintained for Deity, in face of the difficulties felt by certain philosophic writers who have not been able to shed quantitative notions in this sphere of thought. The absolute and self-existent Ground and Cause of all things is, that is to say, as the Absolute Being, really infinite—One in our conceptions of whom we have got clear away from thinking of infinite extension in space, and existence in infinite time. The very end of our study of the positive relations, which God sustains to the empirical world of space and time, is just to raise us at last beyond itself to the spaceless and timeless Causality of the Deity who forms its Ultimate Ground and Cause.

Our conclusion as to the First Cause argument, customarily presented as an inference from effect to cause, is that it is invalid. As an argument, however, from the contingent character of the world to the necessity for a World-Ground, it retains validity and worth. Such self-existent and eternal World-Ground or First Cause is, by an inexorable law of thought, the necessary correlate of its finitude. Though we must reason to Him from data of sense, yet the view so gained may be regarded as our first and most fundamental philosophical conception of God, as involving an Absolute Being necessarily existing. God and the world are not to be conceived as cause and effect, for modern metaphysics can by no possibility regard such an expression of the connexion between the world of experience and the Ground of all possible experience (no mere *ens extra-*

mundanum) as anything like adequate. The true abiding First Cause is God, taken as the ultimate and absolute Ground of the possibility of everything that is—the self-existent Cause of the ever-present world and its phenomena. Should this form of the argument appear to carry infinity only in implicit mode, God, it should be remembered, is, in its presentation of Him as the Absolute Being, taken as full intensive infinitude—infinite plenitude of existence. By such infinity is meant no mere absence of limitation, but the positive conception of pure actuality, limitless existence—an infinity incommensurable with all that is limited. Or, should it be asked whether, in this way, we have not found a Being who is *ens primum* (first Being) rather than *causa prima* (First Cause), our answer clearly is that a Ground so related to the actual world is *causa prima* as well as *ens primum*—is for us *ens primum* precisely that He may be *causa prima*. The First Cause must be just such absolutely necessary Being or *ens a se*, else it were contingent, which the First Efficient Cause could not conceivably be. Such a Deity, as *causa sui*, creatively bringing forth the world out of His own potencies, cannot be allowed to be an arbitrary resting-place, but is a truly rational ground, of thought. For the ontologic basis supplied in the *ens primum* or Absolute Being is not taken as something standing by itself and indeterminate, but something whose objective activities, as the true First Cause, world-phenomena are, and whose nature they bespeak or expound. Thus we preserve and maintain the First Cause argument in deeper form than the old Aristotelic mode, in which the search for a Prime Mover had relation only to the contingency of motion in matter; our argument goes deeper, being concerned with the contingency of being or matter itself. Neither motion nor matter carries necessity in itself; both are grounded in the necessary, ultimate, and self-existent Cause of all things.

JAMES LINDSAY.

FIRSTFRUITS (Introductory and primitive).

—Although a purely practical purpose was perhaps primarily involved in the use of firstfruits (see § 4), it may be taken as an axiom of primitive thought that all which is new is sacred, tabu, and hence not to be touched by man until certain ceremonies are performed by which the tabu is taken off and the whole is set free. This is analogous to the doing of anything for the first time, or the first occasion of any series of events, or the entering upon a new state of life, e.g. manhood or womanhood, marriage, entrance into a mystery association. These states are sacred, dangerous, and involve a tabu condition, primarily because they are new states.¹ For this reason they are accompanied by rites which serve to remove the tabu and to carry off the danger with which the persons concerned are charged. We can thus understand why it is that the new crops, the new vintage, the first catch of the season, the first-born of domestic animals and even of man, are regarded as tabu or sacred. The crops, etc., must not be cut or gathered or dug up or used until certain rites have been performed. The nature of these rites reveals another axiom of primitive thought—that the whole may be fully represented by the part, so that, by setting aside a part, the whole is

¹ See Van Gennep, *Les Rites de passage*, Paris, 1909, p. 249 ff.

set free. In the case of the crops or the vintage, that part is known as the firstfruits. Similarly in the case of the chase or fishing, the first animal or fish caught is also set apart in some specific way, thus giving liberty for the hunter or fisher to continue his pursuit in safety. And the first-born of domestic animals is often sacrificed or set free, because it is invested with a peculiar sanctity, and by this act the future progeny is, as it were, made usable (see FIRST-BORN).

The rites by which the corn or the vintage is set free for ordinary use are of different kinds. Thus the firstfruits may be sacrificed to a god or spirit, or to the dead. They are sometimes eaten in a solemn manner and, so to speak, sacramentally; or there may be a combination of sacrifice and ritual eating. Again, they are made over to king, chief, or priest, who sometimes performs upon them or with them certain ceremonies. Firstfruits are sometimes part of the crop which has been sown specially for this purpose. Frequently the first-fruit ceremonies are very elaborate and lengthy. They often terminate with a feast, or are the occasion of a kind of saturnalia; or they form a kind of festival of beginnings, a New Year, when also new fire is kindled and distributed to the community. And, where the new food is eaten solemnly, it is sometimes prepared for by fasting or by swallowing emetics, in order to make the body ready for the reception of the sacred food (see FASTING, § 4). It is unnecessary to give examples of these rites from all parts of the world. It will be sufficient to cite a few typical ones with references to similar customs in other localities.

1. Sacrifice of firstfruits.—(a) *Offerings to gods.*—In Tahiti the firstfruits of orchards and gardens, with pigs, fowls, etc., were offered to the gods, and it was death to the owner if they were not thus acknowledged (Ellis, *Polynes. Researches*, London, 1831, i. 350). Firstfruits were offered to the god Tani in the Society Islands, with the words, 'Here, Tani, I have brought you something to eat' (Tyerman and Bennet, *Journ. of Voyages and Travels*, London, 1831, i. 284). Such offerings were general throughout Polynesia. The Baganda offered firstfruits from a new garden to a divinity, asking his blessing on the future crops (Rosecoe, *Baganda*, London, 1911, p. 428). The Basutos do not touch their corn after threshing, before boiling some, casting it upon the rest, and saying, 'Thank you, gods; give us bread again to-morrow.' The bulk is now pure and fit to be eaten (Casalis, *Les Bassoutos*, Paris, 1859, p. 265). The Ewe tribes offer some of the new yams or maize to divinities. In the case of the yams, some have been specially planted for the goddess to whom they are offered. The offerer says, 'When I dig mine, grant that I may have plenty,' and then proceeds to dig (Spieth, *Die Ewe-Stämme*, Berlin, 1906, pp. 344, 795). In ancient India the *āgrayaneṣṭi*, or offering of firstfruits, took place in early summer (barley) and in autumn (rice). Cakes were made of these, or the grain was boiled, for Indra and Agni, for the Viśve Devās, and for heaven and earth. Thus the plants were rendered wholesome and faultless, for myth told how the gods had first offered this sacrifice to free the plants from the poison of the Auras (*SBE* vii. [1900] 191, xii. [1882] 369 ff., cf. xxx. [1892] 93, 124, 289). Among many of the present-day tribes the first of the crops, of wine, and of oil is made over to gods or spirits; and, as in the N.W. provinces, this is done that the god may preserve the crop from insects and rats (Crooke, *PR* i. 1896, i. 195 ff.; *Roman-Urdu Journal*, Lahore, iii. [1880] 11; Moorcroft and Trebeck, *Trav. in Himalayan Provinces, 1819-25*, London, 1841, i. 317 f.; Atkinson, *Himal. Districts*, Allahabad, 1884, ii. 825; Shaw, *Asiatic Res.* iv. [1807] 56 f.). In Borneo, when the rice

is ripe, bunches of it are placed round an altar. A two days' feast takes place with dancing. At the conclusion the crops may be gathered (St. John, *Forests of Far East*², London, 1863, i. 191). Examples like these from the lower culture might be multiplied indefinitely.

In the Semitic area the principle that the gods, or some of them, were lords of the cultivated land was well recognized. To them, therefore—in return for seasonable rain and sunshine, growth, increase, and fruitfulness—a share of the produce was given. Thus, in Babylonia the harvest festival was a well-established custom, and to the gods were presented firstfruits of all produce, since the latter was really their property (Sayce, *Rel. of Ancient Egypt and Bab.*, Edinburgh, 1902, pp. 466 f., 473; Jastrow, *Aspects of Rel. Belief and Practice in Bab. and Assyria*, New York, 1911, p. 343). This was also true of the Canaanites. The *b' alim* caused the fruits of the earth to increase, and men presented to them the firstfruits. An inscription mentions a seven days' festival marked by an offering of firstfruits (de la Saussaye, *Manuel d'hist. des religions*, Paris, 1904, p. 184; for Hebrew firstfruits, see next article). In Egypt, Min was the god of the generative power in Nature. To him harvest festivals were dedicated in thankfulness. Firstfruits were presented to him, or to his servants, or to the local divinity. The new king also celebrated a festival to Min, offering sacrifice, and cutting a sheaf of new corn which he strewed before the bull sacred to the god. This was a symbolic offering of the firstfruits of his reign (Wiedemann, *Rel. of Anc. Eg.*, London, 1897, p. 127; Erman, *Life in Anc. Eg.*, do. 1894, pp. 66, 245, 272).

The ancient Teutons also recognized the principle of the offering of firstfruits of the grain harvested; and Snorri speaks of three annual sacrifices, one of which was in connexion with harvest (Grimm, *Teut. Myth.*, London, 1880-8, pp. 39, 42; de la Saussaye, 693). The ancient Roman husbandmen offered a sacrifice of firstfruits of all the various crops to those divinities who were chiefly associated with their welfare: the first ears to Ceres, the first vintage to Liber. Pliny says that neither new corn nor new wine was tasted until the priests had offered the *primitivæ* (*HN* xviii. 2; Festus, s.v. 'Sacrima'; Wissowa, *Rel. und Kultus der Römer*, Munich, 1902, p. 345). In the festivals of the State religion traces of these offerings survive. From May 7 to 14 the Vestals prepared the *mola salsa* made from the first ears of the standing corn, and offered these at the Vestalia in June. At the Vinalia in August or April the *flamen Dialis* plucked the first grapes (*auspicatio vindemiæ*) and offered prayer and sacrifice for the preservation of the whole vintage (Varro, *de Ling. Lat.* vi. 16). Warde Fowler has connected the custom of offering tithes (*decumæ*) of various things at the yearly rites of the *ara maxima* with an earlier offering of firstfruits, these suggesting or even developing sporadically into tithes (W. R. Smith², 245 f.; see § 6 below; W. Warde Fowler, *Roman Festivals*, London, 1899, p. 195; cf. also his remarks on pp. 207, 212; see also FIRSTFRUITS [Greek]).

In China the *Li Ki* describes how the husbandman presented the firstfruits of wheat and millet in the first and second months of summer respectively, and the son of Heaven consumed them with other meats, first solemnly offering a portion of them (*SBE* xxvii. [1885] 271, 274). In both ancient Mexico and Peru, firstfruits were also sacrificed to the gods (Müller, *Amer. Urrelig.*, Basel, 1855, pp. 374, 626).

(b) *Offerings to the dead.*—In many instances firstfruits are offered to ancestral ghosts, who are believed to have power over the growth of the crops. This is common among many African tribes, e.g.

in the south, where no one might gather the millet till the chief had offered some to his ancestors (Theal, *Records of S.E. Africa*, vii. [London, 1901] 397). Generally the spirits are thanked for their services, invited to partake of the food, and, as with the A-Kamba, their permission is asked for the people to eat the crop (Hobley, *Ethnol. of A-Kamba*, Camb. 1910, p. 85 f.; cf. also Hetherwick, *JAI* xxxii. [1902] 94 f. [Yaos]; Tönjes, *Ovamboland*, Berlin, 1911, p. 195; Mockler-Ferryman, *Up the Niger*, London, 1892, p. 141 f. [Igbiras]). In Fiji the firstfruits of yams are presented to ancestral spirits in the *nanga*, or sacred enclosure, and none may eat until this is done, under risk of madness (Fison, *JAI* xiv. [1885] 27). In the Solomon Islands the first yams and canarium nuts are presented to the ghosts for their consumption, and until then none may eat or gather them (Woodford, *Naturalist among the Headhunters*, London, 1890, p. 26 f.; Codrington, *Melanesians*, Oxford, 1891, p. 132 f.). In Tanna, dead chiefs are offered firstfruits to eat, and are requested to be kind to the people (Turner, *Nineteen Years in Polynesia*, London, 1861, p. 88; see also Mariner, *Tonga Islands*², do. 1818, ii. 196 f.; Neuhauss, *Deutsch Neu-Guinea*, Berlin, 1911, iii. 434 f. [Bukana: reward to the ghosts for watching the crops, petition for further favours]). Some tribes of India also offer firstfruits to ancestors, e.g. the Oraons of Bengal, who ask them to 'come and rejoice with us' (Dehon, *Rel. and Customs of the Oraons*, Calcutta, 1906, p. 137), and similar offerings to the dead are common among the Kochs of Assam, in Ceram, and in Tenimber and Timor-laut Islands. Cf. art. FOOD FOR THE DEAD.

(c) *Wild food-stuffs*.—It should be observed that even the produce of uncultivated plants may not be eaten until some has been made over to the spirits presiding over Nature. This is done by some of the wilder Indian tribes in British Columbia, none daring to gather or eat berries or roots in their season till some have been offered to these spirits (Hill-Tout, *JRAI* xli. [1911] 132; J. Teit, *Thompson Indians of Brit. Col.*, New York, 1900, p. 345). Similarly in the Shortland's group, Solomon Islands, when the Pleiades appear at the nutting season, houses are decorated with branches of nuts as an offering to the spirits and to prevent accidents while they are being collected. If the nuts are ripe before the Pleiades appear, no one will eat of them until this takes place (Brown, *Melanesians and Polynesians*, London, 1910, p. 210 f.). This shows that Divine ownership in all that earth produces—not only that which is cultivated by man—is recognized at low levels.

The sacrifice recognizes the Divine ownership of the whole crop, and is analogous to the custom of offering the first spoils of war, the first ore or metal from a mine, or part of a meal or drink. Here it touches the custom of offering to a god only a part of a sacrificial animal, the offerers eating the rest. The principle underlying the sacrifice of firstfruits is that the whole is sacred because it is the possession of a god. Therefore there must be a recognition of that ownership by what has been called a *sacrifices de désacralisation*. The sacrifice sets free the bulk for common use by concentrating upon it the sacredness of the whole (Hubert and Mauss, *Mélanges d'hist. des rel.*, Paris, 1908, p. 79).

2. *Ritual eating of firstfruits*.—(a) In many parts of the world the bulk of the crops may not be touched until part has been eaten with certain prescribed ceremonies. Thus at Kiriwina, New Guinea, the chief, after fasting for some days, makes the whole crop of yams tabu. Feasts follow, at which spirits, including those of the yams, are present to partake (Brown, 413 f.). In the Reef Islands (Melanesia) there is a 'holy eating' of the new fruits, with thanksgiving to the spirit presiding over all food-stuffs (O'Ferrall, *JAI* xxxiv. [1904] 230). In Buru each clan meets to eat a meal of new rice, contributed to by each member of the clan. This is called 'eating the soul of the rice'

(Wilken, in Frazer, *GB*³, pt. v. vol. ii. p. 54). With the Kayans of Borneo, who believe also in the soul of the rice, each person is ceremonially touched by the priestess, and then eats a few grains, after which the feast begins (Nieuwenhuis, *In Centraal-Borneo*, Leyden, 1900, i. 156). This ritual eating is also found in India. In Bihar, when the crops are cut, some of the new grain is taken home and eaten with certain ceremonies (Grierson, *Bihar Peasant Life*, Calcutta, 1885, p. 398). Among the Coorgs the reaper of the first rice is chosen by an astrologer. Each one takes a hot bath and then repairs to the rice-field, where this reaper cuts some rice. Of this a cake is made by him, together with other ingredients, of which every one receives a piece (Gover, *Folk-songs of S. India*, London, 1872, p. 105 ff.). Old men among the Ainus eat the new millet ceremonially before the people can eat. At the same time they worship the living spirit of the millet or the 'cereal deity' (see *ERE* i. 248^b). Ceremonial eating of new fruits, yams, etc., is found among many African tribes. Among the Kaffirs the king himself placed the new food in the mouth of each one, and death would have been the punishment of any one who had eaten before this rite (Grout, *Zulu-land*, Philadelphia, 1864, p. 161; Speckmann, *Die Hermannsburg Mission in Afrika*, Hermannsburg, 1876, p. 150 f.). The king first partook of new fruits among the Matabele. Many oxen were sacrificed, and, on the fourth day, the new crops were distributed among the people by a medicine-man. No one might eat until all these ceremonies were over, under pain of death (Decle, *Three Years in Savage Africa*, London, 1898, p. 157 f.). Among the Onitsha the medicine-man places part of the new yam on the lips of the person, who then eats the remainder, offering thanks for being permitted to eat the new yam (Crowther and Taylor, *Gospel on the Banks of the Niger*, London, 1859, p. 287 f.). Among the Baganda, when beans are ripe, the mother causes her son to eat some of the first cooked. Neglect of this would cause the anger of the gods. Her husband then jumps over her, after which the beans may be eaten by all (Roscoe, 428). Many American Indian tribes ate the new corn ceremonially, usually after fasting or drinking an emetic (MacCauley, *5 EBBW* [1887], p. 522 f. [Seminoles]; Speck, *Eth. of Yuchi Indians*, Philadelphia, 1909, p. 86 f.). Among the Natchez the 'feast of grain' consisted in a ceremonial eating of new corn which had been specially sown with a certain ritual. The chief or 'great Sun' appointed a day for the rite, new fire was made, and, after the grain had been cooked, the command was given to eat it (*Bull. 43 BE*, Washington, 1911, p. 113 f.). For survivals of such customs among the peasantry of Europe, see Frazer, *GB*³, pt. v. vol. ii. p. 50 f.

(b) Sometimes the chief or king alone eats the new fruits. This was a common custom among West and South African tribes, no one being allowed to touch the food until the chief had eaten, while the occasion of the W. African yam 'customs' was marked by human sacrifices and wild saturnalia (Ellis, *Tshi-speaking Peoples*, London, 1887, p. 229 [people fast before eating]; Ramseyer and Kühne, *Four Years in Ashantee*, London, 1875, p. 147 f.; Werner, *Brit. Cent. Africa*, do. 1906, p. 271 [Bantu chief tastes ceremonially before the people can eat]; Macdonald, *JAI* xix. [1890] 277; *FL* xx. [1909] 436 [Pondos and other Bantu tribes]). In Burma some of the *pangati* fruits were taken to the king, who ate of them. No one might eat before this (Bastian, *Die Völker des östlichen Asien*, Leipzig, 1866, ii. 105). In other cases, as in Samoa, firstfruits must be offered to the chief, else calamities will follow (Turner, *Nineteen Years in Polynesia*, p. 327). Or, as among the Betsileo (Mada-

gascar), firstfruits form a part of the royal revenue (Shaw, in *GB*, pt. v. vol. ii. p. 116).

(c) Here also it should be observed that wild food-stuffs are eaten ritually before the bulk can be touched. Some Indian tribes of British Columbia eat the shoots of the wild raspberry. When they are ready, the chief's wife or daughter is sent to pick a bunch. These are cooked, and the chief begs the spirit of the plant to grant them a good supply. Then the food is distributed to all present. A similar ceremony is performed when the berries are ripe. The ceremonies were intended to propitiate the spirit of the plant, in order that a plentiful supply might be vouchsafed; and, if not properly carried out, there was a danger of offending the spirit (Hill-Tout, *JAI* xxiv. [1904] 330 f.).

3. **Sacrifice combined with ritual eating.**—Among the Nandi the women of the family place a basketful of the new corn to dry. Some drops through upon the fire; and, if it explodes, this is a sign that it is accepted by the spirits of the dead. A few days later, porridge is made from this grain. Some is daubed on walls and roof, and some placed in the mouth by all present and then spat out towards the east. The head of the family holds some in his hand and prays for health and for milk, etc. (Hollis, *Nandi*, Oxford, 1909, p. 46 f.). The Ewes have elaborate ceremonies, in which new yams are offered to the gods and a meal follows (Spieth, *Die Ewe-Stämme*, p. 304 f.). The tribes of the lower Congo throw part of the first crop of maize, peanuts, and beans towards the rising sun and eat some, saying, 'We are eating them for ever' (Weeks, *FL* xx. [1909] 311). The Musquakie Indians at the 'Green Corn Dance' make a burnt-offering of the corn to Gechee Manitou for the increase of fertility. Thereafter corn is cooked and a ceremonial feast follows (Owen, *Folk-lore of Musquakie Indians*, London, 1902, p. 52 f.). Similarly the great 'Busk' festival of the Creeks, so often described, with its fastings and emetics, consists of a sacrifice of firstfruits and a ritual eating (Adair, *Hist. of the Amer. Ind.*, London, 1775, p. 96 ff.). In New Caledonia, the first yams are carried before the ancestral images, cooked in pots reserved for that purpose, with prayer for a good annual crop, and eaten (Glaumont, *L'Anthropologie*, viii. [1897] 43 f.). The Badagas of the Nilgiri Hills make the grain of the first sheaf into cakes which are offered and then eaten by the family (Harkness, *Description of a Singular Abor. Race*, London, 1832, p. 56 f.). The central rite of the great Pongol festival of S. India consists in cooking new rice, some of which is offered to Ganēśa, the remainder being eaten by the family (Gover, *JRAS*, new ser., v. [1871] 91 f.; Wilson, *Essays*, London, 1862, ii. 169 f.). In N.W. India firstfruits are offered to the family gods, and then part of the offering, mixed with milk and sugar, is tasted seven times by each member of the family (Elliot, *Hist. of N.W. Provinces*, London, 1869, i. 197). Among the Chams, firstfruits gathered from a sacred field are offered to Po-Nagar, goddess of agriculture, and afterwards eaten. Not till then may the remainder of this field as well as the ordinary fields be reaped (Aymonier, *RHR* xxiv. [1891] 272 f.).¹

4. **Origin of firstfruits.**—In some of the instances cited it has been seen that the food-stuff is believed to be tenanted by a spirit, or to be divine. For this reason Frazer has claimed that in all cases where firstfruits are eaten ritually there is 'a sacrament or communion with a deity, or at all events with a powerful spirit,' and he emphasizes the facts of preparation, purification, and the use of special vessels for the firstfruits as also pointing in this direction (*GB*, pt. v. vol. ii. p. 82 ff.). He

thinks that 'in course of time the sacrifice of firstfruits tends to throw the sacrament into the shade, if not to supersede it' (p. 88). But it may be asked whether there is not a more primitive stage in the history of firstfruits, prior to ritual eating or sacrifice. In most known instances the crops are tabu until the ritual eating or sacrifice is performed, and frequently it is by the act of chief or medicine-man that the tabu is removed. The study of tabu shows that it is very easy for a tabu imposed for purely practical purposes to be hedged about with supernatural sanctions. At an early stage in his history man must have come to see the value of a 'close time.' The fruits of the earth, and animals useful for food, should not be gathered or slain until they were quite ready. This would be emphasized by the community, and insisted on by the old men, or by the chief or medicine-man, and, until these gave the signal, probably consisting of a verbal permission or of some simple rite, nothing could be gathered, or slain, or eaten.

This is illustrated by the totemic customs of many Central Australian tribes. Men of a totem perform *intichiuma* ceremonies to multiply their totem species, expressly for the benefit of non-members of the totem group. When the totem now becomes plentiful, the non-members go out and bring in a large supply of the animal or plant. But not till the men of the totem have eaten a little or performed a simple rite, e.g. rubbing with the animal's fat, and given verbal permission, can the others indulge themselves freely (Spencer-Gillen, 189 ff., p. 283 ff.).¹ It should also be observed that, elaborate as are the yam 'customs' of W. Africa (§ 2 (b)), they are primarily based on a sanitary fact, viz. that the yam is dangerous before a certain time; the 'customs' take place only when it is fit for use (de Cardil, App. to M. H. Kingsley, *W. Afr. Studies*, London, 1899, p. 450, cf. 174). Again, among certain groups of S. African people, one branch, the Bahurutsi, have the prerogative of first eating the firstfruits of the year. None of the other tribes may do so till they have received permission from them (Stow, *Nat. Races of S. Africa*, London, 1905, p. 520, cf. 413). In the Australian instances, and probably here also, there is no apparent belief in a sacramental eating and no sacrificial rite, but merely a removal of tabu on a food supply by those who have a right to remove it.

The primitive prohibition would be supported by various sanctions, and would be analogous to similar food tabus in time of scarcity or those imposed by men upon women or youths. But it would be an easy matter for various magical or religious rites to attach themselves to whatever ceremony was used to raise the tabu—eating the food, etc. The growing feeling that some mystery or sacredness or danger was connected with first things or actions or processes would aid in the application of such rites. When the food-stuff came to be regarded as animated by a spirit, the act of eating would become sacramental (W. African, Ainu instances), and might extend to others besides old men or chiefs. All had then to eat ritually before it was safe to eat the bulk. Or, when it was thought that food-stuffs were produced by spirits or gods, their ownership would be recognized by dedicating a part to them with thanksgiving. Thus they would be propitiated, would continue their goodness, and would now allow men to eat safely and freely of their bounties.² Or both ritual eating and sacrifice might be combined (cf. Lang, *Magi and Religion*, p. 267 f.). Where there is a meal or a feast, spirits or gods are believed to eat with the worshippers.

The view here taken (following Lang) is further supported by the prominent place which the old man, the chief, or medicine-

¹ It is interesting to observe that among the Igorrot, before gathering rice, the harvesters sit round a tiny fire; and the owner of the field says, 'Palay, when we carry you to the granary, increase greatly so that you will fill it.' He then gathers a handful, after which cutting begins (Jenks, *Bontoc Igorrot*, Manila, 1905, p. 103). Some of the instances cited above connect firstfruit rites with the increase of the crops or animals, or there is prayer for a blessing or for a good annual crop (Baganda, Basutos, Ewe, tribes of N.W. India, § 2; tribes of Br. Columbia, § 2; Musquakie Indians, § 3).

² Cf. W. R. Smith, 459: 'The agricultural tribute of firstfruits and tithes is a charge on the produce of the land, paid to the gods as Baalim or landlords.' For the application of a supernatural sanction to tabued foods, see art. FALL (Ethnic), vol. v. p. 707b.

¹ For curious combinations of old pagan customs with Christian rites in Armenia and Syria, see *FL* xv. [1904] 430, 439, 443.

man often has in the ceremony of firstfruits (cf. an instance from Rājnahāḥ [India], where the chief fines any one who eats the new Indian corn before the public thanksgiving for the crops [Shaw, *Asiatic Researches*, iv. [1807] 56 f.]; while among the Matabele any one who ate new fruits before the king did so was put to death). Further, in Elema and Waima we see this more primitive custom in action. The chiefs and old men proclaim a tabu, and certain masked men, called *kaiwakuku* or *hariku*, impose it and punish transgressors. The tabu is imposed after planting and fencing yams, and takes the form of forbidding any one to dig or remove anything from the garden until such time as the *hariku* decide that the crop is fit for gathering. At that time they inform the chief, who then gives permission (Seligmann, *Mel. of B.N. Guinea*, Cambridge, 1910, p. 299 f.; cf. Brown, 126). In many parts of Melanesia the season of yam harvest is regulated by the appearance of the Pleiades (Codrington, 348; Guppy, *Solomon Islands*, London, 1887, p. 56; cf. § 1 above). In Victoria an old chief of the Spring Creek tribe taught the young people the relation of the stars and planets to the seasons; e.g. the appearance of Canopus was a signal for the approach of the emu egg time (Dawson, *Aust. Abor.*, Melbourne, 1881, p. 75). Presumably before such a time no one might touch the crop, and until the appearance of these stars it was recognized to be tabu. In some instances, also, there is neither sacrifice nor ritual eating, but merely the performance of certain acts before which the crop is absolutely tabu, and any infringement is fraught with danger (see, e.g., Roscoe, 428; Grierson, 398).

5. **Firstlings.**—Similar rites applied to the first animal taken in the season's chase or fishing and to firstlings of flock or herd, and it is not impossible that here it was the analogy of the firstfruits of uncultivated products which gave rise to those rites, first of all in the case of animals caught, later aided by the general belief in the sacredness of the first-born, in the case of the firstlings of flock or herd, just as the tabu on uncultivated plants must have preceded that on the cultivated crops. The rites are of various kinds, but in the case of sacrifice of the firstlings of flock and herd it is hardly likely that all the first-born in a season were sacrificed. Probably only one first-born, the first of the year, was sacrificed as representative of all the others (see, however, Ex 22³⁰, where every first-born seems intended).

In Tahiti the first fish caught in the season was offered on the altar (Ellis, i. 350). In Florida (Melanesia), the first flying-fish of the season was sacrificed to ghosts, some of whom were represented by images, as sharks. Others had no images. The fish was therefore offered before the image or simply cast into the water to the ghost (Codrington, 138). In Peru, firstlings of animals were sacrificed (Müller, 375). Among the ancient Arabs the sacrifice of firstlings (*fara*) was recognized, probably in connexion with the annual sacrifices of *Rajab* (=the Hebrew Passover month). But it is not certain whether *fara* means the first-born absolutely or the first birth of the year (W. R. Smith², 228, 402; Lagrange, *Études sur les rel. sémitiques*², Paris, 1906, pp. 255, 298). In North Africa the native still sacrifices the first-born of the flock as well as the firstfruits at a shrine, in order to expel evil from the flock or the harvest (Doutlé, *Magie et rel. dans l'Afrique du nord*, Algiers, 1910, p. 491).¹ Many instances have shown how the offering of firstfruits is accompanied by prayers for the safety of the crop. In Babylonia there was a yearly sacrifice of firstlings of the flocks (de la Saussey, 155), and also among the ancient Teutons (Grimm, 42).

An example of the ritual eating of the first catch is found among the Indians of British Columbia. When the sock-eye salmon run began, the first caught was brought to the chief, who called the people together and prayed. The fish was then cooked and a small portion given to each present, to propitiate the spirit of the fish and to ensure a plentiful catch (Hill-Tout, *JAI* xxiv. 330). In other cases a different procedure is adopted. Among the natives of the upper Congo the first fish caught by a lad is given to his parents, or, among the Bangala, to his mother, or, if she is dead, to her next of kin, else he would fall under a curse. And, generally, the first fish caught in the season is given to the first person who greets the owner when he steps ashore, else he will have no further luck. This is analogous to the native practice of giving away the firstfruits of a man's skill in manufacturing, farming, hunting, etc., and to that of a girl's giving the firstfruits of a farm to her mother or her aunt (Weeks, *JAI* xxxix. [1909] 425; *FL* xii. [1901] 186). Cf. the practice in N. India of presenting the first piece of sugar from the cane or the first bowl of extracted juice to servants or to a friend or a beggar (*FL* xxi. [1910] 217; Crooke, *PR* ii. 807). At the rite of firstfruits in ancient India, a first-born calf was presented to the priest as his fee (*Satapatha Brāhmaṇa* [SBE xii. (1882) 869]). See also FIRST-BORN.

6. **Firstfruits in the Christian Church.**—The Jewish custom of giving firstfruits and tithes for
¹ Cf. the Carib idea that the offering of firstfruits preserved from diseases (Müller, 211), and the Hindu belief that, if the firstfruits of the rice bowl well, there will be good luck in the coming year (Hopkins, *Rel. of India*, Boston, 1896, p. 449 f.).

the support of the priesthood passed over into Christian usage. The first reference to firstfruits is in the *Didache*, § 13. Every true prophet is to receive the firstfruits of the wine-press and threshing-floor, of oxen, and sheep, of baking of bread, the first of each fresh jar of wine or oil, and the first of money, clothing, and every possession. Failing a prophet, these were to be given to the poor. Irenæus taught that Christ enjoined firstfruits when He took bread and wine at the Last Supper (*Hæc*. iv. 17). Origen thinks that our righteousness cannot exceed that of the scribes and Pharisees if we misuse the fruits of the earth so that the Priest and Levite know nothing of them (hom. xi. in *Num.*). The custom was general but voluntary, though several of the Fathers insist upon the duty of giving firstfruits and tithes (Origen, c. *Cels.* viii. 33, 34; Jerome, in *Ezek.* 44, in *Mal.* 3; Greg. Naz. Ep. 80, Or. 15). The *Apostolic Constitutions*, like the *Didache*, define the things out of which firstfruits are to be paid—wine, corn, bread, honey, sheep, and oxen for the clergy, clothing and money for the poor (vii. 30). These are apportioned by the bishop (ii. 25). The Council of Tours in 567 and of Mâcon in 585 ordered payment of tithes, and about two centuries later the practice of charging lands with tithe became usual and was enforced by the State during the Carolingian period (see TITHES). This obligatory tithe for the most part replaced firstfruits, though not wholly. A Council at Bordeaux in 1255 fixed their amount at a thirtieth to a fortieth; another at Tours in 1282 made it a sixth; and they were still paid in France in the eighteenth century.

Bishops had frequently claimed the firstfruits of vacant benefices (theoretically a year's income), this probably originating in the fees paid by incumbents. The Popes began to make a similar claim. Thus Clement v. forbade bishops to take firstfruits, but in England he had done so only to claim them for himself. Even before this the Popes had regarded firstfruits (*primitiæ*) of benefices as at their disposal. John XXII. appointed a collection of firstfruits in Scotland and England in 1316, and he soon extended his claim over the whole Church. Bishops, abbots, prebends, rectors, and vicars were generally included in this tax, though John exempted bishops and abbots. The *communio servitia* or *annates* paid by bishops and abbots grew out of sums paid to the Papal See by candidates for vacancies. In France the payments of firstfruits went on till the Revolution. The Council of Basel (1431-43) had wished to abolish them, but the Concordat of Vienna confirmed earlier decisions. In England, where large sums had been taken out of the country and much dissatisfaction caused, payment to the Papal See was made to cease at the Reformation, but Henry VIII. still laid claim to firstfruits. Eventually the resultant revenues were transferred in 1703 to 'Queen Anne's Bounty,' a fund administered for the poorer clergy in the Church of England.

LITERATURE.—The fullest account of firstfruits is in J. G. Frazer, *GBA*, pt. v., 'Spirits of the Corn and the Wild,' 1912, vol. ii. pp. 48 ff., 109 ff. See also Ersch-Gruber, *Encyc.*, Leipzig, 1818-84, s.v. 'Erstlinge'; A. Lang, *Magie and Religion*, London, 1901, ch. 14, 'First-fruits and Taboos.' For firstfruits in the Christian Church, see J. Bingham, *Antiquities of the Christian Church*, do. 1829, i. 482 ff.; W. M. Brady, *Episcopal Succession*, do. 1876; H. W. Cripps, *Treatise on the Laws relating to the Church and Clergy*, do. 1869; J. C. L. Gieseler, *Ecclesiastical History*, Eng. tr., Edinburgh, 1863, iv. 86 f., 102 f.; Wetzer-Weite, *Dict. encyc. de la théologie catholique*, Paris, 1868 ff., s.v. 'Dime,' 'Prémices.' See also the authorities cited throughout the article. J. A. MACCULLOCH.

FIRSTFRUITS (Greek).—It is a natural thing for those who believe that the gods meddle in all human affairs to dedicate parts of that which they

enjoy. Whether this be due to fear or to gratitude does not always appear; but the practice is widespread (see FIRSTFRUITS [Introductory and Primitive]). Amongst the Greeks it is closely connected with the tithe (see TITHES [Gr.]); the present article will be confined to those cases where the word 'tithe' is not used. The offering of the firstfruits was necessary before it was lawful to enjoy the fruits of the earth.¹

The Greek proper terms are ἀπαρχή, ἀπαρχματα, ἀπαρχεσθαι, varied by ἱεραρχή, ἱεραρχεσθαι, or even by ἀργματα, ἀρχεσθαι locally and before the terms become fixed. Homer uses ἀργματα,² which also occurs in very old Attic inscriptions,³ and ἀρχεσθαι, ἀπαρχεσθαι, or καταρχεσθαι.⁴ The active ἀπαρχω occurs in an old Tanagra dedication.⁵ 'Firstfruit' is ἀπαρχή in Herodotus (i. 92), early inscriptions,⁶ Other inscriptions have ἡ, ⁸ καταρχή.⁹ The meaning of the noun is ἀπαρχαί των ἐνιαυστῶν καρπῶν,¹⁰ ἀπαρχματα ἂν αἱ ὕραι φέρουσι;¹¹ ἀκροβόλια really bears the same meaning, the ὄνες being σιωποὶ των πυρῶν καὶ κριθῶν.¹²

The original sense is firstfruits in kind, which were offered by the farmer, fisher, or hunter from the earliest times;¹³ and the words were applied both to war and to the profits of industry. We have instances of the firstfruits of oil,¹⁴ corn,¹⁵ fish and house-property,¹⁶ tribute-money,¹⁷ and man;¹⁸ the men became temple slaves, and sometimes were sent out as colonists.¹⁹

The Athenians sent the firstfruits to Delos in their sacred ship,²⁰ and other States sent firstfruits regularly to Delos²¹ and Delphi;²² while the shrine at Eleusis was supported by firstfruits sent thither from all parts, on the command of the Delphic oracle.²³ The firstfruit or tithe was sometimes symbolized by a permanent offering, a model in metal of the object tithed. We find golden ears of corn dedicated (θέρη χρυσῶν),²⁴ golden olive,²⁵ vine,²⁶ perhaps silphium;²⁷ Pliny mentions a golden radish, a silver beet, and a lead turnip.²⁸ The same meaning may be given to the numerous figures of game or domestic animals, especially those in characteristic attitudes: as hare, deer, stag, duck, cock, sheep, cow, bull, mare, stallion.²⁹ Specimens of the groups are a brood mare suckling a foal,³⁰ a man milking a cow,³¹ a stag brought down by hounds.³² A model of a ram dedicated at Athens is inscribed τῇ θεῶν (= ὄχελαν) με τάθηναι ἀνέθηκεν.³³

From the practice also develop the organized agricultural feasts; but the customs of the country folk, which doubtless kept their old simplicity throughout the history of the Greek race, and still survive in some form, may be seen from the descriptions in the novel of Daphnis and Chloe.³⁴

Firstfruits are often offered to a hero; the Athen-

ians offered them to the Μαπαθνομήχοι;¹ we find the custom quite late, as in the case of Drimakos, leader of the Chian slave-revolt, who was heroized after his death.² No doubt this custom also is primitive, as firstfruits are offered now in many places to the ghosts of dead ancestors;³ or they might be offered to any deity who should have helped the worshipper, as Demeter;⁴ but the favourite deities of the countryside were Artemis for the hunter, Pan and the Nymphs for the farmer or breeder. The hunter hung up head and horns (if any) or skin upon a tree,⁵ or even dedicated these at a shrine of Artemis (as at Lusi in Arcadia),⁶ who was angry if she did not receive her due.⁷ Pan and the Nymphs were worshipped in caves—itself a sign of primitive worship. Homer speaks of these;⁸ and we have a record of the same thing about 500 B.C. in the case of Vari (τὸνδε ταί(ς) Νύ(μ)φαισι δὲ Σκύρωνος αἰπόλος),⁹ besides mention of many others. In bk. vi. of the *Anthology*, Pan receives 34 dedications—more than any other deity. Other deities who get firstfruits are the Mothers in Sicily,¹⁰ Cybele,¹¹ Hermes,¹² Aphrodite,¹³ Priapus,¹⁴ Bacchus and the Satyrs.¹⁵ Fishers dedicate the first tunny of a catch to Poseidon;¹⁶ they also dedicate firstfruits to other gods, as to 'the gods' in general,¹⁷ to Pan,¹⁸ to the Nymphs,¹⁹ to Artemis.²⁰

Firstfruits of work (ἐργῶν, τέχνης) are mentioned;²¹ and are recognized by Isaeus (vi. 42) as of regular occurrence. Occasionally we seem to get the craftsman dedicating his first work or 'masterpiece'; Lycinus states this of himself: Ἀνκίρος ἀνέθηκεν τῇ Ἀθηνᾶι τὸ πρῶτον ἡργάσατο;²² and a pot found on the Acropolis is called 'firstfruit of work.'²³ We cannot tell if this was a common thing; but there are many records of artists dedicating some of their own works.²⁴ Literary men might dedicate their books, as Heraclitus did at Ephesus,²⁵ and Hanno his logbook at Carthage.²⁶

FIRSTFRUITS (Hebrew).—The term *bikkûrîm* (בִּכְּוֹרִים), which is cognate with *b'khor* (בְּכוֹר), 'first-born' (q.v.), 'firstling', sometimes denotes first-ripe fruits (including cereals) in general (as in Nah 3¹⁵ fig trees with *bikkûrîm*), oftener a small but choice portion of the first-ripe fruits which is offered to God (Ex 23¹⁶ etc.). *Reshith* (רִשְׁתָּהּ) denotes the first of fruits (Ex 23¹⁶ etc.), of harvest (Lv 23¹⁰), of grain (Dt 18⁴), of dough (Nu 15²⁰), of wool (Dt 18⁴), of all one's increase (Pr 3⁹).

Many savage peoples (see FIRSTFRUITS [Introductory and Primitive]) have the custom of eating new corn, rice, and other products of the field sacramentally, for the purpose of partaking of the Divine life which is supposed to animate the fruits of the earth (W. R. Smith, *Rel. Sem.*, 1894, p. 242; Frazer, *GB*, 1900, ii. 318 ff.). It can scarcely be

said that any distinct trace of this primitive conception is to be found in the Hebrew peasant religion, though Eerdmans ingeniously suggests that the spring festival was observed by eating unleavened cakes in order to preserve the 'soul' of the corn for the seed of the year to come (*Expositor*, Nov. 1909, p. 459 f.). What is certain is that in the mind of the Hebrews, who borrowed their conception from the Canaanites among whom they settled, an intrinsic sacredness attached to all firstfruits. Just as the whole produce of a new orchard during the first three years was 'uncircumcised,' and not eaten, while all the fourth year's fruit was consecrated to Jahweh (Lv 19²³⁻²⁵), so the firstfruits of every year belonged to Him and had to be brought to His altar. Till He had received His share it was unlawful and unsafe to eat the new fruit. It is a question whether the offering was supposed to make the Israelite's whole harvest, and all the bread which he ate during the year, pure and hallowed. This is the view of Benzinger (*EBi*, 4911), who notes that one of the punishments with which Hosea threatened Israel in exile was that they would have only 'bread of mourners' (Hos 9⁴), i.e. unleavened bread, to eat, because no portion of it could be brought into the house of God. W. R. Smith, on the contrary, thinks that the prophet here refers only to animal food. His own view is that the offering of firstfruits 'makes the whole crop lawful food, but it does not make it holy food; nothing is consecrated except the small portion offered at the altar, and of the remaining store clean persons and unclean eat alike throughout the year. This, therefore, is quite a different thing from the consecration of animal sacrifices, for in the latter case the whole flesh is holy, and only those who are clean can eat of it' (*op. cit.* 241).

Marti (*Rel. of the OT*, London, 1907, p. 115) finds in the firstfruits a trace of primitive Semitic polydemonism. He supposes that they originally belonged to the spirits of the field, for whom it was also the custom to leave the outermost border of a field that was being reaped, or to forget a sheaf in a corner (Lv 19⁹, Dt 24¹⁹, where the poor now get the benefit of what was once meant for the spirits). When Animism faded in the strong light of Jahwism, the destination of the firstfruits was, of course, completely changed.

The law regarding firstfruits is not the same in any two successive codes. (i.) The *Book of the Covenant* contains the archaic enactment, 'Thou shalt not delay thy fullness and thy trickling' (Ex 22²⁹ [E]), where the LXX paraphrases the substantives by *ἀλαφροὶ καὶ ἀγροῦ* and RV by 'the abundance of thy fruits, and of thy liquors.' The parallel reference to firstlings in the next clause makes this interpretation plausible. 'Thy trickling' (אֲגַרְרָא, 'thy tear,' RVm) seems to denote the newly expressed juice of the grape, perhaps also of the olive. The two other forms of the enactment, couched in more ordinary language, are found in Ex 23¹⁶⁻¹⁸. 'The firstfruits of thy labours' (v.¹⁶), which stands in apposition to 'the feast of harvest,' commonly called the 'feast of weeks,' seems to be less comprehensive than 'the firstfruits of thy ground' (v.¹⁸), which probably includes the later grape and olive harvest. The provision in v.¹⁸ would thus be exactly parallel to that in 22²⁹; and Driver (*Exodus*, Camb. 1911, p. 246) suggests that the two laws, having originally belonged to two distinct collections, were preserved on account of the difference of their form. 'The first' (הָרִאשִׁית) of the firstfruits' (Ex 23¹⁹ 34²⁶, cf. Ezk 44³⁰) denotes either the earliest (Gesenius) or the choicest (Knobel) of them; the rendering, 'the best, (even) the first ripe fruits,' which is favoured by Benzinger and others, is less natural. In all these primitive laws the amount to be offered remains indefinite, being a detail evidently left to the free will of the individual. There is as yet no thought

of dues in the strict sense of the word, but only of offerings determined by custom.

(ii.) In Dt 26¹⁻¹¹ the Israelite is directed to take a basket of firstfruits to the central sanctuary and present it at the altar, making use of a liturgical form expressive of gratitude for deliverance from Egyptian bondage and possession of a fruitful land. A joyful feast then follows, in which the offerer and his household are joined by the Levite and the stranger (*gēr*). The relation of the Deuteronomic firstfruits to the tithe (12¹⁷ 14²⁸ etc.) is a question of great difficulty. Wellhausen (*Hist.*, Eng. tr., Edinb. 1885, p. 157) and Benzinger (*EBi*, 4911) hold that the two are identical, the firstfruits having been gradually fixed at the proportion of a tenth. This amount is not paid into the sanctuary as a due, and it is maintained that the directions for the use of the tithe (14^{23, 26, 27}) and of the firstfruits (26¹²) evidently refer to one and the same domestic feast. W. R. Smith (p. 244 ff.) thinks, on the other hand, that the tithe and the firstfruits were quite distinct, the former being a fixed tribute, comparatively modern in origin, and used to provide for the public banquets at the royal shrines (see TITHES [Heb.]). The question is further complicated by the ordinance in 18⁴ that the firstfruits are to be given to the priest, which seems so inconsistent with their destination in 26¹² that it is generally regarded as a later insertion, though Driver ('Deuteronomy,' *ICU*, 1895, p. 290) suggests alternative ways of reconciling the two passages.

(iii.) Ezekiel demands for the priests the first of all the firstfruits of everything, and also the first of the dough (44³⁰).

(iv.) In the *Law of Holiness* (H) it is ordained that a sheaf of the firstfruits of the harvest is to be waved before Jahweh; and, until this is done, no bread, parched corn, or fresh ears are to be eaten (Lv 23¹⁰⁻¹⁴). Seven weeks later two leavened wave-loaves are to be offered as firstfruits (vv.¹⁵⁻¹⁷).

(v.) In the *Priestly Code* it is enacted that 'all the best of the oil, and all the best of the vintage, and of the corn, the firstfruits (*rēshith*) of them' are to be given to the priests, as also 'the first ripe fruits (*bikkūrtim*) of all that is in their land' (Nu 18¹³). The *rēshith* is apparently the raw fruits, while the *bikkūrtim* are the prepared corn, wine, and oil (cf. Neh 10^{35, 37} 12⁴⁴). A meal-offering of firstfruits consisted of parched corn in the ear with oil and frankincense, part of the corn and oil and all the frankincense being burned (Lv 24¹⁻¹⁶).

(vi.) A distinction was finally drawn between *bikkūrtim* and *trāmōth* (תרומה, 'oblations'), and two tracts of the Mishna, bearing these names, are devoted to the subject. The *bikkūrtim* were drawn from the 'seven kinds,' i.e. the seven products mentioned in Dt 8⁸—wheat, barley, vines, fig-trees, pomegranates, olives, and honey. Those who lived near Jerusalem offered fresh fruits, while those who came from a distance brought them dried. Philo and the Mishna describe the picturesque ceremonial which accompanied the presentation (Schürer, *HJP*, 1885, II. i. 237 f.). The *trāmāh* was a payment in kind for the support of the priesthood, an impost levied upon every species of fruit, whether of the ground or of trees. The amount to be given was not fixed, but the person who gave was counted liberal, while he who gave was thought somewhat stingy (*ib.* 238 f.).

FLACIUS.—Matthias Flacius (a Latinization of Vlach) is conspicuous among the German Reformers of the second generation. As a Churchman, he was the ablest and most uncompromising of the ultra-Lutherans who opposed Melancthon's later mediating doctrines and practices. As a scholar he was not only the author (with collaborators) of the first, and for long the unexcelled, Protestant Church History, but also the pioneer of modern Biblical exegesis. As a theologian he was the unfortunate propounder of a doctrine of original sin which was rejected by friend and foe alike as a revival of Manichæism, and which made the latter part of his life tragical.

Born 3rd Mar. 1520 at Albona in Istria (hence surnamed 'Illyricus'), Flacius lost his father in childhood. In early youth he was able to profit by the instructions of the humanist Baptista Egnatius, in Venice, but, being still a devout Roman Catholic, he resolved, in his 17th year, to enter a monastery in order to pursue sacred learning. He therefore begged his uncle, Baldo Lupetino, provincial of the Franciscans, to receive him into his Order, promising him in return the half of his paternal estate. This pious and learned man, however, being in sympathy with the Reformation, diverted him from his purpose by directing his attention to the work of Luther, and counselling him to seek an academic career in Germany. The advice proved to be the determining factor in Flacius' life. After studying for some time at Basel and Tübingen, he finally turned his face (in 1541) to Wittenberg, the metropolis of the Protestant faith, where he was welcomed by Melancthon, and came under the decisive influence of Luther. From the time when he entered Germany, humanistic studies failed to satisfy his awakened conscience, and he spent three years in spiritual darkness, often verging on despair, from which, however, he was at last delivered, chiefly through the wise instruction and tender sympathy of Bugenhagen and Luther. The personal experience which he thus had of the truth of the Evangelical doctrine of justification by faith alone became at once the basis of his theological reflexion and the impelling motive of his life-long contentions, always sincere if not always dispassionate, on behalf of the Lutheran Church and the purity of its faith.

In 1544, Flacius was appointed Professor of Hebrew in the University of Wittenberg; in the following year his marriage was graced by the presence of Luther, whose own life was now nearing its close; and a happy career seemed to await the brilliant young scholar. But he was soon drawn into the whirlpool of ecclesiastical politics. In May 1548, Charles v. launched upon the Empire the Augsburg *Interim*, a doctrinal and ceremonial compromise which was to be imposed until religious controversies should be settled by an Ecumenical Council. This formulary was essentially Roman Catholic, conceding to the Protestants merely the marriage of priests and the cup of the laity. It soon led to another compromise, the Leipzig *Interim*, enacted (December 1548) by the Elector Maurice, with the help of Melancthon and other leading Lutheran divines, for his Protestant dominions, where it was impossible to put the Augsburg *Interim* into operation. This second document conserved the essentials of the Protestant creed, but it

'required conformity to the Romish ritual, including confirmation, episcopal ordination, extreme unction, and even the greater part of the canon of the mass, and such ceremonies as fasts, processions, and the use of images in churches' (P. Schaaf, *Hist. of the Creeds of Christendom*, London, 1877, p. 299).

From the disposition of Melancthon and his friends to treat these ordinances as indifferent or

non-essential (*ἀδιαφορα*), his party came to be known as the 'Adiaphorists' (see *ERE* i. 93). Flacius, finding himself obliged to assume the leadership of the strict Lutherans, at once began to write under various names against the treacherous compromise. In order not to witness the introduction of the Leipzig *Interim* into Saxony, he resigned his professorship, accepting poverty for conscience' sake. Betaking himself to Magdeburg, where the press was still free, and gathering around him a strong party of rigid Protestants, he opened a destructive literary fire upon the timid and overpliant Adiaphorists. Pamphlets poured from the press, and the scathing criticism of the *Interim* raised such a storm of opposition in Saxony that the obnoxious enactment was withdrawn, while the Elector Maurice felt emboldened to assume hostilities against the Emperor. At a critical time Flacius thus rendered an imperishable service to the Protestant cause. It is generally admitted that he 'saved the Reformation' (*EBr*¹¹, art. 'Melancthon', p. 89^a note). The 'Flacianists' conquered the 'Philippists'; and Melancthon, who in the beginning of the controversy had regarded his young opponent as a renegade—'aluimus in sinu serpentem'—wrote to him in September, 1556, offering, for the sake of unity, to confess that he was in the wrong:

'Fateor etiam in hac re a me peccatum esse, et a Deo veniam peto, quod non procul fugi insidias illas deliberationes' (C. Hardwick, *Hist. of the Christian Church during the Reformation*, London, 1894, p. 64).

Victory, however, failed to soften the heart of Flacius towards his venerable teacher; and, though their feud was in a manner patched up, the two men were temperamentally too different for any real reconciliation ever to be effected between them. The 'Philippists' and the 'Flacianists' long continued to represent different shades of Lutheranism, the former predominating in Wittenberg, the latter in Jena.

Flacius played an active part in all the other controversies of that era of theological strife, and always as a defender of what he believed to be true Lutheran doctrine. He strenuously opposed the mystical theory of Osiander, the Nuremberg reformer, who, assailing the forensic conception of justification, taught that the sinner is *made* just by an infusion of the Divine nature of Christ, who is our righteousness. In maintaining the doctrine of imputation, Flacius was in agreement with Melancthon, Amsdorf, Chemnitz, and almost all the other divines of the time. In the Synergistic controversy, which was stimulated in 1555 by the *De libero arbitrio* of Pfeffinger, Professor in Leipzig, he fought for the doctrine of Luther's *De servo arbitrio*, denying the freedom of the will anterior to the reception of the supernatural gift of faith, affirming that God converts the sinner against and in spite of his perverse will, as the potter moulds the clay and the sculptor carves the statue of wood or stone. Here Flacius was in disagreement with Melancthon, who, though he had originally sided with Luther in his debate with Erasmus as to human freedom, at length (after 1535) openly renounced Determinism as a Stoic and Manichæan error, and taught a certain limited co-operation of the human will in the work of conversion. Flacius was also involved in the Majoristic controversy which raged from 1552 to 1580, the year in which the 'Form of Concord' was framed. Georg Major, a pupil of Melancthon, and from 1539 Professor at Wittenberg, declared at Eisleben (in 1552) that good works are necessary to salvation, and anathematized every one who taught otherwise. Flacius had recourse, as usual, to tracts for the times, in which he

'denounced Major's view as popish, godless, and most dangerous, because it destroyed the sinner's comfort on the death-bed

and the gallows, made the salvation of children impossible, confounded the gospel with the law, and weakened the power of Christ's death' (Schaff, *op. cit.* 276). Major himself ultimately recanted.

The doctrine with which the name of Flacius is specially associated arose out of the Synergistic controversy. Having been appointed Professor of NT Theology at Jena in 1557, he soon found himself sharply disputing with his colleague Victorinus Strigel on the question of the operation of the will in conversion. Having a profound conviction of man's corruption and consequent inability to do any good of himself, he went so far as to affirm that original sin is not an accident of human nature, but is involved in its very substance—'quidam substantiale in homine'—man having ceased at the Fall to be in any sense the image of God, and having become the image of the devil. He was warned in vain that by the use of such language he would provoke a charge of Manichæism, and, as he proceeded, with characteristic tenacity, to develop rather than to modify his doctrine, many of his former friends fell away from him, some of them even joining the ranks of his bitterest enemies. While he had no difficulty in quoting strong passages from Luther which seemed to favour his extreme view, it was instinctively felt that there was a wide difference between the reformer's vehement utterances and the theologian's deliberate dogmatism. The tide of opinion rose swiftly against Flacius, who (10th Dec. 1561) was deposed and exiled with 47 adherents. For him and his numerous family—he had 12 children by his first marriage and further issue by a second—there was henceforth only a life of wandering and poverty. Scarcely any place would shelter the lonely and persecuted heretic. His scheme of founding an academy at Regensburg came to nothing. Strassburg tolerated him for a few years, but cast him out in 1573. He found a last asylum in the convent of White Ladies at Frankfort, where he fell ill in the end of 1574. The City Council gave him notice to quit on Mayday 1575, but by that time, in the spring of the year (11th March), death had released him.

Some of Flacius' most important services to Protestantism still remain to be mentioned. Though too much of his energy was spent in controversy, he was essentially a scholar, and his literary output was as remarkable for its value as for its extent. In 1556 he published a *Catalogus Testium Veritatis*, in which he repels the charge of novelty which the Roman Church constantly brought against the Protestant, and proves that every Christian age had its 'witnesses' who combated the Papacy and its errors. To this book John Foxe was largely indebted for materials in compiling his *Actes and Monuments of Christian Martyrs*, of which the first edition is dated 1565. Flacius next conceived the idea of writing a Church History,

'in which it should be set forth, in certain order and sequence of time, how the true Church and its religion gradually fell away from its original Apostolic purity and simplicity, and this partly from the negligence and ignorance of its teachers, partly from the wickedness of the ungodly; in which it should also be shown how the Church was ever and anon restored by some genuinely pious men, and how the light of truth now shone more clearly, and was again more or less obscured by the increasing darkness of ungodliness.'

In order to carry out his scheme on a grand and worthy scale, he formed (in 1553) a society which had its head-quarters in Magdeburg, but he himself remained the soul of the enterprise. Thus there appeared in 13 folios (1559-74) the *Magdeburg Centuries*, each volume comprising the events of a century, a *magnum opus* to which all later Church Historians were consciously or unconsciously indebted (see Baur, *Die Epochen der kirchlichen Geschichtschreibung*, Tübingen, 1852). To this Flacius added a similar epoch-making work

VOL. VI.—4

in the department of Biblical exegesis. In Regensburg he began his *Clavis Scripturæ Sacre*, which was published in 1567.

'Through this work, which consists of a Bible Dictionary, with Essays in which the principles of exposition are laid down, Flacius became the father of Biblical Hermeneutics' (Plitt, *PRE*² iii. 567).

These principles he applied in his *Glossa Compendiaria in NT* (1570); that to the OT was left unfinished.

For centuries the name and fame of Flacius, the opponent of Melancthon, and the Manichæan heretic, remained under a cloud. Twisten (in 1844) was the first to do him justice. His honour was finally vindicated and his work appraised at its true value in W. Preger's masterly biography, *Matth. Flacius Illyricus und seine Zeit*, 2 vols., Erlangen, 1859-61. He had the faults of his qualities, and it is sometimes difficult to distinguish his zeal from fanaticism, his firmness from intolerance. It may therefore be admitted that 'his hard fate was not wholly unmerited' (Plitt, *op. cit.* 566). Yet Kling (*PRE*¹ iv. 415) is scarcely wrong in numbering him 'among that cloud of witnesses of which the world was not worthy.'

'Flacius' (by G. Kawerau), in *PRE*² vi. [1899] 82-92.

JAMES STRAHAN.

FLAGELLANTS.—The great outbreak of penitential scourging which produced the brotherhood of *Flagellants* occurred in the middle of the 14th century; but this was only an abnormal intensification of a practice which had existed in Christian circles for centuries, and at least one previous epidemic of self-scourging had swept over Europe a century earlier.

Voluntary flagellation as a form of penance is as old as history and almost as wide-spread as religion itself. It does not appear to have been practised in the early Christian period or even in the early days of monasticism, though scourging, inflicted by superiors, was often used in monasteries as a means of correction. But, as the spiritual value of asceticism became impressed on the consciousness of Christians in the 10th and 11th centuries, men who burned with a passion for holiness of life resorted to flagellation as a means of subduing 'the soul's evil yoke-fellow,' the body. It came into especial prominence in the 11th century, through the practices of the monk Dominicus Loricatus († 1060) and of Peter Damian, Cardinal of Ostia († 1072). The latter advocated the substitution of self-flagellation for the reading of penitential Psalms, and even drew up a scale of values, making a thousand strokes of the lash equal to ten Psalms. The penitential scourgings which St. Dominic (1170-1221) practised upon himself, the passionate flagellation of the early Franciscans, and the introduction of collective flagellation into the monasteries, helped to form the mental attitude which was responsible for the first serious outbreak of public flagellation, which began in Italy just after the middle of the 13th century.

It was a time of mental tension. There was an inner circle of 'Spirituals' who were highly wrought with expectation that 1260 was to be the year of the new age of 'the Eternal Gospel,' prophesied by Joachim of Fiore; the people generally were brought almost to the limit of endurance by the woes of the party strife between the Guelphs and Ghibellines; and withal a powerful epidemic of the Plague came in 1259.

Suddenly, in this same year, 1259, without any organized propaganda, the city of Perugia was

seized with a contagion of penitence which showed itself in the form of flagellation. It spread with great rapidity through Northern Italy, along the Rhine, and to the East as far as Bohemia. It affected all walks of life and all orders of society. A contemporary Chronicle (*Monachi Patavini Chronicon*) records that even little children of five years, entirely naked, joined these processions. All the flagellants carried scourges made of leather thongs, and lashed themselves until the blood ran down their bodies. All sorts of sins were confessed, enemies were reconciled, vanities and follies were renounced, and men prepared themselves as for a new spiritual stage of life. Salimbene (1221-88) writes in his *Chronicle*:

'The Flagellants came through the whole world (!). All men, both small and great, noble knights and men of the people, scourged themselves naked, in procession through the cities, with the Bishops and men of religion at their head; and peace was made in many places, and men restored what they had unlawfully taken away; and they confessed their sins so earnestly that the priests had scarce leisure to eat. In their mouths sounded words of God and not of man, and their voice was as the voice of a multitude' (in *Mon. Hist.* iii. 238 ff.).

The still more famous gregarious outbreak of the contagion of penitential scourging, which led to the formation of the Brotherhood of the Flagellants (often called the Brotherhood of the Cross), came in the year 1349, Germany being the country where the movement showed its greatest power. It has generally been supposed that the outbreak was occasioned by the fearful devastation of the Black Death, but the investigations of Höniger (*Der schwarze Tod in Deutschland*) show that, in the incipency of the movement, the Flagellants preceded the appearance of the Black Death. As rumours came of the approach of the Plague from the East, bands of penitents formed, in the hope that God would spare Europe if there were a sufficient measure of repentance. These bands of Flagellants began to form in Hungary, and the movement travelled rapidly westwards, gathering volume and power until all Christian lands were touched by it; and incidentally it appears to have assisted in spreading the very plague which its organizers were striving to avert.

In its early stages the movement, though penetrated with enthusiasm, was well organized under the control of leaders. Whoever joined the brotherhood was bound to promise obedience to a captain, who was assisted by two lieutenants; to have money enough to furnish at least four pfennigs a day for his expenses; to have the sanction of his wife, if he was a married man; and to give assurance that he was reconciled with all men. The members of the brotherhood were forbidden to converse with persons of the other sex, to enter any house without invitation, or to beg for anything, though they were free to accept lodging and meals—but not for more than two days in any one town—if the hospitality were offered. Twice in the day, stripping to the waist, they lashed themselves with scourges, sometimes knotted, and sometimes supplied with iron points which embedded themselves in the flesh. They believed that their blood would mingle with the shed blood of their Saviour, and that this practice of painful, penitential flagellation, continued for thirty-three days and a half, would wash the soul free of all taint of sin. As these ideas came to clearer consciousness in the minds of the Flagellants, they began to feel that the means of salvation were in their own hands, and that the mediation of the Church and its priesthood could be dispensed with.

As the fervour of the movement increased, the influence of hymn-singing assumed a very important rôle, as it had probably also done in the earlier movement of 1280, and vast processions marched through the cities and the country dis-

tricts as well, singing hymns which aroused popular enthusiasm, stirred feelings of penitence, glorified the sufferings of Christ and the Mater Dolorosa, and gave the movement a great marching power. These Flagellation-hymns appear to have had a permanent influence on religious singing in the Christian Church (see Closener, *Strassburger Chronik*; Bartsch, *Germania*, xxv. [1880] 40 ff.; Bäumker, *Kathol. deutsches Kirchenlied*, ii. 201).

Under the mental tension of the times, the bodily pain inflicted by flagellation, and the general social upheaval, it is not at all strange that considerable hysteria, in a variety of forms, appeared. Some of the Flagellants, in their consciousness of spiritual power, undertook to cure diseases, to cast out devils, and even to raise the dead. One of the most curious signs of hysteria was the appearance within the group of a letter of Christ which an angel was said to have brought from heaven, promising that all who should scourge themselves for thirty-three and a half days should be partakers of the Divine grace. This letter was read in many places by the leaders of the procession of Flagellants as a genuine celestial document, and produced a profound impression among the highly-wrought populace.

The Church authorities were not slow in discovering that the movement contained many seeds of danger. In its first bursts of contagious power, when thousands in a single city were swept into it, little could be done to withstand its spread among the enthusiastic people; but, the moment the strange emotion began to spend itself and show signs of waning, the Church set to work to suppress it and to deal severely with all who taught or implied that men could cleanse themselves of sin by self-prescribed and self-inflicted penance, without the mediation of the Church; and in defence of social order the secular authorities joined in the work of checking organized flagellation. Pope Clement VI. and Emperor Charles IV., as well as the Sorbonne at Paris, united their efforts to prohibit, throughout Christendom, the continuance of flagellation-pilgrimages, while many subordinate representatives of the Church and many heads of countries and of cities resorted to extreme measures to destroy what now seemed to them a dangerous fanaticism. The popular mania for flagellation was soon checked; indeed, it waned of itself, as all such contagions do, as soon as the suggestive-idea loses its fascination and its hypnotic spell, and an emotional rebound sets in.

It was, however, not easy to manage the inner group of persons who through the movement had arrived at the radical view that self-inflicted penance was sufficient for salvation, and that the mediation of the Church was unnecessary. Those who arrived at this view gradually formed a sect, and stubbornly maintained their heretical way of salvation. The subject became of such importance that in 1417 it was dealt with in the Council of Constance, and Chancellor Gerson wrote a tractate against the sect of Flagellants, against their contempt of sacramental penance within the Church, and their glorification of their own self-prescribed form of penance. For many years later the sect persisted in Thuringia and other regions, allying itself with chiliastic expectations and joining with many sporadic types of heresy. In fact, the after-effects of the great movement of Flagellation did not wholly pass away before the Reformation.

RUFUS M. JONES.

FLEECE (Greek and Roman).¹—At a primitive stage of culture, fleeces were used as raiment or covering. In antiquity we find frequent traces of this use (Paus. iv. 11. 3, viii. 1. 5, x. 38. 3; M. Besnier, in Daremberg-Saglio, *s.v.* 'Pelles,' iv. 371 ff.). The Libyans were known to make their coverings, garments, and shoes out of goat's hide only (Hippokr. *περὶ λῆς νόσων*, in Wilamowitz-Möllendorf, *Griech. Lesebuch*, ii. [1908 ff.] 271. 30 ff.). Hides could also be used for bedding (Theocr. xxvii. 53), or they were placed on a hard seat as a kind of cushion; cf. e.g. the panther's hide of the Belvedere torso (W. Amelung, *Die Sculpturen des vaticanischen Museums*, ii. [Berlin, 1908] 9 ff., pl. 2), or the lion's hide on the fragment of a relief from Pergamon (*Ath. Mitt.* xxxv. [1910] 517, pl. 27. 3). The *Lares* were represented as protectors of the fields by being accompanied by a dog and dressed in dogs' skins (W. W. Fowler, *Rom. Fest.*, London, 1899, p. 101; G. Wissowa, *Rel. u. Kult. d. Römer*, Munich, 1902, p. 151. 3). In Mamurius' fur-clad appearance we must also, in the present writer's opinion, see a purposed archaism. (H. Pringsheim, *Arch. Beitr. z. Gesch. d. eleus. Kults*, Munich, 1905, p. 27 f., and Pley, *op. cit. infra*, p. 24, hold a different opinion.) In none of these cases has the fleece a religious meaning any more than when the hunter hangs the hide of a killed lion on a fir-tree as an offering to Pan, the god of hunters (*Anth. Pal.* vi. 37. 3; cf. also G. Kaibel, *Epigr. gr.*, Berlin, 1878, no. 811), or when the hide of the sacrificed animal is, as usual, the priest's share (Schoemann-Lipsius, *Griech. Altert.* ii. [Berlin, 1902] 447 f.; F. Puttkammer, *Quomodo Græci in sacrificiis carnes distribuunt*, Königsberg, 1912, p. 7 ff.; sometimes the god is named as the recipient of the fleeces; cf. Dittenberger, *Syll.*³, Leipzig, 1898-1901, nos. 566. 14; 633. 10).

On the other hand, a magic meaning attaches to the goat's hide which women wear in the Dionysiac orgies, in order to become similar to the goat-like god (Hesychius, *s.v.* *τραγῳφόροι*; cf. also Paus. ii. 23. 1), and in the same manner the *nebris*-garment of the Sabazios mystics will have to be interpreted (P. Stengel, *Die griech. Kultusaltert.*³, Munich, 1898, p. 146. 14; Arnob. v. 39, p. 209. 3, ed. Reifferscheid). We may not, however, as Robertson Smith (*Rel. Sem.*, 1889, p. 454 f.) suggests, read an analogous meaning into the passage of Lydus (*de Mens.* iv. 65, p. 119. 19 f., ed. Wünsch) by altering the text, which is quite correct.

The qualities of an animal could likewise be transferred to the wearer of its fleece. Pliny (*HN* viii. 258) tells us that children were rendered fearless by being covered with the hide of a fearless ass. Herakles renders the young Aias invulnerable by wrapping him in his own lion's skin (Berthold, 'Unverwundbarkeit in Sage und Aberglauben der Griechen,' *Rel. Vers. u. Vorarb.* xi. i. [Giessen, 1911] 8 ff.).

The belief in the magic power of fleeces goes yet further (Riess, in Pauly-Wissowa, *s.v.* 'Aberglauben,' pp. 73, 79, 82, and *passim*; Daremberg-Saglio, *s.v.* 'Pelles,' iv. 373. 27-33; W. Kroll, *Antiker Aberglaube*, Hamburg, 1897, p. 27; L. Deubner, *de Incubatione*, Leipzig, 1900, p. 27 f.; Abt, in Schiele's *Religion*, i. [1909], *s.v.* 'Amulette,' p. 452; F. Tambornino, 'De antiquorum daemonismo,' *Rel. Vers. u. Vorarb.* vii. iii. [1909] 88;

Pley, 100, 102 ff.). Not only are fleeces a help against all sorts of diseases (Pliny, xxix. 38), but in many cases they also have apotropaic power. On the one hand, the hide is endowed with the same forces that are ascribed to the animal (Fehrle, *Alemannia*, 3rd ser., iv. 16, 19); on the other hand, the hide as such seems to have been credited with special influences, independent of the animal it belonged to. It is difficult to state, in each case, how far the belief in the magic power of a sacrificed animal's skin must here be taken into account (*ARW* xiii. [1910] 491 f.; Kroll, *ib.* viii. [1905], Usenerheft, p. 40). Often the healing power of a hide was a perfectly natural one, as when fresh sheep-hides were laid upon bruises (Pliny, xxx. 118), in which case the warmth of the hide had a soothing effect. It is difficult to draw the line between rational and magic uses; they appear side by side, as is customary in popular medicine. The hide is used in many ways: a stag's hide is slept upon to quell the fear of snakes (Pliny, xxviii. 150); a sleeve made of wolf's hide is worn to prevent one's being poisoned or bewitched (Pliny, xxviii. 157); shoes made of beaver- or seal-skin are potent against gout (*ib.* xxxii. 110; Alex. Trall. ii. 581, Puschmann); the extremities are rubbed with fur, to relieve a terror or nose-bleeding (*ib.* xxviii. 61); amulets are wrapped in pieces of fur and worn (cf. Tambornino, *l.c.*); vines are cut with a scythe which has been wiped with the skin of a beaver, to prevent the grapes from being eaten by caterpillars (Pliny, xvii. 265); the vessel in which the seed-corn was kept was wrapped in the skin of a hyæna, to ensure good germination (*Geopon.* ii. 18. 8; Colum. ii. 9. 9; Pallad. x. 3. 1); a vineyard is protected from all sorts of evil if the skin of a seal or a strap made of sealskin is hung among the vines (*Geopon.* i. 14. 3; Pallad. i. 35. 15). In order to protect a farm from hail, one must carry the hide of a hyæna, crocodile, or seal round its precincts, and then hang it up before the front-door (*Geopon.* i. 14. 5; cf. Pallad. i. 35. 14; Orph. *Argon.* 762 f.). A piece of the seal's skin, which protects against lightning, is always worn (Suet. *Aug.* 90); during a thunderstorm one repairs to a tent made of sealskin (Pliny, ii. 146) and hangs sealskins on the masts of ships (Lydus, *de Mens.* p. 181. 19 ff., ed. Wünsch). Magic texts are written on hyæna-hides (Wessely, 'Neue gr. Zauberpap.,' *Denkschriften d. Wiener Akad.*, 1893, p. 26. 201. 203. 206). Ashes of a burnt ram's hide are used (Marc. Emp. 33. 56, p. 346, ed. Helmreich). Perhaps the strange record of Jupiter having reached heaven with the help of the golden fleece has something to do with the magic power of fleeces (*Mythogr. Vat.* i. 24, where the text of the Vaticanus, according to O. Rossbach's kind information, is as follows: '[pellem auream] in qua iovis in celum ascendit'); and it is not impossible that this golden fleece of the Argonaut legend has its origin in the same belief. That the possession of a golden fleece should ensure the knightly power and dominion over the sun's course (R. Eisler, *Weltenmantel*, Munich, 1910, p. 568. 6) is not corroborated by the Schol. on *Il.* ii. 106, ed. Bekker (cf., however, Eur. *El.* 718 ff.). The Pythagoreans altogether forbade the use of hides as coverings; they allowed only linen for that purpose (Iamblichus, *Vita Pyth.* 100).

Not only in magic, but also in cult, the supernatural properties of fleeces become clearly evident. And here, too, they are not specific properties, but the very multiplicity of uses bears evidence of the magic character in general (cf. Harrison, *Prolegom.*³, Camb. 1908, p. 27). Thus, when, in the cult of Zeus Akraios, fleeces from Pelion were used to attract rain (Nilsson, *Griech. Feste*, Leipzig, 1906, p. 5 f.), we need not conclude that the fleece was chosen

¹ For a more general treatment, see art. Wool.

as a simile for the clouded sky (Eisler, 80 ff.). The other testimonies which Pley (p. 21 ff.) adduces for the use of fleeces in rain-magic do not belong to the present category, or are very doubtful. The ægis of Zeus, however, may be interpreted as a mythical parallel of the 'weather-fleece,' which, when shaken by the god, had the power of producing rain and storm (*Il.* xvii. 593 ff.; O. Gruppe, *Griech. Myth.*, Munich, 1906, p. 823). This is not the only marvellous property of the ægis. It is above all a *φάσμα*, a magic terror, that puts foes to flight (Schol. on *Il.* xv. 29). In this connexion Athene has taken it over. That the ægis-'shield' is only a later stage of development (M. Mayer, *Arch. Jahrb.* vii. [1892] 198), and that the ægis is originally a genuine fleece, is proved by the fact that occasionally the goddess wraps herself in the ægis (*Il.* xviii. 204), and that the Roman Juno Sospita, who is clad in a goat's hide (Wissowa, 117; *JHS* xxi. [1901] 227), is probably descended from an old Ionian type of Athene (Petersen, *Röm. Mitt.* ix. [1894] 296 f.).

The magic fleece is used in agrarian rites under the name of *δῖον κῶδιον*, which has nothing to do with Zeus (Harrison, 23 ff.). In the last third of the month Maimakterion there was a procession in honour of the chthonic Melichios (Eust. ad *Od.* xxii. 481, p. 1935 *initio*; E. Pfuhl, *de Athen. pompis sacris*, Berlin, 1900, p. 62; Nilsson, *Ath. Mitt.* xxxiii. [1908] 285), who later on was identified with Zeus. In this procession the *δῖον κῶδιον* mentioned by Eust. (*l.c.*) was most probably carried round. Since for the same period a sacrifice to Zeus Georgos, a kindred god to Zeus Melichios, is recorded (Prott, *Fasti sacri*, Leipzig, 1896, pp. 7, 10 f.), and in the month Maimakterion fields were ploughed and corn sown (Preller-Robert, *Gr. Myth.* i. [Berlin, 1894] 131. 2; G. Thiele, *Antike Himmelsbilder*, Berlin, 1898, p. 58), the *δῖον κῶδιον* was probably borne round the tilled land, in order to protect the seed within this magic circle against all evil (cf. also Preller, *Polemon. fragm.*, Leipzig, 1838, p. 141, and the above-mentioned magic rite for protecting the farm against hail). Zeus Maimaktes and the Maimakteria (Preller-Robert, *l.c.*) have nothing to do with this festival (cf. Pfuhl, *l.c.*, whose reasoning, however, is not satisfactory). On the other hand, the festival Skirophoria, in which a sacred ploughing and sowing—evidently enacted in analogy to the profane ploughing and sowing at that season—was performed (Plut. *Coniug. præc.* 42, p. 144^a), belongs to this sphere. Here, too, the *δῖον κῶδιον* was used (Suid. *s.v.* *δῖον κῶδιον*), in the same manner, no doubt, as at the feast of Melichios. The cathartic properties of the *δῖον κῶδιον* seem to have developed later out of its agrarian functions. Not only was the magic fleece able to ward off evil, but any one brought into touch with it was freed from all uncleanness and evil influences. Therefore, those in need of ritual cleansing placed themselves or their left foot (Hesych. *s.v.* *ἄδης κῶδιον*; cf. Ame-lung, *Atti della Pontif. Acc.*, 1905, p. 128 ff.) on such a fleece (Pley, 11; Phryn. *Præp. soph.* p. 9. 14 f., ed. Borries; the 'fleece' on the scene representing the 'cleansing of Theseus' [*Gaz. arch.* ix. (1884) 352 f.; Gruppe, p. 892. 1] is more than doubtful), and those who were submitted to the various cleansing ceremonies of initiation (Schoemann-Lipsius, 414, 417) had to sit or stand on a fleece (Suid. *l.c.*; Hauser, *Röm. Mitt.* xxv. [1910] 287 f.; to a different category must be assigned Aristoph. *Nub.* 730, cf. A. Dieterich, *Kl. Schr.*, Leipzig, 1911, p. 117 ff.). The purpose of the fleece on a 'Thracian rider' relief (*ARW* xv. [1912] 157, pl. 1, no. 4) is not clear. Not a ram's hide (Pley, 31), but the customary net of *infulæ* that covers the Delphic omphalos, is figured in the scene in Müller-Wiesseler (*Denkmäler*, ii. [Göttingen, 1881], fig. 137, cf. p. 95). It is

not impossible that the hide of the Calydonian boar shown in the temple of Athene Alea in Tegea (Püster, 'Reliquienkult,' *Rel. Vers. u. Vorarb.* v. i. [1909] 324 f.) may once have been used in a rite, but it is not very probable.

It has been indicated above that the magic powers of fleeces were probably in part due to the fact that hides of sacrificed animals were used. The *δῖον κῶδιον* originated from the skin of an animal offered as sacrifice (Pley, 11). This signification of sacrificial animals' hides can be clearly recognized in several cases. The *lepai γυναικες* of the Andanian mysteries were allowed to wear only soles of felt or of the skin of sacrificed animals (Dittenberg, *Syll.*² no. 653. 23; Prott-Ziehen, *Leges Græc. Sacrae*, II. i. [Leipzig, 1906], p. 183, § 4). The *albogalerus*, which the *flamen Dialis* wore on his head, likewise had to be made of the hide of a sacrificed animal (Pley, 38; incorrectly explained in E. Samter, *Familienfeste d. Griechen u. Römer*, Berlin, 1901, p. 37). Apron and straps of the *luperci* were cut out of the hide of the goat which had been sacrificed to Faunus (*ARW* xiii. [1910] 490 ff.). The special importance of wool in religious rites probably finds its explanation in the significance of the sacrificial hide.

From a similar point of view we must interpret the custom of *confarreatio*, where bride and bridegroom sat on a seat covered with the fleece of a sacrificed sheep (Serv. ad *Aen.* iv. 374). But the special purport of this ceremony lies in the fact that the sitting side by side on the same fleece was to render the nuptial bond inviolable. The present writer considers it very improbable that there is any closer connexion between this ceremony and the *pellis lanata*, on which in Rome the young wife sat down as soon as she had entered the house of her husband (A. Rossbach, *Röm. Ehe*, Stuttgart, 1853, p. 324 f.). As this custom is found also among other tribes (Samter, 101 f.), it must have an independent meaning. Probably it was a magic rite to promote fruitfulness, as the Indian parallel (Oldenberg, *Veda*, Berlin, 1894, p. 463) shows; in this case again the fleece exerts its magic powers. We do not know the special reason why the young married couple, in Attica, were visited by the priestess of Athene, bearing the ægis (Suid. *s.v.* *alyis*); but here, too, a magic rite may be supposed, for the purpose of fruitfulness.

In some dream-oracles it was the custom that he who interrogated the god lay down to sleep on the hide of a sacrificed animal (Deubner, *de Incub.* 27; Eust. ad *Il.* ii. 233, p. 1057, 64; for the oracle of Faunus, cf. R. Heinze, *Virgils ep. Technik*, Leipzig, 1903, p. 172. 2). The god was understood to be moved by the fleece of the animal that had been consecrated to him to give the desired enlightenment.

LITERATURE.—The leading sources and authorities have been noted in the article. An attempt to treat the significance of the fleece in ancient cult is offered by J. Pley, 'De lanae in antiquorum ritibus usu,' in *Rel. Vers. u. Vorarb.* xi. ii. (Gießen, 1911) 1 ff. Though this does not exhaust the subject, the author's leading idea of close relationship between fleece and wool is correct and important. L. DEUBNER.

FLOOD.—See DELUGE.

FLOWERS.—The purpose of the present article is to discuss briefly the growth of an appreciation of flowers amongst civilized peoples in ancient and modern times.¹

1. Jewish.—An examination of the references to flowers in the OT yields almost entirely negative results. The country in which the Jews lived was carpeted with flowers, especially in the early spring; and their variety and beauty elicit the

¹ For other aspects of the subject, see art. TREES AND PLANTS.

admiration of travellers to-day. The flowers in Palestine which specially attract the traveller's attention are the tulip, poppy, hyacinth, cyclamen, asphodel, Star of Bethlehem, crocus, mallow, and scarlet anemone. So little thought did the Jews give to their flowers that, as far as we know, they did not bestow distinctive names upon all of them. Thus the Heb. word *shūshān*, which is now applied by the inhabitants of Palestine to anemones, tulips, and ranunculi, is rendered in the LXX by *κρίνον*, and in English by 'lily.' Its use in Ca 5¹² ('his lips are [as] lilies') suggests that both here and in the NT *κρίνον* should be rendered by 'scarlet anemone'—one of the commonest and most beautiful flowers in Palestine (cf., however, Löw, *JE* viii. 88 f.). The representation of pomegranates on the pillars of the Temple (1 K 7^{18, 20}) and on the priestly ephod (Ex 28³⁸) was probably borrowed from Egypt. According to Flinders Petrie (*HDB* i. 269), the design of bells and pomegranates is the old Egyptian lotus-and-bud border.

If by the appreciation of flowers be meant the appreciation either of their natural beauty or of their mystic significance, apart from a recognition of their ornamental use, it would be hard to quote any passage from the OT which would suggest such appreciation. The Jew, who inhabited a country which was more or less surrounded by deserts, had a vivid appreciation of the fertility of his own land. Thus, one of the Psalmists says: 'The valleys also are covered over with corn; they shout for joy, they also sing' (Ps 65¹³). Its fertility was often used as a symbol of spiritual blessings, both in the Psalms and in the latter part of Isaiah, where the prophet calls upon the trees and mountains to rejoice with him in view of what God had accomplished: 'Break forth into singing, ye mountains, O forest, and every tree therein' (Is 44²³); and, again: 'The mountains and the hills shall break forth before you into singing, and all the trees of the field shall clap their hands' (55¹²). The words which immediately follow, 'Instead of the thorn shall come up the fir-tree, and instead of the brier shall come up the myrtle tree,' seem to show that the predominant thought in the mind of the writer was that of the glorious fertility which the blessing of Jahweh should bring to His land.

The New Jerusalem, the description of which in the Apocalypse is largely based upon the Jewish imagery of the OT, is like a gorgeous palace blazing with metal and jewels, but it has no flowers. The 'never fading flowers' are a Christian addition to the Jewish conception of Paradise.

2. *Græco-Roman*.—When we turn from Hebrew to Greek and Roman literature, we find the appreciation of flowers hardly more developed. In Greek and Latin writers we find proofs of careful observation of natural scenes, but few or no traces of a sympathetic contemplation of flowers. They were constantly used as ornaments or decorations, and the prettiness of their form and colour was recognized; but, if we may judge from the literature which has survived, there was no appreciation of their glory and significance such as could inspire Wordsworth to write:

'To me the meanest flower that blows can give
Thoughts that do often lie too deep for tears.'

Theocritus and Meleager contain frequent references to flowers, but even they did not look upon them as beautiful in themselves. The only approach in Greek art to such an appreciation is in the acanthus leaves carved on the Corinthian columns; but this is conventionalized and reduced to a geometrical formula.

3. *Christian*.—It would be impossible to find in classical or in Jewish pre-Christian literature any parallel to the saying of Christ, 'Consider the

lilies of the field, how they grow' (Mt 6²⁸). This, and the further statement that not all the wealth of the world, or the gorgeous raiment which wealth might provide, could make a man as beautiful as a flower of the field, constituted a new revelation. It must have been startling, indeed, to His audience to hear one of their commonest flowers compared with the greatest of their kings, and to his disadvantage. How little the Jews and those to whom the words of Christ afterwards came were prepared to appreciate this teaching may be inferred from the fact that, although practically every other saying of Christ is commented on by early Christian writers, there is apparently no reference to these words for a thousand years after they were uttered. Many centuries were to pass before His followers could claim that they had obeyed this teaching of their Master.

In the 15th cent., when landscape painting was for the first time practised in Europe, flowers began to be introduced not merely as ornamental accessories, but as an integral part of the painting.

Although there is something artificial and unnatural in the conception of a flower garden, which is an attempt to idealize Nature, nevertheless the development of a taste for flower gardens may be regarded as a rough index of the development of an appreciation of the beauty of flowers. Bacon, in his essay 'on Gardens,' supplies a list of flowers which should be in bloom during each successive month of the year, and urges that the garden should be so ordered that 'things of beauty' should be always 'in season.' He recognizes that the love of gardening represents a higher ideal than the love of architecture. Thus he writes:

'God Almighty first planted a garden, and indeed it is the purest of human pleasures; it is the greatest refreshment to the spirits of man, without which buildings and palaces are but gross handicrafts; and a man shall ever see that, when ages grow to civility and elegance, men come to build stately sooner than to garden finely, as if gardening were the greater perfection.'

The artificiality which, after Bacon's time, characterized English and still more French gardens, was not unknown in his own time, for he writes: 'I for my part do not like images cut out in juniper.'

The modern appreciation of the beauty of flowers, which found expression in Goethe and Wordsworth, was an outcome of the general movement towards the appreciation of Nature and of natural scenery which dates from the Renaissance. The influence of Augustine and those who adopted him as their master had led men to associate evil with every form of matter, and made it difficult for them to regard it as a vehicle whereby the unwritten thoughts of the Creator might be expressed. One of the first English writers to express the latter idea was Thomson (1700-1748), who wrote:

'There lives and works
A soul in all things, and that soul is God.
... not a flower
But shows some touch, in freckle, streak, or stain,
Of His univ'ral pencil.'

Half a century later Wordsworth wrote:

'One impulse from a vernal wood
May teach you more of man,
Of moral evil and of good,
Than all the sages can.'

The mystic consciousness of the Divine message which plants and flowers have to give to those who can receive it, which Wordsworth possessed, has been shared by many who have written since his time.

4. *Japanese*.—Of non-Christian nations, whether in ancient or modern time, the Japanese possess by far the most striking appreciation of the beauty of flowers. Baron Hübnér, contrasting the development of an appreciation of the beauty of flowers and of natural scenery in Europe with that found in Japan, writes:

'The Japanese are wonderful lovers of nature. In Europe a feeling for beauty has to be developed by education. Our peasants will talk to you of the fertility of the soil, of the abundance of water so useful for their mills, of the value of their woods, but not of the picturesque charms of the country. They are not perhaps entirely insensible to them, but if they do feel them, it is in a vague, undefined sort of way, for which they would be puzzled to account. It is not so with the Japanese labourer. With him the sense of beauty is innate.'

In the 9th cent. A.D. the Japanese Emperor Saga held garden parties during the flowering of the cherry blossoms, at which the literati of the day composed verses in honour of flowers.

At the present day some of the most important festivals observed in Japan are those connected with the blossoming of certain flowers. The cherry-blossom festival is preceded by that of the plum, and followed in succession by those of the peony, wistaria, iris, chrysanthemum, and maple. Every Japanese is familiar with the ode written by the poet Motoori in the 17th cent., of which a translation given by a Japanese is:

'Should any one ask me what the spirit of Japan is like, I should point to the blossoms of the wild cherry-tree bathing in the beams of the morning sun.'

The lotus is the flower specially associated with Buddhism and the spirit world, and the figure of Buddha is often represented as seated on a lotus flower. Lotus flowers made of gold or silver paper are carried at funerals, and tombs are decorated with them at the Festival of the Dead. Lotus leaves are also used to wrap the food offerings for the spirits of the dead.

The Japanese treatment of flowers proceeds on conventional lines. In every school a very large amount of time is devoted to the instruction of the scholars in the art of arranging flowers according to traditional rule. The standard by which they judge of the beauty of flowers is wholly different from that accepted in Europe, and seems to many Europeans highly artificial. The mass of blossoms present in a European bouquet would not convey any pleasing impression to a Japanese. They study the growth and habits of the plant which produces the flower, and pay great regard to stem, leaf, and bud, and to their balance and linear distribution. The art of flower arrangement is said to have been introduced into Japan in the 6th cent. A.D., and several Chinese priests are referred to in early Japanese works as teachers and exponents of this art in connexion with various religious ceremonies. The present style of flower arrangement was developed later, and was specially encouraged by a Japanese *shōgun* who lived in the 17th century. There is a good deal of symbolism involved in the choice and arrangement of flowers, and many weird superstitions, derived from Chinese philosophy and connected with good and bad luck, are associated with the arrangement and subsequent disposition of the flowers.

Although the Japanese are the most painstaking gardeners to be found anywhere in the world, flower gardens such as are common in Europe can hardly be said to exist. The Japanese garden is a landscape garden. For nearly five centuries Japanese artists have been studying and elaborating the rules for the formation of landscape gardens laid down by their predecessors, and with fascinating results. By a careful process of selection and cultivation, forest trees have been reduced to a fiftieth part of their normal size, so that their size may harmonize with the tiny garden in which they are to be planted. The object of these gardens is to reproduce the effect created in the mind of the spectator by an extensive landscape. The older landscape gardeners who are credited with introducing this art into Japan were Buddhists, and they endeavoured by their art to express in symbolic form ideas such as content, calm, and piety.

5. Chinese.—The Chinese cultivate market

gardens with laborious care, and are fond of constructing flower gardens in which bare rocks and ponds are the principal features. These do not, as a rule, contain any flower beds, but flowering plants are arranged in pots of various designs. Flowers grow throughout China in prodigal profusion, and the Chinese are specially fond of those which have sweet scents. They also use flowers and their artificial substitutes as ornaments to put in their hair, but they generally have little appreciation of flowers apart from their regard for them as ornaments or as providing sweet scents.

6. Hindu, etc.—In India, flower gardens are rare, though flowers are extensively used for making garlands to be worn on festive occasions or to show honour to strangers. As artificial flowers, however, are extensively manufactured and used for similar purposes, it can hardly be maintained that their use in this way by the peoples of India denotes any real appreciation of their beauty. The *Rigveda* consists of hymns addressed to Nature-gods; and in the *Atharva*, flowers are mentioned only in magic charms. In later Indian literature, however, lyric and dramatic poetry, as well as elegant prose literature, contains many allusions to flowers which evince a real love of them, just as in later Jewish literature there are repeated references to the beauty of the floral world (cf. the references in Blau's index to Böhtlingk's *Ind. Sprüche*, St. Petersburg, 1870-73; Löw's art. 'Plants,' in *JE*, and various artt. on individual flowers, e.g. 'Lily' and 'Rose,' in the same work). In Muhammadan Persia, flowers receive equal consideration throughout literature (cf. Philipp, *Beiträge zur Darstellung des pers. Lebens nach Muslih-uddin Sa'di*, Halle, 1901, p. 5 f.), while even Pahlavi literature made each flower sacred to a godling (*Bund.* xxvii. 24 [*SBE* v. (1880) 103 f.]). Amongst the pagan races of Africa the traveller who stops to pick wild flowers, or who expresses any admiration for them, is in danger of being mistaken for a lunatic. In Micronesia and Polynesia, the attitude is different, for there flowers and garlands form an important addition to the toilet, and their beauty and perfume receive recognition (Waitz-Gerland, *Anthropologie der Naturvölker*, Leipzig, 1860-72, v. ii. 63, vi. 45, and authorities there cited).

LITERATURE.—Besides the literature mentioned in the art., see A. Biese, *Development of Feeling for Nature*, London, 1905.

CHARLES H. ROBINSON.

FETICIDE.—Destruction of the human embryo has not among any people become a social habit, as general infanticide has done among some modern primitive communities and among the ancient Greeks and Italians. Throughout history its prevalence has been sporadic. One section of a race may practise it, while another, though conterminous, may forbid it, and yet another may be stated to be ignorant of its possibility.¹ Its practice does not involve any high degree of knowledge, for the crudest methods of manipulation, coinciding at times with those accidents which produce natural abortion or miscarriage, are found among the lower races.² Nor does it, at any stage of culture, necessarily imply a depraved condition of sexual morality. As often as not—for instance, among the ancient Italians in many cases, and among many modern savage tribes—the sole reason is poverty. The crime thus is parallel in one aspect with infanticide and prevention of conception.

'The same considerations,' says Westermarck, 'as induce savages to kill their new-born infants also induce them to destroy the fetus before it has proceeded into the world from the mother's body.'

¹ So in the East Indian Archipelago (J. G. F. Riedel, *De stiek-en kroesharige Rassen*, Hague, 1890, pp. 24 [Buru], 302 [Timor and Timorlaut]).

² *Id.* 355.

³ *MZL* 413.

Besides the hardships of wild life and the intense struggle for existence in modern civilization, there are secondary reasons for the practice. A perverted diathesis may induce the mother to forgo the trouble of pregnancy, birth, and rearing.¹ More often it is in order to conceal illicit intercourse.² The length of the period of suckling, which may drive the husband to form other ties, is also a contributory factor. And the same reason applies when the mother has already a child at the breast.³

Whatever be the reasons operating to induce the destruction of a new life, the crime, as already noted, has nowhere and at no time been a social habit. The progressive evolution of culture involves the displacement of infanticide proper by feticide, and in the last half century feticide itself has been largely displaced by the artificial prevention of conception.

The social attitude towards the crime has followed a similar evolution. Rude indifference to child-murder has given place in advancing culture to abhorrence, while destruction of the unborn child was regarded as venial in comparison. The whole question of ethical valuation was complicated by the speculations of early animistic philosophy, which from the Greek period were applied to the elucidation of biological facts. Both the sentiment and the legislation, ecclesiastical and civil, of Western civilization have been largely influenced by the incidence of these ideas. A broad line, lastly, can be drawn between barbarian, classical, and Oriental ethics on the one hand and Christian on the other, with regard to the value attached to the unborn life and the rights of the individual over it.

Among the lower and the higher races alike the moral objection to the crime varies directly as the social consciousness of the duty of augmenting the birth-rate. Hence it may be laid down that infanticide and feticide tend to decrease with the passage from a natural to an artificial method of subsistence. Where agricultural and pastoral culture are established, the importance of numbers is realized. In a secondary degree the objection varies inversely as the sexual morality, dependent upon the matrimonial system of any given people. Cases of mere luxury, as in pagan Greece and Rome, are of little significance. An example of the direct variation may be found in the early Hebrews; and of its modern form in the modern European peoples, including the Jews. Examples of the inverse variation may be seen in the Hindus and Muhammadans, where the results of the matrimonial system have overlaid the primary objection to feticide.

Among semi-civilized peoples it is just possible to connect the existence of the moral objection with upward progress from the natural and precarious mode of subsistence. In Samoa, for instance, artificial abortion was very prevalent. Here there is possibly an indirect influence of sexual morality.⁴ The Dakotas did not regard it as a crime, though the generality of Indian tribes did so regard it.⁵ A good example is the case of the Kafirs:

'The procuring of abortion, although universally practised by all classes of females in Kafir society, is nevertheless a crime of considerable magnitude in the eye of the law; and when brought to the knowledge of the chief, a fine of four or five head of cattle is inflicted. The accomplices are equally guilty with the female herself.'⁶

As distinguished from infanticide, destruction

² *Id.*

³ G. Turner, *Samoa*, London, 1884, pp. 79, 280.

⁴ H. Schoolcraft, *Indian Tribes*, Philad. 1853-57, III. 243; Ploss-Bartels, I. 848.

⁵ Warner, in Maclean, *Compendium of Kafir Laws and Customs*, Mt. Coke, 1858, p. 62.

of the embryo involves no conflict with the instinct of maternal or parental love.

'Considering,' as Westermarck observes, 'that the same degree of sympathy cannot be felt with regard to a child not yet born as with regard to an infant, it is not surprising to find that feticide is practised without objection even by some peoples who never commit infanticide.' He instances Samoa and the Mitchell Islands.¹

Feticide is not referred to in the Mosaic law. The omission is one indication, among many, of the intense regard felt by the Jewish people for parenthood and the future of their race. Hinduism and Islam show an inconsistency between theory and practice.

'In a country like India . . . where six-sevenths of the widows, whatever their age or position in life may be, are absolutely debarred from re-marriage, and are compelled to rely upon the uncertain support of their relatives, it is scarcely surprising that great crimes should be frequently practised to conceal the results of immorality, and that the procuring of criminal abortion should, especially, be an act of almost daily commission, and should have become a trade among certain of the lower midwives.'²

Yet the old laws forbade it and classed it as murder, placing it in the same category as homicide, neglect of the Vedas, incest, and the drinking of spirituous liquor.³ It is one of the three acts which make women outcasts, the others being the murder of a husband or of a Brāhman.⁴ The myth of 'the wiping off of sins' in the Atharvaveda denounces the abortionist, the *bhrūṇahan*, whose name and crime end the lists: 'beyond him who has committed an abortion the sin does not pass.'⁵ Buddhism naturally included it in its denunciation of the destruction of any form or degree of life. The *bhikkhu* 'who intentionally kills a human being, down to procuring abortion, is no Samāna, and no follower of the Sakyaputta.'⁶

In Persia, according to Polak, abortion is regularly practised to prevent illegitimate births; and legislation ignores the crime.⁷ In Turkey there is the same indifference, and the practice is not uncommon.⁸

The Avesta theorizes on the date at which the embryo becomes animate, and its condemnation of feticide is detailed.

'"That man does not follow the way of the Law, O Zarathushtra, who commits the Baodhvarsha crime with a damsel and an old woman," said Zarathushtra.'⁹ Describing the crime, the *Vendidad* (xv. 13 ff.) says that, if a maid who is with child unlawfully tells her lover, 'I have conceived by thee,' and he replies, 'Go then to the old woman and apply to her for one of her drugs, that she may procure thee miscarriage,' and the old woman brings some *bangā* or *shatta*, that kills in the womb or expels the foetus, and the man says, 'Cause thy fruit to perish,' 'the sin is on the head of all three.'

The penalty was that for wilful murder. When a woman has been pregnant for four months and ten days, the child is formed and a soul added to its body.¹⁰ The uttering of a charm is also frequently a factor, for ideas of magic naturally intrude even in such practices as this. Similarly the Greenlanders supposed that an abortion was transformed into an evil spirit, *angiuq*, which avenged the crime.¹¹

In his eugenic proposals, Plato recommends that no child be suffered to come to the birth when the parents have passed the age assigned for procreation.¹² Aristotle, carrying on the Hellenic traditional objection to the existence of imperfect or deformed children, recommends abortion before the foetus is animate, in cases where the mother has

already given birth to the number of children enjoined by the State.¹ Under the Roman Empire the practice of feticide was carried on for reasons of poverty, sensuality, or luxury. Seneca speaks of it as practised by fashionable women in order to preserve their beauty.² Lecky concludes:

'It was probably regarded by the average Romans of the later days of Paganism much as Englishmen in the last century regarded convivial excesses, as certainly wrong, but so venial as scarcely to deserve censure.'³

An attempt was made by the Antonines to prevent the loss of children consequent upon the practice.⁴

Greeks and Romans made a commencement of speculation as to the biological value of the embryonic life. Distinguishing sharply between feticide and infanticide, they put it that the unborn child was not *homo*, not even *infans*, but merely a *spes animantis*. It was regarded, not incorrectly, as merely a part of the mother, as the fruit is a part of the tree until it falls.⁵

Christian philosophy, and consequently Christian legislation, applied from the first 'the healthy sense of the value and sanctity of infant life which so broadly distinguishes Christian from pagan societies'⁶ to this more subtle form of infanticide.

'Prevention of birth,' asserts Tertullian, 'is a precipitation of murder; nor does it matter whether one take away a life when formed, or drive it away while forming. He also is a man who is about to be one. Even every fruit already exists in its seed.'⁷

Empirical knowledge was combined with Aristotle's doctrine to establish a theory of embryonic animation. This, of course, is to be distinguished from 'quickening,' which may commence some hundred days after conception. Aristotle held that the soul of the zygote at conception was the vegetative only, that after a few days it was informed by the animal soul, and later by the rational. His followers distinguished between the male and female embryo in the date of animation. The male was regarded as being animated forty days after conception, the female eighty days. Later the moment of animation was fixed for both sexes at the fortieth day. The Roman jurists adopted the latter view.⁸ The general distinction between the animate and the inanimate fetus was clearly held by Canon and Roman Law alike, and lasted to modern times. It was applied in practice by Augustine thus:

The body is created before the soul. The embryo before it is endowed with a soul is *informatus*, and its destruction by human agency is to be punished with a fine. The *embryo formatus* is endowed with a soul; it is an animate being; its destruction is murder, and is to be punished with death.⁹

Throughout the Middle Ages women guilty of the crime, which, however, was of rare occurrence, were condemned on the capital charge, as the Sixth Ecumenical Council had ordained.¹⁰

There was to the theory a natural corollary that the *embryo formatus* required to be baptized if it would be saved. Augustine held that the embryo might share in the resurrection.¹¹ Fulgentius argues:

'It is to be believed beyond doubt that not only men who are come to the use of reason, but infants, whether they die in their mother's womb or after they are born, without baptism in the name of the Father, Son, and Holy Ghost, are punished with everlasting punishment in eternal fire, because, though they have no actual sin of their own, yet they carry along with them the condemnation of original sin from their first conception and birth.'¹²

Aquinas, however, was of opinion that infants dying before birth might perhaps be saved.¹ Meanwhile some Councils made no distinction between the periods of gestation, and condemned all feticide as murder.²

Interesting variations of opinion are found as to the right of abortion. Plato and Aristotle held that the mother possessed the right. The Stoics held that the fetus was merely the fruit of the womb, and that the soul was not acquired until birth. The Roman theory and practice were in many points far from clear, but the view prevailed that the father alone had the right to order abortion.³

As early as the 4th cent., Gregory of Nyssa had evolved a theory anticipatory of Neo-Vitalism. He held that one and the same principle of life quickened the new organism from the first moment of its individual existence, and that, instead of the organism developing the life, the vital principle built up the organism.⁴

Modern biology holds that the zygote is a new individual from the moment, not of 'conception' in the vague and popular sense, but of penetration of the ovum by the spermatozoon. Modern legislation holds much the same view, but is less severe upon feticide than upon infanticide. Popular sentiment has always tended to regard the life of the embryo as less sacred than the life of the infant. Modern Papal Bulls condemn criminal abortion as unlawful, and punish it with excommunication.⁵ Ecclesiastical influence had, until the 18th cent., been predominant in exacting extreme penalties against the practice. The humanitarian movement succeeded in abolishing the penalty of death.⁶ Apart from the Papal tribunal, modern legislation punishes the crime with imprisonment. Medical practice

occupies a position midway between that of the classic lawyers and that of the later Christian ecclesiastics. It is on the whole in favour of sacrificing the fetus whenever the interests of the mother demand such a sacrifice. General medical opinion is not, however, prepared at present to go further, and is distinctly disinclined to aid the parents in exerting an unqualified control over the fetus in the womb, nor is it yet disposed to practise abortion on eugenic grounds. . . . Society itself must assume the responsibility of protecting the race.⁷

In medical circles there has recently been considerable discussion, which Ellis has analyzed in a valuable summary,⁸ on the ethics of the question. One aspect of this is a return to the Greek view that the right of deciding upon the operation rests with the mother. Thus, though

'alike on the side of practice and of theory, a great change has taken place in the attitude towards abortion, it must, however, clearly be recognized that, unlike the control of procreation by methods for preventing conception, facultative abortion has not yet been embodied in our current social morality.'⁹

The practice is said to be 'extremely common' in England, France, Germany, and the United States.¹⁰ Perhaps this estimate is too high. In France, at least, there is a tendency on the part of the law towards leniency, only professional abortionists, as a rule, being punished.

As for the eugenic aspect of the question, it can hardly be separated from the social.

'Whenever,' says Balestrini, 'abortion becomes a social custom, it is the external manifestation of a people's decadence, and far too deeply rooted to be cured by the mere attempt to suppress the external manifestation.'¹¹

Ellen Key argues that a civilization which permits the slaughter of its carefully selected adults in war has not yet won the right to destroy deliberately even its most inferior vital

products in the womb. . . . The blind and aimless anxiety to cherish the most hopeless and degraded forms of life, even of unborn life, may well be a weakness, and, since it often leads to incalculable suffering, even a crime. But . . . before we are entitled to take life deliberately for the sake of purifying life, we must learn how to preserve it by abolishing such destructive influences, war, disease, bad industrial conditions, as are easily within our social power as civilized nations.¹

Ellis well observes that 'the necessity for abortion is precisely one of those results of reckless action which civilization tends to diminish.'² The observation includes the abortion which is necessary for the saving of a mother's life, and the various applications of the practice by the licentious and depraved.

LITERATURE.—There is an extensive modern literature, periodical and polemical, but the works cited in the article fully refer to it.
A. E. CRAWLEY.

FOLKLORE.³—1. Definition and scope.—Folklore⁴ consists of customs, rites, and beliefs belonging to individuals among the people, to groups of people, to inhabitants of districts or places; and belonging to them apart from and oftentimes in definite antagonism to the accepted customs, rites, and beliefs of the State or the nation to which the people and the groups of people belong. These customs, rites, and beliefs are mostly kept alive by tradition, that almost universal desire to carry on without alteration what one's parents or predecessors performed or professed. They owe their preservation partly to the fact that great masses of the people do not belong to the civilization which towers over them and which is never of their own creation; partly to certain of the people being isolated from centres of thought and culture. Some beliefs, but no customs or rites, are due to those persons or generations of persons who, being peculiarly stunted in their mental equipment, are unable to understand the phenomena of nature or the results of civilization. We may classify these two distinct branches of folklore as *traditional* and *psychological*.

2. Materials.—The tradition-founded customs, rites, and beliefs constitute by far the larger mass of the folklore which has been collected and published in almost every country in Europe. Psychological beliefs are much rarer. Unfortunately, the two groups have never been kept separate from each other even by students of folklore, and arguments based upon a belief which is wholly of psychological origin may be entirely fallacious and misleading unless it is used strictly in accord with its position in folklore classification.

It is obvious that tradition may carry us very far back into the past, and indeed it is one of the facts of traditional folklore, which is the most generally claimed and understood, that almost invariably research leads the investigator to the very earliest phases of racial and social life. Psychological folklore, on the contrary, relates only to the present, or rather to the period contemporary with the existence of the belief. This contrast is fundamental, but it does not entirely separate the two classes. The investigator is met with a phenomenon of peculiar significance, namely, that research into psychological folklore leads not only to the genesis of each particular belief which comes under that head, but thence by analogy to the best explanation of the genesis of all belief. The unity of folklore exists in its origins. The

differences exist in the results which are derived from it.

Always bearing in mind these two wholly distinct branches into which folklore is naturally divided, the next consideration must be given to a fair understanding of the constituent elements of each branch—custom, rite, and belief in the traditional branch; belief in the psychological branch.

(1) *Custom* in folklore occupies a very large space. It embraces all those observances, local and personal, which are carried on by the sanction solely of continued observance—untouched by a rite, unconnected with a belief, simply and solely customs, personal, family, local, racial in their attachment. Examples of custom thus defined will best explain the distinctions. Of personal customs one of the most interesting is the mother's custom at Carrickfergus, where, when giving her child the breast for the last time, she put an egg into its hand and sat on the threshold of the outer door with a leg on each side. Here is pure custom performed according to the demands of traditional usage and with no traditional reasons for its performance. Of family customs the best examples in this country come from the North, where the influence of certain families is still very strong, as, for instance, in the island of Argadia off Argyllshire, where we have the record of the people swearing by the hand of Callum More. A custom belonging to the family of Holt of Aston-juxta-Birmingham is worth quoting in detail. It took place on the 24th December in each year:

'On this day, as soon as supper is over, a table is set in the hall; on it is set a brown loaf, with twenty silver threepences stuck on the top of it, a tankard of ale, with pipes and tobacco; and the two oldest servants have chairs behind it, to sit in as judges if they please. The steward brings the servants, both men and women, by one at a time, covered with a winnow-sheet, and lays their right hand on the loaf, exposing no other part of the body. The oldest of the two judges guesses at the person, by naming a name; then the younger judge, and, lastly, the oldest again. If they hit upon the right name, the steward leads the person back again; but, if they do not, he takes off the winnow-sheet, and the person receives a threepence, makes low obeisance to the judges, but speaks not a word. When the second servant was brought, the younger judge guessed first and third; and this they did alternately till all the money was given away. Whatever servant had not slept in the house the previous night forfeited his right to the money. No account is given of the origin of this strange custom, but it has been practised ever since the family lived there. When the money is gone, the servants have full liberty to drink, dance, sing, and go to bed when they please' (*Gentleman's Magazine*, 1795 (1), 110).

Elsewhere family customs are chiefly connected with land, manorial tenures, and semi-legal cases, many of which belong to the oldest periods of our history and deserve very careful examination from the folklore point of view. Thus, when the rector of Ruan Minor in Cornwall claims his right, by ancient usage and prescription, of sending a horse into a certain field in the parish of Landewednack whenever it is cropped with corn and taking away as many sheaves as the horse can carry on its back, he is performing a custom which certainly comes from times when lands were held in common and not in severalty. Of local customs the best examples are municipal. The Lord Mayor's show in London is carried on as a traditional custom. It is never questioned, and people would oppose its abolition; nevertheless, it represents features in the history of the great city which are older than English history. And so with the Godiva ceremony at Coventry, the Shrewsbury ceremonies, and many other places which have their own special customs. Racial custom is a much more difficult question to describe or to illustrate. Yet it exists. The roaming habits of the gypsies afford the most obvious example. These people stretch across the whole area from India to Western Europe, always preserving their custom of living in tents and not sleeping in a fixed habitat, and

¹ *Century of the Child*, New York, 1900, ch. I., summarised by Ellis, 610.

² *Op. cit.* 611.

³ The purpose of the present article is to fix the definition and scope of folklore, and to indicate generally the materials for study, their historical value, and their scientific treatment. Details will be found in the various articles on peoples and religions.

⁴ The word 'folklore' was coined by William John Thoms (a well-known antiquary and the founder of *Notes and Queries*) in a letter which appeared in the *Athenaeum*, 22nd Aug. 1846.

always observing their own code of life. Besides these curious people every country has its local race-types differing from the dominant race. Thus in our own country, the people of Tacumshane in Ireland could not speak Irish, but had a language of their own which was Chaucerian English; they intermarried amongst themselves, dressed in their own colours, brown and yellow, and never departed from their own customs. Connaught has always had local racial groups in its mountain ranges. The Highlands of Scotland present the same characteristics, and the Borderland was long known as the occupation ground of people whose law was the custom of their ancestors, not the legislation of the State. In Wales down to 1852 there are records of a curious red-haired race called Cochion, who lived by rules of their own and did not intermarry with the surrounding folk. In Cornwall there is the well-known example of the Gubbin people, of whom there exist notes dating from the 17th century. These examples are special cases of race survival; but all over the country, when for amusement or from inherited custom we admit to our house a first foot on New Year's morn, who can be only a dark man or only a fair man, as the case may be, but never a woman, we are reverting to a racial custom.

(2) Passing from custom to *rite*, there appears for the first time the touch of a religious sanction. The farmer who rescues his cattle from disease by burying a dead calf at the entrance of the cattle-shed is performing a personal rite of religious significance. The Manx cottager who looks for traces of a foot in the ashes of his fire-grate for the purpose of seeing in what direction the toes point—if to the door, signifying a death; if to the fire-place, a birth—is performing a family rite of religious significance. The 'oblations to the white bull' of Bury St. Edmunds was a local rite of religious significance. The rites of witchcraft are racial rites of religious significance.

(3) Finally, in the division of *belief*, there are the same main features. Over and over again in traditional belief individuals will retain in memory and in form beliefs which they personally entertain, and which may not be generally accepted. So, too, there are family beliefs some of which are of such special character as to contain many of the characteristics of totemism; for example, the famous case of the Irish clan Conneely, who believe in their descent from a seal, will not kill a seal, and are named from the seal. In local beliefs there is the significant feature of differentiation in the objects of belief in closely contiguous places.

But the section of belief has an important branch of folklore belonging to it which does not belong to the other sections, namely, the *Märchen*, the folk-tale or the nursery tale, which, found all over Europe and in India, has led to much discussion as to origin and significance. Folk-tales are the myths of the race. Myths are the accounts which the science of pre-scientific ages gave of phenomena which could not be understood except by such accounts as early knowledge and observation would allow. If myths accounted for the origin of mankind, of the sun, moon, and stars, of the earth and trees, they accounted for them as creations of higher powers than man. The story into which the myth is woven is not a story to those who believe in the truth of the myth. It assumes the personal shape because the personal is the only form in which the early thought of mankind can be expressed. It lived on by tradition, because of its original sacred character, and the impossibility of altering a once firmly established myth. All research into myth confirms this view of its origin among primitive peoples. Among the higher

barbaric peoples the same process of explaining phenomena which were not understood went on, and Greek myth has come to us as the Greek explanation of temple-rites and ancient worship which did not command the reverence of the Greeks but which demanded explanation. In their hands all religious conception developed, and the gods of Greece became the gods of moral principle, the gods of law and order, the gods of political and social progress—mythic gods all through, but gods very real to the Greek in the earliest stages of his development.

3. *Historical value.*—If this survey of the materials of folklore suffices to explain in general terms what the subject-matter is with which the folklorist has to deal, it will also have indicated to the student that tradition, being the sanction of folklore, carries a weight of evidence for the past which is scarcely second in value to the historical record. History never has pretended to contain every human fact occurring at a place, on an occasion, in connexion with a personage or a people. And very often, where the historical record is faulty, the traditional record may be relied on to fill up the vacuum. Myths are not created out of nothing. A 'mere' myth, which is an expression often used by those who are not folklorists, does not exist, if by that expression is meant a story or account invented out of nothing, a mere fantasy or fiction. Myth is definitely and distinctly not fiction. It is always the covering, the shell, to a kernel of truth contained inside. It may be difficult, or impossible, to get at the truth. One authority will argue for one explanation, and others for quite different explanations; but, because modern scholarship is out of touch with primitive science or with religious accounts of forgotten ritual, it does not do to relegate the whole subject to the waste-paper basket. Scholars should frankly confess an inability to explain, and leave the subject there, perhaps for more successful efforts by future generations.

4. *Scientific treatment.*—The custom, rite, and belief, which are properly called folklore, are to be found embedded in civilization—they are, as we have seen, the unrecorded factors of that civilization at its earlier stages. For this reason they are capable of comparison, first, with parallel customs, rites, and beliefs embedded in civilization of practically the same standard (as when we compare British folklore with the folklore of France, Germany, Italy, Scandinavia, the Slav countries, and the Hindus), or of a wholly different standard (as when we make the comparison with Chinese or Mongolian folklore). Secondly, they are comparable with parallel custom, rite, and belief which are alive at this day as the ordinary custom, rite, and belief of a tribe or race of barbaric or savage peoples. Savage custom, rite, and belief are sometimes classed as folklore simply because they are capable of such close comparison with folklore, but this is obviously wrong, and only raises inconvenient issues as to the regions respectively occupied by folklore and anthropology.

The question of comparative folklore raises very difficult problems. It is not scientific to lift a custom, rite, or belief, a myth, or a *Märchen* from its civilized surroundings and compare it with the living custom, rite, or belief of savages, without first of all understanding what the elements of comparison are. A belief found among the peasantry of modern Europe may well be compared with a belief recorded of the classical countries, or of the Hindus or Persians. There is solid groundwork to start from in the common origin of the religious institutions of these peoples. But there is no such groundwork when the comparison is with modern savage people. It may mean that

the traditional belief discovered in folklore belongs to a stage of culture as low as that of the savage with which it compares, and that this stage of culture survives in modern civilization together with the physical types of a people to whom it belongs. Beddoe insists that types of Palæolithic and Neolithic folk survive in Britain, and European ethnologists advance the same evidence in respect of other countries. These folk could have brought their culture along with them; their descendants could have carried it on and could have passed it on to other individuals. Different degrees of ethnic evolution must be considered in the work of comparison, and it is useless to go on piling up examples of parallel beliefs, rites, and customs without examining the direction in which such parallelisms are leading the inquirer.

The work of the folklorist is and must be arduous for years to come. Those who collect, as the older antiquaries collected, without comment or with such comment as needs no corrective, are supplying the bricks for the edifice which will one day assuredly be erected. The work of analysis, classification, and comparison must follow, not precede, the life-history of each item of folklore. Just as in philology the life-history of each word can alone be the basis of the science of language, so in folklore the life-history of each item of folklore can alone be the true basis of the science of tradition. The work is being gradually accomplished under both heads, and it will lead to a consideration of early national history which has not yet been attempted.

Custom, rite, and belief—these elements of folklore constitute a very recognizable phase in the religious and social life of the people of the country where they are found. It is, however, a non-Christian religion and a non-political society to which this folklore belongs, and the conclusion is inevitable that it must also be pre-Christian and pre-political. This brings us to a period, if not to a date, for the originals from which folklore has survived. It must never be forgotten that survivals are not the originals. Bits of the originals will have been broken off, sometimes to perish altogether, sometimes to exist as an independent item. Originals will have become timeworn, will, in their encounter with the State religion and the State polity, have become altered in form, if not in *motif*, will perhaps have attached themselves to a new phase of the people's life; and the wear and tear, the alterations, the new attachments, will prevent the true interest of the survival from being discovered. All these matters the folklorist has to study and prepare for, but it is for a great historical purpose. All the custom, all the rite, all the belief surviving in the folklore of a people, make up a considerable chapter in the pre-history of that people, are indeed the only material which exists for the pre-history outside the geological and the archaeological record. Later periods in the historical range are no doubt reflected in folklore. The post-Roman Celtic period in Britain is the strongest case. The Arthur cycle has gathered to itself whole volumes of myth. It is strange that the greatest of all English kings, Alfred the Great, should have been able to attach so little of myth to his life—perhaps it is because that life was so very great. It is not strange that Hereward the Saxon chieftain should have gained a place in English myth. But these heroes of historic times do not create new myths. They have transferred to them ancient myths, myths formerly belonging to ancient gods or ancient heroes. And so we come back to the proposition that folklore is the traditional fact of pre-historic life in contradistinction to history, which is the recorded fact of State or national life. This is a great claim on

behalf of folklore, but it is a claim which must assuredly find its way into the scientific study of nations and peoples.

FOOD.—Not only from the physiological but also from the sociological point of view, food, the food-quest, the food-supply, constitute the permanent basis of human action. Food, as Thorold Rogers observes, is 'the raw material of labour'; it is also the raw material of the social system itself. 'Even in the highest stages of civilisation, all wealth can be ultimately resolved into the elementary form of food.' 'The provision of food is the primitive form of labour; its accumulation is the primitive form of wealth.'¹

In religion and morality this relation is, of course, more or less indirect; but, more than any factor of life, man's meat even here is largely realized in direct relation. The beginnings of the moral law are based on food-tabus; religion culminates in a divine meal.

The best distinction between uncivilized and civilized society is that drawn by Payne. It consists in 'the substitution of an artificial for a natural basis of subsistence.'²

'Man adopts the practice . . . of saving for future consumption a portion of certain periodically recurring food-supplies; and from providing for that portion of the year during which the food-supply ceases he advances to providing for years of scarcity. Food thus accumulated obviously enables its possessor to employ his own labour and that of others, in some other way than food-provision. The food-surplus, therefore, is the foundation of all non-food-producing labour; and advancement is always marked by a progressive increase in the quantity of non-food-producing labour, and by the multiplication of the forms which labour of this description assumes. . . . But the method of procuring food from natural sources alone is toilsome and extremely uncertain.'

The next step, the provision of food by artificial means, is

'effected by the simple expedient of not only abstaining from some portion of the food-surplus, but converting the portion abstained from into a fresh source of increase. Instead of being merely stored, seeds or roots are allowed to fructify in the earth, and the captured young of animals are allowed to grow to maturity and become the progenitors of others.'³ But, 'while all artificial production is favourable to advancement, the animal and vegetable species to which it is applied are favourable to it in unequal degrees. Their value in this respect appears to be measurable by two different standards, by the recompense which they return to labour, and the stimulus which they give to ingenuity. When this principle is broadly applied to the two divisions of food-animals and food-plants, the result appears to be that, while the domestication of animals yields the greatest immediate return, the culture of the food-plants gives ingenuity the greatest stimulus.'⁴ The full effect on progress is found only when cereal cultivation is combined with animal breeding. 'When this takes place, progress is accelerated, as it were, in a compound ratio.'⁵

1. Food-stuffs.—The division of economic progress into the hunting, pastoral, and agricultural stages is untenable. But certain backward peoples are chiefly fruit-eating or pastoral or hunting. As for animal food-stuffs, apart from fish and game (the natural supply), the distribution of animals capable of artificial propagation varies. The

⁴ *Ib.* 280 ff.

⁵ *Ib.*

largest number is possessed by the Old World; America, before introducing supplies, had but few, Australia none. The ox, horse, ass, sheep, camel, goat, and pig are the most important. The reindeer, llama, and paco are exceptional cases.

All vegetable food-species are capable of artificial increase. Their three main divisions are fruits, roots, and cereals. Payne¹ notes that fruits take the lowest, roots the intermediate, and cereals the highest position, in reference to the order of adoption, to the amount of labour involved, both for fitting them for consumption and for converting them from a natural to an artificial basis, to their value relatively to bulk, and to the degree in which their culture assists progress. For example, 'fruit-eating savages surfeit themselves in the fruit season and are near starvation for the rest of the year.'²

Though man naturally seems to prefer flesh-meat to all other forms of sustenance, owing to its stimulating properties,³ the slight use of it in hot countries is probably not a primitive habit, but one enforced (like abstinence from alcohol) by a long process of adaptation to climate; yet a composite diet alone has formed the foundation of the greatest advance.⁴ In particular, as Payne observes,

'nothing worthy the name of civilisation has ever been founded on any other agricultural basis than the cereals. This appears to be largely due to the fact that the seeds of the cereal grasses are, as compared with fruits and roots, extremely rich in albumen and albuminoids, the great nourishers of the muscular and nervous systems.'⁵

2. Food-preparation.—Methods of cooking are naturally even more numerous than the substances employed for human food. But the principles of cookery reduce themselves to roasting and boiling. Direct exposure to fire is universally employed; gradually it gives place to the oven. But many backward peoples use a simple form of oven, such as a hole in the ground banked with hot stones. The method of *boucan* or *barbecue*, by which food is smoked for preservation, is common in barbarism.⁶ Tylor has argued that stone-boiling generally preceded pot-boiling. Red-hot stones are placed in a vessel of water until it is hot enough to cook the meat. 'So instantly,' however, 'is the art of stone-boiling supplanted by the kettles of the white trader, that, unless perhaps in the northwest, it might be hard to find it in existence now.'⁷ Goguet's theory of the origin of the art of pottery is connected with this development.

Three types of the evolution of the processes of food-preparation, which are not necessarily continuous, may be selected—the savage, the Hindu, and the modern French. The last is æsthetic, the second is religious, but each has reactions upon the social consciousness, just as each is an expression of it.

¹ *Hist. of the New World*, 302.

² *Ib.* 803.

³ Fleisch, according to the *Satapatha Brâhmana*, is the best of foods (*SBH* xlv. [1900] 119).

⁴ Among the central Australians 'everything which is edible is used for food' (Spencer-Gillen⁸, 21); roots are eaten raw or roasted in ashes; flesh is cooked in pits. The seeds of various plants, especially of wild legumes, the witchetty and other grubs, are only some of the many foods (*ib.* 22 f.). The men chiefly occupy themselves in hunting game, wallabies, and various small animals; the women search for grub and seed-food (*ib.* 32). In North-West Central Queensland seed-food is *pap-pa*; it is eaten either raw or roasted in damper form. The edible roots, yams, are eaten roasted or raw. Any fruits are eaten. Honey or 'sugar bag' is a favourite article. Insects and grubs, ants and caterpillars are eaten, raw, or dried, or roasted. Frogs, lizards, and snakes, fish, and particularly mussels, form a large item. Emus, pigeons, bandicoots, opossums, and kangaroos are caught by the men. Roasting in ashes and baking with hot stones are the two chief methods of cooking (W. E. Roth, *North-West-Central Queensland Aboriginals*, Brisbane, 1897, pp. 92–104).

⁶ E. B. Tylor, *Early History of Mankind*⁹, 1870, p. 268 f.

⁷ *Ib.* 266.

As a culmination of social feeling in the alimentary sphere, applied in everyday life, as distinguished from occasions of critical sacredness, the ritual of the Hindu kitchen and of Hindu meals is significant.

'The kitchen should always be on the south side and should run the whole width of the building. This is the most sacred part of the whole house, and persons of a lower caste than the household are never allowed to enter it. . . . The kitchen is partly a cooking place, partly chapel, and partly dining room.'¹ The mere glance of a man of inferior caste makes the greatest delicacies uneatable, and if such a glance happens to fall on the family supplies during the cooking operations, . . . the whole repast has to be thrown away as if poisoned.'² Cf. also art. Food (Hindu).

The preparation of cereal food calls for some description. Payne distinguishes seven stages, viz. green corn torrefied; ripe corn pounded into a paste; corn steeped and boiled—the usual method with rice; meal boiled in water (this porridge is the 'favourite food of advanced barbarism'); paste in thin cakes grilled—the *tortilla* of Mexico, griddle-cakes; paste in thin cakes baked (this is the unleavened bread 'universal in early civilisation'); finally, leavened bread.³

Numerous folk-customs cluster round the care of food and its preparation. Food, according to Zoroastrian teaching, must not be thrown away to the north at night.⁴ European peasants still regard with horror the throwing of bread into the fire. The ancient Hindu theory was that the remains of food are impure.⁵

3. Food-law and tabu.—The physiological dependence of life upon nutrition is recognized throughout the entire history of human law and custom. Food is the first form of human property. The restrictions placed upon the younger and weaker members of a society in this respect no doubt may be regarded as the first of all human laws.

Among the Australians the younger members of a tribe are subject to a variety of food-restrictions, from which they are gradually released with age.⁶ In the Euahlayi tribe the *wunnarl*, or food-tabu, was taken off a different kind of food at each *Boorah*, until the youth was at last old enough to eat what he pleased.⁷ In the Warramunga tribe a man is usually well on in middle age before he is allowed to eat wild turkey, bandicoot, and emu.⁸ There is little doubt that the ultimate object of these restrictions is partly to reserve the best foods for the older members,⁹ and partly to prevent shortage.

An early type of economic co-operation may be illustrated from the Australian natives. Each individual, until a certain age, is forbidden to eat, though not to kill, a list of animals tabued to each of the four marriage-classes. The husband, for example, lives on articles different from those eaten by his wife; both of them eat foods which their children are forbidden to touch. Thus, as Roth points out, a proper distribution of the total quantity of food available for a community is secured; and, whereas in Europe the more children there are to feed, the less goes to the parents, here the number of children makes no difference in minimizing the parents' supply.¹⁰ In Central Australia it is the function of the men of a parti-

⁶ Westermarck, *MI* ii. 319, quoting authorities.

⁷ E. L. Parker, *The Euahlayi Tribe*, London, 1905, p. 28. Here, as elsewhere, the tabu is removed by bringing the youth and the food into forcible contact. His father made him lie on the first emu he killed, before it was cooked. Then the fat was rubbed on the boy's joints, and a piece of the flesh was placed in his mouth (*ib.* 24).

⁸ Spencer-Gillen⁸, 612.

¹⁰ Roth, 57, 70.

cular totem to perform *intichiuma* ceremonials, the object of which is to secure or increase the supply of the animal or plant which is their totem. Meanwhile the principle is that the food-species of a totem belongs to members of another totem. Magic and co-operation are here in perfect alliance.¹

Though all wealth is ultimately reducible to terms of food, it is an interesting fact that civilized altruism tends to minimize and partially condone offences against property in this form.

'No Chinese magistrate would be found to pass sentence upon a man who stole food under stress of hunger.'² Similar tendencies are seen in Islam, Hinduism, Hebraism, and Christianity. The Canon Law says: *necessitas legem non habet*. Even of lower stages the same is sometimes true, as among the Fjort of West Africa, the Tahitians, the Mexicans, and the Masai. Yet in Danger Island any one caught in the act of stealing food, 'the most valuable property they know of,' was put to death.³

Food-tabus, though materially identical in being restrictions upon diet, and extremely numerous and widely spread, are of diverse origin. One form, probably the earliest of economic legislations, has been noted—the restrictions placed upon the young. Another familiar form is the general tabu *ad hoc*, imposed, as, for instance, by the chiefs in Tonga and the Marquesas, when a particular food was scarce. So, on occasion, the bread-fruit was tabued.⁴ A large body of customs are cases of fasting (*q.v.*), though the primitive notions of pollution by means of food are commonly present.⁵

The individual food-tabu is a curious expression generally of a form of self-regard akin to totemic ideas. In the Andaman Islands each person

'is prohibited all through life from eating some one (or more) fish or animal; in most cases the forbidden dainty is one which in childhood was observed (or imagined) by the mother to occasion some functional derangement; when of an age to understand it the circumstance is explained, and, cause and effect being clearly demonstrated, the individual in question thenceforth considers that particular meat his *yât-tûb*, and avoids it carefully. In cases where no evil consequences have resulted from partaking of any kind of food, the fortunate person is privileged to select his own *yât-tûb*, and is of course shrewd enough to decide upon some fish, such as shark or skate, which is little relished, and to abstain from which consequently entails no exercise of self-denial.'⁶

Similar observances are recorded of the Samoans, the Omahas, and the West Africans.⁷ Such restrictions are most familiar in the case of totemism, where they are group-restrictions.

There are numerous cases in which a whole society refrains by custom from eating some particular food. The Navahos never touch fish or wild turkey.⁸ Such abstinence from fish is frequent.⁹ Abstinence from pork is a custom shared by the Hebrews with the Navahos, the Yakuts, the Lapps, the Guiana Indians, and the ancient Egyptians and Semites.¹⁰ The feelings of disgust and of reverence are variously called in to account for this restriction.

Particular influences of certain meats upon the human system are given as reasons for similar restrictions. Besides various sicknesses supposed to result, special properties of the food in question are believed to pass into the eater. The Zaparo Indians

'will, unless from necessity, in most cases not eat any heavy meats, such as tapir and peccary, but confine themselves to birds, monkeys, deer, fish, etc., principally because they argue that the heavier meats make them unwieldy, like the animals who supply the flesh, impeding their agility, and unfitting them for the chase.'¹¹

The American Indians studied by Adair

'seldom ate of any animal of gross quality, or heavy motion of body, fancying it conveyed a dullness through the whole system, and disabled them from exerting themselves with proper vigour in their martial, civil, and religious duties.'

The Namaquas and Kafirs avoid eating hares, giving as a reason the danger of contracting the timidity of the animal.¹² Such examples might be multiplied indefinitely.

Westermarck has described the tendency to refrain from eating animals with which men have established intimacy.¹³ The Yuruna of Brazil will not eat any animal they have bred themselves, and they censured von den Steinen for eating the eggs of fowls.¹⁴ Such feeling may be connected with the prohibition of beef among the Hindus.

Frazer observes that the food-tabus upon priests and kings are *a fortiori* more numerous and stringent than those upon ordinary persons. Thus, the fetish-priests of Loango, the *flamen Dialis*, the Egyptian kings, and some Indian chiefs are reported to have abstained from various foods.¹⁵

If any rationalist motive is sought for, that which possibly will satisfy most of the cases is a pre-scientific principle of dietetics. But, as Frazer points out,

'to explain the ultimate reason why any particular food is prohibited to a whole tribe or to certain of its members would commonly require a far more intimate knowledge of the history and beliefs of the tribe than we possess.'¹⁶

Westermarck traces several sources for the avoidance of particular foods:

'Disagreeable taste; disgust caused, in the case of animal food, either by the external appearance of the animal, or by its unclean habits, or by sympathy, or by associations of some kind or another, or even by the mere fact that it is commonly abstained from; the disinclination to kill an animal for food, or, generally, to reduce the supply of a certain kind of victuals; the idea, whether correct or false, that the food would injure him who partook of it.'¹⁷

One or two forms of restriction are particularly important in their religious or racial aspects. The Hindu avoidance of flesh-meat has been motivated by various religious principles, but at the back of it is a gradual unconscious process of adaptation to climate; in hot countries a flesh-diet is more or less deleterious. Beef is never eaten by modern Hindus; it is the flesh of the earthly representative of the divine *Bhagavati*.¹⁸ 'At the present day all the higher classes abstain from animal food in every form and are rigid vegetarians.'¹⁹ But Śūdras use animal food; 'indeed, some of the lowest classes of that infinitely divided and subdivided caste eat almost anything and everything that comes in their way.'²⁰ In ancient times beef and other flesh were eaten both ordinarily and in connexion with religious festivals. Thus, Manu, while observing that the eating of flesh (*māṃsa*) and of fish (*matsya*) by twice-born men is prohibited, directs that flesh-meat be eaten at certain *Śrāddhas*; he also says:

'No sin is committed by him who, having honoured the deities and the *manes*, eats flesh-meat which he has bought, or which he has himself acquired, or which has been given him by another.'²¹

The Vedas enjoin a sacrifice of cattle for the purpose of entertaining a guest.²² The *Charaka Saṃhitā*, of the 1st cent. A.D., ordains that 'the flesh of cows, buffaloes, and hogs should not be eaten daily,' but that pregnant women may eat beef, with a view to strengthening the unborn child.²³ In early sacrificial rites the worshippers ate of the flesh.²⁴ The blood was thrown away to the *Rākṣasas*.²⁵ In the relatively modern religion

of the *Tantras* a reaction against the normal tendency of Hinduism is the keynote of theory and ritual. One of the five 'acts' of the Śākta-worship is the eating of flesh-meat (*māṃsa*); another is the eating of fish (*matsya*). As Monier-Williams notes, they 'have good ground for asserting that, in drinking wine and eating meat, they are merely reverting to the practice of their ancestors.'¹

The view held by most Hindus, however, is comparable with that of Europeans on the subject of cannibalism.² Westermarck thinks that Hindu vegetarianism is the 'natural outcome of a system which enjoins regard for life in general and kindness towards all living beings.'³ In Manu there certainly is the germ of this system, as there is that of its contradictory, Śaktism.

'Meat can never be obtained without injury to living creatures, and injury to sentient beings is detrimental to the attainment of heavenly bliss.' 'There is no greater sinner than that man who, though not worshipping the gods or the *manes*, seeks to increase the bulk of his own flesh by the flesh of other beings.'⁴

A connexion certainly may be assumed between the prohibition of killing animals and that of eating them.⁵ The former prohibition is still more stringent in Buddhism and Jainism. It is also important in Taoism.⁶ But Buddhism allows pure flesh to be eaten, if, that is, it has not been procured for the purpose, or if the eater has not supposed so.⁷ The sin is upon the slayer. Ancient Egypt and Greece knew the religious form of vegetarianism, and their myths, like the earliest Hebrew, represented man as having been originally a fruit-eating creature.⁸ The Qur'an prohibits the eating of 'what is dead, and blood, and flesh of swine, and whatsoever has been consecrated to other than God.'⁹ The Jews and early Christians avoided the eating of blood.¹⁰ The Jews also avoided the eating of the intestinal fat,¹¹ and of the 'sinew of the thigh.'¹² Still important in relation to the carefully observed rules in the preparation of 'koshered' food, is the avoidance of meat that is either *n'hēlāh* or *trēphāh*. The former is that of animals dying a natural death, the latter of those 'torn by beasts.'¹³

4. *Ideas and rituals.*—The ideas which centre in food and its properties in early culture are multitudinous; but, since they have had considerable influence in the formation of social habits, they must be briefly classified and described. The natives of Queensland burned all food left over from meals, to prevent 'sorcerers' from getting hold of it and injuring them thereby. The Victorian tribes 'believe that, if an enemy gets possession of . . . bones of animals they have eaten, . . . he can employ it as a charm to produce illness.' The Narrinyeri call such persons 'disease-makers.'¹⁴ In Tanna of the New Hebrides

the disease-makers injure a man by burning his *narak*, i.e. the refuse of his food. All the Tannese carry small baskets about with them, into which they put banana skins, coco-nut husk, or any refuse from that which they may have been eating, in order to avoid its discovery by an enemy, until reaching and crossing a stream of running water, which alone has the power of annulling the danger.¹ Similar ideas and customs prevail throughout the Pacific, East Indies, and South Africa.²

Before eating the new corn the Creeks and Seminoles took a purgative in order to prevent the sacred food from being polluted by common food.³ Here is the tendency to avoid mixing different sorts of food, which plays a considerable part in Jewish sacred dietetics. The young Massai warrior is obliged to eat nothing but beef for so many days; he may not pass to another diet until he has taken a purgative and emetic.⁴ The Eskimo may not eat venison on the same day with whale, seal, or walrus-flesh, nor may two such sorts of meat even lie together on the floor of the hut. Before changing from one food to another they wash themselves.⁵

Properties and qualities, beneficial or deleterious, are naturally believed to be inherent in, or transmissible to, food. Here we have the beginnings both of artistic cookery and of scientific dietetics. One great demand in all ages is for 'pure' food. The meaning of the term in barbarism and in civilization is different according to the atmosphere of the society, whether superstitious or rationalistic. In early thought 'pure' food is unmixed food, but the mixture is avoided as causing ceremonial pollution either to the food or to the eater. The eating of pure food in ancient India was more important than all other means of purity: 'he who eats pure food only, is truly pure, not he who is only purified with earth and water.'⁶ Food itself, as such, may cause pollution; thus, among the Maoris,

'no food is permitted to touch the head or hair of a chief, which is sacred; and, if food is mentioned in connexion with anything sacred or tapu, it is considered as an insult and revenged as such.'⁷

A Maori chief never allowed any food to touch his head. He would not even enter a cooking-house or any building where food was hung from the ceiling, lest his head should be under it for a moment. The Maori theory was 'that anything, if placed in contact with a sacred object, acquired the sacred nature of that object.' And the most marked peculiarities in their customs may be traced to the principle 'that food which has once touched a sacred object becomes itself sacred, and therefore must not be eaten except by the sacred object.'⁸

Similarly the North American Indians held

'that nature is possessed of such a property as to transmute into men and animals the qualities, either of the food they use, or of those objects that are presented to their senses: he who feeds on venison is, according to their physical system, swifter and more sagacious than the man who lives on the flesh of the clumsy bear, or helpless dunghill fowls, the slowfooted tame cattle or the heavy wallowing swine.'⁹

This theory is of world-wide distribution.¹⁰

Among strong or magical foods the most potent is human flesh. The transmission of human char-

acter by this means is at the root of religious cannibalism (*q.v.*).

The contagion of death is supposed to enter food.¹ Murderers, among the American Indians, were not allowed to cook for themselves or others. They could not drink out of any other dish than their own.² In Samoa those attending to a dead person were careful not to handle any food, and for days were fed by others.³ The Moorish custom of *l-ar* seems to depend on the theory of the transmission of curses by food. 'The food will repay' is an explanatory phrase. The food eaten in such compacts contains a conditional curse; the persons eating together take it upon themselves in the event of breaking their word⁴ (see CURSING AND BLESSING, vol. iv. p. 372 f.).

The ceremonies of eating together are worldwide, and bring into relief the social sacredness attaching to food. Eating together is a mode of forming an alliance between two peoples, as between two individuals.⁵ Following the tabu often observed which prevents the two sexes, in particular two affianced persons, from sharing meals, is the marriage ceremony of eating together. There is here the acceptance of mutual gifts, as well as the responsibility of eating food which is representative and which renders the persons 'of one flesh.'⁶

5. Food of the gods.—The conception that the gods are superior members of the community involves the view that sacrifice is largely developed from the social ideas of food and its assimilation. The notions of offering and of covenant supervene. Food is rendered sacred by various critical circumstances. In particular the food of chiefs and of sacred persons acquires a sanctity which helps to explain the value of sacrificial meat. The supply of food to the gods, Payne observes, multiplies man's energy. 'Food and drink are the materials of sacrifice. Health, so far as this is an attribute of the gods, is secured by the continuance and abundance of the sacrifices.'⁷ Moreover, the choicest foods are reserved for the gods.⁸ The gods of Peru, for instance, had their own herds of llamas whose flesh was consumed on their altars.⁹ Flesh also was placed in the idol's mouth.¹⁰

On similar lines is developed the ritual of offering food to the dead¹¹ (see FOOD FOR THE DEAD).

'In some cases the custom of fasting before the performance of a sacrifice may be due to the idea that it is dangerous or improper for the worshipper to partake of food before the god has had his share.'¹²

Into this principle the idea of purity in the worshipper naturally intrudes. Conversely the 'sacredness' of tabu states, such as mourning, is particularly liable to be communicated to food. Hence a multitude of precautions in the feeding of persons in such states.¹³

Particular examples of divine foods are the shewbread (*q.v.*) of the Hebrew ritual, and the Christian Eucharist (*q.v.*). In these and similar cases the ideas of sacred food, of offering, and of eat-

¹³ *ib.* II. 296-310.

ing the god himself are usually combined. The early ritual of eating ceremonially the firstfruits of a crop, and of assimilating the 'soul' thereof, is of a similar character.¹ Since in Greek and Roman theological theory all flesh-meat was sacrificial, the early Christians found here a practical difficulty.²

6. Food in symbol and metaphor.—The contrasted views of Roman Catholics and Protestants as to whether the Eucharistic bread is changed in substance or is a symbol of the flesh of Christ, supply a crucial case of the mystical valuation of food.

To obtain the favour of a deity by self-affliction the Central Americans would eat earth or grass.³ Conversely, the twice-born Hindu is exhorted to 'worship his food and eat it without contempt; when he sees it let him rejoice, show a pleased face, and pray that he may always obtain it. . . . Food that is always worshipped gives strength and manly vigour, but eaten irreverently it destroys them both.'⁴

A Mexican exhortation says:

'There is no man in the world but what eats, for each one has a stomach and intestines. . . . By the sustenance of the body life is upheld, by it the world is peopled.'⁵

In the Upanisads it is written:

'From food are born all creatures that live on earth; afterwards they live on food, and in the end (when they die) they return to it.' Food is 'the root of the body.'⁶

The *Satapatha Brāhmaṇa* has it that food, when enclosed in the body, becomes the body itself.⁷ Food, according to the same, is linked to the body by means of the vital airs.⁸ The essence of food is invisible. Food is the highest of all things that can be swallowed.⁹ The *Satapatha Brāhmaṇa* identifies food and breath, as the *Ārya Laws* identify food and life.¹⁰ Food and breath are both gods, the 'two gods.'¹¹ Food is the deity of the *pratihāra* hymns, for all live when they partake of it.¹²

Payne suggests that, in the development of language,

'not long after emotional exclamations and demonstrative names came primitive adjectives signifying "good" and "evil," applied to animal and vegetable species with reference to the purpose of food, in the sense in which the African guide divides all plants into "bush" and "good for nyam" (the latter including the eatable ones, the former the residue). . . . The Bible (Gn 219c) represents the naming of food-animals as the first effort of speech; and the quest and choice of food is of the substance of all its early incidents (Gn 3 and 4) (cf. Herodotus, *Euterpe*, ii.). Though the Tupi can only count up to 3, Von Martius gives 1224 Tupi words for animals and their parts.'¹³

Celestial food, 'bread from heaven,' combines metaphor and ideas of transubstantiation.¹⁴ Bread as a type of Christ is an idea worked out elaborately in Jn 6 and 1 Co 10. Food the material becomes food the spiritual.¹⁵

FOOD (Hindu).¹⁶—The question of food is considered highly important from a religious point of view in India, and is elaborately discussed in the canonical books of all religions. Indeed, the various and manifold rules of caste in India hinge in the first place on food, its preparation, and the persons with whom it may be eaten. Thus eating the numerous kinds of prohibited food, or eating for a considerable period with persons of low caste or with Muhammadans, is among the most ordinary causes of expulsion from caste, one of the most

dreaded punishments in India, which involves in the first place an interdict against eating with the fellow-members of the caste. Though many educated Hindus eat and drink in the European fashion nowadays, there are still Brāhmanas and other high-caste natives of India to be found who would rather starve than allow food prepared by a man of inferior caste to pass their lips. Thus in 1864, Sir W. W. Hunter saw a Brāhman felon try to starve himself to death, and submit to a flogging rather than eat his food, on account of scruples as to whether the birthplace of the N.W. Brāhman who had cooked it was equal in sanctity to his own native district. Food prepared by a person of inferior caste causes defilement, and a member of the higher castes therefore always employs a Brāhman cook. Leather causes defilement, therefore no one should cook with his shoes on. Food cooked on board a ship causes defilement, therefore native passengers travelling in a boat will sometimes interrupt their journey to cook their food on shore. The kitchen should be the most retired room in the house, so that no Śūdras may look in and thus defile the earthen vessels. It is also considered highly improper to look at any one who is eating. The women, after preparing the dishes, wait on the men, and eat what is left by them; they never sit down to eat with the men. The orthodox fashion is to eat with the fingers, the use of spoons, forks, or knives being forbidden. Nothing must ever be touched with the left hand, which is used in the meanest offices, and therefore considered unclean. Before eating certain kinds of food, a person must wash his hands and feet, and remove part of his clothing. The rice and other dishes are served on a banana leaf or in small earthen vessels. Hindus take two meals a day, in the morning and evening; but widows, penitents, and ascetics must not eat anything in the evening. The remains of food are thrown to the crows and the dogs. The gods and the evil spirits are also to be given their share of each meal, with certain attendant ceremonies. The Brāhman, his meal being over, washes his hands, rinses his mouth, and gargles his throat. Many of these rules are nowadays neglected, but social estimation can still be gauged by the degree to which the food and water touched by the various castes will be accepted by others. Thus the Commissioner for the Census of 1901 circulated for consideration a fivefold division of castes, resting largely on a distinction between those from whom Brāhmanas can take water and those from whom they cannot. Water and *pakka* food, i.e. food prepared with *ghī* (clarified butter), generally go together, so that a man can take water or *pakka* food touched by a member of any sub-caste of his own caste, but he can eat *kachchha* food, i.e. food prepared without *ghī*, only when prepared by a member of the same endogamous subdivision or sub-caste as that to which he belongs. Most castes will take *kachchha* food prepared by Brāhmanas, and many castes can take *pakka* food or water which has been touched by other castes; a Brāhman, on the other hand, would drink water carried in a *lotā* by a low-caste man, if the *lotā* belonged to the Brāhman, but would refuse to drink from the low-caste man's *lotā*. Difference of residence also operates as a bar to eating together, as in a recent case of two orderlies belonging to the same sub-caste, both of whom declined to eat even *pakka* food prepared by the other, because their homes were 50 miles apart. Brāhmanas on the Bombay side will, as a rule, not take water from any but other Brāhmanas, generally only from the members of the sub-caste to which they belong.

As regards the dietary, Brāhmanas are not allowed to taste meat, fish, or eggs, the killing of animals, especially oxen, for food being considered an im-

pious act. This abstinence has gained ground among the inferior strata of society also, and the members of the Śākta sect, who sacrifice certain animals and eat their flesh afterwards, are held in low estimation. It is true that a Śākta cook is sometimes provided for those male members of a family who may feel disposed to eat mutton. The Bengal Rājputs, a landholding caste of high standing, eat the flesh of the goat, the deer, the hare, the pigeon, quail, and ortolan. But these animals, if not killed in hunting, must be slaughtered in a particular way by cutting the head off at a single stroke. Fish is also considered lawful food among the Rājputs, and among many richer families generally. Beef is greatly abhorred, and the flesh of the buffalo, pig, horse, camel, and other large animals is also viewed with disgust. In States ruled by Hindu princes it used to be on no account permitted to kill a cow; and even now the Society for the Protection of Cows is trying to prevent the slaughter of cows for food. The Muhammadan and European practice of killing oxen and cows has been the cause of many quarrels in India. Only the lowest castes, such as the filthy Chamārs (tanners) of N. India, eat beef, as well as pork and fowls, and all manner of unclean food; nor, like the gipsies of Europe, have they repugnance to cooking the flesh of animals which have died a natural death. The touch of these castes pollutes, and no Brāhman barber or washerman will work for them. Vegetables and sweetmeats, which form the principal food of Brāhmanas and Brāhmanized castes, are also subject to exceptions. Thus they reject garlic, onions, mushrooms, and other vegetables whose root or stem grows in the shape of a head. Turmeric, pepper, cummin, coriander, mustard seeds, and other spices are used, and impart a strong flavour to the preparation. Alcoholic drinks are forbidden, and, as a rule, a respectable Hindu will not touch spirits such as toddy or arrack, or any other intoxicating drink, at least in public. Drunken habits would lead to prompt and ignominious expulsion from caste, and it is generally in privacy only that high-caste natives of India break the law of temperance. The drunken orgies of the Śāktas are confined to a particular set, and to particular days. Water is the ordinary beverage of Hindus; curdled milk diluted with water, butter-milk, and milk are also favourite drinks. Tobacco is considered objectionable, but chewing betel after dinner, according to ancient custom, is believed to be wholesome and is generally practised.

Most of these rules are ancient, and may be traced in the sacred books and historical records of the principal religions of India. The prohibition of animal food and the sanctity of animal life are particularly insisted upon in Buddhism and Jainism. Thus king Aśoka, who in early life had entertained no scruple about the killing of thousands of living creatures on the occasion of a royal banquet, stopped this regular slaughter as he became gradually imbued with the spirit of Buddhist teaching. He ruled that only two peacocks and one deer were to be killed each day, and afterwards prohibited even this limited slaughter; he abolished the royal hunt; and he published (in 243 B.C.) a stringent code of regulations applicable to all classes of the population regarding the slaying of animals for food in his empire. With Jain ascetics, the oath not to hurt is the first of the five great oaths which they are required to take; and this oath includes not merely the intentional killing or hurting of living beings or plants; it requires also a watchfulness over all functions of the body by which anything living might be injured. The Code of Manu is less severe, and its provisions on the subject of animal food were therefore attacked in

Jain writings. Though not approving generally of animal food, Manu allows a Brāhman to eat meat if hallowed by sacred texts and used in sacrificing to the gods or *manes*, or in showing honour to a guest (Manu, v. 31ff.). Again, in spite of the general prohibition to eat flesh or fish, certain kinds of fish and birds are declared to be lawful food; likewise, the porcupine, the hedgehog, the iguana, the rhinoceros, the tortoise, and the hare (Manu, v. 11-18). Animal-sacrifice was a recognized institution in ancient Brāhmanism, just as it is with the Śāktas of the present day. Under more recent Brāhmanical texts of law, however, the slaughter of animals at a sacrifice or at the reception of guests is forbidden in the present age of the world. In medical works, the Rohita fish (*Cyprinus Rohita*) is specially recommended to be eaten, as a remedy in various diseases. Of plants and vegetables, garlics, mushrooms, onions, and leeks are forbidden by Manu (v. 19). One of the ancient medical texts preserved in the Bower MS contains a legend, according to which Brāhmans are not permitted to eat garlic, because it was generated from the drops of ambrosia which trickled from the demon Rāhu's head after it was cut off. The drinking of spirituous liquor is included among the five great sins, which are punishable by a penance ending in death (Manu, xi. 91 f.). Hermits in the wood and ascetics are subject to special restrictions with regard to their diet (Manu, vi. 13 ff.), and analogous rules exist for Buddhist monks. Thus a Buddhist canonical book mentions as delicacies which a monk must never taste unless sick: *ghī*, butter, oil, honey, sugar, fish, meat, milk, curds. The Brāhmanical lawbooks further show that a Brāhman took his food twice a day, eating moderately, taking nothing between meals, and offering part of his food to the gods and to his guests first of all. Some remnants of food were always to be left, and offered to dogs, crows, and low-caste persons. After a meal a little water had to be sipped. It was forbidden to eat in a ship, or sitting in the same row with unworthy people, or together with one's wife. It was considered the height of immodesty in a woman to eat before her husband; she had to be content with the remains of his meal. Long lists are given of those persons from whom a Brāhman must accept no food, as, e.g., from a madman, a spy, a eunuch, an unfaithful wife, etc. Special penances are ordained for eating the food of persons whose food may not be eaten, or forbidden food, or food blemished by the contact with impure men or things. The eating or chewing of betel-leaf (*tāmbūlabhakṣanam*) is recommended.

FOOD FOR THE DEAD.—The custom of providing food for the dead, which appears in all ages and in most parts of the world, is based upon the animistic conception of the soul, which, on its departure from the body, is often regarded as a tiny, feeble entity, conscious of the same wants as those which it felt in life, and dependent, at least until it attains its final rest, upon the pious care of the survivors. The same belief appears in the provision of clothes, weapons, and even companions, for the spirit in the next world. The last usage is illustrated by the rite of *sati* (q.v.), and by the

massacre of slaves and dependents, whose spirits are believed to accompany the spirit of their master.

1. **Objects of the rite.**—The common explanation of such rites is that they are intended to make the departed soul so comfortable in death-land that it may have no inducement to return and annoy the survivors. But this is not the only reason that has been suggested for this and the kindred custom of burying his goods with the dead man. Crawley (*Mystic Rose*, London, 1902, p. 98) argues that the practice is generally based on the dread of contact with articles belonging to the dead, which have become infected with the tabu of the corpse; and that the idea of providing for the wants of the spirit, though often combined with the dread of tabu, is probably later in origin. Other explanations, less satisfactory, have been suggested. Thus the presence of flint implements in cinerary urns at the Romano-British cemetery of Seaford has been accounted for by some symbolic meaning attached to them; some suppose the sharp flints to be the knives with which the survivors lacerated themselves as a sign of grief; others believe that the intention was to lay the ghost of the dead, flints and other stones from which it is possible to extract fire being said to be efficacious in preventing the ghost from 'walking' (*JAI* vi. 308, quoting Douce, *Illustrations of Shakespere*, London, 1807, ii. 224; *Arch. Journ.* xxii. 117; *Archæologia*, xlii. 428, xliii. 422). It is, however, impossible to dissociate flint weapons from the other arms and implements laid with the dead to enable them to provide for their wants in the other world.

Jevons (*Introd. to Hist. of Rel.* p. 194 f.) endeavours to establish a gradation in this class of custom. Comparing food offerings to the dead with those of hair and blood, he remarks:

'Originally, the dead were supposed to suffer from hunger and thirst as the living do, and to require food—for which they were dependent on the living. Eventually, the funeral feasts were interpreted on the analogy of those at which the gods feasted with their worshippers. . . . The food-offering is, however, more interesting in one way than the offerings of blood or hair: it enables us to date ancestor-worship relatively. It was not until agricultural times that the sacrificial rite became the cheerful feast at which the bonds of fellowship were renewed between the god and his worshippers. It could not therefore have been until agricultural times that the funeral feast came to be interpreted on the analogy of the sacrificial feast.'

This he believes to be corroborated by the fact that ancestor-worship dates from the rise of the family, 'a comparatively late institution in the history of society.'

It may be true that Palæolithic man in Europe had no conception of the existence of the spirit after death, and was, therefore, not under the necessity of preparing for its wants in the other world; but even so primitive a race as the Tasmanians, who had reached the Palæolithic stage of culture, though there is no evidence that they provided food for the dead, used to place a spear in the grave, 'to fight with when he is asleep' (Jing Roth, *Aborigines of Tasmania*,² Halifax, 1899, p. 119).

2. **Prevalence of the custom.**—Practices of this kind can be traced to a remote antiquity.

(1) *Ancient Britain, etc.*—Thus, pottery in the shape of what are known as 'food-vessels' has been found, in association with both burnt and unburnt bodies, in the round and long British barrows and in pre-historic Swedish interments (Windle, *Remains of Prehistoric Age*, London, 1904, p. 160 f.; Montelius, *Civilisation of Sweden*, Eng. tr. 1888, p. 35; cf. above, vol. i. p. 671^b). Details of articles of this kind found in British interments are described in *Brit. Mus. Guide to the Antiquities of the Early Iron Age*, 1905, p. 107 ff.

(2) *Greece.*—In the *Nekyia* of Homer, when Odysseus visits death-land, the spirits of the dead are too feeble to hold converse with him until they

are refreshed with a draught of blood. He digs a pit (*Sôdpos*)

'as it were a cubit in length and breadth, and about it poured a drink-offering to all the dead, first with mead and thereafter with sweet wine, and for a third time with water; and I sprinkled white mead thereon, and entreated with many prayers the strengthless heads of the dead. . . . But when I had besought the tribes of the dead with vows and prayers, I took the sheep and cut their throats over the trench, and lo! the spirits of the dead that be departed gathered them from out of Erebus' (*Od.* xi. 25 ff.).

Hence arose among the early Greeks the practice of providing the grave with a funnel, down which blood and other drink-offerings might be poured for the refreshment of the spirit (cf. above, vol. i. p. 334^b). At Mycenæ the round altar, which stood exactly over the fourth grave, was used for sacrifices of animals or human beings; and down its funnel the blood was poured into the grave (Ridgeway, *Early Age of Greece*, Cambridge, 1901, i. 7). At the Dipylon cemetery at Athens, the corpse is found laid in the grave, which is then covered with wood, and the shaft filled nearly to the top, a small space being left unfilled; in this space the tomb monument, usually a large painted vase, is set. The space round the vase thus served as a sort of trench, communicating by means of the shaft direct with the dead body. Further, many of the vases have a hole in the bottom, to allow the food and drink placed within them to reach the shade below (*FL* iii. 536 ff.). In the archaic cemetery at Thera, the offerings to the dead include oxen, swine, sheep, goats, and rabbits, the last being found only in the poorest graves (*JHS* xxii. 393). In later times we find a change in Greek sentiment, as is shown by the lines: 'in the cold shadows underground the ghost will not be comforted by ointments and garlands lavished on the tomb; the dead man will not drink' (*Anthol. Pal.* xi. 8). The custom, however, of consulting the wishes of the departed in the provision made for his wants appears in the Greek Hero-cultus (Frazer, *Pausanias*, London, 1898, iv. 24); and the drain as an adjunct to the tomb still survives in the ghost-houses of Tunis (*Man*, iii. 57). In the Greek islands the practice of feeding the dead survives to the present day. Cakes (*κόλλυβα*) of wheat adorned with sugar-plums, honey, sesame, and basil are presented to the dead.

'Sometimes they call these *μακάρια*, or blessed cakes, out of suphony, no doubt; these *κόλλυβα* are put on the tombs on stated days after the decease, with additional lamentations, and remind one forcibly of the ancient feasts for the dead which were likewise offered on stated days' (*JAI* xv. 386).

(3) *Rome*.—The Romans observed the rite of feeding the dead at the *dies parentales* in February, when

'the family would go in procession to the grave, not only to see that all was well with him who abode there, but to present him with offerings of water, wine, milk, honey, oil, and the blood of black victims; to deck the tomb with flowers, to utter once more the solemn greeting and farewell (*Salve, sancte pater*), to partake of a meal with the dead' (Fowler, *Roman Festivals*, London, 1899, p. 308; and see J. E. Harrison, *Proleg.*, Cambridge, 1903, p. 49 ff.).

As among the Greeks, a funnel for libations, connecting the surface of the ground with the grave below, has been observed in Roman graves (Mau, *Pompeii*, Eng. tr., 1899, pp. 421, 427). The placing of food on the bier before cremation is attested by Catullus (lix. 'vidistis ipso rapere de rogo coenam').

(4) *Babylon and Assyria*.—The frequent presence of shells in Babylonian interments (unless they were intended as amulets or as a substitute for food in the form of fish) is still unexplained; but instances of deposits of food are common (Jastrow, *Rel. of Bab. and Ass.*, Boston, 1898, p. 598). In such graves the dead man is provided with clay jars and dishes containing food—his favourite wine, dates, fish, fowl, game, or a boar's head, and even stone representations of provisions which were lasting substitutes for the reality; he was supplied with weapons to protect his food-store (Maspero, *Dawn*

of Civ., London, 1896, p. 686). Vases, spoons, and ornaments are found in Assyrian tombs (Layard, *Nineveh and its Remains*, London, 1849, ii. 18).

(5) *Egypt*.—In Egypt, Flinders Petrie (*Man*, vii. 113) describes the evolution of the custom from the earliest times. From the pre-historic age to that of the Vth dynasty a mat was laid on the grave, with a pan of food upon it. Afterwards this offering was carved in stone as a table of offerings, to give permanent satisfaction to the soul. By the time of the Xth dynasty the stone table was copied as a pottery tray of offerings. To the tray was next added a shelter, copied from the Bedawi tent; then came a shelter on columns, on which in later times a hut was placed; then followed chambers with wind-openings, roof, courts, and a verandah on the roof. Next we find complete two-storey houses. Finally, these are furnished with models of a couch, chair, stool, water-jars, and the figure of a woman making bread for the departed. Food and drink were placed for the *ka* on the table of offerings in the tomb, 'for otherwise he might suffer hunger and thirst, or even, so the Egyptians thought, be obliged to feed on his own excreta' (Erman, *Life in Ancient Egypt*, London, 1894, p. 307). Such offerings were painted on the walls of the tomb, in order to provide the dead with this shadowy food, and the reciter-priest was required to repeat certain magical formulae, conjuring each visitor to the tomb, by what he held most sacred—by his children, his office, his king, and by the god of his house—to say 'thousands of bread, beer, oxen, and geese,' on behalf of the deceased (*ib.* 308). In the remarkable temple recently excavated at Thebes, on one of the sarcophagi

'offerings are being made to the priestess, while an attendant dresses her hair and occasionally inserts a hairpin into her coiffure. A priest milks a cow for her, and afterwards brings her the cup, saying: "This is for thee, drink what I give." On another a priest brings a bowl of beer, saying: "Beer for thy ghost!"' (*The Times*, 22nd June, 1906; and cf. above, vol. i. p. 342).

(6) *Modern Africa*.—The people of Dahomey plant a flat-topped iron on the grave, over which water, rum, or blood is poured as a libation to the deceased (Ellis, *Ewe-speaking Peoples*, London, 1890, p. 159). The Yoruba tribes place food, rum, and cowrie-shells in the grave, and sprinkle the corpse with the blood of a he-goat (Ellis, *Yoruba-speaking Peoples*, London, 1894, p. 158). The people of Ashanti sacrifice animals on the grave, and, in the case of a man of rank, place there food and palm-wine for some months; the spirits of the sacrificed animals accompany the soul to Shramanadzi or death-land (*Tshi-speaking Peoples*, London, 1887, p. 240 f.). M. H. Kingsley (*Travels*, London, 1897, p. 494) describes offerings of food and spirituous liquor made in the W. African death-huts. The Wakonde people in British Central Africa place on the burial-mound little baskets of meal or pots of native beer (H. Johnston, *British Central Africa*, London, 1897, p. 445; A. Werner, *Natives of Brit. Central Africa*, London, 1906, p. 52).

(7) *Scythians*.—According to Herodotus (iv. 73), 'when any one dies, his nearest of kin lay him upon a wagon, and take him round to all his friends in succession: each receives them in turn, and entertains them with a banquet, whereas the dead man is served with a portion of all that is set before the others' (Rawlinson's tr.).

(8) *China*.—In no other part of the world, perhaps, has the rite of feeding the dead been so carefully prescribed as in China. The ancient books describe how the mourners observed a rigid fast, 'all the food in the house having to be sacrificed to the deceased' (de Groot, *Rel. Syst. of China*, Leyden, 1892 ff., i. 27). The custom of filling the mouth of the corpse with morsels has now well-nigh fallen into disuse at Amoy; but, 'before taking their usual breakfast, the deceased's wife and children arrange a bowl of cooked rice, and in many cases also a dish of vegetables, bean-curd, or the like, on a table at the right

hand side of the bed. They carefully add a pair of chopsticks' (ib. i. 29). In former times, when the bodies of grandees were stored in the dwelling for a considerable time, between the structure which concealed the coffin and the coffin itself, the friends placed baskets filled with parched grain and dried fish and meat, which were intended as food for the dead (ib. i. 99). 'During the first seven weeks of mourning, especially before the morning and evening meal, obsequies are done to the spirit, accompanied with loud lamentations. A portion of food is on these occasions presented to the deceased' (Gray, *China*, London, 1878, i. 285).

(9) *Malays*.—At the grave of a Semang, Skeat observed coco-nuts used for holding small quantities of rice, and one containing water, placed near the corpse; the Sakai offer betel-nut and tobacco to the corpse as it is lowered into the grave, and place rice and cakes upon it; the Jakun lay boiled rice at the foot and middle of the mound, the former for the spirit of the deceased, the latter for those of dead parents and relatives who come to visit the deceased; the Orang Laut give the corpse betel-nut and areca-nut, warning it not to call the survivors or require anything from them in future (*Pagan Races*, London, 1906, ii. 92, 99, 105, 109, 116). The Siamese carry food to the tombs of their dead parents, 'which the beasts do eat' (de la Loubère, *Hist. Rel. of the Kingdom of Siam*, Eng. tr. 1693, p. 125).

(10) *Borneo and Melanesia*.—Among the Kayans, at the lying in state of the dead, the corpse is dressed in his best clothes, with a cigar fixed in his mouth, and seated with his betel-box at his side, as if he were alive; the Dayaks collect boiled rice and other delicacies, which are 'thrown through the opening at the back of the house, and the wailer is fetched to effect their transmission to Hades. She comes again to the house of mourning . . . to call upon the adjutant bird . . . to do her bidding in conveying the articles of the *pana* to the other world.' Sometimes the presence of the dead at the funeral feast is secured by the aid of the wailer, who flings behind the house for their conveyance a piece of bamboo in which rice has been boiled; this serves as a boat.

'The dead are believed to build houses, make paddy farms, and go through all the drudgery of a labouring life, and to be subject to the same inequalities of condition and of fortune as the living are here. And as men helped each other in life, so death, they think, need not cut asunder the bond of mutual interchanges of kindly service; they can assist the dead with food and other necessities: and the dead can be equally generous in bestowing upon them medicines of magical virtue, amulets and talismans of all kinds to help them in the work of life' (Roth, *Natives of Sarawak*, London, 1896, i. 143, 206, 208, 213).

In Melanesia a small portion of food is thrown to the dead.

'It is hardly thought that this becomes in fact the food of the departed, but somehow it is to their advantage, at any rate it pleases them' (Codrington, *The Melanians*, Oxford, 1891, p. 128).

At a sacrifice the invocation to the dead runs thus: 'Chief in war! we sacrifice to you with this pig, that you may help us to smite that place; and whatsoever we shall carry away shall be your property, and we also will be yours' (ib. 129).

The death meals, according to the same writer, are

'distinctly commemorative, but are not altogether devoid of the purpose of benefiting the dead; it is thought that the ghost is gratified by the remembrance shown of him, and honoured by the handsome performance of the duty; the living also solace themselves in their grief, and satisfy something of their sense of loss by affectionate commemoration' (ib. 271).

In Samoa, when the dead body was laid in the grave, a pig was taken to the place, and its head chopped off and thrown into the grave to be buried with the body; this was supposed to prevent the disease spreading to other members of the family, apparently because the angry spirit was believed to be pacified by the offering (Turner, *Samoa*, London, 1884, p. 335). In Fiji, when a child of rank died,

'the body was placed in a box, and hung from the tie-beam of the chief temple, and for some months the best of food was taken to it daily, the bearer approaching with the greatest respect, and after having waited as long as a person would be in taking a meal, clapping their hands as when a chief has done eating, and then retiring' (Williams, *Fiji and the Fijians*, London, 1868, i. 191 f.).

(11) *Australia and New Zealand*.—The Arunta tribe do not seem to practise this rite; their spirits 'kill and eat all manner of game, but always uncooked, for they are not supposed to have any fires, and not seldom they steal game which has been wounded, but not killed on the spot, by men' (Spencer-Gillen*, p. 516 f.). Some of the S.E. tribes believe that the spirit warms itself at fires left burning in the bush, and eats scraps of food left at such places (Howitt, p. 438). Among the Dieri, if the deceased was a person of influence, food is placed for many days at the grave, and in winter a fire is lighted so that the spirit may warm itself; if the food at the grave is not touched, it is supposed that the ghost is not hungry (ib. 448). The Kukata lay a drinking vessel on the grave, and a yam-stick is left with the corpse of a woman, in order that she may procure her own food; on the Herbert River food and water are often placed on the grave (ib. 450, 470, 474). In Queensland, tobacco, matches, food, a pipe, and other things are left each night at the grave, and the gift is announced to the spirit (Roth, *Ethnological Studies among the North-West-Central Queensland Aborigines*, Brisbane, 1897, p. 163). Among the Maoris of New Zealand,

'when a person died, food was placed by his side, and some also with him in the grave, as it was supposed the spirit of the deceased fed on the spirit of the food' (Taylor, *Te Ika a Maui*, London, 1856, 1870, p. 220).

(12) *India*.—Some examples of this practice have been given in vol. i. p. 450 f. At the cremation of a Toda, food, including grain, rice, jaggery, limes, and honey, is placed in the folds of the cloak in which the corpse is wrapped, and in a metal bowl (Rivers, *The Todas*, London, 1906, pp. 361, 380, 394). The Khâsis of Assam hang over the corpse a 'basket containing pieces of the sacrificed animals. A dish containing eatables, and betel-nut, and a jar of water are placed near the head of the corpse by way of offering refreshment to the spirit of the departed'; money is laid near it for the purchase of food on the way; pieces of the yolk of an egg, loaves of bread, the leg of a fowl, and the lower jaws of the animals which have been sacrificed are put inside the cairn before it is closed; similar offerings are made after the removal of the bones to the tribal ossuary (Gurdon, *The Khâsis*, London, 1907, pp. 133, 135, 137, 141; and cf. Stack, *The Mikirs*, London, 1908, p. 29; Lewin, *Wild Races of S.E. India*, London, 1870, p. 214). The feeding of the dead is inconsistent with the beliefs of orthodox Buddhists, Jains, and Lingâyats. But among the degraded Mahâyâna Buddhists of Tibet, at the noontide meal in the monasteries,

'lay servants bring to the cells a meal consisting of tea, meat, and *pâk* (a cake of wheat or *team-pa*). Of this food, some must be left as a gift to the hungry *manes*, Hariti and her sons. The fragments for this purpose are carefully collected by the servants and thrown outside the temple buildings, where they are consumed by dogs and birds' (L. A. Waddell, *Buddhism of Tibet*, London, 1895, p. 219).

(13) *America*.—The wild tribes of Central America, when a corpse was embalmed, used to bring food, wine, and the weapons of the dead man, place them in a canoe, and carry them in procession round his house; these things were burned, 'the people believing that the fumes and smoke ascended to the soul of the dead and was pleasing and acceptable to him' (Baneroft, *N.E.*, 1875, i. 783). In W. America, among the Californians, money is placed in the mouth of the dead. The New Mexicans place in the grave several kinds of food, and the utensils and implements with which the dead man earned his living, while on the lips of dead infants milk is dropped from the mother's breast. The Corahs of Mexico, if the deceased possessed cattle, placed meat upon sticks in the field, lest the spirit might claim the herds he formerly owned. The Central Americans place food with the dead

to support them on their long journey. Among the Mosquitos, a hut stored with food, drink, and other articles is erected over the grave; the water which disappears from the porous jars is supposed to have been drunk by the spirit, and it is a good sign if birds eat the food (*ib.* i. 359, 590, 641, 709, 744). The Carajas of Brazil lay with the corpse an ample store of bananas and other food, which is renewed from time to time (D. G. Brinton, *The American Race*, New York, 1891, p. 261).

(14) *Modern Europe*.—The custom prevails even in England. Some years ago, while a grave was being dug in Bucklebury churchyard, an old grave was disturbed, and two bottles of beer were unearthed.

¹ They had been buried according to a custom with the body of a person who was given to drink, and in order to give him a fair start in the land to which he had journeyed' (*PL* x. 258).

In India, brandy and cigars have been deposited on the tomb of a European who was addicted to the use of such luxuries in his lifetime (Crooke, *PR*², 1896, ii. 199; Thurston, *Ethnographic Notes in S. India*, Madras, 1906, p. 296 f.). In Brittany at the present day the hollow of the tombstone is filled with holy water, and milk libations are poured upon it.

² On that night the supper is left spread in every household, and the fire burning, so that the souls of the dead may come from the graveyard to feed and to warm themselves' (M. R. Cox, *Intro. to Folk-lore*, London, 1895, p. 55).

3. The funeral feast.—An extension of the practice of feeding the dead is found in the custom of the funeral feast, at which, to mark the solidarity of the clan, the kinsmen enjoy a solemn meal in the presence of the dead. Jevons (*op. cit.* 47) suggests as one motive for the custom that

'In the feast which is spread with the dead man's favourite delicacies, to tempt his soul to return, we may have the origin of the funeral feasts and wakes, which are universal.'

Hartland (*LP* ii. 278 ff.) shows reasons to believe that the

'most archaic form, if barbarity be a test of archaism, in which it is known to us, is where the meat is nothing less than the corpse of the departed kinsman.'

This savage rite, he suggests, sometimes undergoes a natural transformation into eating with the dead; but wherever a special food, such as beans, is used, it may be suspected to represent the flesh of the dead man. This is illustrated by the remarkable custom, prevailing in Sicily and Perugia, when, at the festival of All Souls (2nd November), sweetmeats impressed with images of skulls, bones, skeletons, souls in Purgatory, and the like, are eaten. This is called 'eating the dead' (*ib.* ii. 288 n.). This funeral feast undergoes a further development when, as with the Hindus, it becomes periodical; or when, as at the Hallow-e'en rites performed in various parts of Europe, food is prepared in the house, the doors are thrown open, and the dead are invited to enter and feast (*ib.* ii. 312; cf. also *ERE* i. 26 f.).

4. Modes by which food is supplied to the dead.—The modes by which food is supplied to the dead are varied. Sometimes, as among the Lingayats of S. India, death is anticipated by placing food in the mouth of the dying person (*BG* xxi. 150). Others place food in the mouth of the dead, as in some cases recorded in this article. In Malabar, when the corpse is laid on the pyre, rice is scattered over the face and mouth, and pieces of gold are placed over the nine openings of the body (Logan, *Manual of the District of Malabar*, Madras, 1887-91, i. 129). The Todas drop milk into the mouth of the dead; the Gululiās of Bengal pour spirits on his lips and kill a cock to feed the spirit (Rivers, *op. cit.* 343; Risley, *TC* i. 303). It is a very common practice to lay food on the grave, on the theory that the souls of the dead reside permanently here, the belief in a separate realm of souls growing up under advancing culture and displacing the earlier tradition. The Yoruba of W. Africa,

after the funeral feast, carry to the grave the bones of the fowls and sheep which were sacrificed. 'All the articles which the deceased had in daily use, such as his pipe, the mat on which he slept, the plate or vessel from which he ate, his calabashes, and other things of small value, are carried out into the bush and burned' (Ellis, *Yoruba-speaking Peoples*, 159). The Dayaks hang necessities for the dead on branches of special trees, or lay them near the grave (Roth, *Natives of Sarawak*, i. 149). The Roman *silicernium* seems to have been a funeral feast held on the day of the funeral, and by the grave (Smith, *Dict. Ant.*³, London, 1890, i. 893; Bekker, *Gallus*⁴, London, 1880, p. 520). Sometimes the food is stored in little huts for the use of the dead. The Bahima of Uganda believe that the ghosts of the common folk have no special abode, but wander about near the kraals; they have little huts in which food, drink, and clothing are stored (*JAI* xxxvii. 102). The Karenni of Upper Burma build a small structure on four posts over the grave, and in this are placed various kinds of corn (*Gazetteer Upper Burma*, i. i. 528). It is the custom of many races to spread sand or dust near the place where the food for the dead is laid, and next morning any marks found in it are examined to ascertain into which animal, bird, insect, etc., the soul of the deceased has migrated. Sometimes, again, the spirit is supposed to haunt the house, and here food is provided. At the funeral feast of the Nagas of Assam each member of his sept in perfect silence throws a piece of liver outside the house for the wandering ghost (*JAI* xxvi. 197). Or the offering is made on the road by which the corpse or bones have been carried. The Khāsis of Assam, who dread the attack of spirits, when bringing the bones of the dead for storage in the ossuary, lay out grains of rice, especially on river banks, and, in the case of a specially malignant spirit, let a fowl loose in the jungle as an offering (*JAI* i. 132). Or, in the belief that the food is conveyed to the spirit by the agency of water, the Khyoungtha of Burma lay the food aside for a short time, and then fling it into a river (*Burma Gazetteer*, ii. 687). On the same principle the Kanowit of Borneo use what are called 'soul-boats,' in which necessities for the use of the dead are floated out to sea, with a strong ebb tide flowing, to meet the spirit (Roth, *Natives of Sarawak*, i. 145). Sometimes the feeding of the dead takes a vicarious form, as when, in India, Brāhmins are entertained, in the belief that they will pass on the food for the use of the spirit. In this class may perhaps be placed the feeding of the so-called 'sineater,' of which numerous instances are given by Hartland (*LP* ii. 219 ff.). But the accounts of the custom are not free from difficulty, and the facts have been much disputed. Lastly comes the rite, common in India and elsewhere, of offering food to something representing the dead man—a reed fixed near the place where the obsequies were performed; a stone known as the 'life-stone,' which is believed to be the refuge of the spirit; or, finally, an image of the deceased which is placed among the representations of the family ancestors, to whom periodical offerings are made.

Frazer, *JAI* xv. 64 ff.; Hartland, *Legend of Perseus*, 1894, ch. xlii.; Robertson Smith, *Rel. Sem.*⁵, 1894, p. 218 ff.; Jevons, *Intro. to the Hist. of Religion*, 1896, p. 45 ff.

W. CROOKE.

FOOL, FOLLY (Biblical).¹⁻³—I. In EV of the OT these two terms are the renderings of several groups of Heb. words. The most frequent in occurrence and the most important of them are

¹ For anything belonging to these terms in their ordinary sense, see such art. as DEGENERATION, DEVELOPMENT (Mental), IGNORANT. See also WISDOM.

הַלֵּל, אֹמֵל, קָטָל, קָטָל, קָטָל. In addition to these הַלֵּל ('arrogant') in three passages of the Psalter (5th 73rd 75th), קָטָל, קָטָל (chiefly in Ec.), קָטָל (La 2nd, cf. קָטָל, Job 1st) are to be noted as belonging to the same class of terms. Viewed from the standpoint of Biblical theology, קָטָל ('simple'), קָטָל ('brutishness'), קָטָל ('scoffer'), ought to be grouped with these words. Not one of these Hebrew words rendered 'fool' and 'folly' denotes mental aberration or incapacity. They are a part of the technical terminology of the Hebrew *Hokhmah*, although they are not exclusively found in the books of the Wisdom Literature. They constitute the contribution which this side of Hebrew genius made to the OT conception of sin. Folly is the antithesis of wisdom, and, consequently, this terminology depicts sin in opposition to, and in contrast with, Divine wisdom. In the later books of the *Hokhmah* Literature the Divine attribute of wisdom is personified, and it is certainly hypostatized in those that are extra-canonical. Wisdom thus conceived is God's agent in creation, who has ordained the laws governing nature and the lives of men. Human wisdom is, as it were, a reflex of the Divine, and consists in the capacity to learn the Divine laws controlling men, and in the ability to conform human life and action to them. Whoever lacks this insight and power is styled a fool, and his conduct folly. As wisdom, so also is folly an ethico-religious concept. This is succinctly expressed: 'The fear of Jehovah is the beginning of wisdom: but the foolish despise wisdom and instruction' (Pr 1st, cf. 9th). The attempt has been made to distinguish between the conception of folly without the Wisdom books and that within. Historically it would be more accurate to regard the fully developed and sharply defined conceptions of Proverbs and the Apocryphal books as the crystallization of ideas long held in solution by the Hebrew mind, for 'folly' occurs very early in OT Literature (Gn 34th [J]).

The strongest and most widely distributed term is *nābāl*. Adultery, incest, and rape are termed *nābālāh*; Achan's sin, the advice of Job's wife and the theories of his friends, practical atheism (Ps 14th), the hostility of a heathen nation (Ps 74th), all come under this category. 'Fool' and 'folly' scarcely give the force of the original; 'senseless' would be a more adequate rendering (Driver, *Deut.* p. 256). These terms would then indicate the moral and religious insensibility of the human soul to the ethical demands of God. The fullest definition of a fool in the sense of *nābāl* is found in Is 32nd: 'For a fool (*nābāl*) speaketh folly (*nābālāh*), and his heart worketh iniquity.' Then follow two epexegetical clauses, 'to practise profaneness and to utter error against Jehovah.' Thus the fool is blasphemous and godless, while his utter disregard for his fellow-men appears in his purpose, 'to make empty the soul of the hungry and to cause the drink of the thirsty to fail.'

In the Book of Proverbs קָטָל and קָטָל are the standing designations for the same class of men. Etymologically they signify the dullard and the stupid, who have a 'mind made thick, darkened, become like crude matter.' The stupidity of such men renders them incapable of recognizing the laws which God's wisdom has ordained for the regulation of human life and conduct. They are incapable of making ethical distinctions, because their understanding is too darkened for the vision of Divine wisdom and her laws. The fool's stupidity is manifested in many qualities; he is inattentive, obtuse, inapt in expression, fond of folly, imprudent, indiscreet, shameless, untrustworthy, unalterable, disgusting, and dangerous. All these qualities are conceived in the ethico-religious spirit.

2. The same terminology is found in the Wisdom-

books of the Apocrypha, Sirach, and the Wisdom of Solomon. In describing the sinner Sirach uses the following terms: *μωπός, ἀφρων, ἀσύνετος, ἀνόητος, ἀνάλθευτος, ἀκαρπίτος* (LXX renderings of the Heb. words discussed above). In this section of the Apocrypha the fool and the ungodly man are identical (Sir 22nd, Wis 3rd et al.), while wisdom and piety are synonyms (Wis 4th).

3. In the NT 'fool' and 'folly' represent several Greek words, and in most of the passages they have no tinge of the Hebraic meaning, but distinct traces of this technical terminology of the *Hokhmah* Literature are discernible in the Gospels and Epistles. When Jesus said, 'Whosoever shall say, Thou fool (*μωπός*), shall be in danger of hell fire' (Mt 5th), when He denounced the Pharisees as 'fools' (*μωποί*, Mt 23rd 17-19), and in the parable of the Rich Fool (*ἀφρων*, Lk 12th), He unquestionably used these terms with a strong ethico-religious force such as they had in the OT. St. Paul gives evidence of similar OT influence in his use of the phrase 'senseless (*ἀσύνετος*) heart' in Ro 1st.

4. In Rabbinical Hebrew the terms קָטָל, קָטָל, קָטָל are used with the ethico-religious meaning of the *Hokhmah*, while כָּזָב, כָּזָב with a similar force occur frequently in the Mishna.

FORCE.—1. Definition.—The term 'force' is, unfortunately, used in many senses: some professedly figurative, some intended to be scientific, but often entirely incorrect. No mischief arises from the common use of phrases such as 'force of mind,' 'force of habit,' 'force of example,' 'economic force,' etc. Nor is there any harm in perpetuating the language which spoke of heat, light, or electricity as 'forces of Nature,' and of their 'correlation.' Such things are so far removed from what is now meant by 'force' in its technical sense that no confusion arises from this kind of figurative speech. But 'force' has sometimes been used, even by those who ought to have known better, for the muscular sense of resistance, and for each of the quantities which physicists call respectively 'energy' and 'momentum.' The word is made to bear each of these senses, in turn, in one context, by Herbert Spencer (*First Princ.*, 1883, p. 432 f.), to the hopeless confusion of his argument. 'Persistence of Force' is an incorrect synonym for 'Conservation of Energy'; but the erroneous identification of 'force' and 'energy' (q.v.) is of long standing, and the confusion is traceable back to Leibniz (1646-1716).

Apart from figurative application and incorrect usage, the term 'force' has held various significations in the history of science, and has stood for quantities or conceptions of varying degrees of abstractness. Hence the obscurity which attaches to the word. In mediæval thought, 'force' was abstracted from 'matter,' and hypostatized as an independent reality. Occult forces were postulated as residing in bodies, and were but a name for latent capacities of various sorts. With the dawn of modern science, however, 'force' began to be reserved to denote the *vera causa* of an observed change, such as a change in motion.

The history of the scientific usage may best commence with Newton's (1642-1727) laws of motion. Newton speaks of a *vis insita*, or inherent force, which he defines as a power of resisting, a power in virtue of which every body persists in its state of rest or of uniform motion in a straight line. This force does not differ from the inertia of the body, so that *vis inertiae* is a 'most significant name for *vis insita*.'

Such inherent force, assumed by Newton, is a universal property of matter, essential to its occupation of space; and, inasmuch as inertia is force, there is no such thing, for Newton, as inert or inactive matter. This *vis inertiae*, however, acts only when an external force (*vis impressa*) is brought into relation with the body in which it resides. The exertion of *vis insita* then becomes *vis impressa*. Thus Newton's three kinds of force are partly the same thing regarded in different ways. From the conception of *vis insita* the metaphysician may set out for his examination and analysis of the nature of matter; while the scientific investigator, who is rather concerned with the observed behaviour of portions of matter, i.e. the operations or phenomenal changes of material bodies, has scarcely any need to deal with *vis insita*, but takes his start from the concept of *vis impressa*. This aspect of 'force' is therefore the one which, since Newton's time, has almost exclusively been adopted by physics.

2. Force as '*vis insita*.'—When we analyze the conception of matter, as used in the most general sense, without reference to its discrete or continuous structure, the rest or motion of its parts, it seems necessarily to involve the concept of force. Force, in fact, is its coherence and occupation of space. The absolute hardness of the ultimate particles of matter, assumed by Newton in his *Opticks*, was increasingly found to be a difficult hypothesis, and the configuration and resistance of material bodies came to be explained solely by 'forces.' Bosovich (1711-87) resolved these atoms into mere mass-points or centres of force, without extension, so necessary is the idea of force to the conception of matter. Thus matter and force imply one another; they cannot be looked upon as separate entities capable of independent existence. Force is simply the activity of matter, or matter conceived as 'doing'; it is the 'efficiency' which constitutes the 'course' of Nature. Like 'feeling,' 'force' cannot be defined; it is similarly an ultimate and unanalyzable element. Considered in itself, it is but an abstraction. Or again, as with matter, we can describe its specific modes, but not itself. From this point of view, force cannot be looked upon as the 'cause of motion,' in the sense of being prior to motion. Motion is a state or accident of matter—a less abstract conception than force (*vis insita*); and there is nothing to suggest or to authorize the assumption that primordially matter existed in a state of rest, and that its motion was produced after its own genesis.

Newton conceived all 'action' of matter on matter to be mechanical, i.e. to be contact-action, of the nature of pulling or pushing. He had a horror of the notion of what is called 'action at a distance,' which seemed to some of his followers to be nevertheless involved in his theory of gravitation. And since his day the idea of action at a distance has been scouted by physicists as a heresy. This kind of action would, indeed, be difficult for us to 'explain'; but it may be asked whether discontinuity or absence of contact must not occur, in infinitesimal degree, even if we take the material world to consist of particles or elements immersed in an ethereal medium. In that case the difference between contact-action and action at a distance would be only in degree. Incongruity with pre-

conceived notions is not necessarily a proof of impossibility; moreover, the prepossession is in this case probably due to the accident that our sense of *touch* happens to be the most highly developed, and impact the most familiar form of action.

3. Force as '*vis impressa*.'—Newton's three laws of motion are as follows:

1. Every body persists in its state of rest or of uniform motion in a straight line, unless it is compelled by impressed forces to change that state.
2. Change of motion (i.e. momentum, here) is proportional to the impressed force, and takes place in the direction in which the force is impressed.
3. Action and reaction are equal and opposite.

Impressed force, or force which is not merely the tendency to motion, but which 'acts,' is seen from these laws always to involve more than one body or portion of matter. Force, then, in this aspect (i.e. as 'impressed' or external) is always a reciprocal action, a *stress*. From the first law is deduced the definition of force which has till lately been universally adopted in the text-books of physics: 'force is that which produces, or tends to produce, motion, or change of motion'—change, i.e., either in direction or in velocity. Of course, this definition is metaphysical in so far as it makes force an efficient cause which 'produces' change of motion. Physical science, however, knows nothing of efficient causes (see CAUSE, CAUSALITY); and, showing itself anxious to disentangle itself from metaphysical implications, has recently sought to remove such terms as 'force' from its vocabulary. So the idea of impressed force is being abandoned as anthropomorphic. The modern movement seems largely to have been determined by the following passage in Kirchhoff's *Vorles. üb. math. Physik.*, Leipzig, 1876, 'Vorrede':

'It is usual to define mechanics as the science of *forces*, and *forces* as the *causes* which produce, or tend to produce, motion. This definition has certainly been of the greatest use in the development of mechanics, and still is so to students of the science, if it is explained by examples of forces taken from the experience of ordinary life. But there attaches to it the obscurity from which the concepts of cause and tendency cannot be freed. . . . On these grounds I propose as the task of mechanics that of *describing* the motions which take place in Nature, and the description of them in the completest and simplest way. I mean, therefore, that we should concern ourselves only with stating *what* the phenomena which take place are, not with assigning their *causes*.'

This advice has been followed by many leading physicists. The tendency is rather a return to the intentions of earlier science—that of Copernicus, Galileo, Descartes, and Newton—than a new step. It is, however, likely to prove rich in consequences, in that it involves the confession, on behalf of science, that it has nothing to do with ultimate explanation, but that its rôle is mere description in terms of 'conceptual shorthand.' It removes from 'naturalism' the usurped right to speak in the name of science.

The definition of force which thus seems destined to become obsolete in science is, accordingly, being replaced by others, which use the term merely as denoting a relation, a mathematical quantity. Newton's second law furnishes a quantitative definition of force, or a method of measuring the relative magnitude of forces. The law may be expressed by the equation $P = mf$, where P = the force, m = the 'mass' of the body acted upon, and f = the acceleration produced in it. For f we may substitute $\frac{v}{t}$, where v = velocity acquired, in the interval of time t , by a body moving with a uniform acceleration of f units. Hence our equation becomes $P = \frac{mv}{t}$, or force is represented as 'rate of change of momentum.' Thus is force coming exclusively to be used in physics. And, indeed, this is all that empirical science is entitled to denote by the term. For experience only yields us changes

FORGERY—FORGETFULNESS

in the motion of bodies; it does not bring us face to face with 'forces' in the older sense. At the same time, science, in thus becoming purely dynamical, abstract, and descriptive, only ignores causation and efficiency; it leaves 'forces,' in the metaphysical sense, to metaphysics, which is concerned to see in them the imperceivable relations of dependence between events which uniformly follow one another. See also ENERGY, MATTER.

FOREKNOWLEDGE.—See PREDESTINATION, PRESCIENCE.

FORGERY.—The *crimen falsi* of Roman law (which, however, included also making and uttering of false coin, perjury, and corrupting of witnesses) is defined by Blackstone: 'the fraudulent making or alteration of a writing to the prejudice of another man's right' (*Comm.* iv. 247). This is a definition of the offence as it existed at common law; but there was formerly, if there is not still, an important difference of opinion as to the kind of writing to which the common law offence extended. It was agreed that the counterfeiting of a matter of record, authentic matter of a public nature, a deed or a will, is forgery; but there were strong opinions that counterfeiting of any writing of an inferior nature is not forgery at common law, at any rate unless some one actually receives a prejudice from it (see Hawkins, as cited in Bacon's *Abridgement*, iii. 747); and more recently it has been stated that 'it is not possible to say precisely what are the documents the false making of which is forgery at common law' (quoted in Stephen's *New Commentaries*, iv. 147). In an important decision in 1725 it was, however, held that forgery extends to instruments of every sort; and the law is so stated by Bacon (iii. 748)—a view which is confirmed and extended by Stephen (*Dig. (Crim. Law**, 350).

A great variety of statutes, reaching from 1562, in the reign of Elizabeth, to late in the reign of Victoria, have multiplied cases of the offence, as well as varied the punishment. Forgery at common law was only a misdemeanour, punishable by fine, imprisonment, or pillory. In the statute of Elizabeth, while a severer punishment was instituted, only a second offence was felony without benefit of clergy. In the Acts passed during the 18th cent., a far greater degree of severity was reached. Forgery was generally treated as a capital offence—a punishment which was inflicted in the well-known case of Dr. Dodd in 1777. The extreme penalty of the law was abolished by Acts passed in the reigns of William IV. and Victoria, and punishment varying between transportation for life and imprisonment for one year substituted.

In this recurring statutory addition of particular cases, the English law of forgery runs through a development somewhat parallel with the similar Roman law. The *lex Cornelia de falsis*, called also *testamentaria*, was passed under the dictatorship of Sulla (81 B.C.). The *Institutes* (iv. 18. 7) say this law 'inflicts punishment on any one who shall have written, sealed, read, or substituted a false testament, or any other instrument, or shall have made, out, or impressed a false seal, knowingly and with felonious intent.' The punishment, in the case of a slave, was the extreme penalty of

the law; in the case of freemen, deportation. By other legislative enactments the penalties of forgery were extended to the fabrication of written instruments other than wills (see *Dig.* xlviii. 10).

Although in Blackstone's time the number of cases in which severe punishment was inflicted had been so multiplied 'as almost to become general,' and although in 1861 a statute was passed consolidating and amending the law relating to forgery, still no general definition is given in these or any subsequent statute. Cases are strung together empirically, just as they arose, and are described with a surplussage of legal verbiage, the precise effect of which it is often difficult to estimate and generalize.

The legal meaning of forgery is by no means confined to counterfeiting a name, or writing, or seal.

'The notion of forgery,' says Matthew Bacon, 'doth not so much consist in the counterfeiting of a man's hand and seal, which may often be done innocently, but in the endeavouring to give an appearance of truth to a mere deceit and falsity; and either to impose that on the world as the solemn act of another, which he is in no way privy to, or at least to make a man's own act appear to have been done at a time when it was not done, and by force of such a falsity to give it an operation, which in truth and justice it ought not to have.'

With regard to the act of forgery, it is to be observed that the offence is complete by the making with fraudulent intent, and that a person may commit forgery by making a false deed in his own name, as by antedating a deed so as to make it appear prior to a conveyance previously executed by him; by signing the name of a fictitious person, or his own name, if represented to be distinct from that of the person signing; by introducing into a document, without authority, whilst being drawn up, what may alter its effect; and, in certain cases, even by omitting, without authority, that which by its omission may alter the effect of other parts.

As regards the instrument, it must be a document which, if genuine, would have apparent validity, though it is immaterial whether it would have actual validity or not. The falsity must lie in the instrument itself—in its not being what it purports to be, not in its merely containing a false statement. It must be a document or writing. Counterfeiting an artist's signature on a painting is not forgery. The fabrication may either be of the whole or of a part, as filling in, without authority, a cheque signed in blank; or an alteration, if material, may constitute a forgery.

As regards intent, it is unnecessary that there should be a special intent to defraud any particular person. A general intent is sufficient, whether there is or is not any person actually defrauded or liable to be defrauded. Mere intention to deceive, as distinct from intention to defraud, is not in general sufficient to constitute forgery. The same is true of forgery of a letter as a practical joke. It is also not forgery to induce another by fraud to execute a document.

STOKES.

FORGETFULNESS.—1. Nature.—'A good memorie,' says Roger Ascham (*The Scholemaster*, bk. i.), 'is well known by three properties: that is, if it be quick in receyving, sure in keeping, and redie in delivering forth againe'—in other words, it depends on the clearness and distinctness of the original impression, on its power of retention, and on its power of reproduction or resuscitation.

These properties are clearly conditioned by the state of the mind, and of the body as well, at the moment when the impression is made, as also by frequency of repetition, and, further, by the working of association through similarity and contiguity. Great, however, as the tenacity of memory may be—in some people, 'even to a miracle'—the best memories forget; there is a limit to the retentive and reproductive powers of the mind. This arises partly from the enormous mass of materials that the matured mind has to deal with, and partly also from the fact that, in memory, we never re-suscitate the whole of a past experience, but only selected portions of it (only what we have *interest* in and what we have *use* for); the remaining parts, through want of being occasionally brought back, drop out of our power of recall. Hence Hobbes, in a very felicitous phrase, designated imagination, and, therefore, memory, 'the decaying sense'; and Locke has a touching passage on the decay of memory:

'The memory of some men, it is true, is very tenacious, even to a miracle. But yet there seems to be a constant decay of all our ideas, even of those which are struck deepest, and in minds the most retentive; so that if they be not sometimes renewed, by repeated exercise of the senses, or reflection on those kinds of objects which at first occasioned them, the print wears out, and at last there remains nothing to be seen. Thus the ideas, as well as children, of our youth, often die before us: and our minds represent to us those tombs to which we are approaching; where, though the brass and marble remain, yet the inscriptions are effaced by time, and the imagery moulders away. The pictures drawn in our minds are laid in fading colours; and if not sometimes refreshed, vanish and disappear' (*Essay Concerning Human Understanding*, bk. II. ch. x. § 6).

Whether, however, any impression once received ever absolutely vanishes and disappears—so as not to be within the power of recall under any circumstances whatever—is a doubtful point. Without pushing to the extreme the testimony of people who have been nearly drowned that, in this experience, the whole of their past lives came vividly before them in an instant, it may yet be questioned whether, under certain conceivable circumstances, any experience may not be recallable to the mind. But forgetfulness, in the practical if not in the ideally theoretical sense, is a fact; and what we have now to do is to look at the causes and the law of it.

2. Causes.—(1) One cause is *faintness in the original impression*. This may arise from lack of intensity in the impressing object, or from lack of vigour in the organism at the moment when the impression was made. In either case, the intellectual discrimination is poor, and interest sufficient for effective retention has not been created, and so there has been no motive to repeat or reproduce the primary experience. But, even when interest has been aroused and a certain amount of repetition secured, the impression may be transient. A case in point is what is known in education as 'cranming.' Getting up knowledge for an occasion is quite different from studying from the love of knowledge. Only the latter gives what abides: remembering for a definite, temporary purpose naturally ceases when the purpose has been served.

(2) Another cause is *enfeeblement or injury of the bodily organism*—as seen in old age, or in disease of the brain. The case of old age is significant, since forgetfulness here follows a definite order. As old age creeps on, recent impressions are forgotten first; earlier impressions remain. The meaning of this is that recent impressions made in old age, even though vivid at the moment, have not been registered and conserved by repetition, and so are lacking in points of association, whereas the impressions of earlier years have become stable through repetition and have formed many points of attachment with other parts of the memory series. Moreover, the earlier impressions were made when nutrition and circulation of the

blood were vigorous, when the physical system was strong and active, whereas the impressions made in old age appeal to enfeebled nutrition and circulation and to a decaying physical system. In this way, we see why it is that old people forget recent events, but retain a memory, often wonderfully full and exact, of what happened in their childhood and youth. 'What first seizes sticks,' as Berkeley puts it: the vigour of the organism secures that, in part; and, for the remainder, the result is produced by association and repetition; and necessarily, when the more recent goes from the memory, the earlier remains in full possession. Still more, earlier experiences are associated with the pleasure that old age has in dwelling in the past, seeing that length of time has mellowed the recollection of bygone days and thrown a halo of glory round them; for it is a notable fact that the mind is not retentive of pain, and so is disinclined to revive painful incidents or experiences, but clings to the thought of pleasure, and its natural tendency is to idealize the past—the Golden Age seems ever behind us. It has further to be observed that, when loss of memory in aged persons begins, it shows itself usually in a tendency to forget people's names. This is in accordance with the nature and working of contiguous association. The identity of the people themselves is quite well recognized; only their names are forgotten. This means that, although we do associate a person with his name during all the time we have known him, nevertheless what specially interests us about him, and what, therefore, impresses us most, is not his name but himself—the concrete individual, living somewhere in space under definite circumstances, pursuing a particular calling, and making a certain mark in life. The image of him, consequently, remains when his name has gone from us.

(3) A peculiar case of forgetfulness arises from *the power of a direct experience of actuality to obliterate or annihilate a previously formed idea of the actuality*. Suppose, for instance, that we try to realize from the description given by another the idea of a place that we have never ourselves visited. Our mental picture is sure to be in many respects erroneous, however full and however powerful the description may be. We naturally picture the unvisited place on the basis of some place or places well known to us, which we suppose to be similar, and the analogy will in many points deceive us. But suppose, now, that we *actually visit* the place which we have as yet only imagined. The result is that, when we come to have experience of the actuality, the vividness of the impression (its warmth and fullness) lays hold upon us so as to exclude all the erroneous parts of the previously formed picture from the mind—the reality and the previous idea will not combine; until, after a time, it becomes altogether impossible for us to call up the original erroneous picture, or possible to call it up only in the vaguest fashion. The reasons are obvious. Partly, we lose interest in bringing back erroneous ideas, after we have obtained accurate impressions of the reality; and, partly, these ideas drop away, because the reality refuses to combine with them. This last fact explains to us how it is that we so readily, as a rule, forget our dreams. However vivid a dream may be, it has not the power upon us of waking experience; and so, when we awake, and are brought under the influence of the objective world, our dream-images necessarily flee. They cannot, in the first place, compete with the vivid insistence of reality; but, in the second place, they do not fit into the ordered train of our waking experiences—they are not on the line of our continuous wakeful existence.

(4) Lastly, forgetfulness may be due to *excite-*

ment. In a moment of excitement, when the nerves are agitated, the memory becomes, partially or wholly, a blank. Many a person, on rising for the first time to speak in a public assembly, has felt this; and, in a less marked case, any one may, through having a question put to him suddenly or abruptly, be unable to make an immediate reply. Although the question may be one that he could quite well answer in a calm mood, the abruptness of the inquiry has disturbed his equilibrium, and the answer has fled. No better example of the power of excitement to produce forgetfulness could be adduced than the case of Cassim, and his futile efforts through excitement to recover the mystic and all-potent word 'Open Sesame,' in *Ali Baba and the Forty Thieves*. The workings of the human mind were obviously the same in the days of Harun al-Rashid as they are to-day.

3. Law.—The great law of forgetfulness is that, under normal circumstances, we forget a thing only by occupying the mind with something else, i.e. by losing interest in it through acquiring interest in something else. We cannot simply will to forget and the thing is done. If we push something out of the mind, we must fill the vacancy somehow. Extrusive power belongs to a new interest. This may be exemplified by the injunction, so often given to us when we are injured, 'Forgive and forget.' This, on the face of it, seems an injunction to do what is impossible; for, when an injury, deliberate and designed, is inflicted on us, it is only human nature (so we phrase it) to resent it, and, consequently, to harbour ill-will towards the perpetrator of the wrong. But, though we cannot forget an injury when the perpetrator does not seek and obtain forgiveness, it is altogether different when he does. For it is the nature of forgiveness not only to pass by the offence, but also to take the offender into favour again and to identify oneself with him and with his penitent attitude. A new and absorbing interest now takes possession of us, and, the more we identify ourselves with the penitent, the less are we disposed to remember his offence: both he and we have entered on a new course together, and the attainment of the new end occupies our attention, as it fills our hearts, and forgetfulness naturally ensues when there is no motive and no purpose in life to keep up the memory. In this, obviously, we have the key to the meaning of Scripture when it speaks of God as forgiving and forgetting men's sins: 'I will forgive their iniquity, and their sin will I remember no more' (Jer 31²⁴; cf. He 10¹⁷). Without forgiveness, that could not be; but with forgiveness, if the analogy of human procedure is to hold with the Deity at all, it is inevitable.

WILLIAM L. DAVIDSON.

FORGIVENESS (Hebrew).—I. DIVINE.—In the view of all the Hebrew writers the God of Israel entered into personal relations with His people. His will was ethical also, and the problem of sin and forgiveness must have a prominent place where the ethical will comes into contact with another will. For the most part the mind of Jahweh towards His people was a gracious one. All that Israel possessed was His gift—the goodly land of Canaan, rain from heaven, success against the enemy. When disaster or misfortune came, it was clear that His anger had been aroused. The conscience of the nation was then quickened, and inquiry was made as to the occasion of the wrath. In all this He was supposed to be moved as a man might be moved; one might 'find grace' in His sight as one might 'find grace' in the sight of a fellow-man, or one might offend Him and placate Him, as happened in the relations of men to each other.

1. In the earliest times.—In early society, rights and claims are based on tribal custom or on a covenant between the parties. Among the Hebrews the earliest conception of sin seems to have been that it was a violation of the covenant rights of Jahweh. The earliest Decalogue (Ex 34¹⁰⁻²⁶) defines His dues. He was to receive the first-born males; He was to be honoured by the observance of the three great festivals, and by cessation of work on the Sabbath. Besides this, certain practices which were uncongenial to Him were to be avoided—the worship of other gods, the use of leavened bread at the sacrifices, the boiling of a kid in its mother's milk. The withholding of any of these dues would rouse His wrath, and the solidarity of the nation was such that it would suffer as a whole. The earliest conception of forgiveness was that, on the removal of the cause of offence, Jahweh would turn again to His people and be gracious. When Achan committed sacrilege (Jos 7), the whole people suffered defeat; when Achan and his family were executed, the people were restored to favour. When Saul violated the oath taken by Israel, the land was visited by famine; the impaling of Saul's sons brought back the rains (2 S 21). If forgiveness be the free restoration of the offender to the favour he has forfeited, there is no forgiveness here. But, if it be the change of mind of the offended party on satisfaction rendered, it is granted in these cases.

It is not necessary, even in the earliest view, that the satisfaction be an act of punishment. The Philistines, when they felt the wrath of Jahweh, made their acknowledgment in the form of golden offerings (1 S 6¹⁰); and, when the people had provoked wrath by their conduct in the wilderness, the intercession of Moses was effectual (Ex 32³⁰ ff.). In the latter case, however, we should note that the punishment of the actual offenders, or at least some of them, went along with the intercession. In view of this we shall understand the declaration of an early author that Jahweh is a God merciful and gracious, patient and abundant in kindness, who takes away (that is, forgives) guilt and transgression and sin, yet does not leave unpunished, but visits the guilt of fathers on children and descendants of the third and fourth generation (Ex 34⁷).

It is a distinct advance on this view when Jahweh is seen to be the protector of the rights of members of the community. A step in this direction is taken when He is made a party to the obligations taken by the community. The case of the Gibeonites already alluded to is in point. By the violation of the oath taken by the Israelites, Jahweh was made angry. This was a national matter—an affair with another tribe. What we

now have in view is within the nation itself. Jahweh takes the part of the client, the widow, and the fatherless—of those who have no other protector. Sin against a brother man now becomes sin against Jahweh. The cry of the oppressed comes into His ears: 'If he cry to me, I will surely hear his cry, and my anger shall burn, and I will slay you with the sword, so that your wives shall be widows and your children shall be orphans' (Ex 22²⁴). The question of forgiveness became more complicated as this class of sins occupied the thoughts of reflecting men.

2. In the earlier prophets.—These men were fully convinced that the nation as a whole was the unit with which God dealt. They were at the same time thoroughly persuaded that the oppression of the poor by the rich had roused the wrath of their Protector. The conclusion was easy to draw—the nation must be punished. Jahweh is a God of justice; His love of His people could not induce Him to spare the guilty. The very fact that He had been so gracious to them in the past was a reason why He should hold them to a stricter account now. The confidence of the people at large, that He will not permanently estrange Himself from His own, is seen by these men to be only one more sign of the incurable levity and blindness of the nation. It is not to be wondered at that they have little to say of forgiveness. Their emphasis is laid on the certainty of punishment. The greater moral earnestness of their point of view is obvious. The mass of the people thought that forgiveness might be purchased by sacrifices or by professions of repentance. The prophets declared the sacrifices to have no value, and compared the repentance to the morning mist which early vanishes away (Hos 6⁴).

Abstractly there always existed a possibility of forgiveness. We cannot otherwise understand the preaching of the prophets at all. Some slight hope that the doom might yet be turned away must have animated them. And in fact they declare that, if the people turn to Jahweh, He will turn to them. 'Let justice roll on as waters, and righteousness as a mighty stream,' says Amos (5²⁴). The implication is that in that case Jahweh will again receive them. Similar statements by Hosea, Micah, and Isaiah show that they all held the conviction of Jahweh's willingness to forgive. No other condition would be imposed than that of ceasing to do evil and learning to do well (Is 1¹⁶). But the sadness of the situation arose from the fact that Israel had sinned away the day of grace. Twice, as Amos sees in vision, Jahweh of His mere good pleasure has turned away the impending calamity. This cannot be expected to go on for ever. This third time the plumb-line is set to the wall, and further respite is not to be expected. Hosea is equally severe, though he has a more adequate idea of the tenderness of Jahweh. In spite of the yearning which cries 'How can I give thee up?' He will meet the recreant people with the fury of a bear robbed of her whelps.¹

3. In Isaiah.—The impression that Isaiah is distinctly a prophet of forgiveness cannot be verified from his genuine prophecies. The words usually interpreted in this sense should be rendered: 'Though your sins be as scarlet, let them become white as snow; though they be red like crimson, let them become like wool' (Is 1¹⁸). They are an exhortation to the people to amend their ways and their doings. (For other interpretations, see Duhm or G. B. Gray, *ad loc.*) The wrath of Jahweh rests upon the land in the view of Isaiah, just as it does in the view of Amos. One passage which

implies the abstract possibility of forgiveness is intended only to deny its actuality: 'This guilt shall not be expiated for you till you die' (22¹⁴). The very purpose of the prophetic mission, according to the prophet, is to harden the people in their evil courses and blind them so that they cannot see their true interest (6⁹). The prophet himself, indeed, is purified for his work by a special act of Divine grace (v. 7). But this is the exception which proves the rule; one who is called to Jahweh's work must be made fit for that work. The doctrine of the remnant, which some find to be Isaiah's leading thought, does not imply forgiveness of the guilty but their punishment; the remnant which survives is made up of the righteous (5²² 6¹³; cf. Mic 2¹⁴).

4. In Jeremiah.—Of Jeremiah we may say that the pessimism grows more intense as the catastrophe approaches. Like the others, he believes that Jahweh is ready to receive those who do well, but he knows the sin of Judah to be too deeply engraved to be obliterated. When a nation has done evil, and Jahweh determines to destroy, 'if that nation turns from its evil then I will repent of the evil which I had determined to do to it' (18⁸). One of the prophet's messages is motivated by the possibility of repentance and forgiveness: 'Perchance they will listen and turn each from his evil way, and then I will repent of the evil I have determined to do them because of their evil deeds' (26³). But these possibilities are never, in Jeremiah's mind, more than possibilities. If there could have been found a man in Jerusalem—one that did justice and sought truth—then Jahweh could have forgiven (5¹). But the search was vain (8⁶). When the heart of the prophet moves him to pray for his people, he is told that, though Moses and Samuel were to unite with him, the result would not be different (15¹).

5. In Deuteronomy.—The Book of Deuteronomy seeks to enforce the ideas of the prophets and at the same time to make them practicable. To this end it adopts a certain measure of priestly and legal tradition. Its conception of sin is that of the prophetic party in general, and on the subject of forgiveness it marks no distinct advance. In its severer moods it tolerates no compromise with evil, and carries out to its logical conclusion the faith, first formulated (as appears) by Elijah, that Jahweh is a jealous God. With an earnestness which might almost be called ferocity, it insists on the destruction of idolatrous sanctuaries and the extirpation of all seducers to the worship of another god (ch. 7). Yet the idea of the authors is that this jealousy is only the reverse side of love, and that the command to love Jahweh is based on His love for His people. The historical sketch with which the book now begins recounts the manifold mercies of the past, and presents Jahweh as a forgiving God. The ingratitude which can despise such love, however, it is intimated, cannot hope for indulgence. 'The wrath of Jahweh will burn against thee and destroy thee' (7¹). The interest of the writer is more in the punishment of the evil-doer than in his repentance, for only by purging out the evil can the nation be kept in the right attitude towards its God (11¹⁶; cf. 31¹⁷).

6. During the Exile.—The fall of Jerusalem brought into cruel relief the threats of the prophets and of Deuteronomy, and made the problem of forgiveness acute. The exiles were weighed down by the thought that the sins of the fathers rested upon the children and that there was no hope. Their judgment on the past is sufficiently evident in the editorial passages of the books of Kings. Although, for instance, Josiah had done right with all his heart, so that he surpassed all the kings who had preceded him, 'yet Jahweh turned not from the

¹ Hos 1¹⁰; cf. 11⁸, Am 4¹⁻¹³. The words of encouragement with which the books of Amos and Hosea now conclude are later additions.

heat with which his anger burned against Judah on account of all the provocations with which they provoked him' (2 K 23²⁸). At the same time, it would be too much to say that the past gave absolutely no ground for hope. There were many instances in the history which showed Jahweh to be a God willing to hear and help His people. The prayer of Solomon at the dedication of the Temple was now made to express the longing of the people that the God of their fathers would hear and forgive those who cried to Him from the places whither they had been carried by their enemies.¹

7. In Ezekiel.—It was the work of Ezekiel to combat the lethargy caused by the sense of rejection. This prophet, like the older ones, was fully of the opinion that Judah's sin was the cause of her calamity, and his specifications are in substance the same as theirs. Oppression of the client, the widow, and the orphan, bloodshed, adultery, the taking of bribes—these are the things with which the wicked Jerusalem is reproached. But Ezekiel regards these things from the priestly point of view. They are sins to be sure, violation of the righteous will of Jahweh, but they are also repugnant to His 'holiness.' It must be borne in mind that the earlier religion had drawn a sharp line of distinction between sacred and profane. Jahweh was separate from common things, and what approached His presence must be separated from the sphere of common things. Whatever had been in contact with another divinity was abhorrent to Him. To come into His presence with the contagion of uncleanness was to rouse His wrath. It was because the sins of Judah had made her ritually unfit for the presence of her God that He had deserted His Temple. Such was Ezekiel's thought.

As to individual men, Ezekiel held a theory of retribution more rigorous than we find anywhere else in the OT. To counteract the despair of the people, who felt that they were weighed down by the load of accumulated guilt, he was obliged to emphasize individual responsibility. The sinner suffers strictly for his own sins—not the son for the father, or the father for the son. When a man turns from his evil way, then he will be received and dealt with according to his new course of life; and, when the righteous man forsakes the good way, he will be dealt with as a sinner (ch. 18). The difficulty of adjusting the facts to so mechanical a theory of the Divine justice must be obvious. The prophet himself seems to have realized something of this, but his main interest was elsewhere. After the fall of Jerusalem it was his task to show how the nation as a whole might be revived. This he did on the ground of the priestly ideals already considered. For the encouraging thing about the difference between sacred and profane was that Jahweh Himself graciously provided a way in which He might be approached. There were rites of purification which fitted a man for the Presence. These rites were matters of priestly tradition, and it is probable that Ezekiel took them simply from tradition without reflecting on their rational basis. Of their efficacy he had no doubt, and this efficacy was of God's free grace. Now it was certain that the nation was to be restored. This followed from the power of Jahweh. It was not possible to suppose that He would rest under the reproach of the Gentiles, who saw Him delivering over His own people to destruction, and who scoffed at His weakness. If the nation was to be restored, it would be by an act of God's free grace, purifying her from the uncleanness which rested upon her.

¹ Not for your sakes am I about to act, house of Israel, but for my sacred name which you have profaned among the nations. And I will show that my name is sacred, and the

nations shall know that I am Jahweh, when by my treatment of you I show before their eyes that I am God. And I will take you from the nations and bring you to your land, and I will sprinkle clean water upon you, and you shall be clean from all your pollutions; and I will give you a new mind and will put my Spirit within you, and will cause you to walk in my statutes' (Ezk 36²²⁻²⁷, considerably abbreviated).

This is the programme for the good time coming; Jahweh will restore His people and will make them fit for His service. The fitness will be partly external and Levitical. The most elaborate precautions will be taken not to offend the exclusiveness of the sanctuary. The Temple, its servants, its surroundings, will be all that the most rigid ritualist can desire. But along with this there will be an internal change in the people themselves; they will have a mind to obey the statutes of Jahweh, and that these statutes are ethical in their nature we have already seen. Forgiveness for past offences is to be granted, but the main thing is not forgiveness but regeneration. Yet the taking back of the adulteress, the renewal of the covenant with her, and the cleansing of her from all she has done imply a forgiving mind on the part of her God (Ezk 16⁵⁵, where the RV introduces the word 'forgive' for *kipper*).

8. In the post-exilic prophets.—There can be no doubt that from Ezekiel's time onwards two tendencies manifested themselves in Judaism. On one side, the free grace of God was looked for to forgive past offences; on the other, the utmost care was taken to secure ritual purity. The keen sense of the wrath of God expressed, for example, in the Book of Lamentations drove men to pray for forgiveness without the intervention of priest or altar. The post-exilic prophets encourage the people with specific promises of forgiveness: 'Return unto me, and I will return unto you, saith Jahweh' (Zec 1³, Mal 3⁷). 'As I determined to do you evil when your fathers provoked me to anger, so now have I determined to do you good' (Zec 8¹⁴). Interwoven in the Book of Jeremiah, as we now read it, are several passages which represent this post-exilic view and give specific promises of forgiveness. A celebrated example is the promise of the new covenant which ends thus: 'For I will forgive their guilt, and their sins will I remember no more.' Even more striking is the following: 'In that time the guilt of Israel shall be sought, but it no longer exists, and the sins of Judah, but they shall not be found, for I will forgive those whom I preserve.'¹ But the most delightful and consistent exponent of the forgiving love of God is the great prophet whose words are preserved in the second half of the Book of Isaiah. The words of comfort with which he begins his preaching are accompanied by the assurance that Zion has been forgiven, that she has received the full measure of punishment, and that restoration is at hand (40¹⁵). The glowing promises that follow are based upon the firm conviction of the love of Jahweh for His own: 'Fear not, for I have redeemed thee; I have called thee by name; mine thou art. . . . Because thou art precious in mine eyes, art honoured and I love thee, I will give mankind instead of thee, and nations for thy life' (43¹⁵). The sorrowful experiences of the past could not be ignored, but they were only a momentary ebullition of wrath and would be forgotten in the infinite kindness that is to follow. Zion, though now desolated and afflicted, is assured of the affection of her Husband who keeps her walls ever before Him. 'I am the one who blots out thy transgressions for my own sake, and thy sins I will not remember' (43²⁶; cf. 44²²). Nor is this love a national matter alone. The individual has part in it; even the sinner may count on it: 'Let the wicked forsake his way and the unrighteous man

¹ 1 K S. For the theory of the Deuteronomistic editor of the Book of Judges, see Jg 2¹⁴ 3¹⁰ 10¹⁰.

¹ Jer 31³¹⁻³⁴ 50¹⁰ 33⁸. A similar promise is found in Mic 7¹⁸. The exilic or post-exilic origin of all these passages needs no demonstration.

his thoughts; let him turn to Jahweh that he may have mercy upon him, and to our God for he will abundantly pardon' (55⁷). It is unnecessary to multiply quotations, for this part of the OT is familiar to every Bible reader.

9. In the Priestly Code.—The ritual ideas of Ezekiel were taken up by the priestly compilers, whose work is now embodied in the middle books of the Pentateuch. The tradition is here collected and recorded with the idea of avoiding everything that could offend the sacred service, or, if the contagion could not be avoided, with the purpose of purging it away as soon and as effectively as possible. So far as sin comes under the head of ritual defilement, it may be removed by these rites. There is a sin, indeed, that cannot be so removed. Whoever breaks the commandments of God with full knowledge and with deliberate purpose must be cut off from the congregation (Nu 15³⁰). But for all other offences there is purification. Certain classes of sacrifices called 'sin-offerings' and 'guilt-offerings' play a conspicuous part in the ritual, but the cleansing efficacy is ascribed as well to other sacrifices, and even to unbloody offerings. How far the removal of such contamination as was treated in this way was forgiveness, in the sense in which we use the word, is extremely difficult to make out, partly because the authors of these directions believed in the efficacy of the traditional rites, and did not concern themselves to explain them, partly because ideas of expiation were imported into the rites from non-Jewish sources. The theory doubtless was that by these rites the impurity was removed, call it forgiveness or call it purgation. See, further, EXPIATION AND ATONEMENT (Hebrew).

10. In the Psalms.—The Book of Psalms has preserved the experiences of believing Israelites in times of suffering and depression. Their temptation was to ascribe temporal misfortune, sickness, or privation to the retributive visitation of God. It is only natural that they should cry out in pain at His turning His face from them. Their settled conviction is that their sins have brought the affliction, though they are often unconscious of sinful motive. Yet in their perplexity they hold fast to the faith that God is merciful and loving. In many cases they are sure of forgiveness, and they are content to endure what He has sent, if only they may have the final revelation of His face. A well-known Psalm recounts the experience of one who had confessed his sin and received the assurance of pardon (32¹⁻⁵; cf. 78³⁵, 65³ *et al.*). Where the history of the nation is reviewed, it is to show the forgiving love and patience of God in the past. And, where the authors prostrate themselves before Him in prayer, the most frequent petition is for forgiveness. It is clear that they do not think of any ritual requirement on which forgiveness is conditioned. On the contrary, they take pains to assure us that God does not ask sacrifice. His requirements are met by repentance and humility.

11. With the Book of Psalms we reach the highest development of OT teaching on this subject. The only thing to add is the declaration of the Book of Jonah that Jahweh forgives even the heathen when they cry to Him. The Book of Joel implies, rather than asserts, that Israel will be forgiven in the Messianic time, but for the Gentiles it has only the severe judgment of God. The Wisdom literature occupies itself with other problems.

II. HUMAN.—Forgiveness of man by man occupied small space in the mind of the Hebrews, if we may judge by the evidence at our disposal. This may be due in part to the nature of the documents, which are interested more distinctly in Divine than in human forgiveness. But in part the social organization of the people accounts for the fact we

have noted. In the early stages of her history, Israel was a group of clans; and the clan recognized no obligations towards those outside the social group. In the later period, religious motives tended to emphasize opposition to foreigners. As between Israelites and Gentiles, therefore, there was no thought of forgiveness. All the cases of actual forgiveness which are narrated in the OT refer to members of the same group. Against the foreigner the nomad boasts that his own right hand is able to avenge a wrong even seventy-seven fold (Gn 4²⁴). Against the foreigner also deceit is allowable, as is illustrated by the conduct of Abraham (12^{10a}, 20^{1a}), Isaac (26^{7a}), and Jacob (30^{25a}), as well as by David's relations with Achish (1 S 27^{5a}).

1. In relation to fellow-Israelites.—Within the clan all are brothers, and there is opportunity for forgiveness. Custom, however, sanctioned the *talia*; and, in case of gross wrong, excommunication was visited on the offender. The possibility of forgiveness, however, is indicated by the story of Jacob's reconciliation with Esau (Gn 33^{1a}). Jacob's offence is notorious and he has reason to fear his brother's wrath, all the more in that Esau is at the head of a predatory band, whilst Jacob is a shepherd and comparatively defenceless. Jacob's gift may be interpreted as an acknowledgment of his guilt, though all that he says is that he will thereby soften his brother's anger (32²⁰). Esau generously attempts to refuse the gift but finally accepts it. The completeness of the reconciliation is indicated in the words: 'Esau ran to meet him and fell on his neck and kissed him' (33⁴).

Since the reconciliation just mentioned takes place before the actual acceptance of the gift, this seems to be a case of real forgiveness. Where a money payment is made in compensation for the injury, it is a question whether the Hebrew writer thought of forgiveness. The story of Joseph, however, speaks of forgiveness in the strict sense of the word. Joseph's brothers, conscious of the wrong they have done him, fear his wrath. And after their father's death they feign a message from him praying that the wrong may be forgiven. The words used are: 'Take away the transgression and sin of thy brothers' (Gn 50¹⁷). Joseph's response implies that vengeance is a matter for God. As for himself, he forgives on the ground that the Divine purpose of good had been accomplished. As all this takes place strictly within the family, it is not probable that the author thought of such a thing as possible between men who were not of the same blood.

In the case of Abraham's prevarication there is wrong on both sides. Abraham deceives Abimelech, and Abimelech (unwittingly) takes Abraham's wife (Gn 20). The reconciliation is effected by a money payment, in return for which Abraham intercedes for Abimelech. The author of the account does not think of either party as forgiving the other. His interest is wholly absorbed in the Divine protection accorded to Abraham. In like manner the reconciliation of Jacob and Laban is narrated with no reference to forgiveness on either side (31^{44a}).

In a few cases where the Divine forgiveness is alluded to, we may suppose human forgiveness implied. Pharaoh asks Moses to forgive his sin (Ex 10^{16a}). What he really desires is the Divine forgiveness mediated by Moses, for the sin is really against Jahweh. Where Moses himself implores forgiveness for the people (Ex 32³², Nu 14^{16a}) we may suppose that the prayer is motivated by his own forgiving spirit, but the narrator does not seem to reflect upon this aspect of the matter. In the quarrel, however, in which Aaron and Miriam took sides against Moses we may suppose Moses

to have forgiven his sister, for he consents to intercede for her. Aaron's request is: 'O my lord, lay not upon us this sin in which we have done foolishly' (Nu 12¹¹).

The life of David affords some examples that should be considered here. Two instances are recorded in which he has his enemy in his power and spares him (1 S 24 and 26). Saul's words imply that this generosity is without parallel. David, however, reveals that he was not moved altogether by generosity. He would not lay his hand on Jahlweh's anointed (24⁷ 26⁹). To slay a consecrated person was sacrilege. Even the mutilation of the king's robe is dangerously near that crime, as we see from David's self-reproach (24⁶). There seems to have been a mixture of motives in this case. In the case of Nabal, however, where David forgoes the vengeance which he had sworn to take, no such mixture occurs. Abigail takes Nabal's guilt upon herself and prays David to forgive it. 'Take away the transgression of thy maid' (1 S 25³⁰). The generous gift she has brought reinforces her petition, and David 'accepts her face' (v. 35). The sequel intimates that his conscience had not been clear from the start, for, after all, Nabal was a fellow-Israelite (cf. v. 39).

Jonathan's intercession for David is followed by a temporary reconciliation on the part of Saul, but nothing is said of forgiveness of any real or fancied wrong (1 S 19⁴⁻⁷), and David's generosity towards Meribael (Mephibosheth) is repayment of Jonathan's kindness rather than generosity towards the house of Saul (2 S 9⁷⁻¹³). Absalom's crime, however, is forgiven, though somewhat reluctantly, by the king; and the woman of Tekoa, who brought about the reconciliation, pleads for forgiveness on the ground that strict justice often works injury (2 S 14¹⁻²⁴). We can hardly doubt that forgiveness would have been granted to Absalom a second time had there been opportunity. David gives us a further example in the case of Shimei, whose grossly insulting conduct was pardoned on his own request (19¹⁷⁻²³). Yet the king did not go so far as to forget the injury, and his resentment made itself felt at the close of his life (1 K 2⁹).¹ In like manner Solomon's forgiveness of Adonijah was not whole-hearted, and an occasion was found for nullifying it (1³ 2²³⁻²⁵).

The above, which seem to be the only specific cases of forgiveness in the Hebrew Scriptures, show us how imperfect was the apprehension of this grace. Exhortations to kindness towards one's fellow-man are frequent, but there seems to be little or no reflexion on the exigency which arises when one has been wronged by his neighbour and seeks forgiveness. The law of *talio* is strictly enjoined, and the Deuteronomist warns against weak compassion on offenders: 'Thine eye shall not pity' (Dt 13⁹ 19²¹ 25¹³).

2. In relation to non-Israelites. — The bitter conflict waged by the prophetic party against foreign religion naturally sharpened opposition to foreigners. Ancient Semitic usage sanctioned extermination of enemies, and the carrying out of this 'devotion' was regarded as a religious duty. Samuel rejects Saul because he shows weakness in this regard (1 S 15), and at a later time a member of the prophetic order denounces Ahab for making a treaty with Benhadad (1 K 20³¹⁻⁴³). The Deuteronomist's stern command to exterminate the Canaanites is the consistent expression of this opposition to foreign custom. There is evidently no room for forgiveness here. Even so genuinely religious a character as Jeremiah has no idea of forgiving his persecutors (Jer 7¹⁶ 11²⁰ 15¹⁷⁻¹⁸ 18¹⁹⁻²³).

The Jewish community in the post-exilic period

¹ If 1 K 2¹⁻¹² is historical.

is equally uncompromising in its attitude towards foreigners, and the conflict of parties within the community itself embittered the pious minority against the Hellenizers, who had the government on their side. Nehemiah's attitude towards Sanballat is typical (Neh 2²⁰ 4¹¹. [Heb. 3³⁸] 10²⁸⁻³¹). The ritual motive came in to reinforce patriotism. The Jews, the sacred people, necessarily regarded all men except themselves as unclean. The prayers for vengeance which recur in the Book of Psalms are in effect prayers for the annihilation of everything contrary to the will of Jahlweh (Ps 3⁸ 5¹¹ 11⁸ etc.¹). Hatred of enemies is regarded as a duty, and the faithful hope for a time when with a two-edged sword in their hand they will 'execute vengeance on the Gentiles and punishment on the peoples, binding their kings with chains and their nobles with fetters of iron' (149⁶⁻⁸). This implacable temper inspired the Book of Esther, and the story of Midian's extermination (Nu 31).

But voices of protest were not wanting. The Book of Jonah satirizes the pious people who hope for the indiscriminate slaughter of the Gentiles, and there was always the possibility that the foreigner might become a member of the Jewish community. Rahab and Ruth are examples. Yet neither the narratives which tell us of these cases, nor the abundant exhortations to kindness and compassion which we find in the prophets specifically enjoin the duty of forgiveness. It is not mentioned in the Decalogue, or in Job's list of virtues (Job 31), or in the ethical Psalms (Pss 15, 26, and 101). Only one of the commands of the Priestly Code seems to have it in mind. Here we read:

'Thou shalt not hate thy brother in thine heart; thou shalt surely rebuke thy neighbour and not bear sin because of him: thou shalt take no vengeance, nor shalt thou bear a grudge against the children of thy people, but thou shalt love thy neighbour as thyself: I am Jahlweh' (Lv 19¹⁷⁻¹⁸).

The duty here enjoined is to be exercised towards the fellow-Israelite; but later in the same chapter (v. 34¹) we read:

'And when a client sojourns in your land, you shall not oppress him; like one of your own blood shall be the client that sojourns among you: and thou shalt love him as thyself, for you were clients in the land of Egypt: I am Jahlweh your God.'

This passage recognizes the client (the proselyte, we may in fact say) as having equal rights with the native. The AV errs in this and other passages by translating the word (*gēr*) 'stranger.'

Whatever duty of forgiveness is implied in such passages has reference only to born Israelites or to those foreigners who have come into definite relations of clientage with the community. Some passages in the Book of Proverbs have a more definite bearing on our subject than any yet considered. The desirability of forgiveness was certainly in the mind of him who wrote: 'A brother offended is harder to be won than a strong city' (Pr 18¹⁹) and who also said: 'The discretion of a man makes him slow to anger, and it is his glory to pass over a transgression' (19¹). In the same book we find the well-known passage: 'If thine enemy hunger, feed him' (25²¹⁻²²); and an exhortation not to rejoice when our enemy falls (24¹⁷). Unfortunately the somewhat cold morality of this book leaves us in doubt whether genuine forgiveness is in the mind of the wise man, or whether he is taking the position that a slight is beneath the notice of a gentleman. The general sentiment is perhaps expressed by a late writer who thinks that only by the judgments of God will the wicked learn anything, and that leniency will only confirm them in their evil ways (Is 26¹⁰). In the new age, when the wolf shall dwell with the lamb (Is 11⁶), there will, of course, be complete harmony among members of the kingdom; there

¹ Citations according to the Hebrew text.

will be no offences committed, and consequently no need of forgiveness.

LITERATURE.—I. The subject of the Divine forgiveness is discussed in the various treatises on OT Theology, usually in connexion with Atonement and Expiation. The student may consult G. F. Oehler, *Theol. des AT*, Tübingen, 1878-4, § 204 (Eng. tr., Edinburgh, 1874-6); H. Schultz, *Alttest. Theol.*, Göttingen, 1889, ch. xxvi. (Eng. tr., Edinburgh, 1892, vol. ii. ch. vi.); A. Dillmann, *Handbuch der alttest. Theol.*, Leipzig, 1895, § 56; R. Smend, *Alttest. Religionsgesch.*, Freiburg, 1893, §§ 21 and 22; A. B. Davidson, *Theol. of the OT*, Edinburgh, 1904, ch. x.; B. Stade, *Bibl. Theol. des AT*, Tübingen, 1905, §§ 101 and 102. The Biblical material is treated by A. Ritschl in vol. ii. of his *Rechtfertigung und Versöhnung*, Bonn, 1900 (Eng. tr., Edinburgh, 1900). Ritschl's first ed., published in 1874, gave occasion for a fresh discussion of the OT view of Reconciliation and Atonement, and was followed by the monograph of E. C. A. Riehm, *Der Begriff der Sühne im AT*, Gotha, 1877. Riehm was not able to attain a truly historical view of the subject because of his theory of the order of the documents. His essay and that of Ritschl were examined and criticized by Schmoller in an art. entitled 'Das Wesen der Sühne in der alttest. Opfertheorie' (SK, 1891). His discussion, as indicated in the title, limited itself to the Priestly documents. The most thorough discussion since Ritschl is that of J. Köberle, *Sünde und Gnade im religiösen Leben des Volkes Israel bis auf Christum*, Munich, 1905. The same author has an article, 'Die Sündenvergebung in der alttest. Frömmigkeit,' in *NKZ* for 1905. Less satisfactory is F. Bennewitz, *Die Sünde im alten Israel*, Leipzig, 1907. See also the essay of J. Herrmann, *Die Idee der Sühne im AT*, Leipzig, 1905; one by W. Staerk, *Sünde und Gnade nach der Vorstellung des älteren Judentums*, Tübingen, 1905; and an art. by Kirchner, 'Subjekt und Wesen der Sündenvergebung besonders auf den frühesten Religionsstufen Israels' (SK, 1905). The Hebrew view is treated along with the Babylonian by J. Hehn, *Sünde und Erlösung nach bibl. und bab. Anschauung*, Leipzig, 1903. The theory of the later Jewish documents and their influence on early Christian doctrine are discussed by H. Windisch, *Taufe und Sünde im ältesten Christentum*, Tübingen, 1908. Cf. also artt. 'Atonement' and 'Forgiveness,' in Hastings' *DB* and 'Rechtfertigung' and 'Sündenvergebung' in *PRE*³.

II. On the subject of human forgiveness (Hebrew) there is no special monograph. The attitude of Israelites towards foreigners is dealt with by A. Bertholet in his *Stellung d. Israeliten u. d. Juden zu den Fremden*, Freiburg i. B., 1896.

HENRY PRESERVED SMITH.

FORGIVENESS (NT and Christian).—I. DIVINE.—I. In the NT.—The difference between forgiveness as the subject of OT and ethnic religion,

on the one hand, and of NT and Christian, on the other, is not so much a difference of terminology, or of accent, or of emotional intensity, or of its end, as of ethical and spiritual purity. In all alike the same or similar formulæ or ceremonial acts may be used; and the same end—that of the establishment or restoration of union with God—may be aimed at, and yet the underlying conception of sin and holiness and, therefore, of forgiveness may differ widely, while at the same time the difference may be felt rather than stated.

The discussion of the mode in which sin is removed in its cause, its guilt, and its consequences has been conducted on the Christian ground under the name not of forgiveness but of redemption, reconciliation, atonement, or justification. The reason for this procedure is that theologians have been more concerned with sin than with sins, with discovering and establishing, on both Scriptural and empirical grounds, a theory of the process by which God and mankind may come to be at one, rather than with showing how the individual as an individual may find grace with God.

Of the words referred to, 'redemption' or 'salvation' has the widest scope and embraces the whole benefit which man receives through Christ; 'reconciliation' or 'atonement' seeks to make clear how one special quality of sin in general, viz. guilt, is abolished; while 'justification,' so far as it differs from the others, may be said to be a forensic way of stating the position of the man who has been redeemed, or whose guilt has been blotted out. We are concerned here, therefore, not with the more general theories of redemption, or atonement, but with a transaction which has an individual interest, and, therefore, an interest which is at once more limited and more intimate. The question it asks is not how humanity as a

whole may remove an evil affecting the race, but how the individual when becoming a Christian gets rid of the incubus of his sins; and then how, after becoming a Christian, he can annul the sins which still easily beset him.

In the NT the words used for 'forgiveness' are analogous to the words used in the OT, and come to it through the LXX. The commonest word is *ἀφεσις*, which as noun or verb is used 61 times, of which 45 are in the Synoptic Gospels (18 in Luke), 2 in 1 John (1st and 2nd), 1 in James (5th), 6 in Acts (2nd 5th, 8th, 10th, 13th, 26th), 2 in John (20th), 1 in Romans (4th), 1 in Ephesians (1st), 1 in Colossians (1st), and 2 in Hebrews (9th, 10th). In RV the Greek word is rendered indifferently 'forgiveness' (50 times) and 'remission' (11 times). What is said to be forgiven is 'sins,' 'debts,' 'iniquities,' or 'trespasses'—a variety which reflects the richness of the Hebrew in expressions for wrongdoing.

In the Epp. another word, *χαρίζεσθαι*, occurs 11 times (2 Co 2nd, 10th, 12th, Eph 4th, Col 2nd, 3rd, 5th), in Luke twice (7th, 42nd). Luke uses also *ἀπολύω*, twice in 6th. Also *καλύπτω*, 'to cover,' is used in Ro 4th, Ja 5th, 1 P 4th; and *ᾤκτειναι*, 'passing-by,' in Ro 3rd. In the Apocalypse the idea of forgiveness is expressed as a *loosing* or *cleansing* by the blood (1st 7th etc.).

Another term which bulks largely in the NT, especially in Romans, Galatians, and Hebrews, has been referred to already, viz. 'justification'—a word which always means 'being declared righteous.' This justification is sometimes treated as the genus, of which forgiveness is a species, or the two are sometimes identified (as by Luther). It is more in accordance with the facts to say that forgiveness (like atonement) is the condition precedent to justification, or that a man is first forgiven, i.e. made righteous through the implanting of faith, and then declared to be in a normal relation to God.¹

But a mere enumeration of the terms used, or of their filiation, is of little service in determining the specific difference between the forgiveness offered and received in Christ and that established elsewhere. It is hardly possible to express such a religious experience except in forensic, or commercial, or other terms of daily life. But nowhere does the maxim 'cum duo faciunt idem, non est idem' apply more forcibly than here. We must interpret such terms by their whole context of Christian experience, refusing to limit them by their etymological or current significance, before we can feel sure that we have seized their vital values.

Of critical importance in this context are the Parables of the Great Debtor and of the Prodigal Son, especially the latter. In the former (Mt 18th-20th) the implicit is that man's normal relation to man is analogous to man's normal relation to God, and that, after any disturbance of that relation, the mode of restoration is the same. Any difference there may be is quantitative rather than qualitative—the debt is a debt in both cases, though one may amount to ten thousand talents and the other to a hundred pence. This parity of relationship, moreover, assumes a community of nature, even though this community be compatible with a difference in degree, or authority, or power. In other words, it is made clear out of the ground of condemnation of the unmerciful servant that the evil of unforbearingness is to be found in the fact that its object is a brother (Mt 18th), and, conversely, that, because God is our Father, whose love for His children is inexhaustible, therefore

¹ Aquinas, of course, regarding justification as 'a mode of motion from one state to its contrary state,' defines it as 'remission of sins accompanied by acquisition of righteousness' (*Summa*, i. ii. qu. cxlii. 1; cf. Harnack, *Hist. of Dogma*, Eng. tr., 1894-9, vi. 288-292).

He forgives us fully and freely on the ground that we are made partakers of the Divine nature. Like as a father has love for his children, so has Jahweh love for them that fear Him (1's 103¹³). This great truth of community of nature which was compressed by Jesus into the title *Father* is critical for any adequate explanation of Christian forgiveness.

The same parable, however, makes it clear that some effective recognition of this vital relationship must be found on the part of the offender before he can be restored to favour. For the very reason why the unmerciful servant was handed over to the tormentors was that he had in act broken down the homologous relationship of God to man and man to man. God's relation to man as His child is regulative of man's relation to his brother, or, in other words, the brotherhood of man rests only on the common fatherhood of God. He, therefore, who flouts that brotherhood is not so much punished or tormented as relegated by himself to a condition in which he is incapable of experiencing forgiveness, that is, of being restored to a normal relation to God. It is not by an arbitrary sentence but by a natural consequence that he remains in the land of outer darkness far from the home of light and love.

The Parable of the Prodigal Son sets out with equal clearness, and even more attractiveness, the same two master-truths. The father's love is always a potential energy waiting for the spring to be touched which shall release it in action, and that spring is touched by the desire of the prodigal for his home, joined to its expression in his changed life and return. The elder brother is the analogue of the unmerciful servant, in so far as his self-centred habit of soul prevents him automatically from sharing in that selfless love which does not weigh merit or demerit, but gives itself freely where there is willingness to receive it.

The full force, however, of the NT teaching on forgiveness is not given due expression until it is correlated with another law of the Christian life. Nothing is more familiar to readers of the NT than an antithesis which occurs constantly, though in varied forms. The Publicans are set over against the Pharisees; the 'elect' against the 'called'; the spirit against the flesh; the son against the slave; grace against the law; heaven against earth; faith against sight, and so on. But what has not been sufficiently observed is that these different antitheses are expressions for one and the same opposition between two states of the soul. One of these is described as carnal (e.g. in 1 Co 3³); or as psychical (e.g. in 1 Co 2¹⁴); or as walking by sight (2 Co 5⁷); or as the lust of the flesh (Gal 5¹⁶); or as being under law (Gal 5¹⁸); or as being a slave (Gal 4⁷); or in darkness (Lk 17⁹, Jn 1⁸, Ac 26¹⁸ etc.); or in outer darkness (Mt 22¹³). The other is described as the Kingdom of God (Lk 17²¹, Ro 14¹⁷); as light (1 Jn 1⁷); as life (Ro 8¹⁰); salvation (Lk 3⁹); faith (Gal 3²); liberty (Ro 8²¹). The very richness and variety of the terms used to describe the two states are an indication, on the one hand, that as living processes they do not lend themselves to definition, and, on the other, that they express something which has the mark of reality.

Moreover, other passages indicate a transition from one state to the other. Christians have passed from death into life (1 Jn 3¹⁴, Jn 5²⁴); from darkness to light (Ac 26¹⁸); the whole creation is to pass from bondage to liberty (Ro 8²¹); the disciples have ceased to be servants of sin and have become servants of righteousness (Ro 6¹⁸); those that were slaves have become sons (Gal 4⁶); the saints have been translated into the Kingdom of God's Son (Col 1¹³); they were raised with Christ (Col 3¹).

The moment which marks the transition is defined as being born again (Jn 3³), as regeneration (Tit 3⁵), as conversion (Mt 18³, Lk 22³², Ac 3¹⁰), as an opening of the eyes (Ac 26¹⁸, Jn 9¹⁴, Lk 24³¹), or of the heavens (Jn 1²¹, Mt 3¹⁶, Ac 7⁵⁴ 10¹¹, Rev 4¹), or of the understanding (Lk 24⁴⁵). The subjective factor in the transaction is called ordinarily repentance (Mt 3² 4¹⁷, Lk 13³, Ac 2³⁸ 3¹⁹ 17³⁰ 26²⁰), or repentance joined with faith (Ac 20²¹).

The precise character of the process which leads to forgiveness must be duly emphasized before any clear conception can be gained of the nature of Christian forgiveness. From the above it is clear that two psychological conditions are sharply contrasted, viz. the psychical and the spiritual, the former of which is characterized by want of freedom, and the latter by the possession of it. The one revolves round the lower self, and the other round God, and hence one is the realm of disorder and the other of order, in much the same way as a geocentric centre of the universe leaves confused what a heliocentric reduces to order. The act which 'translates' the soul is not man's but God's, though man has his work to do in preparing himself for the re-creative act of God—faith is the human face of grace. When the cup of the soul is emptied of self and purified from the dregs of earth, the wine of heaven is poured into it from above, and the man is born into a new order, the spiritual, out of the old order, the psychical, and he is a new creature, for the old things are past and gone, and all things have become new (2 Co 5¹⁷). The annulment of the old is called in the technical language of religion 'forgiveness.' The nature of this forgiveness will be best understood by considering for a moment an aspect of the change of condition which plays so large a part in the homiletics of St. Paul.

Man, as a religious animal, passes, according to St. Paul, through three stages, the choic or earthy (1 Co 15⁴⁷ 48 49), the psychical (v. 49), and the pneumatic (*ib.*). (a) The characteristic of the first is animalism unchecked by any practical knowledge of law (Ro 7⁷), and, therefore, a man in that stage commits, strictly speaking, no sin (v. 5); not till a law forbids lust does the animal-man discover what lust is, or learn that it is wrong (3²⁰). When he does this, however, he is ready to pass into the second, or psychical stage.

(b) The characteristic note of the second stage is law, i.e. commands of an external and superior authority, enforced by sanctions. This power of law acts as a check on the natural impulses of its object; and, as he is ordinarily a man not yet wholly freed from the passions of his choic, or earthy, state, he spends his life in a sort of intermittent warfare with the Law. He learns, however, slowly, by means of the pains and penalties inflicted by law for disobedience, that it pays him better in the long run to obey than to disobey, and thus a habit of obedience slowly grows out of suffering, or the fear of suffering. The psychical man learns to obey through fear of pain or hope of comfort, and hence he is sometimes described as a hireling or mercenary, to distinguish him from the choic man who is a slave, or from the spiritual man who is a son.

It is important for our present purpose to note here that forgiveness has no place at all while man is merely earthy, and a limited and lower place only while he remains on the second, or psychical, level—none in the first stage, because forgiveness implies some sense of moral responsibility; and a lower in the second, because that sense is as yet imperfect. In the psychical stage the man is as yet concerned with his own good, whether higher or lower, and hence forgiveness can only mean the remission of some penalty, the non-exaction of some pain or loss which would otherwise fall to him on

account of breach of law. It is obvious that forgiveness in this sense has little to do with the forgiveness which figures in a religion which is built on spiritual reality.

(c) But the Christianity of the NT is avowedly and obviously a religion of the spiritual, or third, degree. Its worship is in spirit and in truth; i.e. its proper sphere is that of spirit, and its proper object the Great Reality. Its characteristic is love, and love is a super-personal force directly connecting person with person. Its sanctions are not external, its motive is not fear or gain, and its driving-power is in the 'unspeakable gift' which has been committed to the soul. Negatively, it may be said that the hall-mark of this religion is freedom from law; and, as a matter of fact, it is this very freedom from law which forms the subject-matter of the polemic contained in the Epp. to the Romans and Galatians. If we bear this in mind, we shall see quite easily that the forgiveness which stands in the heart of the 'Christian spirit' is synonymous with liberation from law and its consequences as such. 'The law of the Spirit of life in Christ Jesus made me free from the law of sin and of death' (Ro 8²). And 'if ye are led by the Spirit, ye are not under law' (Gal 5¹⁸).

It is necessary, moreover, if we are to appreciate the central position occupied by *forgiveness* in the NT, that we should notice that it is no specific law, Jewish or otherwise, that is the enemy of the Spirit, but law as law, and especially that law embracing all lower laws, viz. the law of cause and effect, by means of which the human mind constructs a coherent whole out of the scattered members of our empirical life, and in so doing robs man himself of his own freedom. The laws of Space and Time added to the law of Causality form the trinity of forces evolved by man out of his inner consciousness by a Divine necessity, for the purpose of first fettering him that he may afterwards be led to seek and find liberation. When by asceticism, self-surrender, obedience, endeavour, prayer, or contemplation he breaks through the boundaries set by the law and attains direct communion with the Great Reality, he experiences what is called 'forgiveness.' It is not so much that he escapes from the penalties of broken law, such as disease, agony, death, or hell; the boon is different and greater. He is set free from law altogether as law, and acts as the Spirit within him (with which he is now one) impels him to act; and, even though the consequences of past breaches of law still persist (for he still in soul and body is a member of the phenomenal world), yet they do not persist as penalties, but have 'suffered a sea-change' into instruments of the Divine alchemy which is transmuting the dross of earth into the gold of heaven. Hence, in the fullest sense he is set free from law in the whole range of its jurisdiction. He has been 'forgiven,' that is, set free from the kingdom of Law by being admitted and naturalized in the kingdom of Spirit.

2. In the Christian Church.—The history of the conception of forgiveness in days after those of the NT is a history of the struggle of the two forces of Life and Form to establish an equipoise. It might be contended with some plausibility that the equipoise was seldom, if ever, actualized, and that at the best any approximation to it was due to a more or less bitter and persistent hostility between different Churches, or different sections in the same Church. Nor is it difficult to see why this should be the case, for the 'mystic' nature of forgiveness as portrayed in the NT was too lofty for human nature's daily food, and hence it might be predicted that some means would be devised to give the inner process known as 'forgiveness' some concrete form or statement which might be intel-

ligible to the ordinary Churchman. This was effected as part of that development of the life of the Church which came to be known as Catholicism, and was carried out with growing decision and thoroughness from the date of the 'peace of the Church' (A.D. 313). The dominant form it finally took was that of the 'sacrament of penance.'

But the forces which substituted the 'sacrament of penance' for the originally dynamic and unformulated act of forgiveness were active from the first. The community of Christians was at the first a company of saints, membership in which gave and maintained forgiveness of sins. Sins previously committed were due to ignorance—they were *delicta pristinae cœcitatís* (Tert. *de Bapt.* 1)—but, being recognized for what they were, repentance ensued, forgiveness followed repentance, and was conferred or ratified by baptism: 'Cessatio delicti radix est veniæ, ut venia sit poenitentiae fructus' is Tertullian's pithy statement of the process (*de Pud.* 10). In some obscure way the forgiveness of sins was related to the Cross; Ignatius speaks of 'the flesh of Jesus Christ which suffered for our sins' (*Smyr.* vii. 1); and, similarly, Hermas (*Sim.* v. 6. 2) refers to the many labours and sufferings by which the Son purged the sins of the people entrusted to Him.

It still remains uncertain whether forgiveness of sins was from the first regarded as the pre-condition of baptism, or as its principal consequence, whether, that is to say, baptism effected or merely proclaimed forgiveness. But what is clear is that the inner act known as forgiveness was very soon embodied in a sacred ordinance; that this sacred ordinance of baptism was regarded as washing away all previous guilt; and that it admitted its recipient into a holy society, in which subsequent sins were an abnormality requiring special treatment. The original Christian teaching had been that none but God could forgive sins, even though He might act mediately; but this mediate action quickly crystallized into the assertion that the right of forgiving post-baptismal sins was in the bishop as the successor of the Apostles. This claim, made by Pope Calixtus against the so-called Novatian heretics, marked unconsciously the parting of the ways, for it defined the process which changed the Church as a 'sure communion of salvation and of saints, which rested on the forgiveness of sins mediated by baptism, and excluded everything unholy' into a body not inherently holy but 'a holy institution in virtue of the gifts with which she is endowed.' The primitive conception that God alone could forgive sins was changed into the proposition that the bishops alone had jurisdiction in the matter—'per episcopos solos peccata posse dimitti.' The way was now clear for the further materialization of the authority into the coherent system of the theory and practice of the 'sacrament of penance.' The efficient cause no doubt of the establishment of this sacrament was to be found in that secularization of the Church which was produced by its recognition by the Empire and the consequent crowding into it of men and women of all grades of piety. The majority, especially after the conversion of the barbarians, were but children in religion, and demanded elementary methods of discipline and training. These were found in the authority which came to be vested in the leaders of the Church, by which they were enabled to exclude from the community certain classes of sinners for varying periods, especially those guilty of murder, idolatry, and adultery. On repentance, however, the excommunicated person might after public confession and promise of amendment be reinstated. Out of this salutary custom of forgiving on terms those who had confessed and expiated their sins against the Church there grew gradually

a custom of another kind and of more searching activity, viz. the forgiveness after confession of sins *against God*, in which was involved also the substitution of the priest for the Church as the absolving authority.

The machinery thus established lay with a heavy weight on the mediæval world. Eugenius IV. instructed the Armenians that the sacraments of the new Law were seven, of which the fourth was Penance; that the matter of this sacrament consisted in the three acts of contrition, confession, and satisfaction; that the words of absolution were its form, a duly authorized priest its minister, and its effect the forgiveness of sins. Martin V. condemned those who maintained that all exterior confession was superfluous and useless where the sinner was duly contrite; and he also directed that all Hussites should be interrogated whether they believed that besides contrition it was necessary to salvation to confess to a priest only and not to a layman, however good and devout he might be. Sixtus IV. condemned the proposition that there was no obligation to confess evil thoughts, since they were blotted out by aversion to them without recourse to the Keys; he condemned also the proposition that confession should be secret, i.e. of secret sins and not of open sins.

To the sacrament of penance as an instrument of forgiveness there was added later a system of indulgences (*q.v.*) under which the Church dispensed from the temporal pains of Purgatory not merely canonical or notorious sinners, but all, whether living or departed, who either themselves or vicariously performed certain prescribed ecclesiastical exercises, such as saying given prayers, attending given offices, or paying fixed sums of money. This form of forgiveness of sins, however justified theoretically, can hardly be recognized as akin to the forgiveness of sins described in the NT.

Accordingly, in the 16th cent. the whole of the existing ecclesiastical doctrine and practice in the matter of the forgiveness of sins was challenged in the name of the NT. It was no accident which led Luther to direct his attack on indulgences, but a true insight into the fact that these were the logical outcome of a long historical process which was a corruption rather than a development. According to Luther, the liberty of every Christian man was destroyed by the priesthood; the Church Catholic had banished or buried the Church of Christ; ecclesiastical law had taken over the rôle of that condemned by St. Paul; the transaction of ceremonies had overlaid the piety of the heart; and a mechanical and external forgiveness of sins had ousted forgiveness as dynamic and proper to the individual.

The battle thus begun raged round the word 'justification,' which hence bore an extended connotation, being made to cover the fundamental difference of *Lebensanschauung* which marked the Reformers from the Romans, and was crystallized by the decrees of the Council of Trent on the one side and by numerous Confessions of Faith and Articles of Religion on the other. Unfortunately, it was a hard necessity laid on the Reformers that they were compelled to attempt to solve a religious problem by logic and by means which St. Paul called 'carnal.' Forgiveness, as we have seen above, is of a spiritual nature, that is, it belongs to a sphere where reason is not so much contradicted as transcended, but it was pulled down by the new learning into the world of reason and sought to be defended by proof-texts, historical precedents, philosophical speculations, and similar instruments of controversy. The result was, and is, that the true, essential nature of forgiveness has been left obscure in the Evangelical Churches by a process which meant only that one kind of

scholasticism was substituted for another. The scholasticism of a Calvin differs in form, but not in method or spirit, from that of an Anselm or an Aquinas.

11. *HUMAN*.—It is the prerogative of religion to impose on its subjects, as regulative of their relations one to the other, the relation to them all of the God they worship. Christianity, accordingly, teaches that the forgiveness accorded to men by God is the pattern of the forgiveness which men are to extend to each other. This is set out clearly in the Parable of the Great Debtor, and in the fifth petition of the Lord's Prayer, for in the former the sin of the unmerciful servant is just this, that he did not do what his lord (= God) had done, and in the latter the statement that we forgive our debtors is not cited as the pre-condition of a contract, but as affirming that the forgiveness given to man by man is an organic factor in the forgiveness given to men by God. The Christian prays for forgiveness, and adds as a plea in justification of his prayer that he is in the habit of forgiving his debtor (Lk 11⁴), but he does not imply that his appeal is to anything but the lovingkindness of God (Nu 14¹⁸, Jon 4²); on the contrary, he appeals to God for forgiveness on the ground that His nature and property is ever to have mercy and to forgive, and adds by way of proof of his being aware of the greatness of the boon he is seeking that he already practises what he seeks. This petition, therefore, is an expansion of Mt 5²².

It may be urged that the capacity for extending forgiveness to others is acquired only as the direct consequence of being first made conscious of the forgiveness given by God, while Jesus seems to imply, if not to assert, that before being forgiven by God we must have forgiven others. The reply is that the objection is similar to that raised by the scholastic distinctions between prevent, co-operant, and subsequent grace, viz. that the difference is formal only and not substantial. He who forgives another is in that very act forgiven by God, and he whom God forgives in the very receipt of forgiveness forgives all his enemies. Reason, and the expression of spiritual transactions in prayer or praise, may necessitate the bringing of the spiritual act under the category of time, but forgiveness, whether of man by man or of man by God, is one and undivided in the sense that where the one is the other is involved. Life remains a unity, though thought and action split it up into duality.

This identity of forgiveness on the Divine and human levels makes it unnecessary to do more than tabulate the moments of forgiveness as between man and man, for they are but the miniature copies of the moments of the forgiveness which God gives to man. (a) In the Christian sense of forgiveness the remission of the consequences of wrong-doing has no independent place at all; for, though it is true that man can so far intervene in the operation of the law of cause and effect as to affect its incidence on his own personal volitions, yet he cannot define its working on Nature or on the volitions of others. For example, an employer may refuse to commit to prison a servant who has robbed him; a man who has been assaulted may abstain from a counter-attack or from prosecuting his assailant; a father may pay his son's debts, or he may forbid him his house. In all these cases human volition counts for something in the course of events, and yet may have no connexion at all with forgiveness, for this may be as consistent with the exaction of penalty as with its remission. (b) Forgiveness regards the higher welfare only of the offender. If we say, for example, that the punishment of the liar is not so much that others do not believe him as that he

does not believe himself, forgiveness will aim at the transformation of the liar into the truth-teller, and the course of action adopted for this end will be determined by what sanctified common-sense dictates as being most serviceable. As God sends before Him His two angels of fear and love, so the son of God will use sometimes one, sometimes the other. (c) Forgiveness excludes all reference to the feelings or interests of the injured person, and concentrates itself on the good of the person who has done the wrong. This may be said to constitute the negative side of forgiveness. (d) Forgiveness, however, is not consistent with a contemptuous, or supercilious, or merely negative attitude towards the offender; the Christian does not treat his wrong-doer as unworthy of notice, or declare that his own peace of mind is too valuable to be disturbed by him, or wait calmly and passively until forgiveness is begged for. On the contrary, the spirit of forgiveness, because it is one expression of the spirit of Divine love, pursues the offender until it has accomplished his conversion. (e) In this process of trying to save his brother's soul a follower of Christ will probably find his warrant in the verdict of Jesus given in the first Word from the Cross, that wrong-doing is the product of ignorance. For, as no one injures his brother who knows that in so doing he is doing more injury to himself (both because he is limiting his own spiritual capacity and because he and his brother are at bottom one), so the man whose eyes are open will bear in mind that tolerance and magnanimity are called for rather than vindictiveness, or hatred in general. In a very true sense all injustice is due to ignorance, and ignorance calls for the tender care of a physician rather than the ferocity of an executioner. (f) Lastly, it follows from the above that forgiveness, when complete, is a single relation between two persons, to which each contributes his quota. On the part of the injured person there is required the spirit of forgiveness; on the part of the wrong-doer a whole-hearted recognition of his offence against his brother, joined to such acknowledgment of it in word and deed as may be meet; then the union of these two in the inner world of the spirit, i.e. of Reality, brings about that restoration of personal friendship and brotherly good-feeling in actual life which goes by the name of forgiveness.

FORM (Æsthetic).—1. Meanings of the word.—'Form,' in its literal significance, means any objective representation of an image or mental idea, whether in matter, language, or sound. This may be the work either of Nature or of Art. In both cases it is the product of an arrangement of the different, but related, parts of a complete thing, or image of a thing. The psychological impulse whence this process arises is that of expression, which belongs to the nature of mind. In the æsthetic sense this general conception is narrowed by the special effort to add beauty to the representation, to construct forms in accordance with the canons of good taste and perfect ideals. Æsthetic form is thus defined as the representation of choice images or ideas in forms that approach the perfection of Nature or Art.

Thus the evolution of art becomes the evolution of forms. Two features of this evolution should

be noted. On the one hand, the forms of art have changed with the growth of man in intelligence, sympathy, and insight, i.e. as culture and social life have changed, though a uniform tendency towards the universal truth of life has always inspired and guided the process. On the other hand, as the various stages of culture and civilization have reached their zenith, those forms of art have crystallized in which are expressed its highest and noblest insights. Form and content, in short, have always mutually influenced each other. It is this obvious feature of æsthetic evolution that underlies and explains the apparently irrepressible conflict between the forms of so-called classical and romantic art. The fixity of any form of expression is called its classical phase; but this is seen to be purely relative. The adoption and imitation, for any length of time, of any form as the highest form suitable for the expression of æsthetic ideas necessarily lead to its becoming stereotyped and conventionalized; and thus a form becomes 'classical,' i.e. representative or typical of the highest insight of the times that gave it vogue. But, as soon as the inadequacy of these forms to express new ideas is perceived, or a change in beliefs, ethical standards, or emotional interest takes place, the classical conventions are threatened and superseded; a new spirit, often of revolt, is generated, which proceeds to invent new and, to the classical ear, barbarous fashions, leading to our romantic reactions. But these, in turn, become set, conventional, imitative; and so the cycle is gone through again. The essential fact which this conflict of forms brings out is that there is a real progress in the invention of forms to express the ever-widening meaning of life, the good of each epoch filling its rôle as guide and inspirer of its later products.

Form, in the technical sense, refers to the various methods by means of which the artist seeks to give perfect embodiment to his ideas. With these we need not concern ourselves here, belonging, as they do, to special disciplines. One remark may, however, be made: the methods have grown more elaborate and perfect for their purpose as the resources of ideas and of mechanical invention have been perfected. The form, in the instrumental sense, cannot be said to have reached its limit, unless we can say that the limit of ideas and of the means of expressing them has been reached.

2. No definite rules can be laid down for the classification of the various expressive forms of art. For the most part these follow the line of interest or inspiration, by which the artist's sense of beauty is controlled. According to his point of view, he may be either an impressionist, a realist, or an idealist, just as he lays stress upon the part sensuous feeling, imagination, observation, or the sense of beauty plays, or may play, in art. His forms will vary accordingly. In the case of the sculptor, the painter, or the poet, a large part of the images or ideas will be imitated from the forms of Nature, through which, by the subtle alchemy of feeling, imagination, and beauty, they will seek to express either their sensuous feeling, or their elementary sense of the veracious, or the higher sense of ideal beauty or perfection. Value may be conferred on the forms of art in any of these ways; but it is the last alone that reaches the highest spiritual standard.

3. Form and content.—Form may vary in accordance with the kind of ideas which the artist seeks to express. No poet would employ the lyrical form to express an epic or tragical meaning. Hence what we call beauty of representation means only our sense of pleasure in the manifest fitness of the outward form to express the inward state of mind. Where the balance between form

and content is maintained we shall find both adequate and beautiful, and therefore satisfying.

In some forms of art, however, especially of literary art, like fiction, *belles lettres*, and the essay, beauty of form is often deliberately sacrificed to intensity of impression and conviction; the subjective factor is allowed to overbalance the formal beauty of the work; temperament is allowed freer play, and even truth may be of less importance than fancy or imagination. Under these conditions the formal element of art does not necessarily become less perfect, but it is obscured in the stronger tides of passion. Art becomes descriptive and declamatory, as in much of Carlyle's writing, while interpretation becomes relatively unimportant.

Realistic art for this reason has always been deficient in the formal beauty of its representations: it tends to become documentary, evidential, not universal. This is the case with much of the art of the present day; and, since form cannot long be valued for its own sake, and since a return to classical form seems impossible, it must be judged as, on the whole, a healthy tendency, though obviously temporary, judged as art, and looking towards a higher synthesis of form and content, of the real and the ideal, which may follow.

On the other hand, form may be emphasized and deemed of more value than matter. This was the case with much of the literature of the 18th century. In the more objective arts, like architecture, sculpture, and painting, it is obvious that form cannot be sacrificed, if verisimilitude is to be secured; but even in these arts the formal element may overlay and obscure the living truth. Greek sculpture, while it is developed with wonderful beauty, spontaneity, and finality of form, lacks the spiritual note. On its formal side it is unexcelled, but as a revelation of the soul it has been often excelled. Rodin has expressed ideas in marble which the Greeks never approached or thought of expressing. So also has Michelangelo. In literature, too, form may overtop matter, as in Pope. The same is true of music and the other arts. Throughout this entire process, the aesthetic judgment seeks, in the work of art, the adequate relation of form and content, poetical thought finding equally poetical formal expression. Where this is the case, form is perceived to be the indispensable medium of the total spiritual ideal which the work was designed to produce.

4. The law of form.—This is the law of unity in diversity. Unity, *e.g.*, is an obvious demand of all formal representations which claim to have artistic value. This is clear enough in poetry and music, which cannot stir our appreciative sense of their beauty by merely stringing together a continuous stream of sounds, however harmonious, in the absence of unifying ideas, endowed, *ab initio*, with power to move the emotions. In lyrical poetry this seems specially obvious; but it is no less so in the epic or the tragedy, which lead to a certain inevitable catastrophe, impressive in itself, and purging the spectator's emotions by fear and pity. And, making due allowances for the different mediums in which the sculptor, the painter, and the architect work, the same is true of their arts as well.

Unity, however, depends, in turn, upon the related elements, diverse in kind and number, which enter into and help to compose it. The unifying of the detail of a work of art into a thing of beauty requires great skill and judgment to avoid excess. Emotion, which enters so largely into this activity, is an unstable medium to work in; and its extreme licence, as in Whitman, often vitiates the value of a representation otherwise extremely nobly con-

ceived. Restraint is one of the best guides of form. In addition to this, it is clear that the human mind takes pleasure in the congruity of the various parts of a work of art; and, where this is sacrificed to power, energy, or force, we feel that something essential is lacking. In these matters the judgment will be guided as much by the sense of fitness between the detail and the central and unifying idea as by emotion. Few have manifested the law of form more perfectly than Shakespeare, who nearly always produces in us a feeling or judgment in which we repose in a disclosed unity amid a wealth of plot and incident.

5. Ethical implications.—Behind all these technical considerations, governing the evolution and control of the formal element in art, lies the fundamental truth that form is always subject to the influence of moral ideals, to the ethical quality in the personality of the artist, and to the acknowledgment accorded by humanity to the Supreme Good. In particular must moral character in the artist be a powerful influence in the form of his art. As Ruskin said, a bad man is not likely to produce art of the highest kind. The precise ways in which the ethical factor affects the forms of expression in art cannot be reduced to strict classification; but it is safe to say that it will impart to all works of art, where its influence is allowed to work, a sincerity and earnestness, as well as a certain chastity and exaltation, not otherwise attainable. After all, the highest art culminates in the supreme revelation of Nature, the perfect man, who unites the ideal in the real, in whom God and man are reconciled. Thus, even on the formal side, art and religion are seen to seek the same end. However this may be, it is certain that we can never permanently approve, either aesthetically or morally, an art, however beautiful or correct in its mere form, which lacks the qualities of greatness, imparted to it first by the artist himself, and next by the ideas to which he, by means of its forms, gives a local habitation and a name. If he be a man of high ideals, the form of his art is likely to reflect the quality of those ideals.

FORMALISM, FORMS.—See WORSHIP.

FORMOSA.—I. Geography and ethnology.—

The Formosa of this article is a continental island, extending from 20° 56' to 25° 15' N. latitude, and from 120° to 122° E. longitude. Its southern end lies 336 miles due east from the British crown colony of Hong-Kong, and its northern end some 140 miles E.S.E. of Fuchau, the capital city of the Fokien Province of China. It has a length of 225 miles, and a breadth of 80 miles across the widest or middle part; while the coast-line encloses about 13,500 square miles of territory—an area considerably larger than Holland, or about half the size of Scotland. Thickly wooded hills cover the whole eastern side of the island, the ranges culminating in Mount Morrison, which is more than three times the height of Ben Nevis, and was so designated by Richard Collinson, after the name of his 'dear friend' who began missionary work in China fully one hundred years ago (*Proc. of Roy. Geog. Soc.* viii. [1864] 25). For the most part, the inhabitants of Formosa are found in the towns and

villages scattered over the broad, level, western seaboard, and may be classified as follows: (1) the Malayan aboriginal tribes, made up of (a) about 180,000 Pepohoan, who live in the more accessible valleys, and who have become almost entirely Sinicized in their dress, language, and general style of living, and (b) about 122,000 semi-nude savages, who occupy the higher mountain ranges, differ from the Pepohoan in speaking their own Polynesian dialects, and spend their time in hunting for game or for the heads of people with whom they have no tribal relationship; (2) the descendants of immigrants from the mainland of China, consisting of (a) about 80,000 from the Kwantung Province, who speak the Hakka form of the Chinese language, and (b) about 2,776,855 from the opposite province of Fokien, who use what is known as the Amoy vernacular; and (3) about 83,330 Japanese, who began to arrive when the island was ceded to Japan in 1895.

2. Religious and other beliefs; manners and customs.—With regard to the religious beliefs and practices of the people of Formosa, it is not necessary to enter into details here about the civilized Pepohoan and the Chinese settlers, because these two classes may be looked upon as one so far as superstitious worship is concerned, while other articles in this Encyclopædia will deal in an exhaustive way with the religions of China and Japan. The first thing to notice in making any statement about the savages of Formosa is the extreme paucity of the information which is available. No European or English-speaking scholar of recent times has acquired any of their dialects, or lived amongst them more than two or three days at a time. It should be remembered, however, that, for thirty-seven years during the first half of the 17th cent., the Dutch were in possession of Formosa—at a time, too, when the ancestors of the present-day hill tribes swarmed all over the western side of the island. Devoted pastors from Holland then laboured for the conversion of this people, and they have left on record many notices of the native customs which are still to be met with. In the absence of anything more circumstantial belonging to this period, the present writer may here transcribe from his *Formosa under the Dutch* (1903, p. 75, and *passim*) the following account, compiled from the writings of Candidius, Junius, and others:

"Although no books or writings have ever been found in the island of Formosa to give us information concerning the religion of the people, it is nevertheless certain that the people there have a religion which cannot be otherwise designated than as heathenish and superstitious, inasmuch as it agrees very much with those other heathen religions which have been handed down from one generation to another. The Formosans imagine that there are several gods, each having his own work and abode; but of one Supreme Creator they know nothing, affirming that the world has existed from all eternity and shall eternally so remain. Nevertheless, they believe that there are certain rewards for the good, and severe punishments for the wicked; the former having to cross over a very difficult gulf before they can become partakers of great joy and every variety of pleasure, while the latter will never be able to cross this gulf, but must roll about there for ever by way of punishment for their sins; a doctrine which would seem to involve belief in One Divine Being, since there must be a Supreme Ruler of the universe if all men are to be judged according to their deeds. The ridiculous part of their religion is that the people find sin in things which are really not sinful. For instance, it is considered an evil thing for any one to build a house on some so-called forbidden day; or to gather wood or food without taking due notice of the singing of birds, or for any pregnant woman to keep alive her children before the thirty-seventh year of her age—a custom which is surely abominable and in itself deserving punishment. On the other hand, they see no sin in actions which are extremely sinful; so much so that crimes like adultery, fornication, murder, and theft do not trouble them in the least, but rather cause boastfulness, under the belief that their gods find pleasure in them; from which it may be inferred that this people must have a very degrading opinion of their duties.

The Formosans have several gods whom they worship, and to whom they sacrifice in time of need, two of them especially being regarded as excelling in power and riches. The one—

who is a male and lives in the south—is called *Tamagiasangk*, and is supposed to be a beautiful man; the other—who is a goddess and lives in the east—is named *Tkarpada*. It is said of her that thunder is heard when she scolds her husband for not sending sufficient rain on the earth; which, however, he immediately does on hearing her voice. Both these gods are worshipped most zealously, and oftenest by the women of Formosa. There is another god, who lives in the north, and whom they look upon as extremely wicked, called *Sarisoan*. They try to propitiate him, seeing that he has the power of making people ugly, and of causing them to take chicken-pox and other kinds of disease. They are greatly afraid of these evils, and seek to ward them off with all their power, affirming that when they serve this *Sarisoan* there is not the slightest need for fear. Besides these there are yet two other gods, *Tapatiap* and *Takafutta*, the gods of war, who are more especially worshipped by the men when they go out to battle, no scruple being made about propitiating them by sacrificing even on the streets. Temples are everywhere to be met with, there being one for every sixteen houses; and, while all other nations have priests to perform religious ceremonies, this is done here by priestesses called *inibs*. These *inibs* sacrifice the heads of pigs and deer, which they are accustomed first to boil somewhat, and then to place before their gods with some rice, strong drink, or *brom*, and *pinang*. Thereupon, two of the priestesses rise and call upon their gods with a horrible shouting and screaming, so furious that their eyes stand out of their heads as they foam at the mouth, causing them to look as if they were either demon-possessed or suffering from madness. Their gods are then said to appear in such terrible form that the priestesses begin to shake and tremble violently—as one actually sees them do—before they fall to the ground as if dead; the bystanders meanwhile showing signs of deep grief, by giving themselves up to continuous weeping and howling. On recovering, the two priestesses climb to the roof of the temple and stand, one at each end, calling upon their gods with violent gesticulations. Every article of clothing is now laid aside, and they appear stark naked before their idols, to honour them and move them to answer prayers by the exhibition of, and continual taberning upon, their female parts. They then wash their bodies in clean water, and remain naked before the people, who are mostly women on such occasions—the men being not very religious—and who have all the while been making themselves as drunk as possible. The *inibs* also busy themselves in expelling demons and warding off all sorts of evil. Nor do they simply foretell good and bad weather, for, by cutting the air with a naked sword, and performing various frantic gestures in public, they profess to drive away the devil who causes the bad weather, so that he is not able to stand the hacking with the sword, but takes refuge in the water and is drowned. These and a hundred other such outrageous stories they tell the common people, who are largely dependent on them, and who wonder greatly at their doings.

Besides these ceremonies performed by the priestesses, every Formosan has a kind of private religion which he practises in his own house, where each one honours his gods in the way that pleases him best. The people also celebrate several feasts, during which they solemnly worship their gods in the temples, with the addition of feasting, dancing, and singing. When any Formosan becomes sick, a rope is first tied round him. He is then suspended from the end of a *spring-branch*, and suddenly let fall from above, so as to shorten his sufferings by breaking his neck and bones. As soon as he is dead, the fact is proclaimed by the beating of drums, whereupon the women gather together, each one bringing a pot of native wine, or *brom*, in which they always indulge very freely. The corpse is likewise treated in a most wonderful way, by placing it near the fire while a funeral feast is going on and the friends are exhausting themselves by dancing to the sound of a drum. These ceremonies are kept up for nine days, during which a most horrible stench is caused by the gradual drying and roasting of the corpse. After this period of mourning, the body is washed nine times, wrapped up in a mat or something of that kind, and placed on a high scaffolding, which is draped round with hangings till it looks like a bedstead or field-tent. Here it is left for three years, till it has become thoroughly dry; whereupon they bury it in their houses, giving their friends at this time another funeral feast according to their means. From all these doings, it is apparent that the Formosans are a stupid, blind, and ridiculous heathen people; and yet it has pleased God—as we shall hereafter see—to bring many of them to a knowledge of the Truth.

With regard to the foregoing account, it need only be said that, as Chinese immigration to Formosa increased, the bulk of the aborigines had steadily to retire into those fastnesses from which they have ever since been making head-hunting raids upon their invaders and those associated with them, the result being that this has placed the hill tribes in a position of almost complete isolation; for no outsider dares to travel through that high mountain region unless he is convoyed along from tribe to tribe as an accredited guest. Only very occasional visits by Europeans have been paid to it in recent years, and about some of these a few notes may now be given.

(1) In June 1857 R. Swinhoe spent two or three days among the *Kweiyang* and *Tylokok* tribes of North Formosa, and found them to be a dark-coloured race, whose features, speech, and customs suggested a decidedly Malayo-Polynesian origin. The tatu marks on their faces first attracted notice, the males having three series of short lines arranged in compact groups on their foreheads, the upper and lower consisting of eight horizontal lines each, and the middle one of six. The tatuing of youths begins when they are sixteen years of age; but, when further on in their teens, and when they have qualified for marriage by capturing the head of some enemy, they are tattooed under the lower lip with a square of short horizontal lines. The faces of the married women have tatu marks from ear to ear; first three simple lines; then two rows of signs like x between two lines lower down; and, below all, four more simple lines. These people usually wear very little clothing, but on holiday or festival occasions gaudy dresses are worn; and, on celebrating a marriage, they all turn out in fine attire, and assemble at the house of the bride's father, when the skull won in that combat which entitles the bridegroom to take up his position is brought forward and presented to the bride, who prepares a draught in it by mixing spirits with the brains, and then offers it as a loving cup to all the guests, commencing with the chief of the tribe and ending with the bridegroom. The huts of the *Kweiyang* are made of bark and rough planks held together with rattan, and thatched with palm leaves. The women and old men do most of the hard work in cultivating the fields for dry rice, sweet potatoes, millet, and tobacco. When on the hunt for game or human heads, the *Kweiyang* and the *Tylokok* are much guided by a certain small species of bird, the notes of which are taken either as an encouragement or as a warning. If thought to be propitious, they follow the flight of the bird, and lie in ambush where it comes down, to watch for their prey. The people of these tribes could not be induced to make any reference to their superstitious practices. They dress their dead in a plaid or wrapper, and bury them in the ground without burning incense or raising any kind of monument, only a few trees which are planted at the time being left to mark the spot.

(2) During May 1878 the present writer visited the savage *Bu-hoan* and *Kale* tribes in the high mountain region of Central Formosa. The people of the first-named tribe were found to be a fine, tall, muscular race, and not by any means so degraded as one might have expected them to be. According to the testimony of the few Chinese who barter with them, they are truthful, chaste, and honest in their dealings with each other. The pursuit of head-hunting is their one serious crime against society. This degrading practice appears to be carried on in much the same way and for the same reasons as it is in Borneo, and it has come to be so largely mixed up with the beliefs and customs of the Formosan tribes that, apart from all quarrelling, heads must be brought in to keep up the traditional stand against Chinese invasion, to show the continued possession of bravery, and to furnish an occasion for excitement, for jubilation, and for the inordinate consumption of native whisky. On the visit referred to, rows of human heads and bleaching skulls were seen, fastened up at the end of the chief's house. All the other houses were similarly provided, there being thirty-nine in one collection, thirty-two in another, twenty-one in a third, and so on. They were the terrible outcome of clan-fights, and of many a fatal meeting with straggling little companies along the base of the mountains outside. Intellectually, the

Bu-hoan seemed to be mere children. For example, any party hunting for game or on the war-path would separate into two companies and arrange to meet again 'after one hand'—that is, in five days. When they were questioned through an interpreter who understood the Chinese dialect used in Formosa, one tribesman pointed skyward and referred to the Great Father of all men as *A-pa*; and on the writer entering a ruined house—standing where some bodies had been buried, the villagers peremptorily called him back, and caused some drops of water to be sprinkled over him as an old priestess uttered some sort of incantation. Another little incident may be mentioned. Chief *Arek* and several others had been so benefited by the doses of quinine served out that they invited the donor to go with them and inspect the water-spring of the village—a proposal which the interpreter said was an unmistakable mark of confidence. It seemed that the clear abundant water of the spring was then supposed to be under an influence which was causing numerous deaths among the people, and that they wished to exhibit their practice of firing into it in the hope that the bullets from their long guns might dislodge the unseen enemy. After all the yelling was over, the writer drank from the well before them, and said they need have no fear now, but begin again to use the water from this Well of *Tur-u-wan*. The dampness of the houses or cabins in which they slept was sufficient to account for the prevalent sickness. They commence the erection of these structures by digging a large oblong pit about four feet deep. The earth forming the floor of this pit is then firmly beaten down, and the sides are built round with large stones. The wall is afterwards carried three feet above the level of the ground, a bamboo frame-work is thrown over from wall to wall so as to form eaves about two feet from the ground on either side, and above this thick slates are placed to complete the structure. When any one of the tribe dies, his friends do not convey the body to the outside of the village for burial, but the log fire which always smoulders at one end of the apartment is immediately cleared away, and a deep hole is dug, into which the body is placed in a sitting posture. Pipes and tobacco, with other articles used by the deceased while living, are placed beside the body; some simple ceremony of mourning is gone through, a couple of the nearest relatives fill up the grave, and everything then goes on as usual.

There is not much to remark about the *Kale* clans of Formosa. They were found to be a finely-formed healthy-looking race, their faces free from tatu marks, and all of them wearing a reasonable amount of clothing; not a few, indeed, being rather prettily arrayed in bright-coloured dresses, and ornamented with ear-rings, bangles, and necklaces of cornelian stone. The chief of the village of *Ka-piang* was a stately-looking dame, who received the respectful service of her people as a matter of course. The few presents offered by the writer for her acceptance at the close of the introductory ceremony included about twelve yards of a highly-coloured cotton print which at once stirred the hearts of all the beholders. It was a piece of the flimsiest Manchester stuff, with great staring flowers on a frightful pattern of scroll-work; and yet that bit of cloth made a remarkable impression on the minds of this people. All formality was now banished. The writer and his party were looked upon as having had some share in the manufacture of this wonderful production; the word was passed that a first-class medicine-man was now standing amongst them; and their pent-up feelings found relief in an order to have supper prepared forthwith. Very few

traces were met with of any belief in the unseen. Ghosts are known to exist, and various simple expedients are resorted to for propitiating them; while at harvest time, offerings of thanksgiving take the form of laying out little quantities of grain and cooked meat, that the good spirits may partake of the essence, before the people feast themselves on what is left. The Kale also indulge in the practice of head-hunting; for one morning when the writer pointed with strong disapprobation to a number of freshly cloven-in skulls, the Kapiangers immediately shouted out with great emphasis, 'Lang-wah! Lang-wah!' meaning that all their customs in connexion with head-hunting were not only blameless, but greatly to be commended.

(3) A two days' journey south-east from Kapiang brings one to the country of the *Amia*, the largest tribe in this part of the island. Our fullest knowledge of the *Amia* comes from George Taylor, Chief Lighthouse Keeper at South Cape, from whose notes mainly the following account has been compiled. The *Amia* trace their descent from the occupants of a long catamaran which was washed ashore at Pilam many years ago from a distant island of the Pacific; the place of debarkation is still pointed out and made the scene of an annual religious offering to the spirits of those early castaways. They have also the tradition of a 'first man and woman,' believing that, long ago, some great unknown Being planted his staff in the ground, which first became a bamboo and then gave birth to a man and a woman, the impression of whose feet on a large stone is still shown to privileged persons, at a place called Arapani. The Pilamites also believe in one Supreme Deity named *Marahtoo*, who is supposed to live 'above and beyond the earth,' and whose assistance is implored on all occasions of danger. The ceremony of adoration or intercession is performed by priestesses or witches, and consists of prayers, accompanied by throwing handfuls of small glass beads in the air, together with small pieces of pork. Among the villagers living near South Cape, however, the belief in a special Supreme Deity is unknown, although spirit-worship prevails, with belief in witchcraft, and in prophetic powers as displayed by certain individuals. Beads and small slips of bamboo blackened on one side constitute the ritual implements used when interviewing the spirits; and the priestesses or witches profess to interpret, by the odd or the even number of beads, or by the position of the bamboo slips as they fall, what the spirits wish to make known. Thus ghosts or spirits of the dead are generally believed in, and thought to be visible to the priestesses; indeed, if they appear to others than those authorized to interview or observe them, it is considered necessary for such unlucky beholders to plead for the immediate intercession of the priestesses, lest death should ensue.

Spirits are supposed to dwell in caves, cliffs, and high places, and to be the cause of echoes; and accordingly such localities are held sacred and reserved for superstitious ceremonies and incantations, these being gone through when the tribe is going on the war-path, when sickness prevails, or on other important occasions. The village elders alone may be spectators of what goes on there, and the chief sight brought before them is that of the priestesses contorting themselves and getting worked up into a kind of ecstasy, till they swoon away or pretend to do so. In this last condition they are left till they enter the village next day to make known the will of the spirits. Those priestesses have a reputation all over the island for superiority in knowledge and power, and they are frequently consulted by the people of other

tribes. The *Amia* believe in an after-state, where good and bad actions performed in this life meet with corresponding rewards and punishments. They have no special code of moral law, but are very much guided by use and wont, and by what they suppose will benefit each other and the community generally. Their creed requires belief in a future heaven, a hell, and a purgatory. Every one, of course, hopes he will go to heaven after death, and hell seems to be reserved as the possible *terminus ad quem* for one's neighbours. They say, however, that, since no one ever comes back to complain, the future world must be better than the one they now live in. Heaven is supposed to be far away to the north, and hell equally far in a southerly direction. Purgatory is in the air, and its inhabitants are ghosts or evil spirits. As to the special delights of heaven or what the punishments inflicted in hell may be, they profess complete ignorance, but hold that the latter cannot be so very severe, for otherwise the spirits would not remain. On this whole subject, their general idea seems to be that each soul will hereafter follow its own tastes and inclinations, the good associating with the good, and the bad with the bad.

There is not much courtship or observance of nuptial ceremonies among the *Amia*. Young people fall in love with each other, and proclaim their intention; should no objection be raised, there is the usual gathering of friends with its necessary feast. Cohabitation takes place immediately after. The *Amia* have only one wife at a time, but divorces are very frequent, and arise from infidelity, or some trifling dispute, or incompatibility of temper. Vicious young men get their wives divorced every two years or so, and wives also desert their husbands on the slightest provocation. Nor do such occurrences give rise to much scandal or comment, as the married state with them can scarcely be called a permanent institution until the males are about forty years of age, when they seem to acquire discretion and a fixed wife simultaneously; for after that, divorces are practically unknown. In cases of divorce, where both the husband and wife were possessed of considerable wealth before marriage, an equitable division of the property and the children is made by the village chief, whose decision is accepted as supreme and final. Sometimes the offspring of divorced persons consult their own inclination as to which parent shall retain custody of them, though in deciding this point the grandparents have an influential voice. No stigma is attached to the children, and, in so far as they can, they strive to take up residence in whichever home is the more comfortable. A curious custom is for all the young unmarried men to live and sleep together in a large dormitory, where storytelling and drinking bouts take place. The idea is to keep the minds of the young women and children from being debased—an end that is served by causing them to come in contact only with staid and elderly people.

Before going to hunt, the *Amia* splits open a betel-nut in which he places a red bead (one of any other colour is unsuitable), and, laying it in the palm of his hand, waves it in the face of heaven, invoking protection and success in the chase. When any one is sick, a sorcerer is called, who waves the leaf of a banana tree over the patient, then sucks the painful part, and, whether the person recovers or dies, the only reward to which the sorcerer is entitled is one of these red beads. Also, when an enemy has been killed, a few drops of his blood are sprinkled on the ground as an expiatory offering to the departed spirit. The staple food of the *Amia* includes beef, pork, and all kinds of fish, with rice and vegetables; but they never partake

of chicken, believing that fowls are the abode of good, gentle spirits, and should, therefore, not be used as food. When hungry and far from home, they find relief by tightening their girdles and chewing betel-nut, of which they always carry an ample supply. They suppose that earthquakes are brought about by a huge pig scratching itself against an iron bar stuck into the earth; rain and wind, by spirits in some way or other; and that thunder and lightning arise from quarrelling between the male and female deities named *Kakring* and *Kalapiat*, the former causing thunder by knocking about the household effects in his anger, and the latter producing lightning by uncovering herself in her displeasure—this being a favourite method which *Amia* females adopt for showing their temper against others. The people of this tribe further believe that the sun, moon, and stars were made by two spirits named respectively *Dgagha* and *Bartsing*; and that the sun revolves every day round the flat world, going under the earth at night. During warm weather, both men and women go about stark naked in their own villages; but, when travelling or hunting outside, the men wear waist-cloths and the women jackets and petticoats. The *Amia* may be put down as numbering about 12,000.

Since the cession of Formosa to Japan in 1895, various successful attempts have been made by Japanese travellers and scholars to obtain fuller information regarding the ethnography, language, customs, and folklore of the native tribes, but their accounts are found only in ephemeral periodicals which are unknown to the outside world, or in reports which were prepared for the local Administration, and they are all in the Japanese language. Y. Ino especially made good use of the opportunity given him for collecting a large amount of useful data in every district of Eastern Formosa; and, from the ethnological and linguistic material obtained, he has divided all the aborigines into the following eight groups, proceeding from the north downwards: (1) *Atayal*, (2) *Vonum*, (3) *Tsou*, (4) *Tsalisen*, (5) *Paiwan*, (6) *Puyuma*, (7) *Ami*, (8) *Pepo*. Only a brief summary can be given here of Ino's remarks on the superstitions of some of these tribes. Among the *Atayal*, ancestor-worship is the main religious observance. The people suspend cakes or boiled rice or millet from trees, on the day before full-moon or seed-time and harvest, and hold a general feast next day, at which there is much drunkenness, and any amount of riotous, licentious dancing by the young women and girls of the village. The *Vonum* also meet for ancestor-worship twice a year. Their distinctive ceremony consists in the fixing in their houses of bundles of green grass, and sprinkling native whisky on the ground in front—such spots being looked upon as sacred that day—and, while fire from the striking of steel on flint serves for everyday use, it must be obtained by the rubbing of two sticks on ceremonial occasions like this. People of the *Tsou* tribe have a tree near the entrance to their villages which is thought to have a peculiar sanctity attached to it, and once a year they sprinkle whisky on the ground under its branches, and worship the spirits of their ancestors. They also regard a certain kind of orchid as sacred, and carefully cultivate it near the holy tree just now referred to, as their

forefathers are supposed to have carried this flower into battle and thereby to have gained their victories. The *Tsalisen* occasionally observe a ceremony which takes the form of arranging on the ground dishes containing rice, millet, fruit, and native wine, and mumbling over them certain prayers or incantations, the spirits thus invoked being supposed to come down and preside so long as the ceremony lasts. Severe penalties are inflicted on any one who breaks the rules of this ceremony, or who offends by stepping within the charmed circle. A tradition is current among the *Tsalisen* that their ancestors came down from heaven with twelve earthen jars; and another tradition is that the moon gave birth to them, for which reasons an old earthenware jar and an ancient circular piece of white stone are still preserved and treasured as being of peculiar sanctity. Many of the *Paiwan* think that the spirits of their ancestors dwell in a thick wood; others that they are enshrined in swords handed down from generation to generation. They worship them when about to plant their fields and at harvest-time, and once every five years, on one of these festival days, they join in a game called *Mavayaiya*. This takes the form of the players trying to catch a bundle of woodbark on the point of their bamboo lances, the one who impales it being considered the victor. According to current tradition, this practice is the survival of an ancient game in which a human head was tossed about and then offered as a sacrifice to the spirits. On a certain festival day among the *Puyuma*, a monkey is captured and tied to a tree in front of the boys' public dormitory, where it is killed by the arrows which are thrown at it. The village chief afterwards steps forward and throws a little wine three times skyward, and a little more three times to the ground. All present thereupon spit on the dead monkey, and cast its body away, before joining hands in the hilarious dance which follows. Tradition explains that during early times, when the *Puyuma* were all-powerful, a member of some subjugated tribe was always sacrificed on such occasions, but that, in their present weakened condition, they have to be satisfied with the oblation of a monkey.

FORTUNE (Biblical and Christian).—Two inconsistent conceptions of fortune are found in association with Heb. thought. The one recognizes it as a superhuman force acting alike upon gods and men, and gradually deifies it as a person to be invoked and appeased. The other keeps its apportionment strictly within the functions of Jahweh, without any betrayal of the monotheistic position; and this conception eventually established itself as a norm of thought and devotion in Christendom.

1. There are several indications that Fortune was known to the early Semites under the name of *Gad*, and amongst them must be placed the ancient tradition in Gn 30¹¹. If the text be read according to the direction of the Massoretes (גַּד אֶזְרָא; so also the Targum), Leah is represented as first exclaiming, 'Good fortune is come,' and then selecting the term as the name of her handmaid's son. The tribal name may have been current before this explanation of its origin was given; but the vivid human interest of the narrative points on the whole to the opposite conclusion. The Aram. lady was so delighted at the success of her device and the close of her disappointments that she gratefully recognized the action of the power which she had already learnt to be superior to any local god, and chose for the child a name that would be a memorial of her gratitude and a pledge of his future prosperity. At the time of the narrator this power had probably itself been invested with personality and exalted to the rank of a god. At the more ancient period, in which the traditional story is placed, an earlier stage in the development of the thought is represented. The power is conceived as impersonal, with a certain degree of uncertainty attaching to it, which could not be entirely removed by any kind of appeasement. The endeavour to devise means of ensuring the favourable action of this force must have been an important factor both in hastening the process of personification and in grouping the gods into a hierarchy.

1. **Origin of the term.**—Etymologically the radical idea in the word *Gad* is that of cutting or penetrating into something—cutting the flesh as a religious observance (1 K 18²⁶), or making attacks upon the life of the righteous (Ps 94²¹). 'Cutting off' so as to make detachments or bands is a later meaning (see *Oxf. Heb. Lex. s.v.*). Hence fortune is conceived primarily as an external influence, hostile, or at least likely to be mischievous, breaking in upon a man's hope or scheme, and not to be averted by the ordinary worship of the local god. It was an easy step, in accordance with principles traceable in almost all the early stages of primitive religion, to invest this influence with neutral qualities and make it a source of good as well as evil. That is evidently the stage corresponding with the presuppositions of the narrative of Leah; and the full personification of Fortune as superior to the local gods and altogether outside their control was a natural corollary.

2. **Early range of the conception in Israel.**—It was almost certainly from the Canaanites that Israel learnt this conception of Fortune, and also borrowed the nomenclature. Several place-names might be quoted in evidence. On the northern limit of

Joshua's conquest was the town of Baal-gad (Jos 11¹⁷ 12⁷ 13³), possibly identical with the Baal-hermon of 1 Ch 5²³ (but see Curtis, *ICC* [1910], *in loc.*) and Jg 3². The boundary was variously designated, topographically by the conspicuous landmark of the famous mountain, or, more reverently, by the village on its slopes with the significant name 'The Lord of Good Fortune,' or 'Good Fortune is our Lord.' To interpret the place-name as denoting that Baal brings good fortune to those who reside there is to ascribe to the people an impossible degree of idolatry even in those polytheistic days, unless the name was current among the earlier Can. population. In that case it is easy to understand why the Israelites sometimes preferred to call the place by a less suggestive name. Migdal-gad (Jos 15²⁷), again, in the territory of Judah, is 'the tower of Gad,' and is commemorative of the ancient worship there. Apparently it dates back to a time when Fortune had already become personified in the locality.

A similar feature can be traced in personal names, two of which at least are very ancient. Gaddi (Nu 13¹¹), 'my fortune,' was one of the twelve spies; and Gaddiel (Nu 13¹⁰), 'God is my fortune,' was another. Neither of these involves the conclusion that Fortune was already regarded as an independent deity. Endearment or devoutness is a sufficient explanation. The former recurs again centuries later under the form of Gaddis (1 Mac 2²), the eldest brother of Judas Maccabæus. For Gadi (2 K 15¹⁴ 17), the father of Menahem, there are Nabatæan and Palmyrene parallels; and a fond name of such a kind would naturally be popular with mothers. Azgad (אֶזְגָד) is the name of one of the signatories of the covenant in Neh 10¹⁵. A number of the family or clan had returned with Ezra (2¹²; but cf. Neh 7¹⁷, 1 Es 5¹³ 8³⁸, RVm). The clan was evidently a large one, and the original detachment was followed by a second. Its name has been identified with the Aram. אֶזְגָר or אֶזְגָר (Targ. Is 18²), a 'runner' or 'messenger'; but no early instances of its use in this sense can be found. 'Gad is mighty' (Gray, *Heb. Prop. Names*, London, 1896, p. 145) is the meaning; and the thought is not a general complaint of the hardness of fate, but the ascription of power to a god Fortune conceived as personal. It is not probable that this family learnt this special form of idolatry in Babylon, for so far that district has yielded few, if any, traces of the prevalence within it of the worship of Fortune. The family became familiar with the worship in their earlier Canaanitish home, and brought it with them to Babylon, where, in the misery and disappointment of the times, it may well have spread among their countrymen, though not attracting the native Babylonians. That large numbers of this family should join the return from the Exile would be due partly to a reaction in favour of the worship of Jahweh, and partly to an adventurous and unstable type of character.

The only explicit reference in the OT to the worship of Fortune is in Is 65¹¹, where also the kindred deity Destiny (Meni) appears. The passage may be dated before the reforms of Nehemiah (Box, *Isaiah*, 338), or even before the return from the Exile, in which case it may help to account for the large representation of the B'nê 'Azgad among

the exiles. It shows that the worship of Gad was well organized with a full ritual, and with attractions that appealed strongly to certain types of mind and conflicted with the claims of Jahweh. The group of rites was an adaptation of the primitive *lectisternium*, in which the images of the gods were placed on couches before tables covered with viands (cf. Jer 7¹⁸). Fortune and Destiny would be treated thus in association (cf. Jerome, *in loc.*), there being, indeed, traces that the two were thought of as a pair, different in gender but complementary in function. This 'preparing a table' does not carry the idea of indulgence and debauchery, as in Ezk 23⁴. The thought was that the worshipper would ingratiate himself with the gods, averting ills which Destiny had prepared and securing the beneficence of Fortune; and the simple motive of courting the favour of a god was both original and permanent (cf. Jer 44¹⁷, Bel¹¹⁷).

3. Range outside Israel.—It is not easy to relate the worship of Fortune in Israel with that in kindred races. Aramaean, Arabic, and Syrian parallels are available; and there are possible connexions with Bab. beliefs, though there is no distinct mention of the god. Lenormant writes (*Chald. Magic*, Eng. tr., London, 1877, p. 120) of a 'Manu the great, who presided over fate'; and Sayce states (*Hibb. Lect.*, 1891, pp. 460, 476, 489) that Merodach was worshipped with a view to ensure prosperity. Hence Gad and Meni have been identified with Merodach and Ištar; and this has been strengthened by the Oriental practice of worshipping Jupiter and Venus as the Larger and the Lesser Luck. Yet the result may be only an illustration of the tendency to invest the gods with real influence upon the life of man, or, under other circumstances, to identify them with the planets. For, in the Isaianic passages, Fortune and Destiny are antithetical rather than graded powers; and Meni is the god of a hostile fate, not of a lower degree of good fortune (cf. Skinner, *in loc.*). Similarly the LXX renders Gad by *δαμνίωρ* and Meni by *τύχη*, though the reverse order is supported by evidence of value, both MS and Patristic. But the significant thing is that the translators selected equivalents that are in antithesis. The one denotes a goddess, conceived as benignant; the other a supernatural force, awful, arbitrary, and only with difficulty persuaded to assume an attitude even of neutrality. The Bab. conception was different. It invested its higher deities with a power of affecting man in his enterprise and ways; but, as far as available information goes, it did not personify this power, or even separate in thought the power from the gods so far as to reach the Greek conception of a natural force playing upon gods and men alike. Hence neither the origin of the name Gad nor the responsibility for his worship can be claimed for Babylon. In Persian religious thought there is a closer parallel, possibly dependent in part upon Heb. influences and itself in turn influencing the development of the conception in Israel. An Old Persian word for 'god' is *bagā* (Av. *bagha*; Skr. *bhaga*, 'fortune'; an implication of divinity accompanying the Av. term). *Bayāōs* as a Phrygian name for Zeus, and the identification of Gad with Jupiter, may be of a later date.

At a comparatively early period signs of personification appeared in the principal Sem. dialects. A transition is found in the Syr. phrase quoted by Baethgen, 'I swear by the Fortune (ܡܢܝ) of the king,' with which may be compared the practice of swearing by the *τύχη* of the Seleucids. To places also the name was applied, at first adjectively in the sense of lucky or unlucky, and then with the implication that the place was the abode of a genius or god, kindly or ill-disposed. Both the Isaianic passage and the non-Jewish evidence

point back to an indeterminate period, during which the process of deification had been going on. For, just as an inscription of the 4th cent. B.C., dealing with the financial administration of Lycurgus, refers to the cost of the sacrifices *τῇ Ἀγαθῇ Τύχῃ* (Roberts and Gardner, *Introd. to Gr. Epigraphy*, Cambridge, 1905, 100 Aa 12), and conveys the impression that the worship was longstanding, there are Phœnician, Nabataean, and Palmyrene inscriptions of a contemporaneous or little later date, which refer to the worship of Gad as though its origin were lost in antiquity and its prevalence were known to all. A Punic inscription of 254 B.C. (Cooke, *North Sem. Inscr.* Oxford, 1903, p. 27) carries back the line of descent of one of the royal *καρπόφοροι* to an ancestor who is described as *בן גרמ*. Baethgen reads the name as 'The Fortune of Athê', Athê being probably identical with the Phrygian Attis or Adonis, whose cult was popular in the district (see, however, Nöldeke, *ZDMG* xlii. 471); and in any case a Phœnician deification of Gad at an early date must be allowed. A later inscription was discovered at Maktar in 1892, and records that a local council vowed to *המני ג*—a close parallel to the 'Fortune Celestis sacrum' of *CIL* viii. 6943. 'Lovers of Gad' is the title given on an altar in a village in Hauran to the family at whose expense the altar was built. The Palmyrene inscriptions are later, but again are evidence of a well-established practice. One of them links the worship of Bel with that of *ܡܢܝ ܐܝܬܝܢ ܕܬܝܚܐ ܕܥܡܝܐ*, i.e. Gad, the patron deity of the clan *ܡܢܝ*. Another protects a sepulchre with the imprecation that the breaker-in may 'have no seed or fortune for ever,' and thereby shows how the original conception of fortune as not itself a god, but simply a good gift administered by a god, lingered side by side with the later impersonation. Altogether it is certain that the tendency to deify Fortune was not specific to Israel, but common to the different races among which Israel grew up. It found expression in the roots of their language; it took definite shape in the attempt to analyze and group the apparently superhuman activities that were traceable in human life; and in the struggle with monotheism it was at length worsted, surviving in the form only of a private superstition.

In pre-Islamite Arabia, again, Manāt is one of the three chief deities (cf. Qur'an, liii. 20; Wellhausen, *Reste arab. Heid.*, Berlin, 1897, p. 25; Lyall, *Anc. Arab. Poetry*, London, 1885, p. xxix), and is identified by the astrologers with Venus, the goddess of Lesser Luck (Siegfried, *JPT*, 1875, p. 356 ff.). Gad would consequently be the god of the Greater Luck, and equivalent in popular thought to Jupiter, to whom that title was given. These, however, are comparatively late identifications, and cannot have exercised any influence on the growth of the conception in Israel. What is wanted is a common source for beliefs that prevailed among the principal Sem. races, and cannot at present be traced in Bab. literature. The Assy. Manu rabu (*WAI* iii. 66) has been suggested as the origin of Meni (Lenormant, 120), with Kibi-dunki as that of Gad. The latter god is described as a dispenser of favours; but the linguistic affinities are too remote to allow a confident assertion of dependence. It is more likely that the starting-point is to be found in a primitive human instinct, or rather in one of the earliest differentiations of the religious instinct, and that the development itself in Israel, checked at times of religious revival, recovered under the influence of the indigenous and neighbouring peoples.

4. In the NT.—There are no distinct indications in the NT of the personification of Fortune or of his particular worship. The nearest passage is

1 Co 10³¹; but 'the table of demons' need not even be the formal *lectisternium* in the precincts of the altar or anything more than the feast that was customary after certain sacrifices. It shows that the Christians at Corinth were in danger of becoming entangled in the idolatrous usages of their city, but not that they had yielded to the seductions of the worship of Fortune. Nor may such an inference be drawn from the allusions to sorcery and other magical arts in such passages as Ac 8⁹ 13⁹, Gal 5²⁰, Rev 9²¹ 21⁸ 22¹⁵ *et al.* (see DIVINATION). For, though it was undoubtedly believed that in such ways the weather and the crops, and the health and conditions of men, might be affected for weal or woe, the power assumed to be under the control of the sorcerer was rarely viewed as concentrated in a single person of Divine rank. A close connexion with idolatry is evident, especially in the cities of Asia; but not many in the Christian communities went further than to suspect or suppose that the arts of the sorcerer might elicit supernatural influences or even stir demonic agencies into action. Of the recognition of Fortune as a distinct deity there are no clear traces.

II. While the worship of Fortune was a form of idolatry that marked certain groups in Israel and occasionally became a national danger, views consistent with monotheism appeared at an early time, survived temporary and partial eclipses, gradually gathered force, and in the Christian era may be said to have held the field without any real rival. Of these views, common to both Jews and Christians, it is possible to distinguish several constituent elements.

1. The fundamental belief is that man's earthly fortune, with all its changes, is in the hands of God. To that belief frequent and varied expression is given in Scripture. Pleas for gratitude because of God's gift of good fortune are abundant (as in Dt 6¹⁰); and the Song of Moses is a tribute to God as the dispenser of earthly favour, and a call upon Israel for worship because in that respect there is none like Him (Dt 33²⁶). It was an ancient proverb that 'the lot is cast into the lap; but the whole disposing thereof is of the Lord' (Pr 16³³); and in the early Christian practice the object was to provide a means by which an intimation of the Divine will might be given (Ac 1²⁴⁻²⁶). Ps 31¹⁵ sets each of the godly remnant singing 'My times are in thy hand,' much as in Is 33⁹ 'stability in thy times' is made the principal result of the fear of the Lord. All useful gifts, writes St. James (1⁷), are 'from above, coming down from the Father of lights'; similarly Jesus Christ in Mt 7¹¹ and 6³², where He even expostulates with men for supposing that their physical needs are forgotten. On the other hand, God dispenses evil fortune, according to the OT, where evil spirits and even Satan (Job 1⁹) are His ministers, by means of whom He brings adversity and disaster upon men. In the NT these beings become antagonistic to Him, and themselves independent sources of evil; but they are still subject to His restraints, and countervailing aids are provided (2 Co 12⁷⁻⁹). Everywhere God is the Lord of life; and the degree of earthly weal or woe is portioned out by Him.

2. As to God's aim in determining the changing conditions of life, there is a difference, at least in emphasis, between the teaching of the OT and that of the NT. Briefly the difference is that in the latter case moral considerations outweigh material good fortune, and secular blessedness falls into the background. The promises of the inheritance of the land (Ps 37²⁹, Is 57¹⁸ *et al.*) were taken literally in the one case, but in the other (Mt 5⁶) are inextricably involved with moral advantage. Even Ps 23, with its marvellous history in the records

of devotion, is concerned primarily with earthly fortune; and the still waters, green pastures, and spread table are at least as prominent as the guidance in the paths of righteousness and the confidence of the conscious presence of God. Between Job's estimate of life's relative values and that of St. Paul, there is a striking contrast. Job loses everything; and, when his mind is chastened, he gains more than he had originally possessed (Job 42¹¹⁻¹²). Paul, too, lost most of the good fortune that men prize; but the effect was to make him exult in the fellowship of Christ's sufferings (Ph 3¹⁰), and count all things only refuse, if he could but 'gain Christ and be found in him' (3⁸). Earthly comfort in its varied forms is the principal and most prominent, though not by any means the only, pursuit of the good man in the OT; whereas against such comfort, either in itself or in its natural influence on human character, the NT with the strenuous and lowly life of Jesus in its centre is a protest. From Mt 5⁴⁸ alone it might be inferred that God is indifferent to the morals of men in His gift of fortune; but the real meaning is that He affords the supreme example of fatherly love by showering kindnesses upon His children, though erring (2 P 3⁹). His aim is conceived as no longer chiefly or only earthly good, but as the moral perfecting of men. 'Rains and fruitful seasons' are sent not merely to fill the floors with wheat and the vats with wine and oil (Jl 2³), but as witnesses to Himself (Ac 14¹⁷); and the fortunes of men are so arranged as to become opportunities for or incitements to repentance (Ac 11¹⁸). As He works in men in the prosecution of His benevolent purpose (1 P 2¹³), so He works around them, shaping their lives with a view to their spiritual triumph.

3. The methods He uses sometimes seem arbitrary; nor have the difficulties been entirely removed either by the teaching of Scripture or by later Christian thinking. In His administration of fortune, God sends or permits to come to men pain, sorrow, loss, at times the most poignant and intolerable; and the numerous instances where there is no manifest balance between a man's real deserts and his fortunes carry God's methods as the Lord of human lives beyond the reach of intelligence, and invest them with mystery and apparent self-will. Partial relief may be found, as the Christian poets have been quick to see, in the educative value of pain and adversity, the opportunities for growth by exercise presented to the active and passive virtues alike. And the residue of unintelligibility is no necessary proof of arbitrariness. It may be regarded as unavoidable, or even as an indication of correct thinking, when a finite mind attempts to interpret the ways of the Infinite, and as involved in the great principle of every religion worthy the name that 'we walk by faith, not by appearance' (2 Co 5⁷ marg.).

4. Obscure as God's methods may be, the uniform representation of Scripture is that they are wise and gracious, and, subject to the right action of man's will, effective. The fundamental principle according to which His gifts are bestowed is indicated in the parable of the Talents—'to each according to his several ability' (Mt 25¹⁵), which throws light upon the 'dividing to each one severally even as he will' of 1 Co 12¹¹. The distribution of fortune, as of natural gifts and of function, is in the hand of God, from whom no one is entitled to ask an explanation; yet He does not act without reason, but assigns to each man a lot in life and a series of experiences, such as each is best able to turn to purposes of moral advancement. The co-operation of man's will is indispensable, and neglect or rebellion on his part may make it necessary for God to arrange for him a new set of experiences (Jer 18⁴⁻⁷⁻¹⁰), as His own design to enable a man to

make the best of himself is unchanging. No course could be wiser or kinder than to adapt the conditions of life in the interest of moral training and to the needs of mutual service. How God's particular gifts in detail conduce to that end is often a bitter and insoluble problem; but that such is the principle on which He acts is the implication of Scripture and the treasured conviction of Christendom.

5. Of this belief in the obscure but ethical disposal of human fortunes by God the Incarnation in some of its aspects is an illustration and pledge. On the one hand, as devised by God, it is such a modification of earthly conditions as is designed to bring redemption nigh. The cosmic relations are altered by the introduction of a new and mightier force; and upon the individual play influences from the incarnate Person and Life, which strengthen the tendencies to right and make the passage easier. Good fortune smiles upon him in his upward struggle, and supplies him with encouragement and aid. Further, in that God spared not His own Son (Ro 8²²), the transcendent gift is a proof that His bounty will provide everything necessary for salvation, and order and re-adjust the changing fortunes of man accordingly. On the other hand, the varied incidence of fortune in the life of the Incarnate Himself brought opportunities for His growth in wisdom and in favour with God and man (Lk 2⁵²). Though he was Son, yet He learned obedience by the things which He suffered (He 5⁸), the tragedies of His life becoming a discipline in which there was no spirit of disobedience to be overcome, but a self-surrender to be kept complete at every stage by a deepening insight into the Father's will. Thus 'through sufferings' He was made perfect (He 2¹⁰); His humanity in its absolute dependence upon God became complete in moral dignity and power—a qualification for sympathy with man in every state of fortune, and an eternal proof that God's intention in regulating the good and ill of life is to lead men on without coercion to obedience and perfecting.

LITERATURE.—Commentaries on Gn 30¹¹, especially Dillmann⁴ (1892), Delitzsch⁵ (1887), Gunkel³ (1902), Driver (1904), Skinner (1910); and on Is 65¹¹, especially G. A. Smith⁴ (1889), Delitzsch⁴ (1889), Duhm² (1902), and Box (1908). Siegfried's essay in *JPT* 7 (1876) 356 ff., is especially valuable. Add F. Baethgen, *Beiträge z. sem. Relig.*, Berlin, 1888; J. Wellhausen, *Skizzen u. Vorarbeiten* 2, Berlin, 1899; Noldeke, in *ZDMG* xlii. (1888) 479 ff.; and Baudissin, 'Gad,' in *PRE³* vi. [1899] 328-336. R. W. Moss.

FORTUNE (Chinese).—Popular ideas of what constitutes Fortune among the Chinese are variously classified.

1. We have, for instance, the 'Three Auspicious Stars,' an almost universal compendium, viz. Happiness, Emolument, and Longevity. A brief examination of each of these will help to elucidate the meaning which they convey to the Chinese mind.

Happiness is represented by the character *Fu*, and is frequently symbolized by the figure of a bat, the words for 'happiness' and 'bat' being similar in sound. *Fu* consists of a combination of two characters, signifying 'worship' and 'full,' and is explained to mean 'the felicity which attends Divine protection.' The character is found in every possible connexion: on the gables of houses, on the outside of funeral vaults, on written or painted scrolls; and is constantly heard from the lips of mendicants, and in all forms of congratulatory speech. It may be said to include every variety of earthly desiderata, and to correspond to our notion of 'blessedness.'

Emolument (Luh) is equivalent to the receipt of official stipend, or the material happiness which is conferred by the Imperial favour; and suggests the fact that, in China, one of the great objects of

ambition, and one avenue to greatness which is open, practically, to all classes of people, is the attaining of a position in the service of Government. The 'upper classes' in China consist, almost exclusively, of officials or their relatives, and the 'landed gentry' are represented, to a large extent, by retired officers or their descendants. To the Chinese, therefore, the 'happiness' of official emolument is an endowment of a much more tangible character, and much more capable of realization, than its equivalent in Europe. The word *Luh* is pronounced in the same way as that which stands for 'deer,' and hence 'office' or 'emolument' is often suggested, symbolically, by the picture of one of these animals.

Longevity (Shou)—compounded of the characters for 'old' and 'speak,' indicating the prerogative of age to speak with authority—is frequently represented by a crane or a tortoise, creatures regarded as enjoying an extraordinarily long term of life; and, in Taoist circles, by the peach, with which is connected the gift of immortality.

'May the Three Stars [i.e. Happiness, Emolument, and Longevity] shine on you!' is a familiar inscription on complimentary scrolls, etc.

It must not be supposed that every one possesses an equally unlimited capacity for enjoying these various benefits. Like the operations of Fate, they are strictly measured by the receptivity of those who would seek to partake of them. The portion of happiness which is allotted to a man may be early exhausted by too large drafts upon it; the conditions may be present, but not the power to assimilate the blessings proffered. Happiness, in measure, is within the reach of all, but great endowments are the lot of the few. Similarly, with regard to preferment, though it is asserted that 'God never sends a man into the world without providing him with a place and a vocation,' it is also admitted that he may be unable to maintain the dignity of the office which Heaven has assigned him. Longevity depends upon the Decree (see FATE [Chinese]), but it rests to a large extent with the object of that foreordination whether he attains to the full measure of his allotted span or not. The possession of these gifts, in any large proportion, is recognized as depending on Heaven's apportionment—as the proverb says, 'Complete happiness comes from Heaven'; whilst a lesser degree may be cultivated by the virtuous—'Great virtue carries happiness along with it'; 'To dwell in peace is happiness.'

2. A somewhat more comprehensive category is that of the 'Five Blessings,' viz. Longevity, Wealth, Tranquillity, Love of Virtue, and a Full-filled Destiny.

Wealth.—The character *Fu*, which differs in tone from that which stands for 'happiness,' though both are spelt alike in the Roman system, is explained as signifying a well-filled shelter; and, no doubt, to the vast majority of the Chinese this best represents the gifts of Fortune. The god of wealth is found in a conspicuous place in almost every house of business, and is daily propitiated with offerings and genuflections; for, though economy and fineness are recognized as having an important bearing on the acquisition of wealth, it is believed that 'riches and honour depend upon Heaven.' In this connexion also it is understood that only to a minor extent can man attain to Fortune by his own efforts—as the proverb says, 'Great wealth is from Heaven, little wealth comes from diligence.' The mind which is wholly concentrated on amassing a fortune is likely to be disappointed, since 'Longing for wealth destroys happiness,' 'Man dies in the pursuit of wealth.'

Tranquillity includes health of body as well as peace of mind.

The Love of Virtue is regarded as one of the most certain means to Fortune—as the proverb says, 'To those who do good deeds in secret, Heaven sends happiness in return'; 'Those who rely on virtue prosper'; 'By a single day's practice of virtue, though happiness be not attained, yet misery may be kept at a distance'; 'Perfect virtue acquires nothing, therefore it obtains everything'; 'Perfect virtue does nothing, but there is nothing which it does not do.'

A *Fulfilled Destiny*, or to 'attain to the end of the Decree,' is equivalent to completing the span of life which is allotted; or, in other words, to die a natural death.

3. Another summary is described as the 'Three Abundances,' i.e. Abundance of Good Fortune (*Fu*), Abundance of Years (*Shou*), and Abundance of Male Offspring (*Nan*); but these are recognized as comprehended in the above, and as being synonymous with Wealth, Honour, and Tranquillity. With regard to the last item there is a proverb which says: 'If your sons and grandsons are good, what (other) wealth do you want? If they are bad, what use is wealth to you?'

4. There are other terms applied to Fortune, such as the 'revolution' or 'wheel of fortune,' and the Creator is sometimes referred to in language which seems to represent Him as 'Fortune,' in accordance with the idea that what is brought about for men by a higher power is to be attributed to Fortune.

5. Methods adopted for the attainment of Fortune.—The pursuit of Virtue was, in the early days, regarded as the best, if not the only, means by which the gifts of Fortune might be attained, such gifts being then comprehended under the heads of 'riches and honour'; and in the Classics there are very few references to any arbitrary methods for the acquisition of those gifts. The following of the *Tao*, or living in conformity with Nature, was regarded as the surest way of attaining happiness; but in later ages—possibly as a result of the introduction of Buddhism, with its material objects of worship—a host of divinities was gradually invented, including the 'happy gods,' or gods of Fortune (the Chinese equivalent of the Lares and Penates), who are worshipped with a view to the dispensation of the gifts of Fortune. Thus the *god of wealth* is represented as supporting in one hand a 'shoe' of silver, and holding up a number of fingers of the other to indicate, as is popularly supposed, the amount of percentage he guarantees his votaries. The *god of the hearth*, commonly described as the 'kitchen god,' usually takes the form of a rough print, which is pasted on the wall of the large oven which serves for cooking purposes in Chinese kitchens. The spirit is supposed to preside over the affairs of the household, and is periodically 'invited,' or presented with offerings of food (in some families twice a month); and on the occasion when the 'god' is timed to ascend, in a chariot of fire, to Heaven, i.e. by being burnt in a bonfire, a special oblation of flesh is presented, so as to secure his goodwill as he mounts aloft to report the doings of the household during the year just closing. *Kwanyin*, generally denominated the 'goddess of mercy,' is worshipped by women who are desirous of obtaining male offspring, her name in Chinese being most commonly known as the 'Giver of sons.' The figure of the goddess is in some cases an almost exact replica of the Madonna and Infant—a resemblance which, there is good reason for believing, is the result of a definite historical connexion, rather than a mere accidental coincidence. The varieties of means for warding off evil influences and inducing prosperity are almost incalculable, including the wearing of charms of every description, the

writing of felicitous inscriptions on doors and walls, the scattering of a special powder in the four corners of apartments, the avoidance of ill-omened expressions on festival and other special occasions, and the careful study of the calendar with a view to the discovery of lucky and unlucky days.

6. Fortune-telling.—In the case of those who are in doubt, recourse to various classes of fortune-tellers is usual. These 'calculators of destiny' are generally divided into six classes: (1) those who profess to foretell the future by combining the eight cyclical characters which denote the year, month, day, and hour of birth; (2) those who study the physiognomy, the fingers, etc., of their clients, and attempt to delineate character, etc., thereby; (3) those who employ a number of slips of paper—generally 64 pieces—on which special symbols are written, and a specially-trained bird, which picks out two of these at a signal from its master; the two characters thus selected are interpreted as applying to the circumstances of the inquirer; (4) those who dissect the two written characters which are drawn at random by the applicant from a number submitted to him, and thus profess to trace his fortunes; (5) those who use a tortoise-shell and three ancient coins, or other contrivances, after the manner of throwing dice; (6) professors of *Feng-shui*, or geomancers, who examine the configuration of the countryside for lucky sites for buildings, tombs, etc. Cf., further, *ERE* iii, 731^b.

7. *Feng-shui*, 'wind and water,' is fully treated in a separate article, vol. v. p. 833.

8. Popular scepticism.—Whilst recognizing the fact of the traditions which appear to find almost universal acceptance, it is well to remember that there is another aspect of the question, represented by the common proverbs which seem to cast doubt upon the orthodox beliefs. To refer to the several departments of happiness which are represented as ideal, it may be said that, though the traditional means for the attainment of these desired ends are plainly exhibited and generally adopted, painful experience and doubt-provoking disappointment have suggested that the nominal high roads do not always lead to the destination indicated, as the following quotations may serve to show.

Happiness.—'Success (*Fu*) is the lurking-place of failure.' 'He who possesses a liberal mind will have great happiness.' 'The happy man finds a happy grave without the aid of the geomancer.' 'The fortune-teller dies in the prime of life, the *Feng-shui* philosopher has no burying-place.' 'The geomancer, whilst pointing south, north, west, and east, mumbles unmeaning words; if among the hills there are places which ensure nobility to later generations, why do they not seek such a place and bury their own ancestors there?' 'Misfortune and prosperity have no door, they are evoked by men themselves.'

Emolument.—'Riches and honour are but a dream, office and emolument like bubbles on the water.' 'Wealth is the storehouse of resentment.' 'Honesty never gets rich.' 'To him who does not covet money it comes of itself.' 'Promote happiness by being content, promote health by keeping an easy stomach, promote wealth by cutting down expenses.'

Longevity.—'For cultivating long life there is nothing like moral goodness.' 'The benevolent are long-lived.' 'Virtue is a sure means of longevity.'

Similar expressions are applied to Fortune generally, as, e.g., 'If heart and luck both are bad, you will be poor all your life long.' 'Lucky people need never be in a hurry.' 'The unlucky may do anything.'

Thus, though belief in the efficacy of charms of various kinds may appear to be universal, and fortune-telling, in its several departments, has proved to be a most profitable business, it is nevertheless a fact that, even amongst those who constantly resort to these methods, there is a deep underlying suspicion as to their effectiveness. It may well be that, as the drowning man clutches at a straw, so the Chinese people, taking counsel of despair, find some consolation in the thought that by so doing they are omitting no precaution; and that, even if no good may result, no harm is done in thus maintaining the traditional observances.

The very complexity of the methods may itself account for the growth of sceptical opinions; the number of lucky days, as set forth in the Imperial calendar, and the innumerable cross-currents of good and evil fortune which must be considered in the selection of a date for any enterprise, have resulted in the feeling expressed by the paradox that one is as little likely to go astray by neglecting to consult the calendar as he is in attempting to unravel the complications which attend the selection of a lucky day, according to the arbitrary methods therein set forth. Superstition in China has, therefore, overreached itself, and the future of the Chinese people may serve to show that the chains of traditional custom are not so inexorably fixed as has been generally supposed by their Western critics.

LITERATURE.—See under FATE (Chinese) and FENG-SHUI.
W. GILBERT WALSH.

FORTUNE (Greek).—The word *τύχη* contains the stem of the verb *τυγχάνειν*, which meant originally to hit the mark, as *ἀμαράντειν* meant to miss the mark. Hence *τύχη* had about it, to begin with, the idea of success. The conception of Fortune is absent from the early religion of the Greeks. Macrobius (*Sat.* v. 16) has pointed out that the word *τύχη* never occurs in Homer. By the father of poets everything is assigned to *μοῖρα*. On the other hand, Macrobius remarks that the later poet Vergil even ascribes omnipotence to Fortune. Fortune is a goddess who grows up before our eyes within historical times. There is no mythological history attaching to her. She is more like the simple allegorizations of Roman religion than the complex deities of Olympus, endowed with a family history, personality, and adventures by the prolific fancy of the Greeks. She is not, as some have supposed, an importation from Asia, like Cybele; nor is it necessary to connect her with the mysterious *Cabeiri*. Fortune is rather a home-growth of the Greek intellect. The connexion between the nymph Tyche and the goddess Tyche, which has been so charmingly traced by F. Allègre, seems to be devoid of solid foundation. We read in the *Theogony* of Hesiod (line 360) that one of the daughters of Oceanus and Tethys bore this name:

Εὐδωρή τε, Τύχη τε, καὶ Ἀμφιρῶ, Ὀκυρὴ τε.

And again in the 'Homeric' *Hymn to Demeter* (line 420) one of the maidens who was playing with Persephone, when she was carried off by Pluto, was called by the same name:

Μελιβοδῖος τε, Τύχη τε καὶ Ἰκυρὴ καλυκώπης.

The juxtaposition of the two names *Τύχη* and *Ὀκυρὴ*, as well as a comparison of the two passages generally, makes one feel certain that the author of the hymn was borrowing from the *Theogony*. But that this humble nymph, lost among the crowd of her three thousand sisters (*Theog.* 364), grew into the tremendous power which at last sealed Olympus and ousted the gods from their thrones—this is more than we are required to believe, at least until some proof is forthcoming.¹ All that can really be gathered from Hesiod's mention of the nymph *Τύχη* is that the word *τύχη* was in the Greek language in his time, whereas we cannot be sure that it was so in Homer's. The names of all the other Oceanides being significant, we may justly infer that Tyche's was so also.

1. The poets.—The earliest surviving use of the word, otherwise than as a proper name, is in the 'Homeric' *Hymn to Athena* (xi. 5):

Χαίρε, θεὰ δὲ δὲ ἄμμι τύχην, εὐδαμονίην τε.

Here *τύχη* is not a person, but a thing. The next is in a fragment of Archilochus (no. cxxxi. Gaisf.):

Πάντα τύχη καὶ μοῖρα, Περικλέες, ἀνδρὶ δίδουσι.

The thing is here on its way to being a person. It gives and no longer is given. Half a century later,

¹ Pausanias (iv. 30. § 3) is responsible for the identification.

Aleman finds a very respectable pedigree for this new personage. According to him, Fortune—presumably the fortune of a State—is the sister of Loyalty and Persuasion, and her mother's name is Forethought (*Plut. de Fort. Rom.* 4, p. 318 A). Solon, whose archonship was in 594 B.C., reduces the person again to a thing. In the Introduction to his Laws he invokes Zeus to grant them success and honour (fr. xxiv. Gaisf.):

Πρῶτα μὲν εὐχόμεσθα Διὶ Κρονίδῃ βασιλῆϊ,
θεσμοῖς τοῖσδε τύχην ἀγαθὴν καὶ κῆδος ὑπάσσειν.

According to Theognis (c. 544 B.C.), it is not virtue or wealth which is the one thing needful for life, but simply luck (129 f.):

Μῆτ' ἀρετὴν εὖχου, Πολυταΐδῃ, ἔξοχος εἶναι,
μῆτ' ἀφένος· μόνον δ' ἀνδρὶ γένοιτο τύχη.

In other words, 'Nothing succeeds like success.'

Pindar (c. 490 B.C.) is full of references to *τύχη*, sometimes associating it with Divine agency, as *τύχη μὲν δαίμωνος* (*Ol.* viii. 67), *τύχη θεῶν* (*Pyth.* viii. 53), *σὺν Χαρίτων τύχη* (*Nem.* iv. 7). He appears to have composed an Ode to Fortune, in which he declared her to be a Fate, and rather more powerful than her sisters (*Paus.* vii. 26. § 3). To this Ode is assigned the fragment which is preserved by Aristides (ii. 256),

ἐν ἔργασσι δὲ νικᾷ τύχη,
οὐ σθένος,

in which the sentiment is the same as in *Ec.* 9^u—'The race is not to the swift, nor the battle to the strong.' *Ol.* xii., which is said to have been recited in the temple of Fortune at Himera in Sicily, consists mainly of an address to the goddess herself, though its professed object is to celebrate the achievements of a runner named Ergoteles. This ode may be considered as the first formal appearance of Fortune on the stage of Greek literature. Under the title of 'Saving Fortune' (*Σώτριά Τύχα*) she is hailed as the daughter of Zeus Eleutherius, and is invoked to protect Himera, seeing that ships at sea, battles by land, the counsels of the Agora, and the hopes and fears of men are all swayed by her power. It was under the same aspect, as the protectress of cities, that Pindar bestowed upon Fortune the epithet of *φερέπολις* (*Paus.* iv. 30. § 4).

2. The tragedians.—In Aeschylus, a junior contemporary of Pindar, *τύχη* is rather a form of Divine agency than itself a Divine agent. With this highly religious poet all is *ἄλσα* or *νέμεσις* or *μοῖρα*, with Zeus as chief ruler. *Τύχη* hardly appears as a power of any consequence to mankind. In the *Choëphori* (783-5), 'Zeus, the father of the Olympian gods,' is invoked to bestow good luck (*ὄδὸς τύχας*; cf. *Sept.* 422). In *Sept.* (625) we have an express denial of the reality of chance:

θεοὺ δὲ δῶρόν ἐστιν εὐτυχεῖν βροτοῖς.

If we find in *Agam.* 664

τύχη δὲ σωτὴρ ναυστολοῦσ' ἐφέετο,

it is only as an alternative for

θεός τις, οὐκ ἄνθρωπος, οἶακος θιγών.

The only passage in which Fortune figures as an independent power is *Sept.* 426,

πύργος δ' ἀπειλεῖ δειν', ἃ μὴ κραινὸν τύχη,

which may be let pass as only a way of speaking,¹ which does not represent the true mind of the poet. Neither does Fortune bulk largely in the mental field of Sophocles. We have mention of *τύχη σωτὴρ* (*Ed. Tyr.* 80), but it is only in a passing phrase. The unhappy Iocasta, who proclaims the reign of Fortune and denies Providence (*ib.* 977 ff.)—

τί δ' ἄν φοβοίμ' ἀνθρώπος ᾧ τὰ τῆς τύχης
κρατεῖ, πρόνοια δ' ἐστὶν οὐδενὸς σαφές;
εἰ τί κρατίστον ἤν, ὅπως δυνάτω τις—

is soon convinced of her error; the noose seals her confession that Fate is more than Fortune, and that some intelligent, but inexorable, power rules

¹ For other allusions to *τύχη* by Aeschylus, see *Agam.* 323, *Prom. Vinc.* 376; *Pers.* 602; *Supp.* 380, 523.

the lives of men. Œdipus, flushed with his unparalleled successes, proclaims himself the son of Fortune, the giver of good, and is therefore prepared to face with equanimity the possible revelation of a low origin (ib. 1080 f.) :

ἰγὼ δ' ἐμῶν παῖδα τῆς Τύχης νόμος
τῆς ἐδ' διδούσης οὐκ ἀτιμασθήσομαι.

But the actual revelation is such as to render the light unendurable to him, and it makes the chorus moralize on how man's prosperity 'never continueth in one stay.' This might be taken as illustrating the power of Fortune; yet it is not Fortune but Fate, since it has all been foretold. With Sophocles, as with Æschylus, the religious view prevails, and fortune is nothing but the mode of action of the gods (*Philoct.* 1316) :

ἀνθρώποισι τὰς μὲν ἐκ θεῶν
τύχας δοθείσας ἔστ' ἀναγκαῖον φέρειν.¹

It is not till we come to Euripides, 'the rationalist,' that Fortune appears as a rival power to that of the gods. Euripides was a man of a religious cast of mind, but he was unable to accept the contradictions of the established theology, and he gave voice to the new science and the new philosophy of the Periclean age, as Tennyson did to that of the 19th century. The antithesis between Zeus and Fortune is strongly brought out in a passage of the *Hecuba* (488-91), where Talthybius, finding the ex-queen of Troy lying in the dust, exclaims :

ὦ Ζεῦ, τί λίγω; πότῃρ' ὁ ἀνθρώπου ὄραν,
ἃ δόξαν ἄλλως τῆδε κεκτῆσθαι μάτην,
φρονή, δοκούντας δαιμόνων εἶναι γένος,
τύχην δὲ πάντα τὰν βροτοῖς ἐπικατέειν;

Talthybius does not decide the point, neither does the poet himself,—he was not an atheist, but a sceptic,—but his language is loaded with a triple tautology, as if to emphasize the apparent falseness of the notion that there is an over-ruling Divine will discernible in the course of human affairs. Chance, it is suggested, is the true bishop of the diocese of man.²

With the elder dramatists we found that there was a tendency to resolve chance into Divine agency; with Euripides the tendency is to resolve Divine agency into chance.³ If the gods do preside over the cauldron of human destiny, they throw in confusion, 'in order that in our ignorance we may worship them' (*Hec.* 960). In Euripides, too, we become aware of a change in the conception of *τύχη*. With Sophocles, as with his predecessors, *τύχη*, so far as it was a power at all, was a benign power, and meant definitely 'good fortune,' so that there was no need to add the epithet *ἀγαθή*. But with the lachrymose Euripides, *τύχη* became the personification of Ill Fortune. 'Alas!' says Agamemnon (*Hec.* 785), 'What woman was ever so unfortunate?' 'There is none,' replies Hecuba, 'unless you were to speak of Tyche herself.' Also, apart from personification, the word *τύχη* is used by Euripides in a bad sense (*Herac.* 714) :

ἦν δ' ὅν, ὃ μὴ γένοιτο, χρῆσθαι τύχῃ;

With later writers this was usual only when the word was employed in the plural. *Τύχαι* properly means no more than 'turns of chance.' But man looks upon good fortune as his right, and so attends more to the changes for the worse.⁴ The successors of Euripides went further than he did himself. Chæremón, a tragic poet who flourished about 380 B.C., answers the question asked by Talthybius

¹ For passing mentions of *τύχη* by Sophocles, see *Aj.* 485, 808; *Œd. Tyr.* 778, 776; *Ant.* 996, 1158, 1182; *Trach.* 724; *Phil.* 546, 1096.

² Cf. a passage quoted by Stobæus, *Ecl.* I. 196 :

ἢ τὰ θνητῶν καὶ τὰ θεῶν πάντ' ἐπισκοπούσα [μὲν]
καὶ μόνον ἡμῶν ἐκαστὴν τὴν κατ' ἀξίαν τύχην
μερίδα.

By throwing in the words κατ' ἀξίαν, the writer, unless he is speaking ironically, makes chance into Providence.

³ See especially *Hec.* 711-715, 1187-1143; *Hec.* 956-60.

⁴ Other passages in Euripides bearing on fortune are *Ale.* 785; *Herac.* 806.

in a sense unfavourable to Zeus and his coadjutors (*Stob. Ecl.* I. 202) :

Πάντων τύραννος ἡ τύχη 'στὶ τῶν θεῶν,
τὰ δ' ἄλλ' ὀνόματα ταῦτα πρόσκεινται μάτην,
μόνη διοικεῖν οὖν ἅπαντα βούλειται.

To the same effect speaks the comic poet Menander, who exhibited his first play in 321 B.C., the year which followed the death of Demosthenes and of Aristotle. The words of Menander seem to be intentionally directed against the philosophical doctrine of Providence (*Stob. Ecl.* I. 194) :

Τύχη κυβερνᾷ πάντα, ταύτην καὶ φρένας
δεῖ καὶ πρόνοιαν τὴν θεὸν καλεῖν μόνην,
εἰ μὴ τις ἄλλως ὀνόμασιν χαίρει κενοῖς.

The conviction that Chance is the real arbiter of the life of man reappears long afterwards in Lucian. In his Council of the Gods, Momus is made to lay a complaint before Zeus with regard to the way in which Heaven is becoming peopled by aliens, such, for instance, as Mithras the Mede. But the most absurd part of it all, adds Momus in conclusion, is that certain empty names of things which have no substantial existence, such as Virtue, Nature, Destiny (*Εἰμαρμένη*), and Chance, are being set up as deities. Though these are mere figments of philosophers, yet they succeed in withdrawing their worshippers from the gods; for men are convinced that, though they were to sacrifice a thousand hecatombs, yet Chance will perform the part of Fate (*τὰ μεμοραμένα*) and give to each what was spun to him from the beginning.

3. The historians. — Among the historians, Herodotus is too much occupied with the religious view of life to leave any real efficacy to Fortune. He sees everywhere the hand of God in history. Sometimes this action is moral, as in the story of how Glaucus, who had entertained the thought of appropriating a deposit, had not a single descendant left to perpetuate his name in Sparta (vi. 86). Sometimes it is merely capricious. There is a jealous God, who will not allow even big beasts to 'fancy themselves' (*φαντάζεσθαι*), but has a thunderbolt ready to hurl at them. This God acts on the same principle as was enjoined by Thrasylus upon Pericles, and docks every head that overtops the rest (vii. 10). It has been well remarked by F. Allègre that Tyche is in part a protest against the malevolence of the Olympian deities. It was something to have a power which was purely non-moral, and which, if it rewarded without merit, was at least free from malignity when it caused disaster. With Herodotus, Fortune is a sign of the present favour of the Immortals,¹ but,

'When haughty power mounts high,
The watcher's axe is nigh.'

A rigorous consistency must not, indeed, be demanded from the chatty and charming Ionian. He gives us views of all sorts. The same Artabanus, who is made to dilate on the jealousy of God, also offers the following highly sensible remarks—that good counsel is the best thing; for, even if it be worsted by Fortune, its goodness is not impaired, whereas he who has counselled ill, even if Fortune attend upon him, has only made a find (*εὕρημα εὗρηκε*).

Although Thucydides came into the world only 13 years later than Herodotus,² yet in turning from the one to the other we are passing at one bound from the theological to the positive stage of thought. Thucydides makes Pericles say, or appear to say (for the passage admits of different interpretations), that there may be a real unintelligibility in the march of events, as there is in the processes of human thought,³ 'wherefore we are accustomed to ascribe to chance whatever takes

¹ I. 124: ὃ καὶ Καμβύσης, σὲ γὰρ θεοὶ ἐπορεύουσιν· οὐ γὰρ ἄν ποτε ἐς τοσούτων τύχης ἄντικεν.

² Herodotus was born in 484 B.C.; Thucydides, in 471.

³ I. 140. § 3: ἐνδεχέσθαι γὰρ τὰς συμφορὰς τῶν πραγμάτων οὐχ ἥσσαν ἀμελῶς χωρῆσαι ἢ καὶ τὰς διανοίας τοῦ ἀνθρώπου.

place contrary to reason.' If anything can be shown to have a definite cause, then it does not come under the domain of chance. That name is reserved for those events for which we are unable to assign a cause. Chance constitutes the irrational, or at all events inscrutable, element in things, which is not under the control of human forethought. Τύχη is now no longer a person, but a statement of fact. There are certain events for which no cause can be assigned. These it is convenient to throw together under the head of τύχη. This meaning of the term was facilitated by the use of τυγχάνειν as a mere auxiliary verb—τυγχάνω περιπατῶν, 'I am walking,' ἐτύχαιον περιπατῶν, 'I was walking,' and so on. So generally τύχη meant what *was*, without question raised as to how it came to be. If one had insisted on raising this question and getting an answer from Thucydides, he might perhaps have referred one to Divine agency. At least he makes the Melians declare that they rested their trust not to be defeated τῇ μὲν τύχῃ ἐκ τοῦ θεοῦ (v. 104), seeing that their cause was just.

4. The orators.—In the orators we may expect to get nearer to the heart of the people than in a scientific thinker like Thucydides. For the orator, who has to play upon the feelings of the multitude, must share those feelings himself, or at least seem to do so. Let us take the greatest of them—Demosthenes. He is full of passages on the power of Fortune,¹ as well he might be, seeing that his own 'best-laid schemes' went 'aft agley.' It was the touch of truth in the reproach brought against him by his rival Æschines, that he was an unlucky statesman, which gave it its sting. Æschines (*in Ctes.* § 157, p. 76) warned the Athenians against the 'evil genius and ill fortune which ever dogged the footsteps of the man.' Demosthenes himself displayed a secret distrust in his own luck, when he got his friends to put their names to his decrees, instead of signing them with his own.² But in his public speeches he put a bold face on the matter. He had done all that in him lay; if fortune thwarted him, he was not to blame (*de Cor.* § 303). But it was absurd to attribute the disasters of the State to his personal fortune. Nor was the fortune of the State itself really bad. For the Athenian State had the advantage over other States of having played the nobler part, and yet being better off than they. But Athens had to take her share in the general blast of ill-fortune which was then blowing over mankind—with the exception, we must suppose, of Philip (*de Cor.* §§ 253, 254, p. 311). This curious conception of a hierarchy of 'fortunes'—that of individuals, of States, and of mankind in general—is in accordance with the genius of polytheism, and throws light on the manifold worship of Fortune public and private, which became more prevalent as time went on.

5. The philosophers.—Anaximenes (544 B.C.) made a very shrewd remark when he said: 'We are wont to apply the term "fortune" to the element in life which is incalculable to man. For, if we always went right in our judgments, the name of Fortune would never have been heard of' (Stob. *Ecl.* ii. 346). We get a very slighting estimate of the power of Fortune in what may perhaps be deemed an unexpected quarter. Democritus (430 B.C.) is quoted as saying (Stob. *Ecl.* ii. 344):

'Men have framed for themselves an image of Fortune by way

¹ *Olynth.* ii. § 22, p. 24: μεγάλη γὰρ ῥοπή, μᾶλλον δὲ τὸ ὅλον ἡ τύχη παρὰ πάντ' ἐστὶ τὰ τῶν ἀνθρώπων πράγματα; *de Pace*, § 11, p. 59: δι' εὐτυχίαν, ἣν συμπάσης ἐγὼ τῆς ἐν ἀνθρώποις οὐσῆς δεινότητος καὶ σοφίας ὁρᾷ κρατούσαν.

² *Plut. Vit. Dem.* 21: τοὶ δὲ ψηφίσμασιν οὐχ ἑαυτὸν, ἀλλ' ἐν μέρει τῶν φίλων ἑκάστων ἐπιγράφεον, ἐξουινούμενος τὸν ἰδίον δαίμονα καὶ τὴν τύχην.

of apology for their own ill counsel. For Fortune does not oppose wisdom much, but the quick-witted and clear-sighted man guides most things in life aright.'

With regard to the power of Fortune, Epicurus speaks as contemptuously as his predecessor, in language which seems to be modelled on his.¹ In the fourth book of the *Laws*, Plato's Athenian stranger is on the point of saying that 'pretty nearly all human affairs are a matter of chance.' He corrects himself, however, and substitutes the formula that 'God, indeed, governs all things; but, under God, chance and opportunity (τύχη καὶ καιρός) are the pilots in all that relates to man,' this again being amended by the addition of 'art' to 'chance and opportunity,' as being more polite (*ἡμερώτατον*). But, when we reach the tenth book, which is Plato's great and final pronouncement on matters theological, we find a very different value assigned to art (τέχνη). He starts from the view held by some people that 'all things which come into being, or have come, or yet shall come,' are due to three causes, Nature, Chance, and Art—the more important, such as the four elements and the constitution of the universe, being ascribed to the first two, Nature and Chance, and the less important to the last, namely Art. He then goes on to show that the soul is the only thing that moves itself, and must therefore be the cause of all becoming. Now, soul is either good or evil, wise or devoid of wisdom. It is impiety to say that the orderly movements of the universe are caused by an evil and unwise soul; we are therefore compelled to conclude that they are produced by one or more souls possessed of perfect virtue (898 C). But, if soul be prior to body, then the things of the soul are prior to those of the body. And, as art is one of the things of the soul, we are thus brought to a Divine artificer more exact and painstaking than any human workman, and one therefore who will not neglect small matters any more than great. In this cosmos of the beneficent soul (896 E), what room is left for chance? Plainly there is none. Chance then—Plato does not say this, but we may say it for him—must lurk in the chaos which precedes the cosmos, where dwells the evil soul of disorder.

If we turn now to Aristotle, we shall find, as usual, the same thing said, only in less theological language. After giving us in the *Physics* (ii. 3) his famous fourfold division of causes, into Material, Formal, Efficient, and Final, he goes on to say that Chance also and Spontaneity (ii. 4: καὶ ἡ τύχη καὶ τὸ αὐτόματον) are reckoned among causes. How then do they come in, and are they synonymous, or are they not? First, let it be observed that a thing is due to chance, not if it have not an efficient, but if it have not a final, cause—in other words, if it be not intended. A man who is not in the habit of going to market goes thither on a particular occasion, and meets another man who takes the opportunity of paying him a debt. This, we say, is due to chance. It is the kind of thing that might have been done on purpose, only in this case it was not. Each of the two persons has his own particular cause for going to market, and the payment of the debt results from the conjunction of the two, as a kind of by-product. Thus Chance (τύχη) is something within the sphere of mind or human agency which is not due to that agency. And, as Chance is to Man, so is Spontaneity to Nature. When some effect which might be produced by Nature is not produced by Nature, then we say that it took place spontaneously. It is not necessary here to discuss the question of Spontaneity. But, with regard to Chance, let it be observed that Aristotle finds the source of it in undesigned collocations.

¹ See Stob. ii. 354, which may be emended from *Cic. de Fin.* i. § 63.

Preller, *Gr. Mythologie*, ed. Carl Robert, Leipzig, 1894, pp. 539-544; O. Gruppe, *Gr. Mythol. u. Religionsgesch.*, Munich, 1906, Index, s.v. 'Tyche'.

ST. GEORGE STOCK.

FORTUNE (Iranian).—The concept of fortune in the sense of chance or good luck finds little place in the Avesta and Pahlavi texts. A happy wife is termed 'fortunate' (*hubagha*) in *Visp.* ii. 7, but neither this nor the frequent word *ustā*, 'weal,' 'good fortune' (lit. 'according to wish'), can be regarded as referring to good luck in the common acceptance of the term (cf. the passages listed by Bartholomæ, *Altiran. Wörterb.*, Strassburg, 1904, col. 417 f.). Nevertheless, there are a few passages which seem relevant in this connexion. Success and fortune (*apemica bagemera*) are objects of reverential honour (*Yast* xv. 1), as is also the everlasting and boundless progress of events according to one's wish (*vispāyūm . . . ūstatātem akarānem*), which it is the torture of the wicked not to enjoy (*Visp.* xviii. 2). Supplication is offered to the Fravashis (*q.v.*) for all boons (*ayaptandm vispandm* [*Yast* xiii. 135]), who grant them when prayed for (*ib.* 24), as do Ardi Sūra Anāhita (*ib.* v. *passim*), Tistrya (*ib.* viii. 49), Drvāspa (*ib.* ix. *passim*), Mithra (*ib.* x. 33), Vayu (*ib.* xv. *passim*), Aši (*ib.* xvii. *passim*), and Xsathra Vairya (*Vend.* xx. 3). Boons are invoked upon Vištāspa by Zoroaster (*Yast* xxiv. 46), while Atar (the Fire) prays (*ib.* 38) on behalf of the same monarch: 'May the Apportioner and Distributor bring to thee a boon' (*upabarať ayaptem baxtača nvaštača*), the allusion probably being to Ahura Mazda. According to the 9th cent. *Sikand-Gumānik Vjār*, iv. 8, 29 (tr. West, *SBE* xxiv. 128, 130), heaven (*spihār*) is the place of the Divinities (*baghān*), who are 'the distributors of happiness (*nēvakāh* *baxtārān*), from which they always justly bestow their distribution of every happiness.' In conformity with this, Haoma granted his four first worshippers the heroic sons Yima, Thrāštaona, Urvāxsaya and Keresāspa, and Zarathuštra (*Yasna* ix. 4, 7, 10, 13); and the obtaining of boons is the direct reward for pious observance of religious duties (*Yast* xxiv. 25).

Among the people it would seem that fortune played a larger rôle than in the official religion, for *baxta*, 'fortune' (also 'fate'; see FATE [Iranian]), occurs as a component of a number of proper names (Justi, *Iran. Namenbuch*, Marburg, 1895, pp. 61 f., 487 f.):

Baxtātrī ('blessed by fortune'), Baxtāvar ('fortunate'), Baxtiyār ('possessing fortune'), Baxtišāh ('fortunate king'), Azādbaxt ('possessed of the fortune of the free-born'), Bidārbaxt ('possessed of watchful fortune'), Darārbaxt ('having the fortune of Darius'), Juvānbaxt ('possessed of young [i.e. sturdy] fortune'), Hūbaxt ('having good fortune'), Xurānbaxt ('possessed of joyous fortune'), Nāubaxt ('having fortune [ever] new'), Nēkbaxt ('possessed of fair fortune'), Sūdābaxt ('to whom fortune is friendly'), Šigūftānbaxt ('he whose fortune has bloomed'), Sultānbaxt ('possessed of the fortune of a sultan'), Vadārbaxt ('possessed of evil fortune'), and Zādābaxt ('fortunate through the birth [of a son]').

Yet it must be confessed that the concept neither of Fortune nor of Fate (*q.v.*) was encouraged by Zoroastrianism. In the ceaseless conflict of good with evil, which human and super-human beings alike must wage, there was little room for mere chance. Such fortune as the Iranian might crave—and all that he might have—was such as his own efforts could win; and the most besides that he might hope for were those boons which Ahura Mazda and his minor Divinities might vouchsafe their pious worshipper and fellow-combatant against Ahriman and his forces of evil.

Side by side with fortune went misfortune, not alone for the wicked who merited it, but even for the good. Why the wicked so often flourish in this world while the righteous suffer woe is answered

by ascription of both good and evil fortune to Fate by the *Dinā-i Māinōg-i Xraf* (li., tr. West, *SBE* xxiv. 93 f.). A more orthodox answer, and one more in accord with the Zoroastrian spirit, though not without a fatalistic touch, is given in the *Dāstān-i Dinik* (vi., tr. West, *SBE* xviii. 23-25), which first states that this state of affairs is more apparent than real, for

'not at every time and every place, and not to all the good, does evil happen more—for the spiritual welfare of the good is certainly more—but in the world it is very much more manifest' (§ 2).

The treatise then goes on to say that 'the labour and trouble of the good are much more in the world, and their reward and recompense are more certain in the spiritual existence; and the comfort and pleasure of the vile are more in the world, and their pain and punishment in the spiritual existence are more severe. And this, too, is the case, that the good, through fear of the pain and punishment of hell, should forsake the comfort and ease in the world, and should not think, speak, or do anything improper whatever. And through hope for the comfort and pleasure in heaven they should accept willingly, for the neck [i.e. as a yoke], much trouble and fear in the practice of virtue in thought, word, and deed. The vile, through provision with temporary enjoyment—even that enjoyment of improprieties for which eventually there is hell—then enjoy themselves therein temporarily, and lustfully on account of selfishness; those various actions also, through which there would be a way to heaven, they do not trouble themselves with. And in this way, in the world, the comfort and pleasure of the vile are more, and the anxiety, vexation, despondency, and distress of the good have become more; the reason is revealed by the stars.'

LOUIS H. GRAY.

FORTUNE (Jewish).—God's free interference in human affairs is one of the cardinal doctrines of the OT. To His causation as rewarding or punishing are ascribed all the happy and unhappy experiences in human life. There is therefore no Hebrew equivalent for *Fortuna*. Leah's exclamation, נָנִי, Gn 30¹¹, rendered in LXX *ἐν τόχῃ*, should be translated 'by the help of Gad' (cf. נָנִי, v. 12, and HDB. art. 'Gad'), a divinity of fortune supposed to have been worshipped in Laban's household (see FORTUNE [Biblical and Christian]). Post-exilic Judaism further developed the doctrine of Divine compensation. Ezekiel was the first to teach its application to individual no less than to national life. The fundamental doctrine of the Wisdom literature is that piety is remunerated in this life.

The gist of the book of Tobit is that all ends well, and better than before, because a righteous man is rewarded for his merit. The Mishna *Pe'a*, i. 1, which is repeated in the daily Morning Prayer, sees in the observance of certain commandments a profitable investment, 'the interest of which a man enjoys in this world, while the capital remains intact in the world to come.' In *Kid.* 39b we read: 'Whosoever keeps one commandment is rewarded (in this world), his days are prolonged, and he will inherit the earth.' Cf. *Pirke Ab.* iv. 11: 'Whosoever keeps the Law in the midst of poverty shall eventually keep it in the midst of wealth.'

Likewise, a state of adversity is not a mere sport of fickle fortune, but an exercise of *קִרְיָה*, the attribute of Divine judgment. God deals with man in a judicial manner, *מִיָּד קִרְיָה*, 'measure for measure.' To every transgression of the law an appropriate penalty is attached: 'With what measure one measures it shall be measured unto him' (*Soṭa*, 8b). 'There is no death and no suffering without sin' (*Shab.* 55a). Frequently the correspondence between each manifestation of misfortune (so-called) and the particular sin which caused it is not evident; but it exists, and resignation is demanded of the sufferer. The Burial Service is called *קִרְיָה*, the acknowledgment of the justice of the Divine judgment.¹ Some instances of misfortune are viewed as evident manifestations of Divine retribution. Thus bereavement is the penalty for broken vows, for neglect of the study of the Law and of certain ceremonies; domestic strife, premature birth, and death of children in infancy, for enmity without cause. For with-

¹ This is an ancient forensic term 'to plead guilty' (*Ber.* 19a. *Ta'an.* 11a). The Mish. *San.* vi. 6 directs that after an execution the relatives and friends of the criminal should call on the judges and witnesses and acknowledge the justice of the decree.

holding tithes and other priestly dues comes failure of crops. Violence is punished by swarms of locusts and famine; perversion of justice by wars and pestilence; false swearing, blasphemy, and Sabbath-breaking by visitation of wild beasts, depopulation, and devastation; incest, idolatry, and neglect of duly observing the Sabbatical and Jubile years by exile; fornication by wounds, bruises, and the bite of serpents, etc. Dropsy is a token of immorality, jaundice of hatred without cause, poverty of pride and overbearing, croup of slander (*Shab. 32b ff.*). Bloodshed was the cause of the destruction of the Temple and driving the Shekhina away (*ib.*). Jerusalem was destroyed for neglect of Sabbath observance and of daily recitation of the *Shema*, for impudence, for despising school-children, for levelling classes, for not reproving each other for sin, for slighting the learned (*Shab. 119b*).

The manifold experiences of life, however, did not square with this doctrine of judicial retribution; and a problem was created which already tried OT saints (*e.g.* Ps 73). In the age of Koheleth, 'because sentence against an evil work was not executed speedily' or the righteous rewarded, evil was on the increase (*Ec 8¹¹*). The author himself did not know what to make of life. The problem must have been more trying during the religious persecution under Antiochus. A modification of the OT doctrine of retribution became necessary. A man's worth was not to be estimated by his fortunes and misfortunes. The true compensation was in another world. This faith supported the martyrs under persecution. It did not, however, entirely solve the problem to the legalist.

R. Yannai said: 'It is not in our power to explain the prosperity of the wicked and the suffering of the pious' (*Pirke Ab. iv. 15*). When Moses was on Mount Sinai to receive the Law, God revealed to him the greatness and martyrdom of R. Akiba. 'What, said Moses, such knowledge of the Law and such a reward! Hush, God replied, I have thus decreed it' (*Menaah. 29b*).

To account for the inequalities of life with regard to nations and individuals, the Rabbis devised a theory which is a combination of OT views and that which relegates retribution to another world, according to which the prosperity of the wicked is a reward in this world for some merit, the punishment being reserved for the next world; the suffering of the righteous is to be regarded either as chastisement for some imperfections, or as a trial of their faith and constancy, or even as an atonement for others. For references to the Rab. literature on the subject, see Weber's *Jüd. Theol.*, Leipzig, 1897, ch. xx.

The spread of astrology all over the Roman Empire, its universal acceptance as an exact science, and its hold on the popular mind affected also Jewish folklore and introduced into the Judaism of the Talmudic period an attraction for the pagan doctrine of fortune. The term used for it is *mazzal*, Aram. *מַזְלָא*, *mazzala*, standing also for constellations of the zodiac and for planet. Since there is no record in the post-exilic age of a relapse into star-worship, the re-introduction of the term into the Jewish vocabulary should be traced back not to Babylonianism, but to contact with the 'Chaldeans,' astrologers and charlatans of the early Roman Empire. *Mazzal*, then, is not a divinity like *Fortuna*, but is either a 'station of the planet' at the time of a nativity or of some other event, or it signifies, in the late Magian sense, a *fravashi* (*q.v.*), the genius, guardian angel, 'external soul' of an individual. Another term is *גַּד*, *gad*. Sometimes both are used, *e.g.* *גַּד וְכֶסֶד מַזְלָא* (*bish gadda utmia mazzala*), 'thou of ill fortune and obscure planet' (*Koh. R. vii. 32*). But the use of the word was discouraged by the Rabbis because of its association with the god *Gad* of Is 65¹¹ (see RV).

VOL. VI.—7

Thus *Shab. 67b* forbids the repetition of the magic formula, *גַּד גַּדְדִּי וְיִשְׁרֹף לִי*, *gad gaddi yisruḥ la* = 'grant me fortune, O my Fortune, and relax not.' A place *Gaddia* ('fortunes') was kakophonized into *Gallia* ('danghills'). *Mazzal* remained a Jewish word, and *mazzal tob* ('good luck') is still used as a formula of congratulation at births, weddings, the blessing of the new moon, and other occasions.

Mankind, then, has a mysterious connexion with the planets (*Targ. Ec 7¹⁵*). 'All depends on that connexion (*Mazzal*)' (*ib. 9¹⁻²*).

'Life, children, sustenance depend not on a man's merits, but on his *Mazzal*' (*Mo'ed Kat. 28a*). Every individual has a *Mazzal*. 'In the case of a sudden fright, if one does not see the cause of it, his *Mazzal* sees it' (*Meg. 3a*). 'The *Mazzal* makes wise; the *Mazzal* makes rich' (*Shab. 160a*). 'Every plant has a *Mazzal* in heaven, which influences it and bids it grow' (*Gen. R. 10*). 'Even the copy of the Law in the Synagogue chest is subject to the influence of *Mazzal*' (*Zohar Niso, 134*). 'Animals, on the other hand, have no *Mazzal*' (*Shab. 63b*). 'The *Mazzal* sees neither what is before it, nor what is above it, but what is below it, like a man descending from a ladder with his face turned backwards' (*Yum. R. 12*). 'The propitious hour recedes if pursued' (*Ber. 64a*). The *Mazzal* of two is stronger than that of one (*B. Meg. 105b*).

Celestial phenomena came to be regarded as harbingers of good or of evil.

Thus an eclipse of the sun forebodes evil to the Gentiles and of the moon to the Jews, because the former reckon time by the sun, the latter by the moon. If the eclipse is in the east or west, it concerns the inhabitants of the respective places; but, if in mid-heaven, the portent refers to the whole world. A red sun is an omen of war, and a grey one of famine. If the eclipse is at sunset, the forthcoming evil will be delayed; if at sunrise, it is near at hand (*Suk. 29a*).

Some days were considered more fortunate for transacting business than others (*Sanh. 65b*). The corn of the year before a Jubile was supposed to be of finer quality (*ib.*). There were lucky and unlucky months.

'If an Israelite has a lawsuit with a Gentile, let him withdraw in the month of Ab because his *Mazzal* is weak, but let him present himself in the month of Adar when his *Mazzal* is strong' (*Ta'an. 29a*). Merit is imputed on a meritorious day, and guilt on a guilty day (*ib. 28b*). It is unlucky to submit to the operation of bleeding on a Tuesday, because on that day Mars reigns in the heavens. Mondays and Thursdays, too, are dangerous, but may be risked by those who have ancestral merits to shelter them. Friday should also be an unlucky day, but, since the multitude are accustomed to that day, 'the Lord preserveth the simple' (*Ps 116⁹*). Wednesdays on the 4th, 14th, and 24th of the (lunar) month should be avoided. Likewise the new moon, the third of the month, and the eve of festivals are dangerous (*Shab. 129b*). The day of the new moon was regarded as unlucky for the transaction of business (*Sanh. 65: 58¹⁷², 171*); so also Fridays. The *Shulch. Aruch Yore de'or*, 179, directs that one should not embark on a new venture on Mondays and Wednesdays. See also *Zohar* on Pin'chas. Tuesday is a lucky day, because on the first Tuesday the words 'that it was good' (*Gen 1¹⁰*) were repeated (*Pesach. 2*). Virgins marry on (the eve of) Wednesdays, and widows on Thursdays (*Keth. i. 1*). On the night of the Great Hosannah it is possible to ascertain whether one will survive the year by observing one's shadow on the wall. The shadow of the man destined to die will appear headless (current Jewish tradition). Nachmanides on Nu 14⁹ sees Scriptural allusion for this tradition, the words 'Their shadow is removed from over them' (see RVm) being equivalent to 'doomed.'

The gifts and denials of fortune were considered beyond control. The fortunate was one 'on whom the hour was smiling' (*Ber. 7a*). He could risk being in dangerous situations. 'Thou art in luck,' said Abaye to his colleague R. Papa, 'the Demon (Ketek Meriri, who was then raging) could do thee no harm' (*Pesach. 115b*). The following pretty story deserves mention:

R. Joseph Mokir Shabbi (= Sabbath-respecter) is foretold by a 'Chaldean' that he will eventually obtain the enormous property of his rich neighbour. The latter sells his property and purchases a pearl of great price, which he keeps fastened in his turban. In a shipwreck he loses his turban. It is swallowed by a fish. After some time, at a fish market R. Joseph happens to be the only purchaser of fish in honour of the Sabbath, and comes into possession of the identical fish and the precious pearl (*Shab. 119a*).

Similarly the unlucky man regarded himself as hopeless. A brother of Raba in the agony of his last moments objected to prayers on his behalf as useless 'because he was delivered to his *Mazzal*' (*Mo'ed K. 28a*).

A change of circumstance may effect a change of fortune. A common saying among the Jews is *M'shanneh makom M'shanneh mazzal* (מְשַׁנֵּה קוֹמָה מְשַׁנֵּה מַזְלָא). In case of extreme illness the custom, based

on *R. Hash.* 17a, still prevails of changing the patient's name, generally into *Chaim*, signifying 'life,' or *Alter*, 'another.' In the formula said on the occasion (see p. 149 of the *Book of Life*, ed. B. H. Asher, London, 1863) occurs: 'And thus may his Mazzal be changed from evil to good,' etc. Many Rabbis asserted that Israel is not influenced by Mazzal (*Shab.* 156), but the belief in astrology was already common.

In the Middle Ages, Maimonides was perhaps the only one who wrote against a belief in fortune (*Yad Ab. Cochab.* xi. 8). On the other hand, that most talented Rabbi, Ibn Ezra, was the most superstitious. In the poem on his Evil Star he maintains that if he dealt in candles the sun would not set in his lifetime, and if in shrouds no one would die. Although this was written in jest, he lived up to the conviction of his ill fortune. He was himself the author of several works on Astrology.

LITERATURE.—See literature at the end of art. *FATE* (Jewish).

A. E. SUFFRIN.

FORTUNE (Roman).—It is not possible to follow out the history of the ideas which the Romans attached to this word with the same accuracy as in the case of Greece; for (1) the Romans have left us no literature earlier than the second half of the 3rd cent. B.C.; and (2) when Roman literature begins, it consists chiefly of translations or paraphrases from the Greek, and in it such Roman words as *fortuna* are apt to become modified in a Greek sense. We have no Italian Homer of whom we can say that the word for 'chance' is not to be found in him; we can only infer, and somewhat doubtfully, that, as the idea of a capricious force interfering in human affairs is a late growth in Hellas, so it may have been in Italy. Our treatment of the subject must begin with the *cult of Fortuna* at Rome and in Latium—about which we know something, though without any certainty of detail.

1. *Fortuna* is formed adjectivally from *fors*, as *Portunus* from *portus*, *Neptunus* from some word unknown to us; and *fors*, so far as we can guess from later literature, must have signified what we call luck, whether good or bad, i.e. the incalculable element in Nature and in human life. Not a capricious force, such as was expressed in later times by the word *temeritas* (Pacuvius *ap. Auct. ad. Herennium*, ii. 23), and in the literature of the Empire sometimes by *fortuna* (this is a semi-philosophical idea of which the early Romans could have known nothing), but the idea of luck or accident which is common to the minds and language of all peoples at all times without any reflexion or reasoning on the mysteries of human life. As *Portunus* was the spirit or deity presiding over doors and gates, so *Fortuna* must have been, for the early Latins, the deity presiding over the incalculable element in human life, not a mere personification of Chance itself. This distinction survived, more or less faintly, to a late period of Roman history. When Nonius, in the 3rd cent. A.D., wished to distinguish *fortuna* and *fors*, he wrote: '*Fortuna et fors hoc distant; fors est casus temporalis, fortuna dea est ipsa*' (Nonius, v. 15). The examples which he quotes from Accius' *Tragedies* do not show the distinction clearly, and are doubtless affected by the Greek original; but from the 13th book of Lucilius' *Satires* he cites the line '*Aut forte omnino aut Fortuna vincere bello*,' where it is plain that *Fortuna* is conceived as something beyond and above mere chance. So in the famous passage of Pacuvius already quoted (to which we shall return), the last five lines contrast *Fortuna* with *temeritas*, blind chance:

'Sunt etiam alii philosophi qui contra Fortunam negant ullam ex parte, temeritate enim autumant esse omnia: id magis verisimile esse usus reapse experiundo docet. voluit Orestes modo fuit rex, factus mendiculus modo naufragio: nempe ergo id fluctu, haut forte fortuna optigit.'

And the author who quotes the lines (Cornificius, as the Germans call him) adds: '*nam hic Pacuvius infirma ratione utitur, quom ait verius esse temeritate quam Fortuna res regi*,' etc. *Fortuna* perhaps never wholly lost the meaning of a power presiding over luck, which might be propitiated by human beings, or assisted by them in her operations: thus Caesar, after his defeat at Dyrrhachium, told his soldiers that '*fortunam esse industria sublevandam*' (*de Bell. Civ.* iii. 73).

This point will be more fully illustrated below, so far as it appears in Roman literature. But it is also strongly suggested by the earliest worship of *Fortuna* in Latium. Experts are all agreed that at Rome *Fortuna* was not an indigenous deity; she did not belong to what has been called 'the religion of Numa,' i.e. the earliest form of the organized religion of the State as indicated in the religious calendar (see art. *ROMAN RELIGION*, *Introd.*); universal tradition ascribed her introduction to Servius Tullius, a king of foreign extraction, and the traditional representative of the plebeian element as distinguished from the old patrician *gentes* and their religious worship; and her earliest temples were outside the *pomerium*—a sure sign of extra-Roman origin (see Wissowa, *Rel. und Kultus der Römer*², p. 256). The most ancient seats of her worship in Latium were at Præneste and Antium; and here such facts as we know point clearly to a deity who has a controlling power over men's fortunes, rather than one who simply represents luck good or bad. In each of these sites there was an *oraculum Fortunae*; and oracles, however simple and primitive, are never associated with the idea of blind chance, but are the result of human experience, which marks special sites with special Divine inhabitants as suited to resolve the uncertainty which besets human life at every turn. That uncertain element the Latins expressed by the word *fors*; *Fortuna*, as has already been said, was the deity presiding over *fors*, and therefore capable of foretelling the future. This is the true meaning, then, of the Latin *Fortuna*; it is not till the time of Servius that we hear of a *Fors Fortuna*,—a combination quite in keeping with Roman religious usage, but probably indicating a degenerate offshoot from the original Latin stock.

That stock, if we examine it as it appears at Præneste, where we have some little knowledge of it, may have been touched by Greek influences at a very early period, but the Latin conception of *Fortuna* can hardly have been seriously affected. The cult-title of the goddess here was *Primigenia*, which must mean 'first-born'; and that she was or came to be regarded as the first-born daughter of Jupiter is made certain by an inscription of great antiquity, first published in 1892 (*CIL* xiv. 2863): '*Oreeria Numeri nationu cratia Fortuna Divo filei primocenia donom dedi*' (see Fowler, *Roman Festivals*, p. 223 ff.). Here a woman presents an offering to *Fortuna*, the first-born daughter of Jupiter, for help in childbirth (*nationu cratia*); she had no doubt consulted the oracle, which here, as elsewhere in Italy, foretold the future by means of lots (*sortes*) mixed together by a boy before he drew one. Now, it is true that this anthropomorphic conception of the deity as daughter of Jupiter is foreign to old Italian ideas, and, as Præneste was undoubtedly exposed to the invasion of foreign cults at a very early period, it is highly probable that *Fortuna* had here taken on some of the characteristics of the Greek *Tyche* or *Nemesis*; but this could not well have been the case if the nature of the original Latin deity had not been of such a kind as to suggest or allow a connexion with Jupiter. But Jupiter is of all Italian deities the one who can least be associated with anything in the nature of blind chance; and we

are justified in conjecturing that this Fortuna was a Power believed to govern the destinies of women in childbirth, perhaps also of the children to be born. Fortuna was at all times more especially a woman's deity, as her many cult-titles clearly show; and adjoining her great temple at Præneste, as Cicero tells us (*de Div.* ii. 85), was another also dedicated to her, which was especially frequented by matrons; here there was a statue of her with two children in her lap, popularly (but no doubt wrongly) believed to be Jupiter and Juno (see Wissowa, *op. cit.* p. 259; Fowler, *op. cit.* p. 224 ff.).

So far, then, as we have any evidence on the question, it would seem that the name Fortuna did not suggest to the primitive Latin any idea of blind chance as a ruling factor in the world. Like all Latin *numina*, she was a power to whom, among the changes and chances of this mortal life, appeal might be made for help, especially by women. Not, of course, every change or chance; there never was, as Wissowa says (p. 261), at any rate during the Republican period, a Fortuna who was a general deity of luck; but in course of time, specialized and localized under various cult-titles, she came to express the hopes of Roman men and women in relation to particular activities or critical moments. It is probable that the cult of Fors Fortuna, already mentioned, was connected with the work of harvest; the dedication-day of the temple, which was beyond the Tiber, was 24th June, when that work would be largely completed; and we have the evidence of Columella (x. 316) that after a successful harvest the praises of this deity were sung. The other temple attributed to Servius, in the Forum Boarium, was certainly that of a woman's deity, who seems to have been identical with Mater Matuta, and also with the Pudicitia of Livy, x. 23 (Wissowa, 257). *Fortuna muliebris*, connected traditionally with the story of Coriolanus and the persuasive power of Roman matrons, might be worshipped only by women once married (Dion. Hal. viii. 56), and may therefore have been the spirit believed to guarantee good luck in legitimate wedlock. *Fortuna virilis* was also a woman's deity, more especially of the lower orders, and was supposed to bring good luck in connubial relations (Fowler, *op. cit.* p. 68). At the end of the Hannibalic war, the great deity of Præneste was transplanted to Rome, probably after successful recourse to her oracle, which so far the Roman State had declined to use; but transplanted cults seldom retain exactly their original characters, and here we find the beginning of the *Fortuna publica populi Romani*, of which we hear so much in later times. Fortuna tends in the later Republic to become a kind of good genius of particular acts and times: *Fortuna hujusce diei* is the unknown *numen* in whose charge are the events of a particular day; *Fortuna equestris* is the good luck of the Roman cavalry, and so on. The idea became popular; innumerable Fortunes came into existence (see a list in Plutarch, *de Fortuna Romanorum*, 10); and, as the Greek conception of *tychē* became more familiar to the educated Roman mind, Fortuna lost in purity and dignity what she gained in popular favour.

There is thus in the early history of the worship of Fortuna nothing to suggest that the virile and persistent Roman ever believed himself or his State to be at the mercy of chance. Such an idea would, indeed, have been utterly inconsistent both with his character and with his conception of his relation to the gods, who in his view, so far from being capricious, were always open to supplication, and practically bound to yield to it if approached in precisely the right way. The only right way was known to the religious authorities of the

State, and in placing himself entirely in their hands the Roman believed himself to be perfectly safe in all matters which lay outside the sphere of his own will and his own activity. But assuredly he never minimized the importance of that will and activity—*virtus*, as he called it. The *fortuna Romanorum* is a late idea, not to be traced further back than Polybius, and in him, as we shall see, by no means definitely conceived; it was by *virtus* and *pietas*, strenuous endeavour and a sense of duty, that the Romans of later days believed their forefathers to have conquered the world.

2. In the scanty remains of the earliest Roman literature, offspring though it was of a sceptical Greek age, we find nothing to suggest that the Tyche of Euripides and his successors had gained a footing in Italy. *Fortuna*, it is true, as well as *fortis*, has come to mean the incalculable in human affairs, and in this sense was used throughout all later Roman literature; but we have distinct traces of the true Roman feeling that '*fortunam esse industria sublevandam*.' One of the *sententiae* of Appius Claudius Cæcus (c. 300 B.C.) is the famous saying, '*Est unusquisque faber ipse suae fortunae*' (here *fortuna* has partly the sense, which never left it, of prosperous condition, wealth); and in the *Annals* of Ennius (l. 172 [Baehrens]) we find the perennial proverb, '*fortibus est fortuna viris data*.' So again, old Cato, in his *Origines* (quoted by Gellius, iii. 7), wrote that the gods give a soldier '*fortunam ex virtute*.' Such sayings fairly neutralize commonplaces like—

' Multa dies in bello conficit unus
Et rursus multae fortunae forte recumbunt :
Haudquaquam quemquam semper fortuna secuta est.'
(Ennius, *Ann.* l. 195).

In Plautus and Terence the use of *fortuna* and its compounds in the ordinary sense of luck or chance is constant, but not even the influence of the Greek original ever suggests the elimination of human endeavour, unless where, as in *Captivi*, ii. ii. 54, or *Pseudolus*, ii. iii. 14, the chances of war as bringing captivity and slavery are reflected from the unhealthy conditions of Greek life in the post-Alexandrian period. In Cato's book *de Agricultura*, the only complete prose work we possess of the period following the Hannibalic war, *fortuna* is not once alluded to. Disintegrating as the consequences of that war were to the old Roman character, they could not all at once obliterate the sense of the need of strenuous human endeavour, and they may have added to it the first intuition of the idea of the destiny of Rome, her mission to rule the world, which remains immortalized in the *Æneid*. In spite of an attempt to introduce Epicureanism early in the century, the better minds at Rome kept clear of any degrading doctrine of chance, with its corollaries of individual selfishness and *laissez faire*.

3. This better tendency was upheld and confirmed by the presence and influence at Rome of two Greeks of great ability, personal friends of Scipio the younger, sympathetic admirers of the Roman spirit—*Panætius* the Stoic philosopher, and *Polybius* the philosophic historian. It is hardly possible to exaggerate the importance of these two men, and especially of Panætius, as guides to the Roman mind in beginning to reason on the facts of life; and their opinions of the power of Fortune must here be briefly explained. Greeks as they were, they form an integral part of the history of Roman thought.

Both of these men belonged to the Stoic school, but their Stoic doctrines were curiously tempered so as to harmonize with the Roman character, and they were no doubt directly influenced by their knowledge of that character and of the extra-

ordinary progress of the Roman State in the last two centuries. In each we find the freedom of man's will fully acknowledged, and his dependence on his own active endeavour emphasized. Cicero, in his *de Officiis* (ii. 6 ff.), has reproduced the view of Panætius on this point. The passage is an emphatic assertion of the power of man to work out his own fortune by his own reason and will. Not that chance is wholly excluded; 'magnum vim esse in fortuna in utramque partem, vel secundas ad res, vel adversas, quis ignorat?' (ii. 6. 19). Accidents will happen which could by no human means have been avoided; but these are comparatively rare, and by far the greater part of the good or bad fortune that may happen to a man, in spite of the element of chance that is always present, is mainly dependent on 'hominum opes et studia.' So far from sitting down passively to take what fortune brings him, the duty of man is here declared to be the free use of his reason and will in modifying for his own advantage and that of his fellow-men the conditions under which he lives (see Schmekel, *Phil. der mittl. Stoa*, p. 194). It was in accordance with this common-sense view of life that Panætius rejected all divination, thus breaking with the older Stoic view, and also with the traditional Roman practice—a fact which was of great importance for the Romans of the last cent. B.C. The more the philosopher exalts the position of man in Nature, the less need will he ascribe to him of such methods for securing himself in the future.

Polybius was not a professed philosopher, but his mind was a philosophic one, and in his treatment of history it is extremely interesting to note his view of Fortune. He works out his own ideas of historical causation independently, and from the practical standpoint of a statesman and a historian, and we cannot expect him to be always precise or consistent. But it is quite clear that he uses the word *τύχη* mainly in two senses: (1) *in modum vulgi*, where he is ignorant of the cause of a phenomenon (e.g. ii. 70. 2, ii. 38. 5, viii. 22. 10, xv. 6. 8, and many other passages); when he knows the cause he never uses the word, and, as he is always seeking out the facts of causation, his attitude is strictly scientific. We may be sure that he did not really believe in capricious Divine interference, in Nemesis, or in blind chance. (2) *τύχη* expresses an agent or power working to a definite end, as in i. 4, of the force which has brought about the growth of Roman dominion. Here he certainly does not mean chance; 'no caprice is suggested in the work of this force; it comes near the *φύσις* of bk. vi. (iv. 11. 9. x. 57. 1), which he invokes, when in a more strictly scientific mood, to explain the regular and natural succession of political constitutions. And this 'Nature' of bk. vi. is not far removed from the Stoic idea of Fate, *Δαίμον* (*ἡ εὐαγγελία*); but as used by a historian it must not be pressed to a philosophical dogma. He uses it much as the modern historian is apt to use the word 'evolution,' to express the natural course of events, without perhaps meaning anything very definite by it. One thing is certain, that both the *τύχη* and the *φύσις* of Polybius can include human agency; the human will is free for him as for Panætius, and, though man is subject to Nature, Destiny, or whatever it be called, yet he is a part of this himself, and can use his reason to shape his course. A good example is in bk. x. 5, §§ 7 and 9, where historians are blamed for attributing the successes of the great Scipio to Fortune, instead of to his own character and genius; cf. i. 35, iii. 31 *ad fin.*, and a very interesting passage in xxxvii. 9. (See the writer's article on this subject in *CLR*

¹ For the Stoic *τύχη* (*αἰρία ἀόρατος ἀνθρώπων λογισμῶν*) see Reid on *Cic. Acad.* i. 7. 20.

xvii. [1903] 445 ff., from which a few sentences have here been quoted.)

Assuredly there was nothing in the writings of these two remarkable men to undermine the Roman sense of *virtus*, or to lead to that popular idea of the caprice of Fortune which we shall meet with soon, and which was due far more to the strange incalculable events of the last cent. B.C., and to the growing feeling of the uncertainty of human life and the hopelessness of the social and political situation, than to any serious reflexion or philosophical reasoning. The general tendency of the best Roman minds in that century was towards Stoicism of the more common-sense type which Panætius had introduced, which admitted no capricious cosmic agency, and exalted the power of human endeavour; and for some time at least the Scipionic circle, as it has been called—the group of disciples of Panætius and Polybius—continued to combine the reasoning of their teachers with strenuous human action. To this school, in some sense at least, belonged the two Gracchi, and also the satirist Lucilius, in whose fragments, more than 900 in number, the word *fortuna* occurs only twice. One of these passages (333 [Baehrens]) has been alluded to above:

'Aut forte omnino aut Fortuna vincere bello;
Si forte ac temere omnino, quid rursus ad honorem?'

Here *forte* seems to be mere chance, and the word *temere* reminds us of the passage of Pacuvius quoted already; *fortuna* seems to be rather a guiding force, like the *τύχη* of Polybius in i. 4; and the general meaning suggested is that *fortuna* and human endeavour aid each other in the field of battle.

4. We may now pass to the two great intellects of the last age of the Republic, Cicero and Caesar; of the great poet who was their contemporary a brief word will be said directly.

Taking Cicero first—it is by no means easy to gain a clear impression of his idea of *Fortuna*; he wrote in many different moods, reflected or translated the views of many schools of philosophy, and was not himself a man of strong conviction on religious or philosophical questions, following the principles of the New Academy, which denied that absolute truth was attainable, and sought for probability in the opinions of various schools. In his later years Cicero was drawn strongly towards Stoicism, and in the passage from his *de Officiis* already quoted (written in 44 B.C.) he clearly approves the views of Panætius that *Fortuna* is a power working for good and evil on mankind, but that man himself can counteract it by his own will in most matters of real importance. He was, in fact, the direct intellectual descendant of the Scipionic circle, and inherited their belief in Panætius and the Roman type of Stoicism which he introduced. But there can hardly be a doubt that Cicero, under the influence of his age, and the chaotic uncertainty of its social and political life, felt the reality of *Fortuna*, good and bad, more keenly than would have been approved by Panætius. It is in his writings that we first find (with the exception of the passage in Pacuvius) *Fortuna* spoken of in terms, not of the old Latin goddess, but of the later Greek *Tyche*; she is *volubilis*, *inconstans*, *caeca*, etc., and sometimes appears with the external attributes of the Greek deity. All this is, indeed, little more than literary language, and expresses no very definite conviction; but it is of value for our present purpose, because it reflects beyond doubt the popular ideas of the time. But for Cicero's more serious view of the matter we may turn with advantage to his work *de Divinatione*, composed almost at the end of a life chequered by many turns of *Fortuna's* wheel (44 B.C.). In the first book of this treatise he puts into

the mouth of his brother Quintus the Stoic view of divination as represented in his lifetime by Posidonius of Rhodes, who differed from his master Panætius in maintaining that human skill and observation can to some extent unravel the mystery of the future, of fate, the 'ex omni aeternitate fluens veritas sempiterna' of the Stoics. In the second book Cicero argues against this view (though himself an augur), and here we seem to find his own personal view of Fortuna. He declares that divination, whether of predetermined fate or of matters accidental, is altogether impossible.

'Quomodo ergo id quod temere fit caeco casu et volubilitate fortunae, praesentiri et praedici potest?' (§ 15 *ad fin.*). 'Nihil enim est tam contrarium rationi et constantiae quam fortuna: ut mihi ne in deum quidem cadere videatur, ut sciat quid casu et fortuito futurum sit. Si enim scit, certe illud eveniet. Sin certe eveniet, nulla fortuna est. Est autem fortuna. Rerum igitur fortuitarum nulla praesensio est.' (§ 18).

No doubt this is the view of Carneades and the Academic school generally; Cicero tells us as much (§ 9); but a perusal of the whole book will produce a strong impression that he adopts it *in toto* and with conviction, and in the incomplete *de Fato*, written shortly afterwards, we find much the same view, here also in the course of a criticism of Posidonius. Fate, he says, is the product of the brain of philosophers; common sense and experience teach us that Nature exists and Chance exists, but not Fate. Where is the need to foist in fate (*includere fatum*), 'cum sine fato ratio omnium rerum ad naturam fortunamque referatur?' (§ 6). Such arguments are scarcely convincing, and we feel that Cicero is not very clear as to the meaning he attaches to the words *fatum*, *natura*, *fortuna*; but there seems no doubt that he genuinely disliked the idea of a chain of causation—*ἡ ἐλαφύμην*, as the Stoics called it; he has too lively a consciousness of his own free will, and of the sport of chance in the history of his own time, to accept such a theory. His intense humanity forbade it; he lived too much in the world, enjoyed too thoroughly the exercise of his own individuality. Lastly, the reader may do well to turn to an interesting passage in the *de Natura Deorum* (iii. 88), in which, after insisting that the gods do not give us virtue, and that we do not thank them for it, but for riches, *externa commoditates*, and such like, he sums up in these words: 'judicium hoc omnium mortalium est, fortunam a deo petendam, a se ipso sumendam esse sapientiam.' Here, as in the passage from this book quoted above, Cicero is plainly uttering the opinion that suits his own mind best.

Of *Cæsar* it has often been said, not only that he believed in Fortuna, but that he believed in her as his own peculiar patroness, as Sulla had done before him. But an examination of his extant writings by no means confirms this opinion. As has been shown in the *CLK* (xvii. 153), the passages usually relied on, when read carefully by the light of their context, fail to prove that *Cæsar* had any particular belief in his own good luck (e.g., the letter enclosed in *Cic. ad Att. x. 8 B.*, *de Bell. Gall.* iv. 26, vi. 35, *de Bell. Civ.* iii. 10), and tend to show that, as regards Fortuna in general, he simply believed in good and bad luck, as we all do, particularly in military operations. In describing his defeat at Dyrrhachium he begins by saying that 'fortuna, quae plurimum potest cum in reliquis rebus tum praecipue in bello, parvis momentis magnas rerum commutationes efficit; ut tum accidit'; but after the battle, in addressing his soldiers, he tells them that 'fortunam esse industria sublevandam.' As far as we can judge from his own writings, he seems as rational as Lucretius on this point; and, if it be true that he held Epicurean doctrines (which is, however, by no means certain), it may be that he looked on

Fortuna much as the poet did—as the mechanical force of Nature acting in ways which we cannot foresee or understand. Lucretius wrote (v. 77):

'Praeterea solis cursus lunaeque meatus
Expeditam qua vi flectat natura gubernans.'

and what his *natura gubernans* is appears in line 107, 'quod procul a nobis flectat Fortuna gubernans.' On these lines Munro notes that the Epicurean Nature is at one and the same time blind chance and inexorable necessity, and compares vi. 31, 'seu casu seu vi, quod sic Natura parasset.'

5. But, if *Cæsar* himself steers clear of any degrading view of Fortuna, and never in reality personifies her, this is not so with his younger contemporaries. The experience of the last century of the Republic might well create a belief in the blind or wilful dominion of chance in human affairs; society and politics seemed to be governed by no benevolent destiny, or rational law of development. Cicero himself had spoken of Fortuna in this sense when pleading for Marcellus before *Cæsar* in 46 B.C. (*pro Marcello*, § 7). Sallust in more than one passage writes of her in a way which we have never as yet met with: 'Sed profecto Fortuna in omni re dominatur; ea res cunctas, ex libidine magis quam ex vero, celebrat obscuratque' (*Catil.* 8); and in the tenth chapter of the same work, while he looks on the history of Roman conquest down to the destruction of Carthage as the result of *labor* and *justitia*, he declares that after that terrible event 'saevire Fortuna ac miscere omnia coepit.' The author of the *Cæsarean* book on the Alexandrian war (possibly Asinius Pollio) speaks of Fortuna (ch. 25) in terms of the Greek Nemesis, as reserving those on whom she has heaped benefits for a harder fate. And Cornelius Nepos (*Dion.* 6) in the same way says that the fickleness of Fortuna began to sink the hero whom she had just before exalted.

It is true, indeed, that neither of the two finest spirits of the Augustan age ever uses the word in this way. They were both natives of Cisalpine Gaul, then the best strain in the population of Italy. Both were of the same type of character—mild, serious, intensely human, right-minded—with a profound conviction of the duty and destiny of the Roman State. For *Virgil*, when Rome or *Aeneas* or even Evander his predecessor and ally is in question, Fortuna is the same thing as Fate, or Providence, or the will of Jupiter representing the Divine government of the world, or the Destiny of the Stoics. 'She is not so much a deity, as Reason and Providence conceived and expressed as the benevolent will of a deity' (Heinze, *Virgil's epische Technik*, p. 287).

'Me pulsam patria pelagique extrema sequentem
Fortuna omnipotens et ineluctabile Fatum
His posuere loca.'

So says Evander to *Aeneas* (*Æn.* viii. 333 ff.). To follow her guidance was the duty of *Aeneas* and his Trojans, and therefore also of the Romans. At the beginning of *Æn.* v. she turns the course of the fleet towards Sicily by threatening a storm: 'Superat quoniam Fortuna, sequamur, says Palinurus to *Aeneas*, 'Quoque vocat, vertamus iter' (22 f.). In v. 709 ff., after the burning of the ships, when *Aeneas* is minded to stay in Sicily, crushed by the blow, old Nautes says:

'Nate dea, quo Fata trahunt retrahuntque sequamur;
Quicquid erit, superanda omnis Fortuna ferendo est.'

Here, if the whole passage be read, it becomes clear that *fortuna* is the will of the gods, against which a man can fight if he will, but submission to which is really victory. So in x. 49 Venus urges Jupiter to let her save the boy Ascanius, i.e. snatch him from the fate which she imagines to be decreed for him; but

'Aeneas sane ignotis jactetur in undis
Et quacumque viam dederit Fortuna sequatur.'

Once more, a curious passage in x. 107 ff. must be here noticed, because it shows that Virgil could conceive Destiny as working independently of Jupiter, and in contrary directions for different peoples: in response to the pleading of Venus on one side and Juno on the other, Jupiter declines to interfere:

'Sua cuique exorsa laborem
Fortunamque ferent. Rex Jupiter omnibus idem;
Fata viam inveniunt.'

Thus Fortuna is in Virgil, at any rate in the *Aeneid*, a moral conception, to which the leader of men, and indeed all men and States, have to respond by obedience and faith, inspired by that sense of duty to god and man which the Romans called *pietas*. When the poet is not speaking of *pious* Aeneas, or of any one who has this sense of duty, he may use *fortuna* in the ordinary sense of chance. In the speech of Turnus (*Æn.* xi. 378 ff.), which is introduced by the words 'Talibus exarsit verbis violentia Turni,' and is therefore the speech of one uncontrolled by a sense of duty, we find quite a different Fortuna:

'Multa dies varique labor mutabilis aevi
Retulit in melius, multos alterna revisens
Lusit, et in solido rursus Fortuna locavit.'

For Fortuna in *Livy* the reader must be referred to the valuable summary in the introduction to Weissenborn's edition, p. xix ff.; the general results of an independent inquiry can alone be stated here. Whoever reads *Livy's* noble Preface to his work cannot fail to be struck by the absence of any attribution to Fortuna or Fate of the growth of Roman power, or the decline of the virtues which brought it about: *Livy* is here clearly writing from conviction, arrived at independently of the fashionable views of his day. He attributes all to man himself—to the *virtus* and *pietas* of the old Romans, to the decline of morality and manliness in later periods of their history. It is true that in the course of his vast work he speaks of the *Fortuna Populi Romani* (an idea now coming into vogue), e.g. in vi. 30, i. 46, ii. 40, vii. 34. 6. But in almost all these and other passages this Fortuna does but come to the aid of energetic human endeavour, or human endeavour finishes the work of Fortuna. 'Quicquid superfluit Fortunae P. R., id militum etiam sine rectore stabilis virtus tutata est' (vi. 30). It is true, also, that he occasionally uses the word *fortuna* in the ordinary sense of chance, and once or twice he personifies her in the Greek fashion as capricious, e.g. v. 37. 1 ('adeo occaecat animos fortuna, ubi vim suam ingruentem refringi non vult'); but this seems to be a casual and momentary reflexion—the exception to the general rule. 'Fortes fortuna juvat' (viii. 29) expresses far better his personal conviction.

6. After the Augustan age, and for the first two centuries of the Empire, the history of Fortuna becomes difficult to follow; and it may be convenient to treat of it under four different heads or aspects of the idea, viz. (1) the *Fortuna Populi Romani*, which we have just found expressed in different ways in Virgil and *Livy*, and which is also to be found in Propertius; (2) Fortuna as Fate, or closely related to it, affecting human life in general; (3) Fortuna in the vulgar sense of Chance, an unaccountable factor in human life; (4) Fortuna as a deity, especially connected with the worship of the Emperors, but showing herself in other ways also. It may be added here that the word is often used in this period in the sense of high position and dignity, as over and over again in Pliny's panegyric on Trajan, and elsewhere in literature; but this is outside the general scope of this article.

(1) *Fortuna Populi Romani* has what we may call a downward tendency, in this period, to become a goddess; so far it is not easy to prove that

the idea of the destiny of Rome had been so regarded, for the *Fortuna Publica Pop. Rom. Quiritium in colle Quirinali* of the calendar of Cære (*Eph. Epigr.* iii. 7) cannot be dated earlier than 194 B.C. That idea may possibly have begun with Ennius, though it is not found in any of his surviving fragments; it is obvious in Polybius from the Greek *quasi*-philosophical point of view, as has been shown; it is expressed, without distinct association with a divinity, in Virgil and *Livy*. The nearest approach to this Fortuna as a goddess in the Republican period is found in the coins of the gens *Sicinia* and the gens *Arria*, which bear a female head (see Roscher, *Lex. der Myth.* i. 1515) with the inscription 'Fort. P.R.', but without any other sign of a cult. But, when the State came to be represented by the individual Cæsar, and its greatness associated with his welfare, the growing tendency to pray to Fortuna for his safety brought the deity, in various forms and cults, very close to the idea. This is well shown in the famous ode of Horace (i. 35), where the Fortuna of Antium,¹ pictured in a curious and puzzling manner, is entreated to preserve Augustus in his proposed expedition to Britain (cf. also Augustus in *Mon. Ancyr.* ii. 29; and see below, p. 103). But the older abstract form of *F. Populi Romani* survives alongside of this tendency; e.g. in *Vell. Pat.* ii. 86 and 103; *Tac. Hist.* iii. 46, 'adfuit ut sæpe alias Fortuna Pop. Rom.', i.e. by bringing Mucianus and the Syrian legions to the Danube. In this context the short work of Plutarch, or of Plutarch's school, must be mentioned, *de Fortuna Romanorum*. Here, however, Fortuna is rather Chance (ῥὰ ἀβρόπαιον) than the grander conception of *Livy* or Virgil; the question raised is whether the greatness of Rome was due more to Fortuna or to Virtus, and the author concludes that it is due to both, but chiefly to Fortuna. 'She came to Rome to stay, and laid down her wings.' There is not much to our purpose in this work, but it serves to show how much people were thinking about Fortuna at the time, and chiefly in relation to Roman history.

(2) *Fortuna as Fate*, or a guiding power of some more or less definite kind. It was said at the beginning of this article that Fortuna, as distinguished from *Fors*, never wholly lost the meaning of a superior and intelligent power. In the Empire, among educated people at least, this still holds good, in spite of the fact that Fortuna becomes more and more conceived on the one hand as a deity, on the other as luck and ill-luck in human life, which is the sport of chance. Thus Seneca (*de Beneficiis*, iv. 8. 3) writes: 'nunc naturam voca fatum fortunam, omnia ejusdem dei nomina sunt varie utentis potentia sua'—an interesting passage, because the universal providence of Stoicism is here a nameless deity, neither Jupiter nor another, the God whom Seneca urges his disciples to love as well as worship, in language hardly distinguishable from that of St. Paul (see Zeller, *Stoics, Epicureans, and Sceptics*, p. 322 ff.; Boissier, *Religion rom.* ii. 71 ff.). But, as a rule, Seneca uses the word in the current sense, as a power not to be worshipped or submitted to, but to be overcome by the human will and wisdom; e.g. in *de Constantia Sapientis*, 15. 3 (and, indeed, *passim*), 'vincit nos fortuna nisi tota vincitur'; *Epist.* 98, 'valentior omni fortuna animus est.' Evidently there is no clear distinction between Fortune and Fate, yet the former is not so much pure luck or chance as something whose action we are not able to understand (*Aug. de Civ. Dei*, v. 9), or the executor of the decrees of Providence (*Macrobi. Sat.* v. 16. 8).

¹ There were two Fortunes at Antium, but Horace speaks of one only, which may perhaps indicate that he did not know much about the cult.

This old Stoic notion we have already noticed as illustrated in Polybius. The great historian of the Empire is occasionally puzzled by conflicting ideas of Fortune and Fate, though, as a rule, he uses the word in the vulgar sense, e.g. *Hist.* iv. 47, 'magna documenta instabilis fortunae summa et ima miscentis.' In a famous passage in the *Annals* (vi. 22, where see Furneaux's notes, and some excellent remarks in the Introduction to his first vol. p. 21) Tacitus tells us that he cannot make up his mind whether human affairs 'fatone et necessitate immutabili an forte volvantur' (cf. iv. 20), where *forte* is identical with *fortuna* as popularly used. It would seem that, as Furneaux says (p. 22), Tacitus was inclined to accept the idea that our destiny is fixed from the moment of our birth, and could be foretold from our horoscope if we were sure of our interpreter; it is only now and then that he has doubts, as, when writing (*Ann.* iv. 20) of the excellent Manius Lepidus who did good work in enviable quiet under Tiberius, he doubtfully raises the question whether favour or dislike of princes is the work of Fate and our 'sors nascendi,' 'an sit aliquid in nostris consiliis,' etc. This is no real philosophic reflexion, but merely the passing doubt of an acute mind which has watched the tyranny of Domitian. Is the human will free to shape its course bravely and with happy result?

(3) *Fortuna in the vulgar sense of pure Chance.*—There is no need to illustrate this further than by quoting the famous passage of the elder Pliny (*HN* ii. 22), in which the universality of the ascription to Fortuna of all good and evil in human life is most emphatically stated.

'Toto quippe mundo et omnibus locis omnibusque horis omnium vocibus Fortuna sola invocatur et nominatur, una accusatur, una agitur rea, una cogitur, sola laudatur, sola arguitur. Et cum conviciis colitur, volubilis, et plerisque vero et caeca existimata, vaga, inconstans, incerta, varia, indignorumque faultrix. Huic omnia expensa, huic omnia feruntur accepta, et in tota ratione mortalium sola utramque paginam facit (i.e. in the debit and credit of human accounts)—adversity and prosperity—everything is set down to her), adeoque obnoxias sumus sortis, ut sors ipsa pro deo sit, qua deus probatur incertus.'

This last sentence should not lead us to imagine that Pliny is here thinking of Fortuna only as a goddess with a cult: what he is really thinking of, as the context shows, is the dismal superstition which attributed all the changes and accidents of life to Chance, whether vaguely conceived and invoked as a deity or regarded as an unintelligible something about which no one had the inclination to reason—a superstition which excludes human endeavour, and indeed human sense of duty generally, and which may be, far more than we should guess without this remarkable passage, accountable for the want of 'grit' and vitality in all classes under the Roman Empire. It may perhaps be connected with the popularity of a coarse Epicureanism in the last period of the Republic, of which Cicero speaks (*Tusc. Disp.* iv. 6 and 7); for, in spite of its noble presentation by Lucretius, or by Cicero in *de Finibus*, bk. i., the disciples of this school undoubtedly learnt that the gods care for none of us, and that good and bad luck come to good and bad men by blind chance only. We have seen how after the period of Cicero and Cæsar the idea of Fortune as treacherous and capricious began to gain ground, but was checked among men of education and reflexion by the *Æneid* of Virgil and the *History* of Livy; but we may conjecture that among the uneducated or half-educated, in a period in which the outward forms of religion were revived, without the inward conviction of man's shortcomings or of his dependence on a Deity for help towards right conduct, this poisonous notion of Chance was weakening the fibre of the Roman. It is probable that the constant use of Fortuna in the literature of the period, and even by serious

authors like Seneca, Juvenal, and Tacitus, is a reflexion of this condition of the popular mind. But we find it in its rawest form in writers who took life less seriously, such as Ovid (e.g. *Metam.* iii. 141), or Petronius (*Sat.* 120, 121), or in the work of a soldier like Velleius Paterculus (e.g. ii. 57, 75, 110 *ad init.*), who was not really a man apt and able to reason about such questions.

(4) *Fortuna as a deity*, in common belief and in connexion with the Imperial family. When Juvenal writes, at the end of his tenth satire, 'Nullum numen abest, nisi sit prudentia; nos te Nos facimus, Fortuna, Deam, coeloque locamus,'

he is no doubt thinking of his own time, of the growing tendency to turn the vulgar idea of Chance, illustrated under the last head, into a goddess Fortuna worshipped in iconic form.

Two curious stories of this 1st cent. A.D. may illustrate the tendency. Suetonius tells us of the Emperor Galba (writing only a generation later) that he dreamt one night that Fortuna told him that she was standing wearied outside his door, and that if he did not speedily welcome her she would be the prey of any passer-by. He went and opened the door, and found a bronze image of the goddess at the threshold; this he took with him to his Tuscan villa, where he made a shrine for her and set up an elaborate cult. The rest of the story will be found in Suet. *Galba*, 18. Another story was that Sejanus had a statue of Fortuna which turned its back on him just before his fall, as he was sacrificing to it (Dio. Cass. lvi. 7, 2). There seems no doubt that he had a statue, and an ancient one, of a deity belonging to his native Etruscan town Volturni (see Fowler, *op. cit.* p. 171), which may have been an Etruscan representative of Fortuna; but the instructive point of the story is the way in which this statue was seized upon as one of Fortuna by the common belief of the age.

There was, indeed, a tendency to identify other deities with the one now becoming so popular in all parts of the Empire; among the innumerable votive inscriptions to Fortuna to be found in every volume of the *CIL* are many which seem to show that Tutela, Nemesis, perhaps Victoria, come very close to her (specimens of this tendency may be found in Dessau, *Inscr. Lat. Selectæ*, ii. 1. 93 ff.); at the same time it may be noted that the typical figure of Fortuna, with cornucopias and patera, or rudder, wheel, or ship's prow, remains essentially the same, as found on coins and statuettes in great numbers in all parts of the Empire (see art. by R. Peter on 'Fortuna' in Roscher's *Lex.* i. 1503 ff.; Mau, *Pompeii*, p. 336 of the Eng. tr.). In this form Fortuna found a place among the Penates of the household.

In two cases, however, under the influence of the syncretizing tendency of the age, Fortuna puts on, in addition to her own, the attributes of other deities: (1) of the mysterious Panthea, by which she seems to become exalted into a position in which she unites the attributes of all other deities (see Roscher, i. 1534 ff.); (2) of Isis (*ib.* 1530 ff.), possibly as a consequence of an old connexion with sea-faring, which was common to both. The latter identification is the most curious development of Fortuna under the Empire.

We can see the process of assimilation in a charming passage of the romance of Apuleius (xi. 15), where the young Lucius is initiated by the priest of Isis into the mysteries of the goddess. Lucius is told that he has passed out of the capricious power of the blind and reckless Fortuna, into the loving care of a Fortuna who is not blind, and who even illuminates the other gods by her own light. 'Behold, freed from his former troubles, rejoicing in the provident care of great Isis, Lucius triumphs over his own Fortune.'

The worship of Fortuna in connexion with the person of the Cæsar may be called an adjunct of the official cult of the Emperor (see art. ROMAN RELIGION, Period IV. § 1). It began in 19 B.C. with the return of Augustus from a course of travel in Greece and the East, when, as we learn from his own record (*Mon. Ancyr. Lat.* ii. 29, Gr. 6. 7), an altar was dedicated on Dec. 15 to Fortuna Redux, and a permanent cult instituted. In the year A.D. 14, i.e. in the first year of Tiberius' reign, games were celebrated to Divus Augustus and Fortuna Redux, which henceforward were held

annually in the beginning of October under the name of *Augustalia*, and appear in the religious calendars (Tac. *Ann.* i. 15: *Fasti Amiterni* and *Antiaties*, and *Feriale Cumanum*). From this time onward *Fortuna Redux*, with the title *Augusta* often added, became specially a deity of the Imperial family. We find her invoked, with the sacrifice of a cow, in the ritual of the Arval Brotherhood, 'ob diem quo urbem ingressus est Vespasianus,' 'pro salute et redivit Domitiani,' and on other occasions of the same kind down to the beginning of the 3rd cent. (Henzen, *Act. Fratr. Arv.* pp. 86, 122). For full information on this worship, and the kindred one of *Fortuna Dux*, see R. Peter, in Roscher, i. 1525 ff.

How far *Fortuna* was conceived by Augustus and his immediate successors as a really efficient *numen* must remain doubtful; but later on there can be no doubt that she, or rather her image, became little better than a fetish. The story of Galba and the image has already been told; the *Scriptores Historiae Augustae* tell us of Antoninus Pius, and even of Marcus Aurelius, that they kept a golden image of her (*Fortuna aurea* or *regia*) in their bed-chambers, and carried it with them wherever they went (see, e.g., Jul. Capitolinus, *Ant. Pius*, 12; Spartianus, *Severus*, 23). But after the spread and final recognition of Christianity this came to an end, as did the official worship; for *Fortuna*, whether thought of as a goddess of chance or as a protecting deity, was equally irreconcilable with Christian convictions.

Summary.—We may now sum up in a very few words the long story that has been told above. *Fortuna* begins as a deity, not of mere chance, but of helpful power in relation to certain events of human life, especially childbirth and seafaring, and then develops under many forms and cult titles which, however, gradually lose their original force and meaning, like so many other of the early Roman worships (see ROMAN RELIGION, Period IV. § 1). Meanwhile the influence of the later sceptical Greek idea of *τύχη* introduces the Roman mind to the conception of blind chance, best shown in the fragment of Pacuvius (above, p. 98); but this is neutralized among the better educated by the later or Roman School of Stoicism, beginning with Panætius and in a historical form with Polybius, and having a tendency to associate the conception of Fortune with the Destiny of Rome and the *Fortuna Populi Romani*, as we see it in Virgil and Livy. In the confusion of the last age of the Republic, and perhaps under the influence of popular Epicureanism, the more degraded idea of *Fortuna* gains ground, and appears in writers of a less earnest moral type in the 1st cent. of the Empire, and also in the thought and worship of the less educated classes. Lastly, we return to an official or state cult of *Fortuna* in connexion with the cult of the Cæsars, and with the settled order of the Empire; and finally, under the benign influence of Christianity the lower aspects of the idea and the cult alike tend to disappear.

See also FATE (Greek and Roman).

LITERATURE.—R. Peter, in Roscher, *Lex. der gr. und röm. Myth.* i. 1503; G. Boissier, *La Religion romaine*¹, Paris, 1891; H. Dessau, *Inscriptiones Latinae selectae*, ii., Berlin, 1902; W. W. WARDE FOWLER.

FOSTERAGE.—By this term is meant the practice of receiving into a family the child of another household, to keep and nurture for a certain period. The custom differs from adoption

(*q.v.*) in that the foster-child does not become a permanent member of the family by which it is received. Language does not originally distinguish between nurse and foster-mother, and fosterage may be considered as a natural development of nursing, arising when considerations of health or other special circumstances render it desirable to separate the child for a time from its parents. Such cases will occur in any community, however primitive, and the natural tie of affection between nurse and nursing may be expected to subsist between foster-parents and their charge. Among certain peoples this feeling attains exceptional strength, and the relationship develops into an important institution. This happens especially in a tribal condition of society, when family relationships are still the main social nexus, before the growth of political association.

1. **ORIENTAL RACES.**—1. **Arabs.**—Although it is among European nations that the custom reaches its highest development, it has its importance for certain Oriental peoples also. It must have prevailed from early times in Arabia. Muhammad was put out to nurse with a woman of the Beni Sad, who reared him among her own tribe until he was five years old, and anecdotes are told of the attachment which he displayed in later years towards his foster-mother and her daughter (Muir, *Life of Mahomet*², London, 1894, pp. 6-7). When he came to legislate for his followers, he laid down a law against the intermarriage of persons connected by the tie of milk-kinship. The principle of the law is stated in the words: 'Whatever is prohibited by consanguinity is also prohibited by fosterage': that is to say, the tie of milk is as much a bar to marriage as the tie of blood, and the kin of foster-parents come within the forbidden degrees in just the same way as the kin of actual parents (*Hedaya*, tr. Hamilton and Grady, London, 1870, p. 67). This enactment must be regarded, not as an arbitrary decree of the Prophet, but as giving legal form and sanction to the traditional usage among the Arabs (Robertson-Smith, *Kinship and Marriage in Early Arabia*², London, 1903, pp. 175 f., 195 f.). Muhammad's principle was worked out in the *Hidāya*, and a metaphysical theory was supplied by later legists. The prohibitions thus established remain in force to the present day, and are incorporated into the Anglo-Muham. law of India (R. K. Wilson, *Anglo-Muham. Law of India*³, London and Calcutta, 1908, p. 113).

2. **India.**—On this point there is a sharp distinction between the Muhammadans of India and the Hindus. Among the latter fosterage is not unknown, but it has no particular significance and is practically unrecognized by Hindu law (H. Maine, *Early Institutions*⁴, 243), whereas adoption holds an important place in this code. A foster-child enjoys no legal status unless the ceremony of adoption has been performed (J. D. Mayne, *Hindu Law*⁴, Madras and London, 1888, § 167). The pure-blooded inhabitants of Rajputana, however, with their more primitive type of community, give much more prominence to foster-kinship.

¹Although the foster-family of a Chief is never of the Rajput clan, but belongs almost always to some particular family of a well-known pastoral tribe, yet the foster-brothers often attain much influence and position at his court, and the family has a recognized hereditary status of "kinship by the milk" (Lyall, *Asiatic Studies*, London, 1882, p. 221).

In the same way the Rajas of Bundelkhand have their children fostered by women of the Ahir caste of cowherds; in speaking to a man of this caste, *dawa*, 'foster-father,' is a respectful mode of address [information from H. Spencer, I.C.S.]. The same habit of choosing the foster-parents of chieftains among a particular subordinate tribe will meet us again in Ireland.

3. **Turco-Tatars.**—That foster-kinship was more

than a legal fiction among the Muhammadans of India may be seen in the case of Akbar, the Mughal Emperor of Delhi.

Akbar had much to suffer on account of the favours which he lavished on his foster-mother, Maham Anka, and her family. She was for many years the most influential person at his court, and her son, Adham Khan Koka, was one of his generals. When this man actually stabbed the Emperor's minister, Muhammad Khan Atka, it is remarked by the Muslim historian that Akbar's wrath caused him to forget the *nisbat* ('connexion') which bound him to the assassin's mother, and to order his summary execution. The murdered minister and his son, Aziz, were related to Akbar through another foster-mother. Aziz succeeded his father in power, but proved troublesome and contumacious; the Emperor, however, refused to inflict any but the lightest punishment on him, saying: 'Between me and Aziz there is a stream of milk which I cannot cross' (Mallett, *Akbar*, Oxford, 1890, p. 177).

The titles *anka*, *atka*, *koka*, here used to designate the foster-mother, her husband, and their son, are Turkish words in use among the nomadic tribes from whom the Mughal Emperors drew their origin; and the sentiment which Akbar acknowledged cannot be ascribed to the influence of the Muham. faith which he and his people had embraced (he was far from being a devout Muslim), but marks the prevalence of the custom of fosterage among the Turco-Tatar nomads of Central Asia. The custom and the associated sentiment no doubt grew up among them under conditions of life broadly similar to those which obtained over most of Arabia. Among these tribes, as among the Arabs, the tie of milk seems to have been from immemorial times equivalent to blood-relationship. The Osman Turks allow to a foster-brother free access to the *harim*, which is otherwise permitted only to near kinsmen (A. Vaméry, *Das Türkenvolk*, Leipzig, 1885, p. 216). A chieftain's foster-brothers are found among his closest adherents, on whom he relies in the hour of need (Elias and Ross, *Ta'rih-i Rushidi*, London, 1898, p. 459, note). The same trait will be noted in the case of the Irish and Scottish tribesmen.

4. **Circassians.**—The Oriental peoples agree, as a rule, in regarding the act of nursing at the breast as the essence of the foster-kinship, which therefore centres in the person of the foster-mother: it is only as related to her that the rest of the foster-kindred come into account. With the Circassians, however, the foster-father seems to be of more importance.

'The son of a Circassian chief is taken from home and consigned to the charge of a tutor or foster-father, called an *attalik*; and, until he attain the age when his education is supposed to be complete, it is considered as an unpardonable weakness in the real father to desire to see his child. Boys are regarded rather as the property of the tribe than of the parents; and, should the latter have neglected to choose an *attalik* for their son, any one who feels disposed may offer to undertake the charge. There are even instances of an enthusiastic educator carrying off a pupil by force; and this is not by Circassian law a punishable offence' (L. Moser, *Caucasus*, London, 1856, p. 32). The rôle of the *attalik* is here very similar to that of the *aise* in Ireland or the *föstri* in Scandinavia (see below).

II. **EUROPEANS.**—1. **Slavs.**—The European peoples do not, as a rule, lay the same stress as the Orientals on the function of the foster-mother, nor is milk-relationship generally regarded as a bar to marriage. An exception must, however, be made in regard to the Slavs of southern and eastern Europe, who, influenced perhaps by their Muham. neighbours, consider the union of foster-kindred as unlawful. Foster-children (and also adopted children) are regarded in the same light as the natural offspring, and the foster-child bears the name of the foster-father so long as it remains in his house (Maine, *Early Law and Custom*, London, 1891, p. 257; F. S. Krauss, *Sitte und Brauch der Südslaven*, Vienna, 1885, pp. 10, 14, 602).

2. **Greeks and Romans.**—The two European nations which were the first to reach a high level of civilization are those among whom the relationship is of least importance. Neither Greek nor Latin has any special term to denote foster-kinship, nor is it recognized by Greek or Roman Law. Isolated

cases no doubt are to be found, and there are indications that under the later Roman Empire (as in the Parisian world of the 18th cent.) fashionable women sometimes got rid of domestic burdens by putting their children out to nurse in the country. An edict of the Emperors Honorius and Theodosius (dated A.D. 409 and incorporated in the *Theodosian Code*) forbids parents to entrust their offspring in this way to the care of shepherds, a class that was held in very ill esteem:

'Nemo curialium plebelorum possessorumve filios suos nutriendos pastoribus tradat. Aliis vero rusticis, ut fieri solet, nutriendos dari non vetamus' (*Cod. Theodos.*, ed. G. Hanel, Bonn, 1842, p. 909).

Foundlings.—A different type of fosterage receives special treatment in Roman Law. This arose from the custom of exposing new-born infants which the parents did not desire to rear. It sometimes happened that the unfortunate babe was rescued and brought up by strangers from motives of compassion or convenience. The story of Oedipus and the plots of many Greek comedies afford examples. In Rome, the codes of the later Empire define the rights of the fosterer (*nutritor*) in such cases. The *Codex Theodosianus*, adopting the principle of an edict of Constantine, lays down (lib. v. tit. 8) that any one who rears an infant thus exposed acquires full rights over it, and may treat the foundling as his son or his slave, at pleasure. If the actual father desires to recover his child, he must give in exchange a slave of equal value, or pay an equivalent sum. Similar provisions are found in the semi-Roman codes of various barbarian peoples who were in contact with the Empire, and among whom the exposing of children was a common practice. The statute just quoted was incorporated in the *Lex Romana Rética* of the 8th century (see *Capitulum Regum Francorum*, cxliv., in Canciani, *Barbarorum Leges Antiquæ*, Venice, 1781, iii. 274). A further development is added in the Laws of the Visigoths (c. A.D. 654), where the actual parents, if identified, are laid under a formal obligation to redeem the child; if they fail to do so, they are to suffer exile for life, and the *judex territorii* is directed to pay the redemption price out of the father's property; or, if the father has nothing, he is to become a slave in place of his son, who is to go free. It is further laid down that, if parents entrust a child to another person, the fosterer is to be paid annually a shilling (*solidum*) for each year of the child's age, up to the age of ten, after which his service is to be taken as equivalent to his keep. It is, of course, impossible to say whether such enactments were really operative among the rude nations for whom they were framed.

The attempt to enforce the performance of parental duties was no doubt due to the growing influence of the Church, to which the practice of exposing children was naturally repugnant. The *Formulae Sirmondæ*, which probably represent the practice of the *tractus Turonensis* (Touraine), speak of a class of officials called *matricularii*, whose special duty it was to take charge of foundlings. These infants were usually left at the church-door by stealth; the *matricularii* had to take care of them and induce charitable persons to receive them into their families. The Synods of Vaison (A.D. 442) and Arles (A.D. 443?) laid down canons dealing with this question.

Cf. Hefele, *Hist. of the Councils*, Eng. tr., Edinb. 1885, iii. 166, 171; *Formulae Sirmondæ*, in Canciani, iii. 419, 438; see also Regino, *de Eccl. Discipl.*, Paris, 1871, lib. ii. §§ 60-72.

The methods adopted by the mediæval Church are still in force in the Balkan States (F. S. Krauss, 587). In the more progressive countries the care of waifs and destitute children is generally recognized as a public duty, and is entrusted either to Foundling Hospitals and similar institutions, or

to foster-parents, who are paid for their trouble either by the State or by local authorities (*EBri*, art. 'Foundling Hospitals').

3. Anglo-Saxons.—After the introduction of Christianity into England, these duties were discharged by pious women (*sacræ virgines* [Augustine, *Ep. ad Bonifac.* 23]). The laws of King Ine provide an allowance for any one who takes charge of a foundling; and other early laws define the rights of foster-parents on lines similar to those laid down by the *Codex Theodosianus*. Fosterage by desire of the parents seems to have been prevalent among the Anglo-Saxons. Augustine, in the *Epistle* just referred to, complains that mothers are apt to delegate to others the duty of nursing their children; and the early Church set its face against the practice, but it was too deeply rooted to be easily suppressed. Thorpe asserts that the custom of fosterage was as prevalent among the Anglo-Saxons as among the Scandinavian nations (*Ancient Laws and Institutes of England*, London, 1840, Glossary, s.v. 'Foster'). It should be observed, however, that the words *fōstre* and its derivatives, on which he seems to rely, are used of nursing in general, whether in the home of the parents or elsewhere (cf. T. Wright, *Womankind in Western Europe*, London, 1869, p. 55). But there is other evidence to show that the custom was very general: e.g., the efforts made both by ecclesiastical authorities and by kings to check the abuses, and even crimes, which occasionally arose from the carelessness or treachery of foster-parents.

Thus, Kenelm, son of Kenwulf, king of Mercia, was murdered in infancy by his fosterer in order to clear the way to the throne for his aunt Quendreda (for other examples, see J. Thrupp, *The Anglo-Saxon Home*, London, 1862, p. 83f.).

Such instances might suggest that the relationship did not possess the same sanctity among the Anglo-Saxons as in Scandinavia or in Ireland. But it is natural to suppose that, as a rule, a strong affection did subsist between foster-parents and their charges.

Both King Edgar and King Athelstan showed their gratitude to their foster-mothers by bestowing on them substantial grants of land (Sharon Turner, *Hist. of the Anglo-Saxons*, London, 1862, iii. 6-7).

4. Scandinavians.—In Scandinavia the custom attains a much higher development, and it is to be noted that the word *fōstr*, with its derivatives, belongs originally to the Scandinavian branch of the Germanic languages, whence it was early borrowed by the Northern dialect of English. In primitive Norway, as elsewhere in the ruder stages of society, it sometimes happened that children exposed at birth were reared by strangers, and that this charitable office produced a mutual affection of great strength (Dasent, *Burnt Njál*, London, 1861, preface, xxv). But, as a rule, fosterage was undertaken by the wish of the parents; examples are to be met with on every page of the Norse and Icelandic Sagas, and the native codes legislate specially for this kind of relationship.

(1) *Characteristic features.*—The maternal office performed by the foster-mother is not here, as in the East, the essential point; it is rather the foster-father (*fōstri*) who plays the leading part. The charge of the child does not always begin from infancy, and it is usually continued to the verge of manhood. According to the Icelandic code of law known as the *Grágás* (tit. xxi.), the age of sixteen is the normal limit of the period; but in the Sagas it often lasts to eighteen or even later (*Herverar Saga*, ed. P. F. de Suhm, Copenhagen, 1875, p. 81). The fosterer does not merely rear the child; he undertakes its whole education.

In the *Völsunga Saga*, Sigurd's foster-father instructs him in *idrottir*, chess and runes, and teaches him to speak foreign tongues (du Chaillu, *Viking Age*, London, 1889, ii. 45). So, in the *Droplaugarsona Saga*, Besel the Wise, in offering to foster the son of Droplauga, promises expressly to teach him his own wisdom (*Sagan af Gunnlaugi Ormatungu ok Skalla-Ragnfrí*,

Copenhagen, 1775, p. 48, note). Often the boy's education is completed by his being taken as a comrade on expeditions of adventure and piracy (Dasent, *Orkneyinga Saga*, Rolls Series, 1894, p. 220). A knowledge of law being an important branch of knowledge, Njál teaches it to Thorhall, so that he becomes the greatest lawyer in Iceland (Dasent, *Burnt Njál*, i. 82). The crafty Thrand teaches Sigmund 'how to bring all kinds of law-suits, and how to get his own rights and those of others' (York Powell, *Færeyinga Saga*, London, 1896, p. 75).

Such cases justify the saying *fjórðungi bregdr til fōstrs*, 'the fostering is a quarter of the man' (Cleasby-Vigfusson, s.v. 'Fōstr').

In many cases the foster-father gives part of his property to his foster-son. The amount that may be thus conveyed is limited by the ancient law in the interest of the proper heirs (*Norges Gamle Love*, Christiania, 1846, i. 213); but in the Sagas the foster-son is sometimes made heir to half or all his fosterer's property (K. Kaalund, in *Aarbøger for nordisk Oldkyndighed og Historie*, 1870, p. 279).

(2) *Strength of sentiment.*—The affection which sprang from this relationship is described as of extreme intensity, both as between foster-child and foster-parents, and as between foster-brethren; as in Ireland, it is said to have been even stronger than the tie of consanguinity.

When Thorhall, one of Njál's foster-sons, heard of Njál's death, he was so violently moved that 'he swelled all over and a stream of blood burst forth from both his ears, and could not be staunched, and he fell into a swoon' (*Burnt Njál*, ii. 195).

A violation of this sentiment is regarded as an offence against the natural charities.

The tragic motive of the *Laxdæla Saga* consists in the gradual estrangement brought about by the machinations of a wicked woman between the foster-brothers Bolli and Kjartan, which issues in a fratricidal conflict. Attacked unwillingly by Bolli, Kjartan flings away his weapons, saying: 'I am much more fain to take my death from you than to cause the same to you myself' (*Laxdæla Saga*, tr. M.A.C. Press, London, 1899, p. 178).

The term 'foster-brothers' came to be extended to those who had gone through the ceremony of swearing brotherhood, as in the so-called *Fóstbrædra Saga*. (This rite is described in Vigfusson and York Powell, *Origines Islandicæ*, Oxford, 1905, i. 319 and in art. BROTHERHOOD [Artificial], vol. ii. p. 857; cf. Dasent, *Gisli*, Edinburgh, 1866, p. 23.) The proper term for such a 'sworn-brother' is, however, *eidbróðr* or *svarabroðr* (see Vigfusson and York Powell, *Corpus Poeticum Boreale*, Oxford, 1883, i. 424).

(3) *Reasons of special development.*—The causes which gave the practice of fosterage peculiar importance in Scandinavia must be sought in the barbarous and violent condition of society described in the Norse and Icelandic Sagas. The weaker man, unable to secure the safety of his household, could gain the protection of a stronger neighbour by fostering his son. Or, again, one who found himself isolated and threatened by enemies might acquire in this way the support of powerful friends.

In the *Færeyinga Saga* the crafty and treacherous Thrand, being a kinsman, takes to himself foster-sons from three different families. Tord of Geirulfssore, in the *Vígþinguma Saga*, is fosterer to one of Helge Asbjörnson's children; being convicted of theft, he refuses to pay the usual fine, saying that 'it would be little good he should get by fostering Helge Asbjörnson's son, if he should have to pay the penalty in a case like that!'

The fosterer is therefore, as a rule, in a position of inferiority to the parents of his charge: hence the saying that 'he is the lesser man who fosters another's child' (Cleasby-Vigfusson, s.v. 'Barn-fōstr').

This maxim may be illustrated by a tale which is told in the *Saga of Harald Hårfager* (S. Laing, *Heimskringla*², London, 1889, i. 391-4). Athelstan of England had tricked Harald into performing an act which might be construed as a form of homage to the English king. Wishing to pay him back in kind, Harald sent his infant son, the child of a servant-girl, to Athelstan under the charge of Hauk. On being admitted to the king's presence, Hauk advanced and set the child on the king's knee; and, when Athelstan asked what this meant, he replied: 'Harald the king bids thee foster the child of his servant-girl.' Taking a child on one's knee (*kneita*) was among Germanic peoples the usual form of accepting parentage. Athelstan was very angry, but presently accepted the situation, and brought up the boy, who grew up to be king Hakon. Harald was de-

lighted at the success of his retort, 'for it is the common observation of all people,' says the chronicler, 'that the man who fosters another's children is of less consideration than the other.'

Instances are, however, to be found where the offer to undertake the charge of a boy is made as an overture of friendship, as when Heidrek, in the *Hervarar Saga* (p. 111), offers to foster the son of the king of Gardariki; the queen's advice to her husband on this occasion shows that it was dangerous to refuse such a proposal when made by a formidable and ruthless warrior. Again, the person who offers fosterage may be an equal or superior, and his intention may be to make reparation for injuries done, by thus accepting the inferior position. So Njál undertakes to foster the boy Hauskuld, whose father has been slain by Njál's son Skarphedin (*Burnt Njál*, ii. 59).

(4) *Fosterage as a legal contract.*—The ancient laws of Scandinavia give the foster-father a legal status, and define his rights and obligations in respect to the foster-child and the actual father. The parties enter into a regular contract, and the foster-father receives a certain amount of money or goods or land to defray his expenses. If either side fails to fulfil its part of the bargain, the law provides compensation. Thus, if the child is withdrawn by the father, he cannot recover the money he has paid; while, if the fosterer sends the child home before the proper time, or if he does his part so badly that the father is justified in withdrawing his child, he must refund a proportion of the amount paid to him (*Grágás*, tit. xxi.; *Gamle Love*, i. 286, § 88). In some cases recognized by the *Grágás* no payment is made by the father, fosterage being given in consideration of benefits rendered or promised. The case of an orphan is specially provided for: if he is reared by a person not legally responsible for his nurture, the fosterer may claim a fee (*fóstrlaun*) out of any property which may come to the foster-son, or out of any *vergild* which may be adjudged for injury done to him—provided always that the person who makes such a claim has formally undertaken the duties of a foster-father. By so doing he acquires the rights and undertakes the liabilities of the natural parent: he is entitled to make claims on behalf of his foster-son, and is responsible for claims made against him.

Thus, when Sigmund in the *Færeyinga Saga* (as above, pp. 36-38) claims *vergild* from Thrand for the murder of his father Breste, Thrand, as a counterstroke, undertakes the fosterage of Laf, whose father had been slain by Sigmund, and makes a cross-claim against Sigmund for *vergild* on behalf of Laf. Under the ancient *Vulathing-lov*, either of a pair of foster-brothers has the right to demand a *vergild* of 12 *aura* for the death of his fellow from the slayer (*Gamle Love*, i. 80, § 239).

In all this legislation there is much that is closely similar to the provisions of the *Ancient Laws of Ireland*; the whole conception of the foster-relationship is much the same, and there are striking coincidences in points of detail.

5. *Gaelic Celts of Ireland.*—(1) *Legal enactments.*—References to the subject of fosterage are scattered throughout the five volumes of the *Ancient Laws of Ireland* (which, it must be remembered, do not constitute a code and have no historical unity). The most important locus is the *Cáin Iarraith*, or Law of Fosterage-Fee (ii. 146-192). The term *iarraith* answers to the Scandinavian *fóstrlaun*, and denotes the value in money or kind made over to the fosterer by the parents. The amount of this fee is fixed on a scale varying according to rank, a higher rate being charged for girls than for boys. Provision is made, as in Scandinavian law, only with more detail, for the termination of the arrangement on either side, and for compensation to be made by the foster-parents in case of neglect or of harm done to their charge. The treatment which the foster-child receives is to

vary according to the rank of the parents and the amount of the *iarraith*. Rules are laid down as to gradations of food and dress, with a minuteness that belongs to artificial theory rather than actual practice (for details, see *CHILDREN* [Celtic], § 7). The foster-father is to teach the useful and agreeable arts, especial stress being laid on riding. He has the right of inflicting castigation and other punishments in case of misbehaviour; on the other hand, he is made responsible for mischief done by the foster-child, so far as this can be ascribed to his own neglect or ill teaching. His functions thus include those of a tutor; the importance of the moral influence so exercised gave rise to a saying to the effect that fostering is two-thirds of a child's nature (O'Donovan, *Battle of Magh Rath*, Dublin, 1842, p. 294). As one man might foster several boys, it is clear that in a more settled state of society the foster-father would easily pass into a schoolmaster. And, in fact, the term *aite* may mean either 'foster-father' or 'tutor', and the derivative *aitechas* or *oideachas* is in modern Irish the regular equivalent of 'education'; so also *dalta* is an ambiguous term meaning sometimes 'fosterling' and sometimes 'pupil'. The relations between tutor and pupil are expressly recognized by the Laws as constituting a distinct species of fosterage; a section of the *Cáin Lánamna*, or Law of Social Connexions, defines the mutual obligations of the 'teaching foster-father' (*aite forceatail*) and his pupil (*Laws*, ii. 349). Maine has pointed out the analogy between this relationship and that which subsists between the Bráhmán and his disciple (*Early Institutions*, 242). In ecclesiastical documents, such as the *Lives of the Saints*, the same terminology is employed to designate the spiritual teacher and the pious youths who come to live with him and receive instruction in the Faith.

It is significant that in the *Cáin Iarraith* the foster-mother (*muime*) is barely mentioned. It is true that this omission is to some extent made good by paragraphs in the *Cáin Lánamna* (*Laws*, ii. 349); but there can be no doubt that among the Gaedels, as in Scandinavia, the foster-father was the pivot of the relationship.

In the Laws, as is natural, fosterage is regarded mainly as a contract for mutual advantage. Yet even here it is expressly stated that it may be undertaken for love; and, even where a consideration is paid, it is recognized that the relationship established does not end with the termination of actual fosterage, which is fixed at the age of 17 for boys, 14 for girls (*Laws*, ii. 176, 193). A durable connexion has been created, described as *lanamnas*—a term which ordinarily denotes the most intimate of all relations, that of husband and wife. When the foster-father returns his charge to the parents, he gives parting gifts (*seóit gairi-techta*), which are, in fact, the assertion of a lasting claim on the gratitude and good offices of the foster-child (*Laws*, ii. 190).

(2) *Historical evidence.*—There is much uncertainty as to the period in which the Irish Laws first took definite shape, and it is difficult to judge how closely their theory corresponds with actual usage; but there can be no doubt that their enactments in regard to fosterage are founded on a custom which was inwoven with the life and habits of the Gaedels as far back as they are known to us. It is already in vigour in the legends of the Ulaid (the cycle of Conchobar and Cúchulainn), which represent a state of society perhaps as old as the Christian era; and it meets us at every turn in Irish literature and history, down to the break-up of the old tribal system about the year 1600. Even in the 17th and 18th centuries it still lingered in certain regions.

In Ireland, as in Scandinavia, it was deemed an

honour and advantage to be allowed to rear the son of a powerful chieftain, and thus establish a claim to favour and protection. A passage in the *Lawes* (ii. 285) seems to imply that fostering could be undertaken only by persons who stood in a certain degree of consanguinity to the parents. This may have been the rule in very primitive times, or it may have been a point of artificial theory, not really observed in practice; at all events, if there ever was such a restriction, it must have disappeared very early. As a rule, no doubt, the foster-parents belonged to the same clan as the father, but this was not always the case. The son of a noble house often had several fosterers.

At the birth of Cúchulainn, who was nephew to the powerful king Conchobhar mac Nessa, and whose future greatness was foretold by Druids, a competition at once arose for the privilege of fostering the child (Thurneyson, *Sagen aus dem alten Irland*, Berlin, 1901, p. 61). The daughter of another king, Eochaid Salbuide, had twelve foster-fathers (ib. 63). When St. Patrick preached to the daughters of King Leisgaire, and told them of the greatness of God, they asked, among other questions, whether many had fostered God's Son, implying that this would be a test of His rank and power (Joyce, *Soc. Hist. of Anc. Ireland*, ii. 17). In the latest days of the old national life we find the same view expressed. Fynes Morison says that women of good wealth seek with great ambition to nurse the children of lords and gentlemen, 'not for any profit, but rather spending much upon them while they live, and giving them when they die sometimes more than to their own children. But they do it only to have the protection and love of the parents whose children they nurse' (Itinerary, in C. L. Falkner's *Illustrations of Irish History*, London, 1904, p. 318).

According to Sir John Davies (in H. Morley's *Ireland under Elizabeth and James I.*, London, 1890, p. 296), the poorer and weaker sometimes actually bought the 'alterage' of a 'potent and rich' man's children—an inversion of the principle of *varraith* described above. It is probable that, during the centuries of constant warfare with the English invaders, the desire to gain protection and support gave additional strength to the system of fosterage, and imparted fresh intensity to the feeling by which foster-kindred were united.

(3) *Strength of sentiment*.—The feeling referred to had always been one of singular power. Everywhere in the older literature the tie between foster-father and foster-child, or between foster-brothers, is regarded as equivalent to the ties of blood.

In the tale of Ronan and his son Mallofhartig, the latter's two foster-brothers are his truest companions: one of them dies with him, the other avenges his death ('Fingal Ronán,' in *RCel* xiii. [1892] 388). In the tale of the Battle of Magh Rath (ed. O'Donovan, pp. 135, 161, etc.), King Donnall is throughout deeply concerned about the personal safety of his foster-son, Congal Cloen, though the latter is in rebellion against him. When circumstances force men so connected into conflict, the situation is felt to be peculiarly tragic, as in the combat between Cúchulainn and Fer Diad (E. Hull, *Cuchullin Saga*, London, 1898, p. 186 ff.), or in the destruction of Conaire by his foster-brothers, the grandsons of Donn Desa (*Togail Bruidne Da Derga*, ed. W. Stokes, in *RCel* xxii. [1902]).

Giraldus Cambrensis in the 12th cent. (*Topog. Hibern.* iii. 23) and many English writers and politicians of the Elizabethan period bear emphatic testimony to the binding force of this attachment.

'In the opinion of this people,' says Sir John Davies (as above, p. 290), 'fostering hath always been a stronger alliance than blood, and the foster-children do love and are beloved of their foster-fathers and their sept more than of their own natural parents and kindred, and do participate of their means more frankly, and do adhere to them in all fortunes with more affection and constancy.' Stanishurst (*de Rebus in Hibernia gestis*, Antwerp, 1584, p. 49) and Fynes Morison (p. 319) speak in similar terms, and Spenser (*View of the State of Ireland* [Works, Globe ed., London, 1906, p. 636^a]) describes a scene equally barbarous and impressive, when, after the execution of Murrough O'Brien, his old foster-mother flung herself on the ground and drank the blood that flowed from the headless corpse.

(4) *Political significance*.—The passion which inspired such actions was to Englishmen morally unaccountable and therefore repugnant; and its consequences were politically inconvenient. A relationship so wide-spread and so intimate formed a social cement of great tenacity, and helped to

solidify the tribal system which the conquering race was above all things anxious to undermine. If a native leader had a turbulent and dangerous following, it was apt to be commanded by a foster-brother, who clung to him with desperate loyalty.

The State Papers supply instances in point. When the Sagan Earl of Desmond was finally hunted down, the only man left with him was his foster-brother, Thomas O'Feighy (H. Bagwell, *Ireland under the Tudors*, London, 1890, iii. 391). See also J. Perrott's report as to the fosterer of Turlough Lynagh O'Neill (Calendar of State Papers [Ireland], 1574-1586, p. xxii).

Another circumstance gave a formidable extension to the influence of the custom. The relationship was not confined to the family of the fosterer, but might be accepted by the whole sept to which he belonged. Examples of this are given by O'Curry (*Manners and Customs*, ii. 375), who goes so far as to assert (ii. 355) that fosterhood 'was generally that of a whole family or tribe,' and that 'in very many cases it became a bond of friendship and alliance between two or more tribes and even provinces.' This is an exaggeration; it is more probable that the tribe was concerned only when the fosterling was the son of an important chief. Such cases are to be met with frequently in Elizabethan times.

Hugh Roe O'Donnell, born about 1572, was fostered by chieftains of the O'Donnells and McSwineys and also by the O'Cahans, thus uniting the support of three of the strongest clans in the north of Ireland (*Life of Hugh Roe O'Donnell*, ed. D. Murphy, Dublin, 1895, pref. xxxii). The strength of the famous Shane O'Neill is reported to lie 'not in the nobility nor yet in his kinsmen and brothers, but in his foster-brothers the O'Donnellaughs, about 300 gentlemen' (Calendar of State Papers [Ireland], 1589-1578, p. 333; cf. *Intro.* to this volume, p. xv). In a description of the state of Ulster in 1588 the Quins and Hagans are spoken of collectively as fosterers of the Earl of Tyrone (Cal. State Papers, 1608-1610, *Intro.* p. x).

It was not only the cohesion thus imparted to the tribal system that made the custom objectionable to English politicians. They saw in it one of the main influences which tended to merge the English settlers in the native population. The Statute of Kilkenny in 1367 declared fosterage and *gossipred* between English and Irish to be high treason; and 'fosterage and alliance with the Irish' headed the list of charges for which the seventh Earl of Kildare and eighth Earl of Desmond suffered attainder, and the latter execution, in the year 1468 (*DNB*). Nevertheless, the Statute of 1367 soon became inoperative in this respect. Sussex, writing in 1557, complains that it is not put in execution (Cal. State Papers, 1509-1573, p. 138). Fynes Morison (p. 280) classes fosterage, along with intermarriage, among the five main causes which combined to alienate the Anglo-Irish from the English connexion. At the very end of the 16th cent. Spenser (p. 675^a) declares that the English settlers tend to 'become mere Irish, with marrying with them, fostering with them, and combining with them against the Queen.' Amid the general effacement of native institutions which followed the suppression of Tyrone's rebellion, fosterage disappeared, though traces of the custom persist in later days.

6. *Gaedels of Scotland*.—As the Scottish Highlanders were originally an offshoot of the Irish race, it is not surprising to find that fosterage prevailed amongst them also. It did not attain the same political importance here as in Ireland, but there is sufficient evidence to show that it was equally common and associated with an equally powerful sentiment. Two striking examples of the devotion displayed by foster-brothers are cited by Sir Walter Scott in the preface to his *Fair Maid of Perth*. As the native social system lasted unbroken in the Highlands longer than in Ireland, this characteristic feature survived later. Dr. Johnson found it still in vigour when he visited the Hebrides in 1773. His *Journal* describes in detail the arrangements made between foster-parents and the fathers of their charges (*A Journey*

to the *Western Islands*, London, 1876, p. 118). Skene (*Celtic Scotland*, Edinburgh, 1876-80, iii. 221) gives four examples of written contracts of fosterage, the latest of which dates from 1665. They confirm the accuracy of Dr. Johnson's statements, and agree in principle with the Irish *Cáin Iarraith* already quoted. The obligation of the foster-father and the parent, and the share of expenses to be borne by each of the parties, are very precisely specified.

7. *Wales*.—Among the Brythonic races the evidence of fosterage is much more meagre than with their Gaelic relations. The remains of Breton and Cornish literature are too slight to furnish any information, but in the *Mabinogion* instances are found sufficient to show that the custom held a certain place in the primitive life of the Welsh people (see the tales of Peredur, Kulhwch, and Branwen, in Lady C. Guest's *Mabinogion*, London and Llandoverly, 1849, i. 313, ii. 250, iii. 114).

The references to the subject in the *Ancient Laws of Wales* are casual and unimportant in comparison with the elaborate provisions found in the Irish Laws; but they imply that it was a common practice for a noble to allow his sons to be fostered in the house of a serf (*aillt* or *taeog*). If such fosterage lasted a year and a day, the boy thereby acquired a right to a share in the goods of his foster-father (*Ancient Laws of Wales*, London, 1841, pp. 95, 393). No such right seems to have existed in the case of freehold (*breyr*) land.

The sons of kings seem to have been frequently brought up in noble houses. The early Latin *Life of St. Samson*, who lived in the 6th cent., speaks of his parents' families as being of high rank and fosterers of kings (*altrices regum*) (*AS*, 28 Jul., vi. 574). Giraldus Cambrensis declares that in his time this usage led to civil discord, as the nobles who had thus reared the different sons of a royal house took each of them the side of his own foster-son, and pushed his interests against his brothers'. Giraldus adds that truer friendships are accordingly to be found existing between foster-brothers than between brothers in blood (*Descriptio Cambrie*, lib. ii. cap. 4, 9).

A remarkable instance of this is quoted in J. E. Lloyd's *History of Wales*, ii. 549. When, on the death of Owain Gwynedd, war broke out among his surviving children, and his son Hywel was defeated and slain by his half-brothers, he was defended to the last by the seven sons of his foster-father Cadifor, who died fighting round him.

Sir J. Rhys (*Welsh People*, London, 1902, p. 207, note) suggests that the explanation of the custom of fosterage in Wales is to be sought in the character of the marriage-contract and the division of the children on the separation of the parents. But this theory is at variance with the whole treatment of the subject in Irish law, and it is not likely that the custom had different origins in two neighbouring peoples of kindred race. It is perhaps more likely, as is suggested by Anwyl (see *CHILDREN* [Celtic], § 1), that it was connected with some primitive tabu which forbade the father to see his children until they had reached a certain age (cf. the account of the Circassian practice quoted above, I. § 4). Whatever the origin of fosterage may have been, the evidence here collected indicates that it is most likely to develop and assume importance in a disturbed and unorganized condition of society, where the individual, not being able to rely on a central authority or on corporate social instinct, is led to seek security by laying great stress on family ties, and by giving to artificial relationships the same sanctity as to the natural obligations of blood-kinship.

LITERATURE.—For discussions and descriptions of fosterage in different countries, see especially the following: H. S. Maine, *Lectures on the Early History of Institutions*, London, 1906, pp. 241-243; *EB* 11, art. 'Foundling Hospitals,'

with the authorities there quoted: R. Cleasby and G. Vigfusson, *Icelandic-Eng. Dict.*, Oxford, 1874, under 'Barn-fóstr', 'Fóstr', and derivatives; V. Gudmundsson, in H. Paul's *Grundriss der german. Philol.*, Strassburg, 1891, iii. 415 ff., with authorities cited; K. Weinhold, *Altord. Leben*, Berlin, 1886, p. 285 f.; K. Kaalund, in *Aarbøger for nordisk Oldkyndighed og Historie*, 1870, p. 279 ff.; *Ancient Laws of Ireland*, vol. vi., Glossary, Dublin, 1901, p. 460, s.v. 'Iarraith'; E. O'Curry, *Manners and Customs of the Ancient Irish*, London, 1878, ii. 356, 375; P. W. Joyce, *Soc. Hist. of Anc. Ireland*, do. 1903, ii. 14-18; C. Plummer, *Vita Sanctorum Hiberniae*, Oxford, 1910, i. cvi; J. E. Lloyd, *Hist. of Wales*, London, 1911, i. 310, ii. 549. For primitive peoples, consult the references given by A. H. Fost, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894-95, i. 90-98, ii. 67, 177.

E. J. GWYNN.

FOUNDATION, FOUNDATION-RITES.

—Throughout the lower culture the erection of a new building, or the foundation of a new settlement, is the occasion for certain rites, which may be described as magico-religious, and of which the rites still performed in civilized countries at the laying of a foundation or memorial-stone, or at the consecration of a church or masonic lodge, are the pale and attenuated survival.

1. *Choice of site*.—The first business is naturally the choice of an appropriate site. Among savage and barbarous peoples this choice is guided not merely by considerations of health or suitability to the occupation (whether hunting, fishing, agriculture, or the rearing of cattle) whereby they gain their means of livelihood, or of safety from enemies or from wild beasts, but also by its acceptability to superhuman beings and the prospect it affords of good fortune. For this purpose recourse is had to divination, the methods of which are various.

The site having been provisionally selected, the Mundas of Chola Nāgpur dig a hole at each of the four corners and place a small quantity of rice in them, with a prayer to the divinity Singbonga that the test may truly indicate whether the site be good or bad. If the rice is found next morning undisturbed, the omen is good, and with another prayer to Singbonga for a blessing on the site the work of building proceeds (Dalton, *TES*, new ser., vi. [1898] 83). This mode of augury is common in India and Africa. In Africa sometimes, but not always, the omen is reversed, as among the Maravi, west of Lake Nyasa, where a small heap of flour is laid under a tree. If twenty-four hours later it is found undisturbed, the site is rejected as displeasing to the *War wo* (ancestral spirits), who decline to partake of food there. But, if the flour has been disturbed, the *Wazimo* have eaten of it, and the choice of site is ratified (Andree, *Ethnograph. Parallelen*, Stuttgart, 1878, i. 24).

The foregoing are illustrations of a simple method of divination. When professional diviners are called in, the ceremonies frequently become very complex, and it is impossible to enumerate or even roughly classify them. Attention may, however, be drawn in passing to the Chinese practice, which has elaborated geomancy into a pseudo-science called *feng-shui* (q.v.), without which no site is selected for any purpose (de Groot, *Rel. Syst. of China*, Leyden, 1892 ff., iii. 936; Dennys, *Folklore of China*, London, 1876, p. 65). But there are some methods of divination which, followed by uncivilized peoples, have found a place in mediæval times, and among the more backward inhabitants of modern Europe. Animals of good omen for this purpose are met with in many countries.

In Japan a Buddhist temple was erected, under the Emperor Kotoku, on the spot where a white deer was seen quietly moving (*Nihongi*, Anton's tr., Yokohama, 1896, ii. 236). In Germany the Abbey of Herford was erected on a site shown, in answer to prayer, by a snow-white cow bearing a burning taper on either horn; and the site of a neighbouring church was determined in the 11th cent. by a flight of doves (Pröhle, *Deutsche Sagen*, Berlin, 1863, p. 182 f.). Many such sites in France and Germany are alleged to have been chosen by similar indications. The capture of a bear in the forest on the banks of the Aar on Good Friday, 1191, when Duke Berchtold of Züringen was contemplating building a fortress to overawe his rebellious lieges, is said to have decided the site of the town of Berne (ib. 160). The contrary case is reported from India, where the village of Ner Pingal in Berar was built by Nawab Muhammad Khan Miyazi on the spot where, we are told, a hare turned on one of his hounds and put it to flight (*NINQ* iv. [1894-5] 205; cf. 108, and Crooke, *PR*, 1896, i. 100). On the N.E. slopes of the Carpathians the Hunule peasant does not regard every site as lucky, and thus suitable for his house. He is guided in the choice by his cattle, and builds where they prefer

to lie. He avoids the place where red ants make their hill; but a hill of black ants promises good fortune. Like a wise man, however, he will sleep over it, and that on the very spot. If his dreams are fair, especially if of fine cattle, this settles the matter; otherwise he looks elsewhere. Or sometimes he will test the site by leaving on it a glass not quite full of water and covered with a leaf. If on the following day the water has increased, the place is lucky; if it has not, he will avoid it. If these precautions be omitted, the site may turn out to be haunted by evil spirits; and then the house also will be haunted, and mischief will result to the inmates (Kaindl, *Die Huzulen*, Vienna, 1894, p. 29).

Another form of divination is found frequently in French legend, as, for instance, in the story of the foundation of the famous abbey of Cluny, concerning which we are told that the monks were unable to agree where it should be built. The dispute was finally decided by one of them, who was a mason, flinging his hammer; and the abbey was erected on the spot where it fell (Sébillot, *Folk-lore de France*, iv. [Paris, 1907] 114).

A somewhat similar mode is employed by the Southern Slavs. It is not, indeed, employed to fix a site, but to determine whether the hill-spirit will permit the erection on a hillside provisionally selected. The peasant-farmer who proposes to build rolls a flat round cake down the hillside. If it ultimately falls on its face, the hill-spirit which haunts the place is favourable; otherwise the omen is against him, and the farmer must seek another position. The cake here is perhaps an offering to the hill-spirit. In the Austrian Duchy, furthermore, the peasant lays about the chosen site some large stones. Coming three days later, he turns them over to see whether worms are to be found beneath them; and he builds on the spot where that stone lies under which the worms appear. The worms are the messengers of the earth- or hill-spirit who dominates the place, and their presence is a sure indication of his consent (Krauss, *Volksl. der Südalpen*, Münster i. W., 1890, p. 158).

Throughout N. W. Europe a very common legend relates that the site, especially of a church, was changed by supernatural means. The legend is usually etiological, and its object is to account for a site the original reason for which has been forgotten. But it often points to the necessity for securing the consent of the local earth-spirits to the erection. This belief appears repeatedly in both legend and custom in many parts of the world. It is brought prominently forward in many stories relating to the elves or fairies, in the British Isles and elsewhere.

In Galloway, for example, 'when the new house at Greenan was being founded, a woman appeared and asked the masons and others taking a hand in the work to change the site. She told them that the house on that site would be right over her dwelling, and in consequence much annoyance and inconvenience would be caused to her and her household' (*Rep. Brit. Ass.*, 1897, p. 491). In Sweden great care is taken to avoid a spot haunted by the underground folk. The builder must go to the chosen place, make known his purpose in a loud voice, and ask permission; and the day before he intends to begin work he lays his tools and materials there. If the underground folk agree, the noise of people busy with hammering and hewing will be heard in the silence of the night. In the Faroe Islands an instrument as modern as the compass is laid on the site. According to its behaviour it is ascertained whether the *Huldr* dwell there; if they do, they must not be disturbed (*Zeitschr. d. Vereins f. Volksk.* viii. [1898] 274, 273).

Sites in Europe and elsewhere, especially for churches, are said to have been indicated by the direct command or the apparition of supramundane beings, such as the Virgin Mary. Or an image is found in a certain spot and cannot be removed. It is needless to refer here to instances. Sometimes the Divine will is shown by a flame or light seen in a bush, as in the case of the Monmouthshire church of Llantilio Bortholly (*Parochialia*, *Arch. Camb.*, 6th ser., xi. [1911], Suppl. 38, 71). Some of these sites, such as that of the famous shrine of Our Lady of Guadalupe, near the city of Mexico, may have been places of pagan worship, converted to Christianity in accordance with the well-known policy of the Church.

2. Appropriation of the site.—The site being chosen, the next business is to appropriate and exorcize it, and incidentally to mark it out. Among the Basuto, when the village, or *kraal*, as it is often conveniently termed, is to be removed, the chief drives into the ground a peg covered over with

charms to nail the village firmly to the soil of the new site, and in order that neither war nor any other misfortune may distress the inhabitants and force them to change their abode. This is a formal and religious act, and probably attended with ceremonies which our authority has unfortunately not thought proper to recount (Casalis, *The Basutos*, Eng. tr., London, 1861, p. 124). Among the A-Kamba of East Africa (like the Basuto, a Bantu people), when a new village is founded, a medicine-man is generally consulted, and, having satisfied himself by divination that the site chosen is lucky, he kills a goat and walks over the rough outline of the village, sprinkling it as he goes with the goat's blood and the contents of its stomach. The fence of branches surrounding the site is then put up. The head of the village and his family camp in temporary shelters inside the fence for several nights before beginning to build the huts. On the second and fourth nights of their preliminary occupation the head of the village must cohabit with his wife—doubtless as a magical rite to obtain prosperity, and increase in cattle and crops, as well as in the human population (Hobley, *Ethnol. of A-Kamba*, Camb. 1910, p. 58). The circumambulation of the site as performed by the medicine-man of the A-Kamba is also a magical rite. In Siam, when the ground for the erection of a Buddhist temple is first dedicated, eight *luk nimit*, or round marking stones, are sprinkled with holy water and buried, to mark the limits from which evil spirits are warned off (Alabaster, *The Wheel of the Law*, London, 1871, p. 272 n.). Doubtless the priest performs the sprinkling by walking the boundary. The Etruscans, on founding a city, ploughed with a cow and a bull a furrow round the limits; and we gather from Ovid's account of the *pomerium* of Romulus that the animals yoked to the plough were white (*Fasti*, iv. 826). To some such rite as this, misunderstood by later ages, we must attribute the numerous legends assigning, as the extent of lands given for various purposes, the quantity that the recipient could walk or ride round in a day. Thus Coirbri, when a fugitive from the south of Munster, was given by his son-in-law Aedh, king of Connaught, as much of certain wooded lands as he could pass round in one day. As in all these stories, the extent of the land thus acquired was much greater than the donor anticipated, and led to subsequent trouble (*Annals of the Four Masters*, Dublin, 1851, iii. 239 n.). Variants of the tale are by no means confined to Europe.

The most famous of all is perhaps the Hindu legend of Vignu, who appeared to Bali in the form of a dwarf mendicant and begged three paces of his vast kingdom. The boon was granted contemptuously. Forthwith the dwarf with his first step measured the earth, with the second the skies, and there was no space left for the third. Bali submitted to the god, and was made the judge of the dead (Southey, *The Curse of Kehama*, quoting in a note Sonnerat's *Voyages*. The ultimate literary source is the ancient poem of the *Harivamsa*).

Of similar origin are the stories which represent the quantity of land as to be enclosed by a bull's hide. It is cut into very thin thongs, and the area is thus rendered unexpectedly great. The earliest example of this is the tradition of Dido, who obtained the site for Carthage in this way. Parallel tales are found in Britain and Scandinavia, though not without suspicion of literary influence—a suspicion, having regard to the legend of Gefjon's Ploughing, not entirely deserved. The legend is also current among the Tatar tribes of Siberia, and as far to the east as China. There, in one version, the settlers are Spaniards, in others Dutch; and to the Dutch and Portuguese is attributed a similar trick in India and Cambodia. The incident is even told by the Hottentots of the first settlement of the Dutch at the Cape of Good Hope (Arbousset and Daumas, *Exploratory Tour in S. Africa*, Eng. tr.,

Cape Town, 1846, p. 25). The kind of rite to which these legends point may be illustrated from the practice of the Bechuana in founding a new town.

A bull is taken, its eyelids are sewn together, and, thus blinded, it is allowed to wander at will for four days. It is then killed where it is found, roasted, and eaten on the spot. The witch-doctors take the skin, and, after it has been marked with certain appropriate markings and 'medicine,' it is cut into one long spiral thong. This thong is finally divided into lengths of about two feet. One of the lengths is pegged down in each of the paths leading to the new township. After this, if a foreigner approaches the new town to destroy it with his charms, he will find that the town has prepared itself for his coming (*JAL* xxxv. [1905] 303 f.). It is clear that we have here a mystic rite intended for the protection of the town and its inhabitants.

Among some of the Kaffir tribes of South Africa the medicine-man formally disenchanting the site before the work of building was begun (*Mélusine*, x. [1900-01] 70, citing Magyar, *Reisen in Süd-Afrika*, Budapest and Leipzig, 1859).

The practice of the Yao and Manganja about Lake Nyassa prescribes that the chief, with his brother and the medicine-man, shall rise at dawn. Walking round the site, they tie the grass tufts into little knots, smearing them with medicine. At the spot where the *Kuka* hut is to be erected they take fire and put 'medicine' upon it. Then, taking water, they blow it in a spray from the mouth. This is to guard the village from lions and cannibals. The people then bring the building materials, and clear the ground (Rattray, *Folklore in Chinyanja*, 1907, p. 109).

Among the Ho tribe of Ewe, a Negro people of West Africa, a big mound is cast up. The priest then takes four cowries in his hand, mixes meal and water in a calabash, and prays 'the earth which they have just found' (possibly the *genius loci*) for favour and human fecundity, and that nothing evil may happen. He pours the meal and water on the ground, praying the earth to be soft, and throws the cowries upon it. If they, or even two of them, fall with the opening upwards, the augury is favourable. When the site has been cleared and prepared for building, 'medicine' is made and sprinkled on the earth, and the people all wash their faces with it, and are asperged with holy water. Lastly, an offering of meal is made to the earth for favour (Speth, *Die Ewe-Stämme*, Berlin, 1906, p. 367).

In some of the Moluccas, where the population is Muhammadan, a ceremony which, like that of the Ewe, is called by our authorities 'consecration' is performed.

On the day of the new moon the owner's wife measures a piece of rope with her 'fathom'—that is, presumably, the length of her outstretched arms—and gives it to her husband, together with a bottle of water and an egg. The rope is rolled up and laid partly in the ground, with the bottle and the egg. The owner invokes the prophet Loqman the Wise, and explains to him that these objects are placed there to obtain an augury. He watches all night. If a dog approaches, it forebodes quarrels in the house; if a cat passes by, it means sickness. If neither of these contingencies occurs, and if next day the rope is found of the same length, the bottle still full, and the egg uncorrupted, the omens are favourable, and the work proceeds. This rite would seem to be not merely a consecration, but an endeavour, like some of those previously discussed, to ascertain the will of the higher powers (Riedel, *De sluit-en broesharige rassen*, The Hague, 1886, p. 160).

Nor is consecration of the site, even of ordinary dwelling-houses, unknown in Europe. In some parts of Germany pious people of the old faith still sprinkle the site with holy water and bless it. Formerly a priest performed this function; and by its means all evil, all ghosts and demons, were exorcised (*Globus*, xci. [1907] 335, quoting Montanus, *Die deutsche Volksfeste*, Iserlohn, 1854-58). Consecration (*q.v.*) of sacred sites is, of course, well known. It is not a specially Christian rite, but has descended from much more archaic times and practices.

3. Laying the foundation.—When the site has been appropriated, it is cleared and levelled. The next step is to collect the materials. This is often done either by rule, or in accordance with the directions of a priest or medicine-man after divination; and certain rites must be observed. It is begun on a day declared lucky, or (where astrology is practised) according to the calculations of the astrologers. Except among highly civilized peoples, where more substantial materials are easily obtainable, or in the case of very important buildings, the fabric is usually of timber. If a block-house, as frequently among the peasantry of Europe, the lower beams constitute the foundation. Otherwise the

stability depends on the centre-poles or the corner-poles; and it is consequently about their erection that ceremonies tend to aggregate. Such ceremonies to procure stability may be roughly divided into those whose object is: (a) to scare away evil spirits and destroy spells; (b) to conciliate the local spirits; (c) to provide a new tutelary power.

Among many peoples the house must face in a particular direction, frequently to the east. On some of the Moluccas it faces the east, in order not to offend the divinity Upulero (Riedel, 380). In the State of Manipur (India) it is the rule of some of the Nāgā tribes that the house must not face the west, because that is the direction taken by the spirits of the dead. As showing how utilitarian sometimes coincide with superstitious considerations and render it difficult to distinguish the real origin of a practice, it is to be noted that the prevailing wind is westerly, and it would, therefore, enormously increase the danger of fire to build the house fronting in that direction (Hodson, *Naga Tribes of Manipur*, London, 1911, p. 43). The custom of many North American tribes is to place the encampment with its entrance to the east. This was always done among the Omaha when the tribe encamped for tribal ceremonies; while at other times, if the entrance was not actually in that direction, it was always symbolically so reckoned, and the position of the various camps relatively to it was the same (Fletcher, *77 RBEW* [1911], 137). In the lower culture the plan and erection are always traditional, and it would be a serious breach of custom to depart from them. When a chief of the Bechuana chose a site and fixed the place of his own dwelling and the public cattle-kraal, each of his tribesmen knew the relative position of his own hut (Mackenzie, *Ten Years North of the Orange River*, Edinburgh, 1871, p. 367).

(a) To scare away evil spirits and destroy spells.—Some of the ceremonies at the foundation of a house or more important building are in themselves apotropaic.

The Tingit, as appears from one of their recorded traditions, cut the large trees for the timbers of a feast-house fasting; and, while it is being completed, the drum is beaten continually (Swanton, *Tingit Myths and Texts*, Washington, 1900, p. 836). The Japanese ritual for the building of a royal palace prescribes that the ground is to be levelled and cleared by young virgins; with a sacred spade they are to dig holes for the uprights; with a sacred axe they are to make the first cut in the trees selected for the timbers; and at the completion a ceremony is performed at the gates, in the course of which the names of the gods who watch over the house are repeated by the officiant (*TASJ* ix. [1881] 190 ff.). In building a house the Baganda begin from the roof. The apex is a ring of cords bound together, and into this the reeds for the roof are stitched. The workmen who made the rings for the royal houses were required to live apart from their wives while they were at work; and no one might come near them or touch the work (Roscoe, *Baganda*, London, 1911, p. 370 f.). The sprinkling of 'medicine' in the ceremony practised by the Ho tribe has already been mentioned (6 a). In the neighbourhood of Dinant, in Belgium, the owner of a new house dips a box-twig, which has been blessed by the priest, into holy water and asperges the foundation-stone before laying it, and the twig is built into the wall (*RTP* ix. [1894] 563). The virtues of holy water, both heathen and Christian, are well known.

Near Goslar, in Protestant Germany, a tale is told of a master miner bold who successfully explored a vault belonging to the mountain-folk and wrested from them a silver goblet. He sold the goblet, and applied the proceeds in building a new wall to his kitchen. But, as soon as the fire was kindled, the wall fell in. When this had happened several times, he consulted the parson, by whose advice he bought a new Bible and built it into the wall; and the wall stands to this day, though the owner and his family have died out (Prohle, 30).

In some parts of the Scottish Highlands 'there should be placed below the foundation of every house a cat's claws, a man's nails, and a cow's hoofs, and silver under the door-post. These will prove omens of the luck to attend the house' (J. G. Campbell, *Superstitions of the Highlands*, Glasgow, 1900, p. 231). In Sussex a bottle containing pins is buried beneath the hearthstone to ensure safety from witchcraft (Henderson, *Folk of Northern Counties of Eng.*, London, 1879, p. 232). In Lincolnshire an animal's heart stuck full of pins was regarded as a great protection (*FL* xii. [1901] 176). In Ceylon, four pebbles and four silver coins should be charmed, and one of each buried at each corner of the site. Precious stones of poor quality may be

substituted for the pebbles with advantage, since they attract the 'sight' of gods and benevolent demons (*JRAL* xxxvii. [1908] 190).

The Huzules lay incense, money, salt, and bread under the lower beams of their blockhouses towards the interior, and towards the exterior charcoal and mortar from a baking oven. The former objects are regarded as luck-bringing, the latter as efficient against enemies, probably spiritual. We may, however, perhaps see here a relic of the custom of bringing fire from the old house (Kaindl, 31). Salt and bread are widely regarded among comparatively civilized peoples as valuable talismans, the former as driving away evil influences, the latter as bringing plenty. They are among the first objects to be brought into a new house; and salt is commonly placed on the breast of a corpse while it is lying in the house. Money, like bread, and doubtless for similar reasons, is pre-eminently lucky.

When Pope Julius II. in full canonicals laid the foundation-stone of the citadel of Civit  Vecchia, he spread mortar in the form of a cross (an apotropaic spell) and put under the stone a vase full of coins (*RTP* ix. 90, citing Bonanni, *Numismata summa*, Pont., Rome, 1696). During the viceroyalty of Lord Dufferin, Lady Dufferin laid the foundation-stone of a hospital in India and put underneath it coins, together with a little golden serpent, an infallible charm for the building (*RTP* vii. [1892] 489, quoting Lord Dufferin's *Four Years of Viceroyalty*, ii. 231).

Pre-historic celts and arrow-heads are amulets wherever the Stone Age has been forgotten in the march of civilization. In France they are constantly found buried beneath the foundations or in the walls of houses, or even churches, as preservatives against thunder or fire; or they are kept in the house for the same purpose, or hung up in the stables and outhouses to secure the domestic animals from disease. They are also worn on the person or stuck into fruit-trees (S billot, iv. 70).

Various plants, too, are held to be prophylactic. The consecrated box-twig at Dinant has already been mentioned. On the island of R gen a juniper-bush is laid in the foundation to keep out the devil and evil spirits (Kuhn, *Sagen*, etc., *aus Westfalen*, Leipzig, 1859, ii. 60). On the island of Serang in the Moluccas, beneath the spot where the sleeping apartment will be, health-giving herbs and roots are buried to keep off evil spirits (Riedel, 119). Sacrifices of men or animals will be discussed below. Independently of sacrifice, however, blood has a well-recognized magical value. The Ottoman Jews, on digging a well, cut the throat of a cock and allow three drops of blood to fall into the excavation in order to destroy the effect of any talisman which might cause it to fall in (*M usine*, viii. 281). To the blood of fowls, among other substances, the Nicolaresse ascribe occult virtue; they smear their houseposts, or even their own bodies, with it, either alone or mingled with various powerful ingredients, for protection against evil spirits (*Intern. Archiv*, vi. [1893] 13). In Aberdeenshire the first stone laid is that behind the fireplace. A chicken is struck upon it until it is covered with blood. This will ensure that the pot boiling on the fire will always be well filled, so long as he for whom the house is built occupies it (Gregor, in *RTP* vi. [1891] 173). It is said that the mortar used to build the Tower of London was tempered with the blood of beasts (*NQ*, 7th ser., vi. [1888] 350, quoting Fitzstephen's *Survey of London*, London, 1598). Blood is prescribed for this purpose in many places; whether it is actually used is another question. Not very long ago a builder at Brooklyn went to much trouble and expense to try the experiment with bullock's blood; but the results did not justify the outlay (*ib.* vii. 13). Like all barbarous customs, the use of blood tends to the adoption of a milder expedient. One of the traditions relating to the bridge in the Kuventhal, Lower Saxony, affirms that a bottle of wine is walled up in the founda-

tion (Schambach-M ller, *Nieders chs. Sagen*, G ttingen, 1855, p. 18). To this origin we may attribute the breaking of a bottle of wine against the bows of a ship in the ceremony of launching.

(b) *Sacrifices*.—In cases like those hitherto examined, the shedding of blood seems not to have a sacrificial object, but to be performed for the prophylactic virtue of the blood itself. More numerous, however, are the instances in which it constitutes a sacrifice. In connexion with this we shall find that life, whether of men or of the lower animals, is not the only form of sacrifice at the foundation of a building.

Sacrifices are sometimes offered to ancestors on these occasions. In German South-west Africa, when a man dies at a *werft*, or village, the *werft* is abandoned and a new one founded. If he has been a man of importance, he is buried in the cattle-kraal of the old *werft*. After a lapse of years the people often return to the former site to rebuild there. The holy fire of the *werft* where they have been living in the meantime is extinguished, in order that new fire may be made with fire-sticks in the sacred manner on the site to which they are returning. Before doing this, they invoke the deceased chief of the *werft*, calling themselves his children and telling him they have done as he ordered. When the new sacred fire has been made, it is the custom to slaughter a sheep as a sacrifice before the huts are put up (*S. Afr. Folklore Journal*, i. [1879] 61). On the island of Buru in the East Indies, as soon as a site has been decided on by divination, an offering to ancestors is made (Riedel, 12).

This also seems to be the explanation of an obscure Maori custom. 'The ground-plate which supports the house is carved to represent the prostrate figures of slaves who had been sacrificed; on them the figures of ancestors stood.' Taylor (*T  Ika a Maui*?, London, 1870, pp. 38, 502) explains this as referring to 'an extinct custom of killing human victims and placing them in the holes made to receive the posts, that the house, being founded in blood, might stand.' The crushing of human victims beneath the pillars of a new building is, as we shall see hereafter, capable of another explanation. But, if it were really a sacrifice here, it would without doubt be a sacrifice to ancestors.

More usually, however, it is to divine beings or to local or earth-spirits that the sacrifice is offered. In India the examples are very numerous. Only a few can be referred to here; some others will be considered later.

The Kols of Chot  N gp r offer an egg to the good god Singbonga, the yokt being his symbol (*F. Aehn. F hrung in das Gebiet der Kolmission*, G tersloh, 1907, p. 91). When the fort of Lohagad was built, a Maratha offered his son and his son's wife to be buried under the foundation, because the king was warned in a dream that 'the favour of the god of the hill was won by burying alive a man and a woman' (*BG* xviii. pt. iii. p. 249).

The practice of slaughtering an animal on such occasions is firmly rooted throughout the west of Asia and the north of Africa.

The Arabs of Moab, east of the Dead Sea, thus endeavour to pacify the *jinn* (who are regarded as malevolent spirits) whenever a tent is set up in a new place. As soon as the tent is fixed, a fat sheep is taken, its head turned to the south, and its throat cut with the words, 'Permission, O possessor of this place!' This is a request for authority to enter the tent and to dwell there. Part of the blood is received from the victim in a bowl. With it the master of the tent anoints the entrance pole; and sometimes the goat-skin curtain closing the entrance on the west side is also asperged with the blood. The half-sedentary Arabs of the same country make a similar offering at the building of a house, first on putting up the vault, again on the threshold when the lintel is laid, and once more on the threshold at completion. The practice even extends to Christians of the Greek and Latin communions (Jausen, *Coutumes des Arabes*, Paris, 1908, p. 339 ff., cf. 819).

Analogous to this was the ancient Roman custom on fixing a boundary stone. A victim was killed and offered as a burnt sacrifice. Fruits of the earth, together with the bones, ashes, and blood of the victim, were put into a hole, and the boundary stone was rammed down upon them. It has been suggested with probability that the

annual festival of the *Terminalia*, in the course of which a lamb and a sucking pig were slain and the boundary stone sprinkled with their blood, was a renewal of the rite with which the stone was originally fixed in its place (Fowler, *Roman Festivals*, London, 1899, p. 325). In the east of Europe a lamb or, as an alternative, a cock is commonly sacrificed; for, according to a popular adage in Greece, 'there must be blood in the foundations.' The object of the sacrifice seems to be to propitiate the *σραγεῖον*, or familiar of the spot (Rodd, *Customs and Lore of Mod. Greece*, London, 1892, p. 148).

The Sea Dayaks of Borneo, when removing a village, kill a fowl or pig for every family before digging the holes to receive the posts. The blood is smeared on the feet and sprinkled on the posts to pacify Pulang Gana, the tutelary divinity of the earth (Roth, *Natives of Sarawak*, London, 1896, ii. 15; cf. 215). The Milanaus in N.W. Borneo seem originally to have offered a human sacrifice to the earth-spirit (*ARW* xii. [1909] 140). In the Malay peninsula brazil-wood, ebony, and scrap-iron are deposited in the hole for the centre-post. The last is possibly apotropaic. A fowl, goat, or buffalo is sacrificed by cutting its throat, and the blood is spilt into the hole, or an egg is deposited in it (Skeat, *Malay Magic*, London, 1900, p. 143 f.).

In the New World, similar sacrifices appear to have been made, though the exact object is not quite so clear. The Mazatecs in Southern Mexico, for instance, dig a hole beneath the place intended for the fireplace, and bury there cacao-beans, eggs, and small chickens, 'to secure good fortune' (Starr, *Ethnogr. of Southern Mexico*, i. [1907] 79). In Guatemala, the Kekchi Indians, when building a communal house, slaughter a pig at midnight and smear the posts and beams with its blood (*ARW* vii. [1894] 465).

In Africa, when the foundations were laid of a European house, built by some German missionaries and other prisoners for the king of Ashanti before the taking of Kumasi, a sheep was slain, and the blood sprinkled on certain places with prayers to the 'Fetich' (Ramsayer-Kühne, *Four Years in Ashanti*, ed. London, 1876, p. 226). When Tako-dontu, the founder of the Kingdom of Dahomey, conquered the Fovs about the year 1625, he took Da, their king, put him to death, and built his palace upon the victim's body, whence the palace and ultimately the kingdom were called Dāwhomi, 'Da's belly' (Ellis, *Europe-speaking Peoples*, London, 1890, p. 279 f.).

It is perhaps open to doubt whether this last was literally a sacrifice, or a ceremony such as those described in the following section. The same question does not arise as to the practice in Polynesia, where human sacrifices were not uncommon. At Maeva, for example, such sacrifices were performed at the foundation of temples. The central pillar of one of these was said to rest upon the body of a man who had been offered as a victim to the sanguinary deity worshipped there (Ellis, *Polyn. Researches*, London, 1831, i. 346). Similar rites were practised in Melanesia (Codrington, *Melanesians*, Oxford, 1891, p. 301).

In Western Europe numerous cases are reported from Brittany and Belgium where an animal has been killed and the foundations sprinkled with its blood. Usually the animal is a domestic fowl; but in the Morbihan it is said that at the building of a house or a church an ox would be killed, and its blood offered to the earth-spirits, that they might not destroy the building. A pair of fowls was often offered. They were feathered and buried in the middle of the site. Afterwards they were dug up to ascertain whether the sacrifice was accepted. This would be deemed to be the case if they were found eaten by worms. In Anjou and Maine the custom of burying in the foundations a small living animal, such as a frog, was continued to very recent times (*RTP* vii. 37, 179, ix. 564; Sébillot, iv. 90 f.). So in Leitrim, Ireland, it was usual to kill a hen and allow the blood to drip into holes at the four corners of the house (*FL* x. [1899] 118). Remains pointing to the practice of killing and burying animals have been discovered in Germany, in pulling down old houses (*Am Urquell*, iii. [1892] 165). The dried bodies of cats found so frequently walled up in old houses both in this country and on the Continent point to their having been immured alive. The hypothesis derives probability from the belief that every new building must have

a victim, in order that human life may be preserved. This belief is at the root of the numerous legends in which the erection of a bridge is undertaken by the devil, with the stipulation that he is to have the first living being (or soul) who crosses it, but he is usually outwitted with a dog or a cat. The devil of Christian belief here doubtless replaces the river-spirit of pagan Animism (see art. BRIDGE, in vol. ii. p. 851). The same belief applies, however, to other constructions.

Many legends of human sacrifice in India relate to the erection of embankments or the excavation of tanks and artificial lakes. In the government of Jaroslavl, Russia, there is a story of a miller who used to seize and drown in his mill-pond a belated wayfarer to keep the water-spirit in good humour and prevent the weir from being washed away by the spring floods (Löwenstimm, *Aberglaube und Strafrecht*, Berlin, 1897, p. 16). Among the Masurs, about Gligenburg in Eastern Prussia, the first living thing that enters a newly built house must not be a human being, for Death lurks there for his prey. It is customary, therefore, to fling a dog or cat first into the house (Toeppen, *Aberglauben aus Masurien*, Danzig, 1867, p. 90). At Lège a cat was formerly shut up in a new house to die of hunger before any one else entered; for, when any living creature has died in a house, it is believed to be a guarantee of the life of the rest (Monsieur, *Le Folklore wallon*, Brussels, 1892, p. 115). Such practices are, in fact, found all over Europe. The Russian peasant believes that the building of a new house is apt to be followed by the death of the head of the family (Ralston, *Songs of the Russian People*, London, 1872, p. 126)—a belief found in Galloway in the vaguer form that it is 'unlucky for one to build a house to live in' (*Rep. Brit. Assoc.*, 1897, p. 468). Among the Ewe, the Ho tribe think that whoever first enters a new village must die; hence the old people are sent in before any one else (Spieth, 370). The Yoruba send two slaves to sleep the first night in a new house, to break the enchantments of the evil spirit Akalasho (Andree, i. 25). In Russia, where slaves are not available, a specially bold person, generally a relative of the owner or a servant, is chosen for this purpose. If nothing untoward happens, and he has no bad dream, the house is safe (*Globus*, lxxvii. [1905] 51). Or, as among the Ho, the oldest member of the household enters first (Ralston, *loc. cit.*). It is not an unusual thing in the west of Europe for the *cure* to attend to sprinkle holy water and bless the house, in order to exorcise the evil spirits and prevent the death of the housemaster during the following year (*RTP* xii. 332; Harou, *Le Folklore de Godarville*, Antwerp, 1893, p. 135). In the Sandwich Islands, offerings being made to the gods, presents were also made to a priest, who entered the house with prayers and other ceremonies and slept in it before the owner took possession, in order to keep away evil spirits, and secure the inmates from the effects of incantations (Ellis, *Polyn. Res.* iv. 322)—a practice followed also in some parts of Melanesia and West Africa.

In course of time sacrifices of living victims, whether human or not, are frequently commuted for something which merely symbolizes the real intention. Thus in Germany, and indeed in other European countries, the skulls or hoofs of horses, querns, and pottery and vegetable remains have been repeatedly found beneath the walls of buildings. In Ireland, horse-skulls have been found, as well as broken querns, buried beneath houses or in recesses of the walls (*FL* xxii. [1911] 54). In Lincolnshire the old-fashioned jugs known as 'greybeards' are sometimes found embedded beneath the foundation, the threshold, or the hearth-stone of ancient buildings (*FL* xii. 176). Among the Saxons of Transylvania a human bone used to be buried beneath the floor to give stability to the building (von Wlislöcki, *Volksl. und Volksbr. der Siebenburger Sachsen*, Berlin, 1893, p. 202). In the middle of last century, when Corgart Castle, Aberdeenshire, was demolished, it is said that the workmen found in the foundations a fragment of a skull wrapped in a red material. And Dr. Gregor discovered some evidences of a former custom, on the erection of important houses in Rose-shire, for the workmen to seize the first person or animal they met in the morning on going to work, and to touch his head with the first stone to be laid (*RTP* ix. 563). In taking down old Blackfriars Bridge (built in 1760-1768) for the purpose of rebuilding in the year 1867, the engineers discovered, under the foundations of the second arch on the city side, and fifteen feet below the bed of the Thames, a quantity of bones of cattle and sheep and some

human bones. On these the foundations had been laid (Liebrecht, 285, citing *Illustr. London News*, 2nd March 1867). In mediæval times, if not later, at Rome it was the custom to bury ancient statues—the smaller whole, the larger smashed to pieces—under the foundation. Between 1872 and 1882 no fewer than 200 statues and busts were found on the Esquiline alone, buried in this way; and doubtless many more have been since recovered (*FLJ* i. [1883] 23, quoting a communication by Signor Lanciani to the *Athenæum*). Other surrogates will be referred to below (p. 115*).

Many substances, however, put beneath a foundation have their own proper value as offerings. Thus a favourite offering in the Moluccas, by way of propitiating the divinity of the earth, is gold or silver—either in dust or small pieces—food and *sirih-pinang* (Riedel, 63, 200, 225, 255, 286, 423); and in the Pueblos of New Mexico sacrificial deposits of turquoise and shell-beads have been found (*Amer. Anthr.*, new ser., ii. [1900] 169).

(c) *The provision of a guardian spirit.*—Numerous legends relate that on the construction of an important work such as a palace, a bridge, an embankment, or a city wall, the building repeatedly fell, until a living human being was buried in the foundations; or that such a victim must be obtained to render a fortress impregnable. In the Balkan Peninsula and adjacent parts of the Levant the tale is the subject of many ballads, of which the best known is perhaps that of the Bridge of Arta. Generally the victim is the master-builder's wife, but in the most piteous of all an innocent child is walled up; often it is a virgin or a beggar-boy, in one case a student. These legends are most numerous in Germany, the East of Europe, and India; but they are also found in the west of Asia, North Africa, throughout the European continent, and in the Celtic parts of the British Isles. Specimens have been discussed in the article already referred to (*ERE* ii. 850). Nor are they unknown on the American continent. The Shuswap believe that the beaver, when constructing a dam, kills one of its young and buries it beneath the foundation, that the dam may be firm (*Rep. Brit. Assoc.*, 1890, p. 644). It is common in tales of the N.W. tribes, and indeed a matter of actual practice, that, when a chief or great man built a house, captives and slaves were put to death and the house-posts reared upon their bodies; others were buried beneath the fireplace or the totem-pole in front of the house (Boas, *Ind. Sagen*, Berlin, 1895, p. 186; *JAF* vi. [1893] 51; *Rep. Nat. Mus.*, 1895, p. 357; *26 RBEW* [1908], 437). In central America the incident is mentioned in the *Popol Vuh*; probably, therefore, the practice was not unknown. In S. America the palace of the Bogota, ruler of the Chibchas, was believed to rest upon the bodies of maidens (Liebrecht, 287; cf. *Anthropos*, v. [1910] 1166).

So deeply engrained are these stories and the beliefs which they imply in the popular mind that in modern times and civilized countries public scares have repeatedly arisen at the erection of great architectural and engineering works.

In India they have occurred many times within recent years, notably at the building of the Hooghly Bridge and the construction of the Calcutta Harbour Works and the new waterworks at Delhi. At the building of the cathedral at Shanghai it was said that the municipal council required a certain number of human bodies to bury beneath its foundations; and for a week people were afraid to go out by night, especially near the site. There was a similar scare in the north of China during the construction of the Manchurian railway. If in our pride we deny that these populations are civilized, let us remind ourselves that such scares have arisen in Germany, as when the bridge at Halle (finished 1843) was built (Grimm, *Teut. Myth.*, London, 1880–88, p. 1142), and during the construction of railways; that it was seriously believed by some people that a man had been thus buried beneath one of the towers of the great bridge between New York and Brooklyn (*NQ*, 7th ser., vii. [1889] 13);

and that Lord Leigh, barely half a century ago, was accused of having built an obnoxious person (some people said eight!) into the foundations of a bridge at Stoneleigh (Liebrecht, 285, citing *Nature*, 15 June 1871).

No adequate explanation of legends and scares like these is feasible in the absence of a widespread custom which deeply impressed the popular imagination. Such a custom was not only once common; it is not yet abandoned among barbarous nations. Without going further afield than Turkey, it was reported by the correspondent of the *Echo de Liège*, on 1st Oct. 1865, that, when building a new blockhouse at Duga, near Ragusa, the Christian workmen who were engaged on the work caught two Musalmán soldiers in the act of preparing to bury two young children alive in the foundations. In many cases we have seen that the victims are regarded as a sacrifice to a god or spirit, while in others a magical virtue is attached to their blood. But there is yet another reason. The vague intention expressed in many of the legends to render the building stable or impregnable conceals the purpose, expressed more clearly in the accounts we have of actual sacrifices, to provide a supernatural guardian, a daemon, to watch over it.

*Thus when a new gate was made or an old gate was repaired in the walls of Bangkok, it used to be customary to crush three men to death under an enormous beam in a pit at the gateway. Before they were led to their doom, they were regaled at a splendid banquet: the whole court came to salute them; and the king himself charged them straitly to guard well the gate that was to be committed to their care, and to warn him if enemies or rebels came to assault the city. The next moment the ropes were cut and the beam descended on them. The Siamese believed that these unfortunates were transformed into the genii which they called *phi* (Frazer, *GB*², 1911, 'Taboo,' 90).

The same purpose is explicitly attributed to similar practices prevalent in Burma up to the date of the British conquest. The notion that a human being put to a violent death becomes a powerful daemon is extensively believed. Nor is such a being necessarily hostile to the murderers; it may be, at any rate, propitiated and its friendship secured. The East Indian practice of head-hunting is an attempt to convert an enemy or a stranger into a supernatural protector. The well-known legend of St. Ronnald, whose reputation was so great that the community proposed to secure him in perpetuity as a tutelary saint by putting him to death and thus obtaining possession of his relics, is typical of many tales localized from China to the Atlantic. And the same notion is probably—to some extent, at least—responsible for the veneration of the relics of Christian and Muhammadan martyrs. Mighty kings and heroes are sometimes buried on the boundary of the kingdom, to ward off attacks by their supernatural power.

Thus, according to the Norse Saga, Ragnar Lodbrog's son Ivar, dying in Northumbria, was buried by his own desire where his realm was most exposed to attack. Nor could William the Conqueror penetrate the territory until he had dug up Ivar's body and burnt it to ashes. In the *Mabinogion* we are told that, when Bran the Blessed, invading Ireland, was wounded to death with a poisoned dart, he commanded his men to cut off his head and take it to the White Mount, in London, and there bury it with the face toward France. When they did so, 'no invasion from across the sea came to this island while the head was in that concealment' (C. Guest, *Mabinogion*, London, 1877, p. 383). Eoghan Bell, king of Connaught, was similarly interred for the protection of his kingdom.

The custom of living burial for the same purpose was, if we may believe Irish traditions, which are no doubt accurate on this point, carried over into Christianity in connexion with the foundation of monasteries. Oran, one of the companions of St. Columba, offered himself, or the lot fell on him, to be buried alive under the monastery of Iona. Clonmacnois was consecrated by the similar burial of a leper who was in St. Patrick's retinue. The protective purpose does not definitely appear, it is true, in these stories. It is clear in the case of the

sisterhood at Cill Eochaille, founded by St. Senan of Inis Cathy. They entreated Senan that the body of a lowly monk of his community might be given to them 'to be buried by us, so that his relics may protect us.' Senan replied: 'Verily this shall be granted to you. Be in no distress as to one from whom your protection shall come' (*Arch. Camb.*, 5th ser., xvii. [1900] 256). Probably in this case the monk was not buried alive. However that may have been, bodies or human skeletons are often found built into the foundation or the walls of churches in this country and on the Continent; and it has been conjectured that in the practice to which these discoveries point we have a relic of the belief now under discussion. The conjecture seems well-founded; but in the later Middle Ages, at all events, such burials, unless of persons renowned for sanctity, and even perhaps in their case too, may have been carried out without any definite reason beyond compliance with custom. Numerous tales of burial in the wall, whether inside or outside the church, in order to avoid the consequences of a pact with the devil, and of persons walled up alive by way of punishment, may have been founded on the custom when its origin had been forgotten.

We have already seen that in Russia the head of the household is liable to death on building a new house. In this connexion it is important to note that the *Domovoi*, or household spirit, is the soul of the founder of the homestead (Ralston, 122, 126; cf. DEMONS AND SPIRITS [Slavic]). The Roman legends of the slaughter of Remus by his brother Romulus and the self-sacrifice of Curtius, as well as the numerous tales, East and West, of the architect of a building put to death by the king, that he might not eclipse the achievement by any future work, have been referred upon plausible grounds to the rite by which a human victim becomes the tutelary spirit.

For the purpose of this rite, as for others, surrogates have frequently been provided for human victims. The statues found beneath buildings at Rome have already been mentioned. If we may believe Olympiodorus of Thebes, during the reign of the Emperor Constantine there were dug up in Thrace, on the Illyrian frontier, three silver statues in barbaric costume, with their hands bound behind their backs, which must have been buried for prophylactic purposes; and he notes that, shortly after they were found, the Goths, Huns, and Sarmatians invaded Thrace and Illyria (Liebrecht, 289). Whatever credit we may give to this story, it is quite certain that, as everywhere in the lower culture, magical virtue was attached during the Middle Ages to an effigy, and many stories illustrative of the superstition have got into literature. Its use in witchcraft is well known. A statue was frequently supposed to be possessed of a god or spirit who, unless a personage celebrated in Christian hagiology, was necessarily regarded as evil. The belief is still applied to the consecration of a house in some parts of India. The image of *Vāstu*, or the *genius loci*, is placed in a box face downward and buried in a pit near the foundation pole (*BG* xx. 525; cf. Crooke, *PR* 1. 102). In this way the genius is secured and effectually prevented from escaping.

Even easier modes of identification with the intended victim are practised. In Europe, in modern times, the ignorant populations of the Balkan Peninsula and adjacent islands would continue the rite of burying a human being beneath an important building, if the law permitted them to do so. Since it is forbidden, a man is sometimes enticed to the spot, his body, or simply his shadow, is measured, and the measure is buried under the foundation-stone, or the

stone is laid upon the shadow. It is believed that he will die within the year, or, as it is said in some places, within forty days. In default of a human shadow, that of one of the lower animals is measured (Frazer, 89 f.).

In the island of Kisser in the East Indies, the guardian divinity of a house or village is the measuring-tape which has served to measure the foundations of the house or of the village-temple. It is wound round a stick, the head of which is carved into the figure of a human being, and is kept in a box (*ib.* 91 f.). In Russia, the carpenters at the first few strokes of the axe call out the name of some bird or beast, believing that the creature mentioned will rapidly perish. 'On such occasions the peasants take care to be very civil to the carpenters, being assured that their own names might be pronounced by those workmen if they were neglected or provoked' (Ralston, 126). The pronunciation of the name at the moment of the stroke causes the blow in some magical way to reach the owner of the name. British law in Burma is equally opposed to the rite in its cruder forms. Accordingly the Naga tribes of Manipur, who used to put a head under the main post of a new house, have discovered that a lock of hair is of equal value, 'for the ghost of the wretch would go there and seek the missing lock and he for ever compelled to remain beneath the post' (Hodson, 116).

Thus, in order to obtain a tutelary spirit, it is not absolutely necessary to immure a human victim. Fowler is of opinion that the real object of the rites already described at the fixing of a boundary stone among the ancient Romans was to provide a *numen*. Whether this was so or not (and it seems probable), there can be little doubt that the church-*grim* believed to haunt churches in Scandinavian and Teutonic countries was the ram, horse, or other animal killed at the foundation, or buried alive beneath the building. Many weird tales are told of the manner in which it performs its tutelary function.

In building a house it is often desired not to obtain a new protector, but merely to convey the family-god and settle him in the new abode. Images, icons, and ancestral tablets are in various countries reverentially and with soothing ceremonies transported to the place appropriated for them. The bringing of fire from the old home, as among the Russian peasants, is explicitly a transfer of the old house-spirit, who is formally welcomed to his new domicile (Ralston, 120, 137). The Hindu custom of interring earth from the parental homestead in the new foundations has probably a similar meaning (*PNQ* i. [1884] 87).

LITERATURE.—The principal works dealing with the foundation sacrifice are E. B. Tylor, *Primitive Culture*, London, 1872 (4 1903), i. 84 ff.; G. L. Gomme, *Folklore Relics of Early Village Life*, do. 1883; oh. i. F. Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 284 ff.; R. Köhler, *Aufsätze über Märchen und Volkslieder*, Berlin, 1894, p. 38 ff.; E. Westermarck, *Moral Ideas*, i. [London, 1906] 461 ff.; E. Thurston, *Omens and Superstitions of Southern India*, London, 1912, p. 214 f. It has been most fully and systematically considered in an article by P. Sartori, in the *ZE*, Berlin, 1898, p. 1. Accounts of the other rites discussed must be sought for chiefly in works of descriptive folklore and ethnography, such as those to which reference has been made in the course of the article. The writer is indebted to his friend, Mr. William Crooke, for references to a number of Indian and other examples.

E. SIDNEY HARTLAND.

FOUNTAIN OF YOUTH.—The legend of the Fountain of Youth was known throughout Europe in the Middle Ages, and is even intertwined with the history of discovery in the New World, where Ponce de Leon sought the Fountain after hearing of the medicinal springs of Florida, with which he associated the Fountain of Youth the more readily since in popular belief the latter was located in the Indies. In Europe, this tradition of the Fountain was inextricably united with that of the River of Immortality. But the two did not have the same origin, and they should be kept apart as distinct legends. The River, or Spring, of Immortal Life was Semitic; the function of the river in legendary history was to preserve life. The Fountain of Youth was not Semitic but Hindu, and the function of this water was not to render man immortal, but to renew his vigour. The one idea easily glides into the other, and history shows

that the two national legends actually became united, the more quickly perhaps because the Semites themselves had the notion of rejuvenation, though it was not associated with man, and not at first with a fountain. This parallel phase of the legend is that of the rejuvenation of the eagle, which in Semitic legend renews its youth (cf. Ps 103³), but not at first by means of bathing.

In India the Fountain of Youth appears in early Brāhmanic legend and has continued down to the present day, although many of the modern 'Fountains of Youth' are in reality so called only by Europeans, most of them being known to the natives only as healing waters. The idea that some water was curative undoubtedly formed the basis of the legend in India, as it did in Florida. On the other hand, rejuvenation, either by fiat of a spiritual power or by means of drugs, charms, etc., was recognized as possible much earlier than was the special form of rejuvenation utilized in the legend of the Fountain. As early as the Rigveda, water is spoken of as medicinal, and men are rejuvenated by the will of the gods; but the two ideas are not brought together till a later period.

In Greece and Rome there was no Fountain of Youth attainable for man in this world, but only a spring of rejuvenation in the next or the spirit world. And so, originally, the Semitic 'Water of Immortality' was found only in Paradise, not within the reach of man on earth.

The legend of the Fountain of Youth was not known in France or Germany until it was introduced from the Orient. There is no reason, therefore, to suppose that this was an Indo-European myth. The kettle of Medea, which used to be brought into connexion with this myth, has a different motive, and the water here used has no similarity with the Fountain. In French and German legend the Spring is called *La Fontaine de Jove*, the *Jungbrunnen*, etc., and the different popular versions, mixed with the Semitic legend of the Water of Immortality, are found to be clearly drawn from Oriental sources, all being originally forms of the story known as 'The Three Brothers.' The tale of Alexander's search for the Water of Immortality in India did much to facilitate the (otherwise natural) combination of the Semitic and Hindu legends. At the time of Sir John Mandeville, the 'Fountain of Life,' now identified with the 'River of Immortality,' was placed definitely in India. Older authors referred the legend of the Fountain more vaguely to 'the Orient.' In America there was no Fountain of Youth, only a medicinal spring, till European tradition had built upon native belief. Chinese and Muhammadan accounts have joined in spreading the tradition through the Pacific, where, again, European thought has often interpreted some other means of rejuvenation as a Fountain of Life, or the River of Immortality as a Spring of Youth.

It is probable that the Hindu fable was brought from India by the Nestorians (possibly by the Arabs), and was thence conveyed to Europe. Independently of the Nestorians there was constant communication with India as early as the 7th century. The Persians were not likely to have been the intermediaries, as they did not have the legend of rejuvenation, but only that of the Water of Life. Northern rather than Southern India (where European legend placed it) was the home of the Fountain. Outside of India, the eagle (see above) and the phoenix are rejuvenated. These two legends are also more or less confused. But it is to be noticed that the rejuvenation of both birds is ascribed to a fountain in the Orient. No classical writer, however, knows of such a fountain. As for the eagle, even Origen and Augustine, when commenting on Ps 103³, on the eagle's renewed

youth, do not ascribe it to a bath; though Donatus (*ad Heaut.* iii. 2. 10) attempts thus to explain the allusion to *aquilæ senectus* in Terence. But Jerome (*Ep. ad Præsidium*) has the legend, probably from an Oriental source, since, when the eagle's fountain is first located, it is placed 'in India.' To go back to earlier classical authorities is to lose all trace of the eagle's spring of rejuvenation. Aristotle (*de Anim.* ix. 22. 2), Pliny (*HN* x. 3. 3), and even Aelian (*περί ζώων ιδιότητος*) and Aulus Gellius (in his ch. concerning marvels, ix. 4), are silent on the subject, although they have much to say of eagles, Aelian especially stating (*op. cit.* ii. 26) that the eagle 'needs no spring' (being superior to thirst)—a statement he would scarcely have made without modification had he known of the eagle's spring of youth. We may, therefore, conclude that the eagle was not rejuvenated by a bath in a fountain till the Oriental version of the Fountain of Youth became familiar to the Mediterranean littoral.

To sum up the tradition and legends of rejuvenation: there are various means of rejuvenation, but the Fountain of Youth appears to be derived from India, where it is first known. In European thought it was combined with the Semitic Water of Life, and with the classical Spring Immortal, which confers endless health and life on those who have passed the bourne whence there is no return, Anostos land, which coincides with the ends of the earth imagined as a home for the blessed. This, in time, coincides with the belief in the earthly paradise of the Golden Age described by Hesiod (*Works and Days*, 113) as free from disease and old age. The Fountain of Youth, considered rationalistically, is medicinal water with exaggerated properties.

FRATRES ARVALES.—See ARVAL BROTHERS.

FRAVASHI.—This is the Avestan name (Pahlavi *Fravāhr*) of a spiritual being, conceived as a part of a man's personality, but existing before he is born and in independence of him; it can also belong to divine beings. The concept so largely arises out of ancestor-worship that a complete account of it would include all the material already given in art. ANCESTOR-WORSHIP AND CULT OF THE DEAD (Iranian), vol. i. p. 454 f.

The etymology of the word given by Lehmann (in art. cited) is still accepted by Geldner and other excellent authorities, but it must be regarded as exceedingly doubtful. A. V. Williams Jackson has abandoned it, and Bartholomæ marks the origin of the word as obscure. There are many proposals, but none can be regarded as proved. *Fravashyō asūunqm*, 'the Fravashis of the followers of Asha (Right, Truth),' first appears in the prose *Gāthā Haptanghāiti*, which represents a decided relapse from Zarathushtra's teaching towards the old polytheistic Nature-worship which he tried to supersede by his spiritual monotheism. The significant absence of the Fravashis from the *Gāthās* proper is best explained in the same way as that of Mithra and Haoma, divinities for whom Zarathushtra could find no room without compromising the unity of God. The Fravashis, as described in the oldest and most authoritative document, the *Farvardin Yast* (Yt. 13), have no definitely ethical character; nor is there any attempt to moralize them until the Sasanian age. Zarathushtra, who would admit to his heaven only spirits of the most abstract and ethical character, associating them with Ahura Mazda as a real part of his own hypo-

stasis, was not likely to approve of the popular *manes*-worship, which moved in a far lower plane. He made much of the *daēnā*, the 'self' or 'individuality,' which, indeed, may well have owed its origin to his own analysis. He taught the great ethical lesson that this *ego*—a part of every man, good or bad—was the real determiner of a human destiny. The Fravashi has a certain resemblance to the *daēnā*; but the difference is vital, in that the former is divine, though in a sense in which the divine may be far lower than the human. Parsiism never allowed the association of Fravashis with the personality of a bad man. This was capable of interpretation on the same lines as the silence of the NT about the *πνεῦμα* of a sinner; but the original reason was very different. It was simply because the maxim *de mortuis nil nisi bonum* has a very serious significance among primitive peoples, and euphemism becomes a necessary precaution; hence the 'Fravashis of the pious' in Parsiism, and the *Di Manes*, or 'good gods,' in Roman religion. If in ordinary Parsiism 'unbelievers have no *fravashis*,'¹ it is only because the concept was too deeply rooted in ancestor-worship to be capable of association with the world of evil. The question was not pursued as to what happened to the Fravashis of a pious man who went wrong. Two exceptions are noted from late periods in the history of the religion. The *Sad-dar Bundahis* (ed. and tr. Spiegel, *Trad. Lit. der Parsen*, Vienna, 1860, pp. 173, 175) says that the Fravashi of an unbeliever goes to hell with his soul and his 'perception.' Al-Birūnī (A.D. 1000), in describing Farvardīgān (the All Souls festival), makes the souls of the dead return to their old homes 'from the places of their reward or their punishment' (*Chronol. of Anc. Nations*, tr. Sachau, London, 1879, p. 210). This may be safely regarded as an outsider's inference, and a wrong one.

Speaking generally, we may say that the Fravashis when plural are ancestor-spirits, acting only collectively, like the *manes*. When the word is singular, there is usually an emergence of other elements in the concept; these form the principal subject of the present article. Before turning to them, we must notice a subsidiary characteristic of the Fravashis which is mainly due to their connexion with the benignant departed, as is shown by the fact that it manifests itself only when they appear in companies. The name 'guardian spirits,' by which E. W. West renders the Pahlavi *fravāhr*, is decidedly inappropriate as an equivalent for the Avestan term, as we shall see. But there are some tutelary functions which are exercised by the Fravashis, though we do not find any one Fravashi acting as guardian angel for the human being with whom he is linked; and this, of course, is the fatal objection to the use of the term 'guardian,' which would naturally suggest a conception like that found in mediæval Christian theology. But the Fravashis act together as bringers of rain and givers of fruitfulness to plants; here the *Amshaspands*, Haurvatāt and Ameretāt, took their place in strict Zarathushtrian doctrine. To judge from the strangely imperfect definition of these twin archangels given by Plutarch (*Isis and Osiris*, 46), the popular mind was never eager to accept such shadowy figures in place of the beloved ancestral spirits whom men continued to invoke for the necessities of life. The Fravashis were most conspicuously active in promoting conception and birth, and the healthy growth of the babe at the breast. (Here their competitor was Anāhita, who was not really Iranian at all, still less a deity recognized by Zarathushtra.) The primitive belief that ancestor-spirits reincarnated themselves may account for the distant beginnings of this concep-

tion; but it must be noted that no doctrine of metempsychosis could spring from it on Iranian soil without bringing hopeless confusion into the relation between a Fravashi and his human counterpart. The Fravashis acted collectively here again, like their fellows the Indian *Pitṛas*. They are powerful helpers in battle. The nearest approach to individual tutelary action is just where the connexion with the dead is strongest. In *Yast* 13 there is an immense list of names of departed saints whose Fravashi is adored separately. Some of these are invoked for specific help—deliverance from evil dreams, heresy, persecution, etc.

So far we have dwelt on functions which link the Fravashis with the *manes*; we have now to note that these Iranian spirits have marked points of contact with another Roman conception, that of the *Genius*. Some of the characteristics already observed may come as well from this side as from the other. The *Genius*, with his female counterpart the *Juno*, was conspicuously associated with the promotion of birth; and this is perhaps pre-eminent among the activities of the Fravashis. The Fravashi, like the *Genius*, belonged to gods as well as men, and to communities as well as individuals; and tutelary functions were recognized in both to about the same very limited degree. The Greek *ἀγῶνς δαίμων* is a kindred conception, less fully developed; and all three may well go back in their history to the common store of the pro-ethnic Indo-European people. It is possible that we may link it in its remote origins with the notion of an External Soul.

We come now to the ideas connected with the Fravashi in the singular. Avestan psychology made the human personality include five immaterial elements—'vitality' (*ahū*), 'ego' (*daēnā*), 'perception' or 'sense' (*baodhah*), 'soul' (*urvan*), and Fravashi (*Yt.* 13¹⁵⁵). The last was the highest, the immortal part, which, according to an important passage from the *Great Bundahis* (tr. Darmesteter, *Zend-Avesta*, Paris, 1892–93, ii. 500 f.; Blochet, *RHR* xxxii. [1895] 104), dwelt with Ahura in life and united with the soul at death, thus saving it from extinction, when the other parts were dispersed among the elements. The pre-existence of the Fravashi was as essential a characteristic of the conception as its continuance. *Yt.* 13⁷ tells us that the Fravashis appointed the paths of sun, moon, and stars. In the *Bundahis* (ii. 10 f., tr. West, *SBE* v. [1880] 14) we read of the choice originally offered them by Ahura Mazda, between abiding eternally in the spiritual world and becoming incarnate to join in the battle against the demons. The same great Pahlavi cosmogony makes the first of four trimillennia in the world-year belong to the spiritual creation alone, the Fravashis living with Ahura above, before anything material was made. The silence of our earlier sources makes it probable that this first trimillennium was added in Sasanian times; but that the Fravashis existed before the other elements of human personality is beyond doubt an ancient idea. It is implied, of course, by the fact that in *Yt.* 13 the Fravashis of the yet unborn Saoshyants are adored. They are, moreover, classed with those of the 'men of the primitive law' (*paoviryō-kaēšn*), Zarathushtra and his immediate followers, as the most powerful of all the host. That the Fravashi-concept has travelled a long way from exclusive association with ancestors is sufficiently shown by this strong and repeated connexion with men yet unborn, and by the express statement that 'the Fravashis of the living faithful are mightier than those of the dead' (*Yt.* 13¹⁷).

The connexion of the Fravashis with communities was alluded to above, among points in which the Roman *Genius* showed kinship. In *Yt.*

¹ Geldner, *EBr* 11 xxviii. 1048.

13²¹ we find that each of the four concentric circles of the Iranian commonalty—house (*nmāna*), family (*vis*), clan (*zantu*), and district (*dahyu*)—has its heavenly counterpart. The much disputed phrase *vithibis bagaibis*, in the Persepolis inscription of Darius, seems to be best rendered 'with the gods of the (royal) family,' the *theoi βασιλῆως* of Herodotus. There is an analogy here with the 'princes' of Persia, Greece, and Israel in Daniel, and with the 'angels of the churches' in the Apocalypse. Actual Persian influence in developing a conception rather decidedly out of the normal course of Jewish angelology can be argued more plausibly than is possible in most of the alleged cases of borrowing from Persia. Two NT passages speak of individual 'angels' in terms which strongly resemble the heavenly counterpart of Parsism, whether or no the idea has been developed under Parsi influence. Mt 18¹⁰ makes the 'angels' of the little ones dwell perpetually in the Presence. The declaration is completely interpreted if these are the heavenly counterparts, the Fravashis, of those who have not yet learned to sin; no other conception of angels suits it so well, since tutelary angels of children would have no special reason for precedence over those of adults. In Ac 12¹⁶ Peter's 'angel' is clearly his 'double'—his counterpart which has taken his place while he still lives. (See on this and some other Biblical passages the present writer's paper in *JThSt* iii. [1902] 514-527.)

The connexion of the Fravashis with the stars was probably a feature peculiar to Magian theology, never naturalized in Parsism. In Yt. 13 they guard the heavenly bodies, but only in the same way as other *yazatas* are said to do. Identification with stars is not found till a late Pahlavi treatise (*SBE* xxiv. [1885] 92), where it seems to be mentioned only as an opinion held by some. It is quite in keeping with Magian star-lore—one of the most prominent notes of the Magi in ancient accounts of them, but conspicuous only by its relative absence in the Avesta. If the Magi did thus identify Fravashis with stars, we have a promising suggestion for the interpretation of Mt 2, by the help of their well-known devotion to divination by dreams. An apparition of a bright Nova in the sky would suggest the Fravashi of a great one newly born.

FREEMASONRY.—The Freemasonry of the present day, organized as we now have it with its associations of Lodges (as the various units are called) grouped territorially under what are known as 'Grand Lodges' with their hierarchies of 'Grand Officers,' took its rise from very humble beginnings in London in the year 1717, when the famous 'Four Old Lodges' combined in order to establish the first 'Grand Lodge' of the world. Until that time there had been isolated Lodges of Masons, working for the most part independently of each other, as far as is now known, in different parts of Great Britain. Whence, then, had these various Lodges come? What was their origin? These are the problems that confront any one who would write a history of Freemasonry.

The earliest Masonic documents now extant are a number of MSS known as the 'Old Charges of British Freemasons,' so called because they contain certain charges as to conduct and duties which were in bygone times read or recited to a newly admitted member of the craft. Of these, 78 different versions (according to the latest list) are known to exist, the earliest of all (known as the Regius or Halliwell MS, and preserved in the British Museum) having the date of c. 1390 assigned to it by experts. These 'Old Charges,' though differing in details, all have the same general character, and consist of three divisions: (1) an invocation or prayer, addressed to the Holy Trinity; (2) the legendary history of Masonry; (3) the charges addressed to the new member.

According to the legendary history of the craft as narrated in these old MSS, masonry (or geometry, as it is called in them) was originated in Egypt by Euclid, and spread thence into various countries, reaching England in the time of St. Alban (A.D. 300), who is said to have obtained increased pay for masons from the king, and to have 'got them charges and manners.' It is further stated that King Athelstan (925-941) granted a charter to the masons of England allowing them to hold an assembly every year. No doubt, in thus ascribing the origin of geometry to the Egyptians, the compilers of these 'Old Charges' were but following the tradition (confirmed by modern research) that the Egyptians were compelled to invent it in order to restore the landmarks effaced by the inundations of the Nile. Egypt may also be considered the birthplace of architecture, which commenced there with the construction of the Pyramids, 3000 years or more before the birth of Christ. Much, again, of the present Masonic symbolism can be traced to Egyptian counterparts, and Egypt was the home of the 'Mysteries'; but we doubt whether any connexion between modern Freemasonry and Egypt can be established.

The rules or precepts contained in the 'Old Charges' were plainly intended for the government of bodies of operative masons, and it is to such bodies that we must look for the origin of the Freemasonry of the present day. With the progress of civilization the art of building necessarily grows more and more important, and those who practise it tend to become more and more a close society with their own trade secrets and rules for their governance, just as with other bodies of men who practise the same calling or trade. Thus it is on record that, from the very earliest times of the city of Rome, there were corporations of men with common interests called *Collegia*, which were recognized and allowed by law. Some of these corporations were formed for trade and commerce, such as the *Collegium Fabrorum*, or gild of workers in hard materials, the *Collegium Pistorum*, or gild of bakers, and others, members of which had a common profession, trade, or craft upon which their union was based, although every man worked on his own account. These corporations or gilds spread throughout the Roman Empire, until in the time of Theodosius II. (A.D. 401-450) there were, in almost every city and considerable town, companies similar to those which existed in Rome, who exercised some particular trade or occupation for the safety, benefit, or amusement of their fellow-citizens. That there was a *Collegium Fabrorum* in Britain is established by a reference to it on a tablet now preserved at Chichester, which records the erection of a temple to Neptune and Minerva. Probably the origin of English Freemasonry may be attributed to these Roman *Collegia*, though it may be impossible to trace its actual descent from them. This supposition is strengthened by the number of

points of resemblance that can be traced between the organization of a Roman *Collegium* and that of a Masonic Lodge. It may be asked, Why did the masons alone of all trades preserve their organization? Because, being largely employed to erect ecclesiastical buildings, they came specially into contact with churchmen, as the 'Old Charges' show, and thus may be supposed to have been more highly organized than other combinations of workmen, besides being more skilled; and because, as they moved about the country wherever their services were in request, they would need such organization more than the others would. It is known that the masons of the Middle Ages, when employed to erect some important building, used first to make for their own use a temporary hut or shed near the place where the work was to be carried on, which they called the 'lodge.' Thus, in the Fabric Rolls of York Minster, we find an order for the workmen issued in 1352 as follows:

'In summer they are to begin work immediately after sunrise until the ringing of the bell of the Virgin Mary; then to breakfast in the fabric lodge (*logium fabricae*); then one of the masters shall knock upon the door of the lodge, and forthwith all are to return to work until noon. Between April and August, after dinner, they shall sleep in the lodge; then work until the first bell for vespers; then sit to drink until the end of the third bell, and return to work so long as they can see by daylight.'

Hence we see that the masons employed on a particular building, and living together in the lodge, would naturally become a more or less exclusive and organized community. That such bodies did exist is proved by some MSS now in the Bodleian Library at Oxford, which contain lists of the members of what is called *la loggge Lathamorum*, or Lodge of Masons, attached to the Priory of Canterbury for the years 1429, 1431, 1433, and following ones. Such bodies of skilled workmen would naturally have their own operative secrets, and would be jealous of admitting outsiders to a knowledge of them, and would have some set ceremonial for the admission of apprentices. There can be little or no doubt that the Freemasons of the present day are the descendants of such bodies of operative masons, who moved about the country and set up their lodges wherever their services were needed, having a system of secret signs and passwords by which a craftsman who had once been admitted could be recognized by the members of another lodge. They were called 'Free' Masons because they were free to travel about in times of feudal bondage and to render their services where any great building was in process of construction. The earliest instance known of the name in this sense is found in a list of the companies entitled to send representatives to the Common Council, dated August 1376, and now preserved in the Corporation Records at the Guildhall, London; in this the nineteenth Company on the list is that of the 'freemasons.'

These organized bodies of workmen, with their rules and regulations, seem to have been more common at one time in Scotland than in England, or at all events to have left behind them more records of their existence in the north than in the south of Great Britain; thus two codes of rules for operative masons, drawn up in 1598 and 1599 respectively, which dates they bear, are still preserved in Scotland. They are signed by 'William Schaw, Maistir of Wark, Warden of the Maisonis,' and hence are known as the Schaw Statutes. William Schaw was appointed Master of Works in Scotland in 1584, and had under his care all the royal buildings and palaces in the Northern Kingdom. The later of these two Statutes provides that Edinburgh shall be 'the first and principal lodge in Scotland,' Kilwinning the second, and Stirling the third lodge, and contains an elaborate code of rules for the government of the craft. The Lodge

of Edinburgh possesses minutes commencing in July 1599, and has been in continuous existence from that time, and, inferentially, from an earlier date.

In England the Masons Company of London, though its extant records date only from 1620, is considered by its historian (Edward Conder) to have been established about the year 1220, if not earlier, at which time there was great activity in the masons' trade in London, consequent on the building of London Bridge, which was commenced in 1176, and of Westminster Abbey, of which the foundation-stone was laid in 1221. These works, especially the latter, would naturally attract to London the members of such operative bodies as that previously mentioned as having existed at Canterbury, which were attached to religious houses, and possessed certain signs, secrets, and symbols relative to their craft. These symbols had doubtless descended from a remote antiquity, together with some knowledge of geometry, which was then regarded as a trade secret.

We have now to trace the gradual process by which the lodges of operative masons lost their operative character and were converted into the present-day Lodges of speculative Masons, who meet in secret, and have changed the working tools of the operatives into symbols inculcating moral lessons, so that the square with which the operative mason tries and adjusts rectangular corners of buildings is now regarded as a teacher of morality, the level denotes equality, and the plumb-rule uprightness of life and actions. This change was in progress both in England and in Scotland during the 17th cent., until it culminated, as before mentioned, in the establishment of the Grand Lodge of England in 1717; and various instances can be mentioned of the admission of non-operatives into the craft before that time. Thus it is on record that, on 8th June 1600, John Boswell, Laird of Auchinleck (a village in East Ayrshire, Scotland), was present at a meeting of the Lodge of Edinburgh, when, like the operative members present, he attested the minutes by his mark. In England the earliest proof of the existence of a non-operative or speculative Freemasonry is afforded by the records of the Masons Company of London, from which it is made clear that previously to 1620, and, inferentially, from a remote past, certain members of the Company and others met from time to time to form a Lodge for the purposes of speculative or symbolical Masonry, and were known as the 'Accepted' Masons. Hence comes the familiar title of 'Free and Accepted Masons,' implying a combination of operative and speculative Masons. Then it is also on record that Sir Robert Moray, who was Quartermaster-General of the Scottish army which occupied Newcastle in 1641, was admitted into Masonry in that year at Newcastle by some members of the Lodge of Edinburgh, who were also serving in the army. Next we find the celebrated antiquary, Elias Ashmole, founder of the Ashmolean Museum at Oxford, stating in his diary that he was made a Free Mason at Warrington in Lancashire in the year 1646; he also gives the names of the members of the Lodge, and it has been ascertained that they were all men of good social position, without a single operative mason belonging to their number. He also records in his diary that in 1682 he attended a Lodge at Masons Hall, London, when six persons were admitted into the Fellowship of Freemasons. In 1688 was published the *Academie of Armorie*, by Randle Holme, who was a heraldic painter and a professional genealogist, and acted as Deputy Garter for Cheshire, Shropshire, Lancashire, and North Wales; in it he writes: 'I cannot but Honor the Fellowship of the Masons because of

its Antiquity: and the more, as being a Member of that Society, called Free-Masons.' It is, therefore, obvious that symbolical Masonry must have existed in Lancashire before the admission of Ashmole, and in London before 1620; and that the gradual change of operative into speculative Freemasonry had begun early in the 17th cent., if not before.

However, we have no means of tracing the change with any completeness, until, in 1716, four of the then existing London Lodges met together and determined to unite under a Grand Master 'as the Centre of union and harmony'; and accordingly, on St. John Baptist's Day in 1717, the Grand Lodge of England was established at the Goose and Gridiron in St. Paul's Churchyard, London. Apparently the operative masons were already in a minority, for of the three principal officers then appointed one is described as 'Gentleman,' one as 'Captain,' and the third as 'Carpenter.' Dr. James Anderson, the historian of these events, says that they 'revived the Quarterly Communication of the Officers of Lodges (call'd the Grand Lodge), resolv'd to hold the Annual Assembly and Feast, and then to chuse a Grand Master from among themselves, till they should have the honour of a Noble Brother at their Head.' Hence the establishment of this Grand Lodge in 1717 is commonly known as the 'Revival' of Freemasonry, though there are no authentic records now extant of any previous Quarterly Communications or Annual Assemblies. But some sort of Annual Assembly must have been held, for the 'Old Charges' previously mentioned constantly refer to the duty of a Mason to attend the Assembly when properly summoned to do so; and possibly the note in Aubrey's *Natural History of Wiltshire* (ed. 1847, p. 99), that on 18th May 1691 there was to be 'a great convention at St. Paul's Church of the Fraternity of the Adopted Masons,' may refer to some such occasion, which was sufficiently notorious to be known even to a non-Mason. However that may be, this 'Revival' in 1717 forms the starting-point from which continuous Masonic history dates.

A similar Grand Lodge is known to have been in existence in Ireland in 1725, though the precise date of its establishment has not yet been ascertained; and in 1736 the Grand Lodge of Scotland was erected. From these three Grand Lodges have come, directly or indirectly, all the other regular Grand Lodges and their subordinates throughout the world, so that modern speculative Freemasonry has descended from the operative masons of Great Britain, who, in turn, may possibly have been descended from the Roman *Collegia*.

The founders of the premier Grand Lodge were quickly able to get 'a Noble Brother at their Head,' for in 1721 the Duke of Montague was their Grand Master, and from that time onwards an unbroken succession of noblemen or members of the Royal Family have presided over the Craft in England, the present (1913) Grand Master of English Freemasons being H.R.H. the Duke of Connaught, who succeeded the late King Edward VII.

In 1751 a rival Grand Lodge was established in London by some Irish Masons, who claimed that they alone preserved the ancient tenets and practices of Masonry, and that the regular Lodge had made innovations; so they called themselves 'Ancient' Masons, and styled the members of the 1717 Grand Lodge 'Moderns'; the two bodies continued in rivalry until 1813, when the 'United Grand Lodge of Ancient Free and Accepted Masons of England' was formed, and this body has continued ever since.

The spread of speculative Freemasonry through-

out the world since 1717 has been something marvellous, especially of late years, until there are now in existence about one hundred and ten independent Grand Lodges, with almost twenty-three thousand subordinate Lodges, from which the operative element as such has quite died out, and with over two millions of members owning allegiance to these various Grand Lodges, which exist in all civilized countries, except Russia, China, and Japan.

Besides the 'pure Antient Masonry, the growth of which we have been trying to trace, which consists of three degrees and no more, and is known as 'the Craft' *par excellence*, there are a number of other organizations calling themselves Masonic, a few being of real antiquity, but most being of quite modern growth. Among them may be mentioned the Masonic Knights Templars, a body of great strength in the United States of America; the Mark Masons, who are very flourishing in England; and the members of the Ancient and Accepted Rite, besides many others which it is needless to particularize in the present article.

The question is frequently asked, Is Freemasonry a religion? The answer to this must depend upon the meaning to be given to the term 'religion.' The latter may be defined as 'a system of faith in, and worship of, a Divine Being.' Freemasonry is defined to be 'a peculiar system of morality, veiled in allegory and illustrated by symbols.' But 'morality' is concerned with man's duties to his fellow-men, and is therefore different from 'religion,' which is concerned with his duties to his Creator. Thus our question may be answered in the negative—Freemasonry is not, and does not profess to be, a religion. At the same time it may be called a handmaid of religion, for it is founded upon the purest principles of piety and virtue; and no man who endeavours to live up to and act upon its teaching can fail to be a better man for doing so. As the early communities of builders in England, from whom our modern Freemasonry is descended, were mainly employed upon ecclesiastical buildings, it is only natural that Christianity should have been the religion of the early Masons, as is conclusively proved by the 'Old Charges' previously mentioned: it was not until the formation of the Grand Lodge of England in 1717 that they were left free to belong only to that 'Religion in which all men agree . . . that is, to be Good Men and True.' Freemasonry has never met with favour from the Roman Catholic Church, and has been expressly forbidden by several Papal Bulls; and some writers have maintained that its symbolism was only a cloak for a conspiracy against government and religion. But, whatever may have been the case with Continental Freemasonry, such an accusation is groundless as regards British Freemasonry; and Masonic Lodges in Great Britain were specially exempted from the operation of an Act passed in 1799 for the suppression of secret societies. Cf. art. FREE-THOUGHT, p. 122^b.

Now, with the spread of Freemasonry over the whole world, men of all religious faiths are admitted as members, and work together under its banners in harmony, as also do men of most varying political views; and Freemasonry has become a potent factor in promoting a feeling of universal brotherhood among mankind.

E. L. HAWKINS.

FREE-THOUGHT.—The term 'free-thinker,' as applied to certain writers and others who,

individually or in societies, impugned the supernatural authority of the Christian Church, came into use during the 18th cent., and gained general currency largely as a result of its employment by Shaftesbury and Collins (cf. Collins, *Discourse of Freethinking*, London, 1713; Fr. tr. 1714). In France those belonging to societies of this type were called *libres penseurs*, *libertins*, or *esprits forts*; in Germany, *Freigeister* or *Freidenker*. The extent to which the designation was adopted by the free-thinkers themselves, and to which it eventually prevailed in common speech, forms a still unsolved problem in the literary and social history of the 18th cent. (cf. art. DEISM, vol. iv. p. 533 ff.; and ENCYCLOPÆDISTS, vol. v. p. 302 ff.).

In any case the essential feature of the term is its having been applied to certain fairly comprehensive societies and circles which agreed in regarding their 'free' views as palpably identical, while, on the other hand, the more eminent original thinkers of the period—from Hobbes and Locke to Hume, Gibbon, Voltaire, and others—did not apply the term to themselves. This fact indicates the two most salient characteristics of the free-thinkers—the one negative, viz. their opposition to the Church's doctrine of authority and revelation, and their implied appeal to the freedom and independence of autonomous thought; the other positive—their assumption that such free or natural thought leads universally to essentially identical conclusions in a natural morality and religion. Free-thought is thus intimately related to Deism. It rests upon the assumption that reason contains a truth which has existed from the dawn of human history—a truth which has been obscured and defaced by the historical development, and, in particular, perverted by superstition in the Christian Churches, but which may nevertheless be restored by the free exercise of rational thought. Specifically, however, free-thought, in its attitude towards Christianity, leaned in some cases to the more conservative view that natural truth was supplemented and reinforced by revealed religion, and in others to the more radical, that only the kernel of Christianity—that element, namely, which harmonizes with natural reason—can be maintained. The whole movement was really a reflexion of the ecclesiastically orthodox mode of thought, which desiderates a uniform and absolute truth, in a mode of thought free from ecclesiastical bias; and, further, it had recourse to an old idea which had become fused with the theology of the Church, viz. the Stoic doctrine of the universal ethical religion of conscience and providence. Formally, therefore, free-thought was the repudiation of supernatural authority, while, materially, it was the liberation of the Stoic doctrine of ethics and religion from the Christian dogma with which it had hitherto been incorporated.

It is true that this holds good only of the earlier stages of free-thought, i.e. of its English forms. In France, where Catholicism, conformably to its nature, had drawn a much more rigid line of demarcation between religious doctrine and modern thought than that found in Protestant England, free-thought, as represented by Voltaire, renounced all connexion with Christianity, and in the Encyclopædists and their adherents it broke away from religion altogether. In England the free-thought and Deistic movement issued from a revolution having positive religious aims and subject to powerful religious influences, whereas in France it was associated with a purely social and political revolution, whose exponents identified religion with the Catholic State Church, and so took up a position of fundamental antagonism to both at once. It was in France, accordingly, that the movement assumed its most radical form. Of

its French representatives, Rousseau alone adhered to a form of religion in essence identical with Christianity. In the Netherlands and Germany, on the other hand, the English influence predominated, producing a more decidedly Christian variety of free-thought, the adherents of which, from the time of Grotius and Leibniz, maintained the essential identity of Christianity with Natural Religion, and differed in opinion only as regards the extent of the positive additions and guarantees which the former contributed to the latter.

In England, free-thought was, in a religious regard, extinguished by the rise of Methodism, and, as a philosophy, transcended in the historico-psychological relativism of Hume. In Germany it gave way before Herder's doctrine of development, and the poetic pantheism of philosophy. In France it succumbed to the anti-metaphysical principle of Positivism and the historico-critical method. In the purely religious sphere it declined greatly before the rehabilitation of ancient creeds which set in slowly with the Methodist movement, and then effectively asserted itself after the Napoleonic wars. More recently it has suffered further impairment at the hands of Socialism and its unfledged ethical and metaphysical theories.

It must not be forgotten, however, that among the people generally, in so far as they have freed themselves from ecclesiastical authority, and yet desiderate some provision for religious education and edification, the tendency towards a form of free-thought that will meet this need is still active at the present day. To some extent the masses are predisposed towards such a type of free-thought precisely as in former times, by the natural theology which commingles with Christian teaching. The tendency is due partly to the elements of Christianity which survive when it has abandoned mysticism and the belief in miracles, and, accordingly, it continually re-emerges from the work of criticism in the Christian sphere. Partly, again, it rests upon ideas towards which the moral and religious emotion of mankind, emancipating itself from all historical data, readily gravitates; and, indeed, such ideas have a natural affinity with the moral and religious instincts, and are so far not unjustifiably called 'natural.' To these influences we must add that residuum of tradition from the deistic and rationalistic epoch which has all along continued to operate powerfully in poetry and general literature, and in positive and apologetic theology, and from which a popular rationalism may ever anew be developed. It is to be noted, moreover, that almost all endeavours to enlighten the masses, and all democratic movements and organizations inspired by modern philosophy, tend naturally to approximate to the same position. Virtue, love of mankind, belief in Providence or in development, progress, the unification of the race, and an all-embracing philosophy of teleological optimism—such are the features of a phase that ever recurs in this sphere.

It is true that, among the classes referred to, belief in the personality of God, the immortality of the individual, and the freedom of the will has become less assured. Here, in fact, modern science is at work with its conceptions of the universe and of law, and tends to effect some sort of synthesis between the teleological idea of ameliorative optimism and agnostic or pantheistic conceptions. Then the ideals of progress have come to be focused more upon the present world, upon the social and humanitarian factor, and—in place of personal immortality—the permanence of the race. This is just what was to be expected. The older type of free-thought belonged to an age which knew nothing of the achievements of modern scientific thought, or of its pantheistic metaphysics, and was thus more

favourably disposed towards the belief in God, immortality, and a responsible freedom: regarding these, in fact, as truths issuing from the light of nature. But, discounting these changes, we may venture to assert that, in all civilized countries where the people are no longer under the control of the Church, a wide-spread tendency to free-thought pervades the lower and middle classes. Within the sphere of pure science, on the other hand, and among the higher classes—so far as they have been influenced by science—the clash of fundamentally antagonistic systems and the habit of scientific scepticism have conspired to produce sheer anarchy in such things; and to speak here of a free-thought exhibiting any kind of unanimity in its conclusions is out of the question.

This brings us to a phase of the subject which, though of great importance, is usually overlooked. The characteristic feature of free-thought, as distinguished from modern science, properly so called, is its pervading sense of an axiomatic unity amongst its adherents, based upon the assumption of certain self-consistent, universally binding, and 'natural' truths. The sociological aspect of ethical and religious thought manifests itself here in the assumption—'natural' and self-evident—that all independent thinkers will inevitably arrive at uniformity in their convictions and modes of thought. On the foundation of natural religion arises, so to speak, a 'natural' Church of free-thinkers. At the outset, indeed, the free-thinkers proposed simply to continue the process of purifying the Church by criticism, and the English Deists and free-thinkers had originally no other end in view; their object was the conservation of the old religious organization—imbued, however, with a purified or natural knowledge of God, which, after all, was the true essence of Christianity. But, in proportion as the Church resisted their efforts, and their internal development carried them beyond the Christian sphere of thought, they found it necessary to form communities and societies of their own. It would certainly be wrong to dissociate this tendency from the purely theoretical and dogmatic side of the movement, where, on the assumption of a free, autonomous, and individual thought, it might appear, of course, as something altogether individualistic. As a matter of fact, however, such movements in the sphere of doctrine, like all other human interests, have a social aspect. This is found, first of all, in the axiomatic character which the free-thinkers expected to attach to the uniformity of their assumed principles, and in the fact that, being invisibly united in these, they were feeling their way towards becoming a power of the future and of progress—a spiritual federation of mankind, which would of itself come to prevail in virtue of the mere force of natural thought. Thought, just because it is free, i.e. because it issues from the necessity of nature, which is everywhere the same, is likewise a socially unifying factor. But, again, they were, of course, forced to recognize that, though the community of man would come into being of itself, it nevertheless required the aid of education and propaganda. They were thus brought to realize the necessity of organization, and, in the nature of things, their organizations became counterparts and imitations of the Churches. But they went further still. Even for fully developed and mature minds they felt the need of some visible means of confirming and deepening the convictions held in common—some kind of ceremonial and worship which should present these convictions to the imagination in vivid form, and thus evoke the stimulating and elevating force of solidarity. The result was the establishment of something analogous to Church worship,

which, indeed, has to some extent the same end in view, while the only elements thereof that the free-thinkers could not use were the idea of exerting a real influence upon the Deity and the preaching of ecclesiastical dogma.

It was in this way that the movement was led to adopt the policy of forming associations, and became allied with the forces working for the disestablishment of the Church. Of outstanding free-thinkers, Rousseau alone wished to make the new religion an official and compulsory one, proposing at the same time, however, that the individual be allowed to cultivate his distinctive tenets in his own way.

Here, then, we have the explanation of the fact that the 18th cent. was crowded with secret societies and free-thought unions, the secrecy being resorted to partly as a protection against the power of the State Church, and partly as a means of drawing the masses, or, as it might be, of out-rivalling the attractions of Church life. The academies of the 17th cent. had already pointed the way. From the soil of Deism sprang Toland's scheme of a *Socraticum Sodalicium*, for which his *Pantheisticon* was to serve as a liturgy. But the most outstanding example is found in Freemasonry (q.v.), which was instituted in England by the foundation of the Grand Lodge in 1717, was introduced into France in 1725, and found a footing in Hamburg in 1733, and which now pervades the whole civilized world. Freemasonry created a sacred symbolism and ritual of its own, as also a sacred mythical history, and thus actually forms a kind of rival to the Church, though it has here and there found it possible to keep on good terms with the latter. In Romanic countries it has become an organization working aggressively against Catholicism. Here, too, should be mentioned the Theophilanthropists of France (1797), the Abrahamites of Bohemia (1782), numerous Unitarian societies, and the ephemeral *Culte de l'Être Suprême*, instituted in France on the lines laid down by Rousseau.

The task of exploring the annals of the 18th cent. with reference to the formation of secret societies is one which still awaits the investigator. But the phenomenon is in no sense confined to the 18th century. When the religious revival of the first half of the 19th cent. had thrust such associations into the background, and the progress of science had largely undermined their Deistic principles, fresh combinations made their appearance—due partly to the reaction against the religious revival, and partly to the advance of modern science. The so-called *Deutsch-Katholicismus* founded by the contumacious priest Johannes Ronge, and the community which, under the name of *Lichtfreunde* (1840), set itself against the Protestant supernaturalism of the religious reaction, led to the formation of numerous 'free-religious' and free-thinking congregations in Germany (see art. DEUTSCH-KATHOLICISMUS, vol. iv. p. 672 ff.). In France the Religion of Humanity took shape at the hands of Comte; in Britain, America, and India arose societies professing the religion of reason. In 1880 an international society of free-thinkers, with national sections, was instituted at Brussels; and it was in the interests of that society in Germany that Bruno Wille wrote his *Lehrbuch für den Jugendunterricht freier Gemeinden* (Berlin, 1905), and Andreas Bard compiled his *Freidenker-texte* (Schwerin, 1909), while Edgar Monteil did the like for France in his *Catéchisme du libre-penseur* (Antwerp, 1877). The non-religious ethical instruction given in the schools of Paris—the so-called *instruction civique*—proceeds on similar lines. Another free-thought federation is the International Order for Religion and Ethics, which has its

central organization in Berne (1908); it owes much to the influence of Auguste Forel. Similar aims are pursued by the societies for moral culture which, originating in America, have spread throughout the civilized world. The latest organization of the kind is the Monistic Society inaugurated in Rome by Ernst Haeckel, but it is not likely to be the last. It stands to reason that, if modern thought should eventually prove unable to remodel the Churches, and find itself totally incapable of coming to terms with them, it must provide something to take their place. The alternative organizations which it has hitherto produced have been mainly imitations of the Church in one or other of its aspects, and a really sufficient substitute has not yet been found.

On the whole, we may affirm that the principle of an autonomous and non-theological type of thought for which the free-thinkers contended has, so far as science is concerned, been fully vindicated, and is now regarded as axiomatic and outside the sphere of controversy. But their other principle—their belief in the universally valid conclusions of Natural Theology—has completely broken down in the face of modern historical relativism and amid the clash of the great philosophical systems. Free-thought is thus, in one of its aspects, a self-evident principle, and, in the other, a shallow illusion now finally dispelled. This fact, again, militates against its tendency to produce new associations and groups, though fresh efforts in that direction are always being made. Cf. also art. MODERNISM.

[Additional Note.—Owing to a lack of sufficient material on which critical inquiry can profitably exercise itself, it is a work of peculiar difficulty to trace the progress of free-thought in the religious life of the *Ancient East*. But, as Max Müller long ago pointed out, the religion of Buddha was originally a pure a-theism. It was only as a reaction set in, and the popular mythology began to exercise itself in the direction of a Buddha-cult, that this system of atheology decayed. In the Brahmanic cults it is not, perhaps, incorrect to say that pantheism took its rise in a semi-developed attitude towards 'free-thinking' in its widest application; while in Persia the reaction from polytheism in favour of a partially enlightened Mithraism, and the later Mazdaism, issued in nothing that deserves the name of free-thought. In *Egypt*, despite the vast store of materials that bear upon the problems of religion, little definite knowledge has come to hand; though it is arguable that the religious reformation attempted by Akhenaten was prompted by what may, for lack of better nomenclature, pass as Rationalism.

With *China*, different tendencies were at work. Apart from ancestor-worship, the religion of China has been, and still is, rationalistic in a pronounced degree. The arrested growth of religion, as generally understood, is one of the significant facts that face the historian. In the 'religious' reformations connected with such names as Kung-fu-tse, Lao-Tse, and Mencius, the purely ethical side of religion, and the reduction of supernatural elements to a minimum, are points that deserve consideration.

Free-thought in *Israel* was never truly realized save partially and sporadically; of a system of

Rationalism we cannot properly speak in this connexion. It is true there are traces of a free-thought movement in the later books of the OT, such as Job and Ecclesiastes; but these lie out of the main current of the nation's religious development, which was in the direction of a rigid monotheism, akin in many respects to the creed of Islam.

Not until we reach *Greece* do we find those forces vitally at work out of which a co-ordinated system of free-thought springs; but, once there, we realize that those forces were active all down the stream of Greek history. Many reasons might be alleged for the unique place which Greece holds in the evolution of human freedom; but they are not germane to the present inquiry, which is to indicate the direction of the movement itself. It may be noted, however, that nothing contributed more to the rationalizing of all religious thought, which characterizes the most progressive epochs in Ancient Greece, than the fact that for the people generally there was no definite creed, no sacred book, no universally acknowledged priesthood. 'Each local cult had its own ancient ritual,' says J. M. Robertson (*Short Hist. of Free Thought*, i. 137).

Of any definite cult of free-thinking in *Ancient Rome* there is scarcely a trace. Religion was largely based on purely material considerations, and the element of 'mystery' was noticeable by its absence. It was the very lack of this element which brought about the hankering after weird emotional cults, which became such a feature in the last days of the Republic and in the early Empire. Lucretius is, perhaps, the one genuine exception to the statement made above; his great poem, *de Rerum Natura*, based on the teaching of Epicurus, is one long attack on supernaturalism, and a paean, in hexameters, to the spirit of Rationalism.

Coming to a later period, we must briefly mention the rise of Rationalism in the *Muslim world*. No free-thinker of any country—Voltaire alone excepted—is more celebrated in England than Omar Khayyam, the high priest of free-thought and of pessimism. But, though Omar has attained no great vogue in Islam, he does not stand alone; the names of al-Kindi and Averroës (to mention two only) at once spring to the mind. Of free-thought in later times there is less to record; but that the foundations of Islam are being gradually undermined in the modern Muhammadan world by its contact with Western thought, no serious student can doubt; and this in spite of phenomenal successes secured by the followers of the Prophet in Central Africa during the past half century.

Of Rationalism in *Christian Europe during the Middle Ages* we find many traces; but the questions that arise in dealing with its progress must be sought for in a history of heresy. With few exceptions, a free-thought propaganda during those centuries was mainly confined to the struggles of 'heretics' and the semi-'orthodox' to assert for themselves a right to worship in accordance with what they held to be reason and revelation.

It is with the *Renaissance* (q.v.) that free-thought, in the modern sense of the term, begins to make itself powerfully felt. The free-thinkers of the 15th and 16th cents. once more set ablaze the torch of human liberty which had been smouldering for a millennium. The complex ecclesiastical organization which had its centre at Rome had tried—and almost successfully—to quench it; but the re-discovery (so to speak) of Greek culture, and the opening up of vast avenues of thought which was the consequence of that discovery, finally broke the domination, mental and spiritual, exercised for ages over the minds of men. A beginning

was made by Boccaccio and Petrarch; the movement culminated in Machiavelli, the politician, and Giordano Bruno, the philosopher and man of science.—E. H. BLAKENEY.]

FREE WILL.—I. GENERAL.—1. Freedom a vital question.—The Free Will controversy is sometimes regarded as turning 'merely upon words and ambiguous expressions' to which 'a few intelligible definitions would immediately have put an end' (Hume, *Philos. Works*, Edin. 1854, vol. iv. 'Liberty and Necessity'). Historically, a vague terminology—will, motive, necessity, determination—has undoubtedly caused confusion. But, while the controversy has often been verbal, there is a real issue at stake. 'The government of God and the responsibility of man are equally involved' (H. B. Smith, *Faith and Philosophy*, Edin. 1878, p. 359). Again, the Free Will controversy is not an indifferent one, as Sidgwick implies (*Methods of Ethics*, Lond. 1901, ch. v.). Historically, indeed, thinkers of the most diverse moral systems are indiscriminately found on both sides of the discussion. Anthony Collins the free-thinker defends necessity against Clarke. Bramhall defends freedom against Hobbes. Edwards and Chalmers seem to fall into the same ranks as Hume and Mill. This *quæstio vexata* seems to cut athwart well-defined moral affinities. The capricious manner in which men 'of high-toned character and devoted piety' (J. Martineau, *A Study of Religion*, ii. 196) are affiliated to either side of the controversy is no proof, however, that the question of freedom is an ethically indifferent one. For (1) this caprice is more apparent than real. Though Bain, for instance, may claim to have Chalmers on his side, yet the *Weltanschauungen* represented by the two are separated *toto cælo*. Leslie Stephen and Green also may both be called determinists, but in a very different sense. Principal Cunningham took Hamilton to task for identifying predestination and philosophical necessity, and historical justice demands such differentiation (W. Cunningham, *Reformers and Theol. of Reformation*, Essay ix.). (2) We must also discriminate between what thinkers are defending and what they are denying. Thus Augustine denied free will in order to defend God's free grace. The defence was the real aim, the denial was incidental.

'There are theses which are, outwardly considered, entirely untrue, but, inwardly considered, true. Thus is Augustine's doctrine of sin and grace to be judged. As an expression of psychological religious experience it is true; but projected into history it is false' (Harnack, *Outlines of the Hist. of Dogma*, Eng. tr., Lond. 1893, p. 372).

This is really a vital point to remember. Many who oppose free will do so because they wish to conserve the effects of good actions already done (so T. H. Green, *Prolegomena*, p. 129), while many who champion free will do so to give some ground of hope to those who feel the burden of the past (so W. James, *Pragmatism*, New York, 1907, p. 120). The problem of freedom is neither a linguistic nor an ethically indifferent question. It is a permanent problem of thought.

2. Ground of problem in human nature.—Kant has emphasized the difference between man's theoretical and his practical activities. Man, as intellectual, demands coherence in experience. From this point of view, character is 'empirical'; i.e. it falls under the law of causation. Man belongs to the realm of Nature. But man, as moral, looks on himself as an 'intelligible' character, and 'the intelligible character has this prerogative over all other beings that he fixes his end for himself' (*Werke*, ed. Hartenstein, Leipzig, 1887-68, iv. 85). Viewed thus, man belongs to a realm of ends. Whatever may be thought of Kant's use of this distinction (see J. Ward, *The Realm of Ends*, Lect.

xiv., for a discussion both of its importance and of its liability to abuse), the distinction itself is recognized as important, and so

'for us, as for Kant, the question of freedom takes the form of a deep-seated antithesis between the interests of the scientific or intellectual consciousness on the one hand, and the moral and religious convictions of mankind on the other' (J. Seth, *A Study of Ethical Principles*, p. 345 f.).

The moral life is a real part of human experience, and it must not be denied in the theoretic interests. This at once obviates many objections to freedom. (a) When the psychologist denies freedom, he does so in the theoretic interest. Psychology is in the third person, its point of view is that of the spectator (cf. H. Höffding, *Outlines of Psychology*, Eng. tr., 1892, p. 345); morality is in the first person, its point of view is that of the agent. To raise the question of freedom at all is to transcend the ground of psychology, unless, indeed, we get a psychology, such as Boyce Gibson outlines in *Personal Idealism* (London, 1902, pp. 136-192), that takes the inward point of view.—(b) In the same way arguments against freedom based on the law of the Conservation of Energy lose their force because such discussions are carried on in a universe of discourse which leaves the moral attitude outside.—(c) It is quite true also that historians and statisticians are able to appeal to uniformities of experience due to material conditions 'without regard to the volition' of men (Buckle, *Hist. of Civilization*, 1867-68, p. 24), but that is just the business of the statistician (cf. W. James, *Will to Believe*, p. 216 f., for a brilliant refutation of this objection).—(d) 'We always explain the voluntary action of all men except ourselves on the principle of causation by character and circumstances' (H. Sidgwick, bk. I. ch. v.). Sometimes we excuse our own actions on this principle, yet if one

'really seek to excuse himself in the sequel, by trying to show that it was impossible for a man with his particular antecedents to act otherwise than he did, he is regarding the action entirely from an external and non-moral (which for him in the circumstances is an immoral) point of view' (Pringle Pattison, *The Philosophical Radicals*, Edin. 1907, p. 101; cf. p. 322).

These and all similar attempts to deny freedom shatter on the moral consciousness. W. James, in 'The Dilemma of Determinism' (*op. cit.* 145-183), has shown by a series of arguments *e consequentiis* how Determinism destroys the ineradicable moral instincts of man. Butler also dismissed Necessity from the same point of view with a 'disrespect amounting to contempt' (W. E. Gladstone, *Studies Subsidiary to Butler's Works*, Oxford, 1896, p. 288).

The problem of freedom may thus be said to be grounded in human nature. To discuss it is to raise the validity of the moral consciousness. It is a philosophical and theological question, not a question of physics or empirical psychology.

The admission of a freedom from co-action or compulsion is not enough to satisfy the moral demand. To man in normal conditions this is not denied by any one. It may be impaired by disease, it may be limited by inadequacy of material, it may be compulsorily taken away, but otherwise it is a common human possession. Such a power, however, is purely non-moral. It does not distinguish man from life in general. But freedom has meaning only in reference to the moral nature of man. 'It is the reason's postulate for the dictamina of conscience' (J. Duncan, *Colloquia Peripatetica*, 1907, p. 30).

Nor is it sufficient to view freedom as the action and reaction between character and environment. On this view, character is partly inherited, partly acquired, but the acquired character is the inevitable product of the inherited one. 'The whole man is inherited, if we may use such a phrase' (Leslie Stephen, *Science of Ethics*, Lond. 1882, p. 289). Freedom may be thus regarded in the interests of naturalism or of idealism. T. H. Green

does it in the latter interest. 'The action is as necessarily related to the character and circumstances as any event to the sum of its conditions' (*Proleg.* p. 126; cf. p. 129). Logically, in either case the moral consciousness is violated. According to this view, things could not possibly have been otherwise; and praise and blame, punishment, obligation, and the hope of progress are illusions. In short, the moral point of view is disregarded. For, morally viewed,

'action is not referred backward in time to the circumstances and predispositions of which as motives it is the legitimate outcome, but the man brings his action face to face with a "Thou shalt" which he finds within him, and according to its conformity or want of conformity with this law he approves or condemns his conduct' (Pringle Pattison, 322).

We must take our stand on the moral nature of man; and, while admitting the prevalence of habit, the power of inherited character, and the force of circumstances, and so refusing a *liberum arbitrium indifferentiae* which is dismissed now by indeterminists as a contradiction in terms (cf. Wendt, *System der christl. Lehre*, 196), we at the same time have to determine whether the consciousness that things could have been otherwise—that evil might be abolished, that responsibility is a fact, that punishment is not a fiction—is possible of vindication on any *Weltanschauung* that can gain the respect of the reason. This is the problem of Freedom.

II. PHILOSOPHY AND FREE WILL.—1. Free Will and Naturalism.—Naturalism explains all Reality in terms of matter and motion. It carries necessity all through experience. On this view, freedom has no meaning. So the philosopher who believes in free will has to defend its possibility against this system. This can be done (1) by an argument from consequences.

'Those who hold "naturalism" are bound to believe that every decision at which mankind have arrived and every consequent action . . . was determined by the quantity and distribution of the various forms of matter and energy which preceded the birth of the solar system' (A. J. Balfour, *The Foundations of Belief*², 1895, p. 20).

(2) The concept of the 'Uniformity of Nature,' which is the foundation of Naturalism, may be shown to be not opposed to mental activity, but a fruit of it. It is a reflexion, in short, of the activity of the self into the realm of Nature—a metaphorical explanation of Nature in terms of human action. Natural laws are symbolic formulæ of explanation, not ontological dogmas. They fail even to earmark individual cases in their own sphere; they are thoroughly inadequate to explain all reality. This offspring, then, of the active self cannot be used to discredit its parent. (3) Again, in conscious life we find all along a subject as well as an object. T. H. Green has shown that knowledge is inexplicable without a subject. Hume's sensationalism is inadequate to explain cognition. But feeling and conation imply a subject also. For feeling and conation depend on interest and attention. W. James finds that the 'duration and intensity' of mental effort are not dependent on the object, but on the subject. He calls this an 'independent variable' at which science has to stop (*Text-Book of Psychology*, N.Y., 1892, p. 455); but it is not so. It is only one phase of the activity of the subject which is all along present. This we may call the psychological possibility of freedom, and

'freedom is a permanent attitude of the conscious subject, consciousness always implying a consciousness of the subject's relative independence in relation to the object that conditions but does not necessarily regulate its activity' (*Personal Idealism*, 161 f.).

This 'creative synthesis,' which characterizes conscious life in general, is the distinguishing quality of moral life in particular. For here we are in the realm of ideals, of values which create and control activity. This is admitted by 'Ideal-

ism' and 'Pluralism' alike as against Naturalism. How, then, do they explain this activity itself? What is their view of freedom?

2. Freedom and Absolutism.—The problem of freedom arises when we ask: (1) What is the relation of the self to the character? (2) What is the relation of both—of a person—to Reality?

(1) Absolutism tends to identify the self and the character. 'This is one result of equating the 'real' and the 'rational,' but it overlooks the fact that experience for us is not complete, and that the 'ought to be' is not the 'is.' H. Bergson has pointed out that there is another and a truer way of looking at things.

'Hence there are finally two different selves, one of which is, as it were, the external projection of the other, its spatial and, so to speak, social representation. We reach the former by deep introspection, which leads us to grasp our inner states as living things, constantly becoming, as states not amenable to measure, which permeate one another and of which the succession in duration has nothing in common with juxtaposition in homogeneous space. But the moments at which we thus grasp ourselves are rare, and that is just why we are rarely free. The greater part of the time we live outside ourselves . . . we "are acted" rather than act ourselves. To act freely is to recover possession of oneself, and to get back into pure duration' (*Time and Free Will*, Eng. tr., p. 231 f.).

It is not simply, however, by deep introspection that this happens. It takes place also when we obey great ideals. On this view, the self, though manifested in the present character, is greater than it. Hence it is possible for sudden changes of character to take place, to make a new beginning. The evil past can be transformed, and its very memory may be an inspiration in its own undoing: while the past, in so far as it is of value, is made a ground of further development (cf. Boyce Gibson, *Rudolf Eucken's Philosophy of Life*, Lond. 1906, p. 27 f.). We hold, then, that the self acts teleologically on its own character, i.e. it acts through ideals. The mechanism of character it either accepts or modifies and turns into new channels for new purposes. The mechanical and intelligible worlds of Kant are thus brought together in the unity of a growing personality—free, yet using its freedom in ordered calculable ways.

(2) Absolutism tends to make the self a phase of Reality. In fact, the self in this system is in a state of unstable equilibrium. Its essential features are either projected into the social order or sublimated into the Absolute Experience. We have seen how on the first view freedom is attenuated. On the second view we have the acosmism of Spinoza, which can give no place to freedom except as the rhythm of the Divine life (cf. J. Seth, 379-386, for a criticism of this view of freedom).

3. Pluralism and Freedom.—Pluralism recognizes the distinction between the self and the character. Freedom is its watchword; but, as expounded by some, the objective element in experience is undervalued. As a reaction against Naturalism it makes truth wholly pragmatic. Nature is absolutely plastic. There are no laws there till we make them. The world is an *ἀπειρον*, and chance governs all (*τύχη κυβερνᾷ πάντα*). This 'Tychism,' however, errs in overlooking the persistence of character. For, even in the case of a sinner converted, his past is recognized somehow as his own. Moreover, civilization and Nature, impersonal and mechanical in some sense, are yet the very media through which the self acts. Moral ideals, again, though self-accepted, have the characteristic of universality. We are in danger here of laying exclusive stress on a bare activity of the subject. But this is not enough; objectivity and unity are also required. These are given us in the physical and psychical orders in which our freedom works as well as in the universality of the moral ideal itself.

We have already attempted to give a view of the freedom of the subject in relation to the character. What is this freedom in relation to

outward reality? This is the most living problem in modern metaphysics. It involves not only the relation of man to Nature, but that of Nature to God and of man to God.

Freedom touches the problem in so far as the power of obeying the moral imperative is concerned, and thus it postulates at least that the mechanism of Nature must not be either indifferent or hostile to its own teleological activity. The difficulty of the problem is increased by the fact that between man and Nature there is what Comte called *l'humanité*, i.e. Nature as modelled by man.

This aspect of Nature is the hope of the moral consciousness—that all Nature is in reality a fit vehicle of spirit. When moral endeavour has already done so much to make the world familiar and subservient, may it not do all? On the other hand, *l'humanité* often fills moral endeavour with despair. For here progress against evil customs and perverse institutions seems to be helpless; and even customs and institutions, good in themselves, hinder progress when taken as final resting-places of the living spirit.

The relation of persons to Nature, then, is actually one neither of freedom nor of slavery; but, ideally at least, moral effort demands that Nature become a fit mechanism for realizing worthy ends. This suggests that much of *l'humanité* (in the Comtian sense) must and can be subverted; it does not imply, however, that Nature itself is inherently opposed to freedom; for mechanism here may become media of purposive acts (cf. R. H. Lotze, *Microcosmus*, Eng. tr., Edin. 1885, i. 261; and H. Bergson, *Creative Evolution*, Eng. tr., Lond. 1911, for the relation between persons and Nature).

III. **FREE WILL AND THEOLOGY.**—Theology refers everything to God. Its great danger in so doing is that the personal attitude inherent in moral experience may be submerged. It is always difficult to do justice to God and man (cf. Pringle Pattison, *Hegelianism and Personality*, Lond. 1887, p. 153). Man's moral nature is threatened from this side even more than from the side of Nature, because, while the moral life rises up in self-defence against Nature, it feels secure in dependence on the Divine.

The religious consciousness asserts both the sovereignty of God and the freedom of man. Pharisaic Judaism held both views side by side (Jos. *BJ* II. viii. 14), and St. Paul (Ro 9. 10) emphasizes now the one, now the other. To do this is more important for morals than to do violence to either in the interests of premature synthesis. St. Paul did not neglect the individual attitude.

The ethical sense of responsibility, the energy for struggle and the discipline of will was not paralysed or absorbed in Paul's case by his consciousness of redemption and his profound spiritual experiences (J. Weiss, *Paul and Jesus*, Eng. tr., Lond. 1909, p. 118).

St. Paul, however, did not deal with free will from the standpoint of an insulated individual. The latter from the religious point of view is an *ens rationis*. Every man is related to God, and is—within the movement of history—open to influences of sin and grace. For St. Paul, God is the author of his redemptive experiences: they are not the effect of his free choice; they came to him from God. But they are not opposed to free choice. They are a gift; they are also a task.

Within the individual religious experience, freedom thus tends to coalesce with necessity; this freedom is not power to do anything irrespective of character, nor is this necessity physical coercion. This is the *felix necessitas boni* of Augustine (cf. Luther's *Freiheit eines Christenmenschen*, opening paragraphs). This freedom is perfect in God. It is the *non posse peccare* of a holy character. In

man it is a progressive attainment nurtured by the Holy Spirit. The sovereignty of God is thus essential to this freedom because it means the conservation of spiritual values, and it gives the individual certainty of moral victory while it frees him from the tyranny of sin and the world. Negatively, it is freedom from sin; positively, freedom for righteousness.

It was in the interests of this ideal freedom that Luther and Calvin tended to neglect its natural basis in man's moral nature (cf. J. Oman, *The Problem of Faith and Freedom*, London, 1906, p. 14). This ideal freedom (cf. T. H. Green, *Works*, ii. 308 f., for philosophical cognates) is not an attained reality in religious experience. 'A power of choice is not thought of in this freedom, but a state of the most fixed and settled decision for God' (J. Müller, *Christian Doctrine of Sin*, ii. 12). Hence, till we reach that ideal, we need a conception of freedom to represent present experience. "Freedom" in a world already perfect could only mean freedom to be worse, and who could be so insane as to wish that?' (W. James, *Pragmatism*, New York, 1907, p. 120).

Can God's sovereignty be reconciled with such a freedom of choice as we require? It cannot if God's absoluteness is asserted without qualification; then the moral life becomes unintelligible. Butler has warned us against speculating on how God ought to reveal Himself. We ought rather to find out how He has revealed Himself. So, God's absoluteness must be approached from experience. The defect of Augustinianism and Calvinism is that they start from a knowledge of God's absoluteness above experience, deduce logically from this eternal decrees, and so explain individual experience. We must start from experience, however; and, doing so, the problem is to reconcile God's absoluteness in grace with man's freedom. If we deny the latter, we deface man; if we deny the former, we are in a world which is a moral chaos, where ideals have no reality that can be depended on, where the holiest hopes of men may never be satisfied. The history of Free Will within theology is an oscillation between these two interests. The Greek Church had to conserve human freedom against the Gnostic fatalism, with its three fixed unalterable types of men (pneumatic, psychic, hylic). This was done in such a way as to obscure the distinction between nature and grace. Augustinianism, again, made an impassable gulf between the moral consciousness of responsibility and the new life of grace. In any attempted reconciliation both interests must be conserved.

I. **Freedom and Omnipotence.**—It is not enough to admit freedom *in civilibus* or *in moralibus* and deny it *in spiritualibus*. That is not the way to safeguard religious experience. So even Calvinists like Chalmers, who adopt the Edwardean position, insist on their right to make a free gospel offer (cf. T. Chalmers, *Works*, Glasgow, 1849, ix. 312 f.). It may be said that this is speculatively inconsistent, and it is so because God's omnipotence is logically started from instead of being explained from experience. The power to embrace God's offer of salvation must be granted to man. The difficulty is created by starting with an individual cut loose from God, by separating the *ἐνέργεια τοῦ θεοῦ* from the *τὸ θελεῖν* in man. But that is not thinkable. God is there all along, though only in the religious life is His power graciously accepted. Hence the freedom theology requires for man is freedom in a universe where God is active, and where man is active too. In short, this is not a 'block universe,' but a realm of ends realized in God, realizable by man within the limits of his finiteness, opposable by man also within these limits. No other view

of freedom can satisfy the moral demand as it shows itself negatively in guilt, and positively in responsibility for future obedience.

2. **Freedom and Omniscience.**—Nor can we be satisfied with a bare foreknowledge unrelated to experience. It is true that, on the human analogy, we have foreknowledge of one's action without being its efficient cause; and so some theologians (Rothe, Martensen; cf. Gladstone, *op. cit.* 273, and Jowett, *Epistles of St. Paul*, 1894, ii. 370) have regarded the Divine prescience as the logical knowledge of everything apart from any causal connexion with anything; but we are in danger here of lapsing into the Epicurean view of God as careless of mankind. Again, thinkers (e.g. Royce) have regarded God's knowledge as timeless, as 'knowledge at one glance of the whole of the temporal order' (*The World and the Individual*, Lond. 1900, ii. 374; cf. J. Ward, *The Realm of Ends*, p. 313 f., for a criticism). Both these views err in not relating God's knowledge to human experience, but it is just this relation that is of religious value. Religion demands God's activity all through, but it demands this in harmony with morality. Hence it speaks of God changing His mind, of God delaying His judgments when men repent. In short, it admits a possible change in the course of history dependent somehow on human action. The very essence of the religious claims—repentance, new obedience—does not postulate a closed universe in which God is fettered or man predetermined either by omnipotence or omniscience. While God must thus be actively aware of all possibilities, and cannot be surprised, or His purposes ultimately frustrated, yet there is within this real contingency.

Thus it is possible to have a view of God's foreknowledge which is immanently present and lovingly active all through, but works in accord with holy purposes. This view, with all its difficulties, seems to us to safeguard God's freedom in Nature, to substantiate His continual efficiency in grace, and yet to conserve man's responsibility. It is the task of theology to furnish a *Weltanschauung* consistent with both these positions.

FRIENDLY ISLANDS.—See **TONGAN REGULATION.**

¹ For Hamilton and Mill, see art. **LIBERTARIANISM AND NECESSITARIANISM.**

FRIENDLY SOCIETIES.—1. The theory of mutual aid.—Friendly Societies are institutions formed for the purpose of mutual insurance, and have been one of the chief means employed by the working classes for providing against the risks of sickness, old age, and funeral expenses. The inadequacy of purely private providence to cope with the uncertainties of life and health among working people has been recognized from very early times, while religious and social fraternities have everywhere devoted some attention to guarding their members from losses due to these vicissitudes. The Greek *επαφες* appears frequently to have undertaken provident functions, and the mediæval gild in Germany and England used its 'box' or 'chest' for the purpose of assisting members in distress. Grants of burial money were a remarkably general feature of such fraternities, even when the common purse was used mainly for feasting, or when the primary object of association was the control of a craft. Some writers, indeed, assert that the modern Friendly Society is an actual descendant of the mediæval gild; but, except for some similarities in their fraternal functions and the fact that the English gilds decayed about the time when Friendly Societies took their rise, there is little to warrant the belief in any direct connexion. Feasting, attendance at funerals of members, solemn entrance oaths, contributions to the 'box', processions to church, and assistance in times of distress, were common characteristics of fraternities of all kinds, and the fact that they appear in the earlier Friendly Societies does not suffice to prove that these institutions had any organic relation to the gilds. Possibly the customs of the gilds had an influence upon those of the Friendly Societies, but evidence for any closer connexion is lacking in England, although in Scotland, where the gilds continued in existence to a later period, some of them gradually merged into Friendly Societies as they lost their trade privileges. Cf. art. **GILDS.**

The Friendly Society is not a mere institution for promoting thrift. It must be sharply distinguished from Savings Banks, Building Societies, and similar organizations, which have afforded facilities for investment in small sums to the working classes. Its differentiating characteristic is that of mutual insurance as contrasted with individual investment, and in some important respects the security and welfare of the contributor may be more adequately promoted by becoming a member of a Friendly Society than by depositing small savings in a bank. Death, though certain, may come early or late. Sickness may fall upon one before he has had time to make any savings commensurate with the burden; to another, who has saved more, it may be so protracted as to consume all his reserve long before he is again fit for work; to a third it may not come for twenty or thirty years, and even then may be of brief duration. Old age, again, when the earning power ceases, is reached by a minority, and it may or may not be protracted in any particular case. Mutual insurance meets these contingencies as individual saving can seldom do, because the uncertainties of life and health for a single person may be almost translated into certainties when a large number of persons are concerned, so that, instead of taking account of the extreme possibility of the particular case, it is necessary only to proceed on the basis of average probabilities.

Many men could not possibly save sufficient to maintain themselves even on the barest necessities of life during a protracted old age; still more could not do so without undergoing very great privation during their working years. As it is also problematical whether they will ever reach old age, it may be quite unwise in some cases for them to

undergo the discomfort of saving much for this purpose, particularly if that would reduce their present industrial efficiency or retard the development of their families. But if, on a calculation of average probabilities of life in that social class, it can be shown that a contribution of a few pence a week from all will suffice to provide for the superannuation of those who do attain a given age, it may be well within the means of most of them to pay on this basis of average probabilities, although it would be unwise to save on the assumption of the extreme possibility of the individual case.

The risk of illness is precisely similar. Any individual may be suddenly stricken down with a long illness or even permanent disablement, and few working men could by private thrift provide against this extreme possibility; while even a brief illness may occur before sufficient has been saved to meet it. But provision for the average probabilities may come within the reach of the vast majority. The mutual insurance of Friendly Societies is based upon this principle of average probabilities; and, while ensuring systematic contributions from each member, it also shares the risk among a large group.

2. Recent growth of scientific methods.—Although there has always been implicit in Friendly Society activities some recognition of the principle of average probabilities, the actuarial data by which to calculate the proper contributions and benefits are a late development. The fact that certain contingencies occur with remarkable regularity, when sufficiently large numbers of persons are considered, may be generally known before even approximate estimates of the degree of frequency can be made. But, when account is taken of the further circumstance that mortality and sickness vary according to the occupations, economic conditions, and habits of the people, so that a table which is appropriate to a certain class or trade cannot forthwith be applied without modification to quite a different section of the population, it is scarcely surprising to find that a host of early Friendly Societies worked almost at random, and yielded a dismal story of insolvency and inability to meet the obligations which they had undertaken. For a few years, while the members were mainly at the healthiest periods of life, the Societies would appear to flourish; but it soon became manifest that, as the average age increased, the contributions and levies were insufficient to meet the higher risks, and dissolution precisely at the period when the needs of the members were greatest has been the melancholy experience of thousands of these institutions. Many of them had so little appreciation of the factors to be allowed for in the calculation of risks, that they proceeded on the assumption that a contribution from each member which sufficed to meet the outlay on benefits during the first year would also suffice permanently to cover all claims. It was not understood that the risks are largely prospective, so that even a Society with an accumulated fund might not be actuarially solvent. A valuation of its assets and liabilities might well show a deficiency. A Friendly Society is in a sound financial position only when the sum of its existing funds and the present value of the future contributions of its existing members equals or exceeds the present value of the benefits which those members may be expected to claim in the future, together with any expenses of management. The value of these prospective benefits depends upon appropriate estimates of sickness and mortality, which, again, depend upon such factors as the age of the members; and, similarly, the present value of prospective contributions is dependent upon the expectation of life at different ages, as

well as upon the rate of interest. It follows that a premium adequate to cover the risks must vary with the age of the entrant if the Society is to be permanent; and, in order to protect itself from an accumulation of bad risks, a voluntary Society must also refuse to admit individuals who do not give evidence of normal health. Periodically it should make a thorough valuation of its assets and liabilities; and, if this reveals a deficiency, arrangements should be made either to raise the premiums or to lower the benefits, since persistence in the old course will lead to eventual insolvency.

In the light of these general principles it is easy to account for the failures so abundantly manifest in the history of Friendly Societies. Ignorance of the actuarial factors, sometimes combined with dishonesty of officials, led to sad disappointment among the thrifty labouring people who sought to provide against the risk of pauperism through ill-health and old age. There are still many small Friendly Societies in existence which cannot stand before a valuation test, and every year adds a few of them to the long list of disasters. As, however, the long experience of some of the largest societies has been analyzed by competent actuaries and made available to the public, sound statistical data have accumulated, and a proper appreciation of the elements which must enter the calculations has become more widely diffused. On the whole, there has been a marked improvement both in methods and in stability during the last thirty years.

3. Historical development and legislative recognition.—The oldest existing Friendly Society is the United General Sea Box of Borrowstounness in Scotland, which was founded in 1634. In England, it is interesting to note that the Societies which can trace their history furthest back are those founded about the beginning of the 18th cent. by the Huguenot refugees in Spitalfields. Some of the earliest Societies were confined to workers in a particular trade, while others had distinctively religious restrictions, as in the case of the Society of Lintot, founded in 1708, in which the members must belong to the church of Lintot and be good Protestants, loyal to Queen Anne. These were all isolated local associations, and before the end of the 18th cent. such Societies had grown up in nearly every part of Great Britain. There are preserved in the British Museum the rules of a large number of these small clubs centring about Newcastle-on-Tyne in the second half of the 18th cent.; and there is abundant evidence that in most districts such organizations were then meeting at the village ale-houses, and included a large proportion of the population. The social and convivial side appears to have been pronounced, and one of the earliest references to them in the Statute book describes them as 'societies of good fellowship.'

Meanwhile there arose a new class, distinct from the local sick clubs, which has now become in some respects the most important form of Friendly Society, viz. the Affiliated Order, owing its inspiration mainly to Freemasonry (*q.v.*), and borrowing from that movement its rites and ceremonies, secret signs, and gorgeous costumes. Of greater moment is the fact that the Orders adopted the model of Freemasonry in their organization of local branches or lodges; and, though the chief emphasis at first was convivial, by the end of the 18th cent. the Free Gardeners, Oddfellows, Druids, Foresters, and Comical Fellows had developed into Friendly Societies with many branches.

The growing importance of the associations led to a general interest in them and a desire to afford them a better legal status, and to this end in 1793

there was carried through an 'Act for the encouragement of Friendly Societies,' which granted to them valuable privileges on condition of submitting their rules to the approval of the justices in Quarter Sessions. While a large number of local societies were enrolled and obtained a definite legal status under this Act, the Affiliated Orders were being repressed by other legislation aimed at Secret Societies whose members took any oath not required by law. Hitherto the enrolment of Societies under the Act had not restricted their financial management, and there were growing complaints of their instability and failure. In 1819, Parliament attempted to deal with this phase of the problem by requiring the justices, before confirming the tables of contributions and benefits, to see that they had been approved, by at least two persons who were professional actuaries or persons skilled in calculation, as fit and proper according to the most correct calculation of which the nature of the case would admit. Yet this bold attempt to secure financial soundness had little effect in practice. On the one hand, there was nothing to prevent Societies from operating without becoming enrolled by the justices, and any stringent requirements of this nature simply led to a decrease in registration. On the other hand, 'persons skilled in calculation' in practice frequently meant village schoolmasters and others who had no special training for the work, so that numerous Societies were still enrolled without sound financial bases.

In 1829, provision was made for central registration, a barrister being appointed to examine the rules of Societies; while, instead of the approval of the financial tables by two skilled persons, it was simply required that the justices should be satisfied that the tables could be adopted 'with safety to all parties concerned.' This meant, in effect, that the attempt to procure financial soundness by legislation was relaxed; and in 1834 even this mild provision was repealed, so that thereafter the Societies could adopt whatever rules, benefits, and levies they pleased, so long as the barrister certified that they contained nothing contrary to law. After this, Parliament vacillated on the question. In 1846, when a registrar took the place of the barrister, he was required to obtain an actuarial certificate before registering a Society; and it was enacted for the first time that every registered Society should be valued once in five years. But in 1850 these provisions were repealed, and in the amended Act of that year no arrangement for valuation was demanded, while a distinction was drawn between certified and registered societies. The former had their tables approved by a qualified actuary, while others were merely registered; but in point of fact very few Societies sought to obtain certification, and in 1855 a new repealing and consolidating Act abandoned all pretence to regulation of the financial tables of the Societies.

By this time the Affiliated Orders, which had been studiously ignored by the Friendly Society legislation until 1850, began to be recognized, though prior to 1875 they could register only as if each branch were a separate organization. They were the pioneers in securing financial stability by voluntary methods. The Manchester Unity of Oddfellows made a complete valuation of all its branches in 1870, and a partial valuation was made by the Order of Druids, thus paving the way for the provisions of the Act of 1875, which, in spite of later amendments and consolidations, contained almost all the chief legislative regulations affecting Friendly Societies before the National Insurance Act of 1911 came into force. Registration remained optional, and no endeavour was

made to impose upon Societies actuarially sound tables. Societies are still registered even if they charge small subscriptions and promise absurdly large benefits. But a registered Society comes under the obligations of making an annual return to the registrar and of undergoing a quinquennial valuation. This publicity conduces in some measure to financial soundness, although a Society which shows a deficiency in its valuation is not struck off the register, and is not compelled to raise its levies or lower its benefits unless the members decide to do so. Yet this method enables the members to ascertain the financial condition of the Society, and to remedy any defects if they so desire. Also, if a certain proportion of the members request it, the registrar must appoint an inspector to examine into the affairs of the Society, or must call a special meeting of members; though, again, the inspector may merely report, and the members are at liberty to disregard his statements or suggestions. If a Society becomes insolvent, members may apply to the registrar to wind up its affairs.

4. Membership and funds.—Although a Friendly Society thus surrenders little of its independence by becoming registered, there are still very many small local Societies which have not taken advantage of the legislation, and it is to be feared that most of them would show serious deficiencies in a valuation. The registered Societies, however, have become stronger, numerically and financially, since the passing of the Act of 1875. A large number of different organizations may register as Friendly Societies, including those which provide by voluntary subscriptions of members against such diverse risks as shipwreck, loss of tools by fire, or insurance of cattle; but these may here be neglected. Three groups of organizations account for 94 per cent of the total membership, and for 96 per cent of the accumulated funds, of all kinds of registered Friendly Societies in the United Kingdom. The growth of their membership and funds from 1877 to 1909 is shown in the following table; but it should be remarked in this connexion that many individuals are counted more than once, since it is not uncommon for a skilled workman to be a member of two Societies.

	Number of Members.		Amount of Funds.	
	1877	1909	1877	1909
Collecting Societies	2,439,988	6,829,164	£1,172,363	£9,117,347
Affiliated Orders	1,528,216	2,708,607	£7,752,060	£27,167,686
Ordinary Societies	1,287,670	3,526,639	£5,211,052	£20,987,852

5. Burial clubs.—The Collecting Societies, which, while registered as Friendly Societies, are also regulated by a Special Act of 1896, may be said broadly to deal with a poorer section of the population than do the other organizations, and to insure only for burial money. In 1909 they were 63 in number, and had a larger membership than the other two groups combined; but their relative importance is diminished if regard is had to the amount of their accumulated funds and to the fact that, as a rule, they do not provide for sickness or old age. Moreover, the majority of the members are young children. The work done by these Societies is very similar to that of the Industrial Assurance Companies, which do an enormous business in petty death policies; and from the standpoint of thrift they are subject to the same criticism of high cost of management. Here, as

in so many other cases, the poor have to pay proportionally much more than the well-to-do for the benefits they receive. The premiums are collected by canvassers at the houses of the insured, and the cost of this and of general administration absorbs about one-half of the contributions, so that for every penny invested for his own benefit the member pays another penny to agents and officials. Three Collecting Societies, the Royal Liver, the Liverpool Victoria Legal, and the Scottish Legal, together embrace about six millions of members, leaving under one million to the remaining sixty Societies. The accumulated funds appear to be very small relatively to the membership, but, in fact, a very high proportion of those who become members cease after a time to contribute, and the membership lapses. Thus, in the year 1909, 2,124,709 new members were admitted to Collecting Societies, 120,041 members died, while no fewer than 1,556,855 members lapsed in the single year. The melancholy conclusion at which the investigator arrives is that a large part of the membership is temporary, and never obtains any return for the premiums. That there is a clamant need for the institution of a system of small insurances for payments at death, in which the poor would receive benefits commensurate with the premiums, is manifest to all who have practical acquaintance with the lives of the poor; but, so long as the contributions have to be collected in pence from door to door every week, there seems to be little chance of meeting this need. Nor are the cost of management and the number of lapses the only drawbacks. Despite the small number of Collecting Societies, there are almost every year some that collapse after obtaining the money of the poor. Speculative assurances on the lives of persons in which the contributor has no real interest are believed to be frequent, although they are contrary to law. Sometimes, too, there is said to be danger to infant life in the practice of insuring babies, though for a child under five years of age the maximum payment at death is fixed by law at £6. Yet it must be granted that the Collecting Societies induce some provision for burial, and for small benefits to survivors, among a poor and improvident class who would otherwise remain untouched by the institutions for thrift.

6. Sickness insurance by Friendly Societies.—The Affiliated Orders provide for sickness as well as sums at death, and frequently for superannuation and other minor risks. Their aggregate funds are higher than those of the other two groups, although their membership is the lowest. They differ from the Collecting Societies in the following important respects. (1) They administer sickness benefits, which it is generally impossible for a Collecting Society to undertake because of the supervision required as a check to malingering. These benefits usually include medical aid, as well as the more important grants of weekly sums to members who are ill and, consequently, incapable of earning. (2) They are organized on a basis of self-government by the insured, while the Collecting Societies are managed by a hierarchy of paid officials. Consequently, the expenses of management are about 10 per cent of the receipts as contrasted with 50 per cent in the Collecting Societies. (3) They permit of a common bond among the members, who meet in the local lodges, courts, tents, or divisions, for social purposes and for the discussion of topics relating to their general welfare.

These advantages are generally found in the ordinary or single Friendly Societies as well as in the Affiliated Orders; but the latter have the distinctive merit of supplementing local independence

with a salutary central control. The lodge manages its own affairs in an area sufficiently small to admit of thorough supervision and social life, thus providing an excellent unit for friendly relations, political training, and discussion, as well as for checking malingering; while the lodges are usually grouped into districts in which the claims for funeral money are equalized and the accumulated funds invested to better advantage than could be done by the lodges themselves. It was customary until recently for the district body, composed of delegates from the lodges, to levy sums from the lodges to meet the funeral expenses when they occurred; but latterly this has developed into a system of charging premiums from each lodge in accordance with the age-constitution of the members. Above these there is the central body, or general meeting of delegates from the districts and lodges, which is either held permanently in some city or moves from place to place. This 'high court,' or 'movable committee,' secures capable men for the guidance of the Order, makes general rules which the lodges must observe, often prescribes the rates of contribution, and administers a central fund for the aid of branches that are in difficulties, when it is deemed advisable to render such assistance. This, however, does not amount to a guarantee of the solvency of each lodge by the central body. The relative importance of the different forms of benefit is indicated by the fact that out of nearly £20,000,000 paid to the members of the Ancient Order of Foresters during the thirty years from 1876 to 1905, 72 per cent was devoted to sick pay for the maintenance of members during illness, 12 per cent to medical aid, and 16 per cent to funeral allowances.

The group designated 'Ordinary Friendly Societies' includes a great variety of bodies, from the small local benefit club to the centralized class, the strongest of which is the Hearts of Oak, with a membership of over 300,000 in 1909. The centralized Societies dispense all benefits from the head office, and they are unable to check malingering so efficiently as a local society or branch, since they must depend solely on the medical attendant without the aid of the visitations of fellow-members. Consequently, the rate of sickness, even in the best centralized Society, is in excess of that experienced by the Foresters or Oddfellows, where the local court or lodge provides against fraud. There are also local Societies confined to particular trades, especially among miners and railway servants, Societies of juveniles and of females. Moreover, in addition to the membership shown in the foregoing table, there are a great many village clubs and county Societies that have not registered and, therefore, do not enter the returns.

7. Dividing Societies.—Some of the small Societies still adhere to the primitive method of dividing the surplus each year among the members. They charge weekly sums, frequently higher than those levied by other Friendly Societies, pay sickness benefits to the members who may be ill during the year, and divide the remaining funds among all the members at the end of the year, carrying forward only a small reserve. Such Societies, sometimes called 'tontines' and 'slate clubs,' appeal very strongly to the working classes in some parts of the country; but they obviously lead a precarious existence, from the fact that they have no accumulated funds and virtually begin afresh every year. From the standpoint of insurance this is a very questionable method, for the older members are liable to be left out of the Society precisely when their sickness is greatest. Though there may be no intention to dismiss every year the members who have become burdensome to the funds, it generally happens in practice; for, if they

do not leave the club, the younger and healthier members break away and form another Society of their own, so that the original Society soon collapses. The inadequacy of a Dividing Society is manifest from the fact that, while the expectation of sickness is about one week per annum at the age of 30, at the age of 48 it is two weeks, at 53 it is three weeks, at 57 it is four weeks, and increases rapidly thereafter. Hence insurance against sickness is mainly a provision for the later years of life, and a Society which accumulates no fund can scarcely be said to cope with the chief problem. Despite this disadvantage, however, the Dividing Societies attract large numbers of members, who use them for the purpose of saving for Christmas expenditure as well as for sickness benefits; and since 1875 they have been permitted to register on condition that no division of funds takes place before existing sickness claims have been met.

8. Lapses from membership and deficiencies of funds.—One of the greatest weaknesses attaching to Friendly Societies as a whole, and, indeed, to every form of voluntary health insurance, has been the large number of lapses from membership. In recent years the Affiliated Orders and the Ordinary Societies have experienced about three lapses from membership for every four new members added. Thus in 1905, while 458,854 new members were admitted, 64,528 members died, and 338,235 members lapsed. A large proportion of these lapses were due to temporary difficulty in maintaining the contributions. In the Collecting Societies, as was observed above, the number of lapses is still greater.

The other serious weakness is that a very large proportion of the small Societies still show a deficiency in their periodical valuations: and, beyond ensuring publicity in the case of registered Societies, the law imposes no obligation upon them to take steps towards solvency. A large Affiliated Order is usually financially sound, because the central body not only imposes upon the branches an official valuation, but, if a deficiency is revealed, the branch is compelled to readjust its contributions or benefits. Lacking this salutary control, however, the small independent Societies promise benefits out of proportion to the contributions, which they may succeed in granting for many years when the average age of the members is low, but, as a result, many of them show increasing deficiencies at every valuation, until they finally fall to pieces when the rate of sickness and mortality becomes high.

9. The Friendly Society work of Trade Unions.—Many Trade Unions have undertaken the provision of sickness and funeral benefits, in addition to the more distinctive unemployment and strike benefits. It is estimated that about 1,500,000 trade unionists subscribe for burial money, and about 900,000 for sick pay. But the friendly functions of Trade Unions have been carried on without reference to actuarial calculations, since the primary object has been to have all the funds available for strike purposes at any moment. No adequate reserves have been kept, and from the standpoint of mutual insurance the Unions have always been financially inferior to good Friendly Societies. They have never viewed their contract to pay sickness benefits as binding. They may expel a member at any time if he disobeys orders during a strike or accepts less than the standard wage; and, although he may have paid for years to the sick and superannuation funds, he can claim nothing. They may alter or abolish the benefits in any period when the funds are required for strike pay. In view of the entire absence hitherto of any guarantee that the funds would be reserved to meet the sickness benefits, this system cannot be ranked with the health insurance of Friendly Societies.

10. Effect on Friendly Societies of the National Insurance Act.—The National Insurance Act of 1911, which made insurance against sickness compulsory upon a large proportion of the population of the United Kingdom, is, in the main, being worked through the agency of the Friendly Societies, subject to the approval of their rules by the Insurance Commissioners. This measure has led to a great increase in the membership of the Societies, and to a strengthening of their financial position. Allowing for the many persons who belonged to more than one Friendly Society, and for the overlapping of membership between these Societies and the Trade Unions, it is probable that in 1911 not more than 5,000,000 individuals in the United Kingdom were insured against times of sickness by the voluntary system. The actuaries who worked out the statistical data for the Insurance Act estimated that in 1912 the persons compulsorily insured against sickness would number over 13,000,000, in addition to those who might voluntarily avail themselves of the provisions. From the data now available (Jan. 1913) this estimate seems likely to be realized, the vast majority of this number having already become members of existing Friendly Societies or formed new ones. The conditions attached to approval of Societies under the Act, and the financial supervision by the central Government for which provision is made, should also suffice to afford due protection to the members. Indeed, the plan of finance is so arranged as at the same time to increase the assets and to relieve the liabilities of existing Friendly Societies, thus putting most of the small insolvent Societies on a sound basis as a start, while it will keep them solvent in future by the rules and supervision imposed upon them. It will no longer be possible for a Society to run on indefinitely with a deficit, as it will cease to be approved under the Insurance Act, and so cannot receive the compulsory contributions from the workman, the employer, and the State. The benefits or contributions must be adjusted every three years to the position shown in the official valuations. A Collecting Society can be approved under the scheme of health insurance only if it institutes quite a separate branch for the purpose; while Trade Unions must keep the funds quite distinct from their 'fighting' resources, and must observe all the regulations applicable to other Societies, if they wish to take part in the administration of the Act. See also art. INSURANCE.

STANLEY H. TURNER.

FRIENDSHIP.—One of the numerous 'essay-ers upon friendship' justly observes that 'there is no subject of morality which has been better handled and more exhausted than this' (Addison, *The Spectator*, no. 68). The leading Greek thinkers represent the view of this virtue that prevailed in the ancient world; and perhaps the things they said first on the subject are not only the most original, but the best. Roman friendship was formed on the model of Greek, and the celebrated treatise of Cicero, *de Amicitia*, apart from its attractiveness of style and reminiscence, seems to have been drawn in substance from Aristotle's successor, Theophrastus. The halo thrown around ancient friendship has been dispersed by the ideals of Christianity; and the tie of marriage, wherever social and moral enlightenment has been reached, has in great measure superseded the tie of friend-

ship, which knit together heroic pairs like Achilles and Patroclus in the Homeric age, and bound master and scholar, or like-minded youths, in the gymnasia of Greece. Friendship, as a modern sentiment and force, is directed by ends and motives that were not present in pagan society. We shall see this by considering the subject in some of its historical phases.

I. PLACE AND DISCUSSION OF FRIENDSHIP IN ANTIQUITY.—It is the poets, and especially the philosophers, of Greece who present the ancient view of friendship, and from them we see its extraordinary influence in intellectual discourse, and in social life and institutions. The conditions of society explain the rise of this sentiment, and the prominent place it was allowed to fill. Ordinarily the position of woman was inferior, and the State, as in Plato's *Republic*, dwarfed the individual. The traditional religion failed to supply adequate motives for conduct, and thus friendship became a social distinction, a moral safety-valve, and an intellectual and religious inspiration. The citizen or politician who sought an escape from the hardness and corruption of society could say with Socrates, 'I have a passion for friends' (Plato, *Lysis*, 211). Friendship, indeed, touched Greek life and morality with emotion, and acted with 'the expulsive power of a new affection.' Its exercise is a revelation of the Greek mind, and its history is the summary of Greek moral life (Dugas, *L'Amitié antique*, 400). In a delightful essay, which fixes attention on this feature, Harnack points out that 'the history of the Greek schools of philosophy is at the same time the history of friendship' (Excursus on 'Friends,' in *Expansion of Christianity*, Eng. tr., 1905, ii. 25-34). See, further, the following article.

II. FRIENDSHIP IN THE OT AND IN CHRISTIANITY.—**1. Dignity and attractiveness of Hebrew friendship.**—Unlike some religions (e.g. Hinduism) which tend to repress individuality, the religion of Israel stimulated patriotism and the production of characters of a high and heroic type. At the different and critical periods, therefore, of Hebrew history, men and women were not wanting who could assume the responsibilities of leadership and wield a corresponding influence. It has been rightly said that the key to friendship lies in individuality, and that the OT knows well to appreciate this virtue, as history and circumstances required it (Rothe, *Theol. Ethik*, 1845-48, iv. 68 f.). Both on account of the high and brilliant examples that attract our notice, and the number of wise and sententious utterances that call attention to the importance of this subject, the claim that friendship receives a favourable and prominent place in the Hebrew Scriptures, and in Jewish literature as a whole, is fully justified.

The historical books of the Bible furnish several instances of genuine friendship; and the pithy sayings of the Wisdom literature, of Talmud, and of Midrash, contain a philosophy of friendship. The Bible endows friendship with a peculiar dignity by making it symbolical of the intimacy that exists between God and man (*Job* v. 520, art. 'Friendship').

One peculiar and determining consideration has to be mentioned. Under the influence and history of revelation, the consciousness of God as an overruling but gracious Power rose to clearness and intensity in the Hebrew mind. Later, in the schools of Greece, the Divine Being was the object of dim and remote speculation. But already in Israel the faculty of spiritual intuition was being trained, and God's entrance into friendship with men gave rise to a new and astonishing line of experience. Abraham and Moses, the outstanding figures of Hebrew history, not only towered above their fellows in virtue of their leadership, but, on account of the intimate and wonderful intercourse they were admitted to, stood in the unique position

of 'friends' of God (*Ex* 33¹¹, *Is* 41⁸). This conception or relationship never entered the mind of a thinker like Aristotle, who held that friendship is destroyed when persons are separated by a wide inequality; and therefore between God and man, or personalities so far removed from one another, friendship or intercourse was not conceivable (*Eth. Nic.* bk. viii. ch. vii. [Grant's notes]).

We may glance at some of the examples contained in the OT. The friendship between Ruth and Naomi, recorded in a charming fragment of literature, is a specimen of what is not often celebrated in classical writings, viz. an independent and beautiful relationship between women. Ruth's expression of affection and loyalty (*Ru* 1^{16c}) corresponds to the warmth and disinterestedness of sentiment incorporated in the Greek and Roman ideals, and exhibits the two component elements which, in Emerson's view (*Essays*, 'Friendship'), make up friendship, and are named *truth* and *tenderness*. That author, in the course of his sparkling and paradoxical essay, describes unconsciously, in defining the end of friendship, the traits that distinguished the friendship of Ruth:

'It is for aid and comfort through all the relations and passages of life and death. It is fit for serene days and graceful gifts, and country rambles, but also for rough roads and hard fare, shipwreck, poverty, and persecution.'

More celebrated and influential is the relationship between Jonathan and David, who form the classic pair, the Pyliades and Orestes, of the OT, and whose friendship was formed spontaneously, and pledged deeply and lastingly (*1 S* 18¹⁻⁴). Each of these noble characters, in their perfect intercourse and devotion, felt to the other as to himself, and their attachment was, in Aristotle's phrase, applicable to the friendship of the good, 'incapable of being disturbed by accusations' (Grant's *Aristotle*, ii. 259). No friendship on pagan soil can rival the qualities displayed by Jonathan and David: 'the best that Greece and Rome have to show of friendship looks pale beside this' (J. C. Shairp, 'Friendship in Ancient Poetry,' *N. Amer. Rev.*, Nov. 1884). In their case, the 'prelude' or preliminary trial, required by prudent moralists, was unnecessary. As Jeremy Taylor puts it, in a sentence marked by less than his usual amplitude (*Works*, i. 86), 'some friendships are made by nature, some by contract, some by interest, and some by souls.' The beauty of Jonathan's friendship has been immortalized in David's elegy (*2 S* 1²⁶), and the intercourse of these twin souls stirs fresh admiration in the historian, who sees in it a healthy testimony to the period in which it was realized, and the spectacle of 'a friendship which shines for all ages as an eternal type' (Ewald, *Hist. of Isr.*, Eng. tr., iii. 2, 1878, p. 76). In the personal attendants who accompanied and ministered to the Hebrew prophets (e.g. Elisha, the servant of Elijah [*2 K* 3¹¹]), in the band of disciples who gathered round Isaiah as their spiritual leader and guide (*Is* 8¹⁶), and in the circle of godly people who drew together in degenerate and dangerous times (*Mal* 3¹⁶), we see further interesting developments of this principle, and how various are the sympathies and services that test and prove the worth of friends.

What may be termed the 'Directory' of the OT on the subject of friendship is to be found in the Book of Proverbs. Its pointed and scattered sayings crystallize the maxims and warnings drawn from Hebrew wisdom and experience on this topic, and contain a practical philosophy designed to meet some of the duties and dangers connected with friendship and companionship. A few instances will suffice. (1) *Prudence is required in choosing friends*: 'walk with wise men,' etc. (*Pr* 13²⁰). (2) *Friendship may prove closer and more enduring than natural relationship*: 'a friend loveth at all

times,' etc. (17¹⁷, cf. the latter half of 18²⁴). This excellence is noticed also by Cicero: 'whereas you may eliminate affection from natural relationship, you cannot do so from friendship' (*de Amic.* ch. v.). (3) *Plain speaking is sometimes a duty, and is better than flattery*: 'faithful are the wounds of a friend' (27⁶). (4) *A primary virtue in friendship is loyalty*: 'thine own friend, and thy father's friend, forsake not' (27¹⁰); cf. Shakespeare, *Hamlet*, I. iii. 62:

'Those friends thou hast, and their adoption tried,
Grapple them to thy soul with hoops of steel.'

(5) *Intercourse is the life and soul of friendship*: 'iron sharpeneth iron; so a man sharpeneth the countenance of his friend' (27¹⁷). Similarly, in Aristotle's judgment (*Eth. Nic.* ix. 12), men brighten each other's powers, and add to the zest of life, by frequently coming together; cf. Tennyson's tribute to Hallam, *In Memoriam*, canto ex., 'Thy converse drew us with delight.' So cordial and practical is the Hebrew appreciation of friendship and its blessings (cf. Sir 6¹⁶ 'a faithful friend is a medicine of life').

2. *Distinctiveness and reality of Christian friendship.*—It is an old and almost a stock objection that friendship occupies a subordinate place in the NT, compared with the prominence assigned to it in ancient ethics. Certainly, it is nowhere made the subject of formal discussion and of express precept. This reproach has been traced to the period of the Renaissance and the rise of Humanism, when men turned admiringly to the models of classical art and literature, and when the worship of friendship became a romantic and religious passion. The objection has received attention at the hands of writers on Christian ethics (Rothe, followed by Luthardt, Martensen, and Köstlin), and is reproduced by Aristotle's sympathetic commentator in the passing judgment that 'Christianity ignores friendship' (Grant's *Aristotle*, ii. 259).

The difficulty is hardly solved, in Rothe's manner, by distinguishing between the writings of the NT and Christianity, and still less by the admission that no proper examples of friendship meet us in these writings. It is true that the relationship of Jesus to the Twelve, and in particular to individuals like John and Lazarus, did not contain the element of 'equality' which marks ordinary friendship. But this feature should not be pressed unduly. Jesus welcomed His disciples and followers to the higher platform of His friendship, and made their admission to His confidence and intimacy a matter of distinct recognition (Jn 15¹⁰). It is right, therefore, to take the friendships we find in the NT in their natural and honest sense (see Stalker, *Imago Christi*, 1889, ch. v. pp. 93-95, where this objection is vigorously challenged).

But, while Christianity does not ignore friendship, it absorbs it in a deeper current, and creates out of the ancient relationship a special and distinct type. The ordinary category of friendship is no longer prominent, and the virtue characteristic of pagan ethics is transformed. The contrast is noteworthy. The ancient world was distinguished by friendship, which was enjoyed as a privilege by few; the new world originated by Christ and the gospel is distinguished by love, which may become the possession and inspiration of all. While, therefore, Christianity enters into the natural order of society, and assimilates institutions like the family and friendship, it transforms their character and content, and moulds anew the types and ideals that formerly prevailed. Love to Christ is the mainspring of the new moral world, the 'golden thread' which binds men to their Divine Master and to each other; and this friendship, on the part of Christ's followers, is prompted as the response to His own supreme

act of friendship, and must be evidenced in each case by the virtues of sincerity and obedience (Jn 15¹³).

Apart from this general conception of friendship which distinguishes Christianity, and the use of the term 'friends' in its ordinary and natural sense (Lk 12¹, Jn 11¹¹), there are two instances that call for remark. In Ac 27³, mention is made of Paul's friends (*τοὺς φίλους*) whom he was allowed to visit. The expression may be taken as simply synonymous with Christian brethren and disciples, previously known. Again in 3 Jn 14 the closing salutation runs: 'The friends (*οἱ φίλοι*) salute thee. Salute the friends by name.' This shows that the primitive communities of the NT, or groups of Christians, constituted an inner circle of disciples and brethren, and that the term adopted by Jesus continued to carry a special and spiritual meaning. But in neither of these cases need we infer that the term is used in a technical sense, or that the first Christians applied this title to each other as it had been used professionally by Greek philosophers or the Epicurean school. Harnack points out that the early Christians, in accordance with the fellow-feeling which animated them, preferred the warm and close term of 'brethren' to that of 'friends,' and that later, in the 14th and 17th centuries, with the rise of the *Gottesfreunde* (see FRIENDS OF GOD) in Germany and of the Quakers (see FRIENDS, SOCIETY OF) in England, the term 'Friends' was appropriated, and acquired its special usage (*Expansion of Christianity*, Eng. tr., ii. 31-34).

III. *QUESTIONS IN THE STUDY OF FRIENDSHIP.*—A few remaining points involved in the elucidation and appreciation of this subject may be presented.

1. *Friendship and youth.*—It is generally acknowledged that youth is the golden period of friendship. Aristotle did not fail to notice, however, the impulsive tendency of youth to enter on and dissolve friendships in one day (*Eth. Nic.* bk. viii. ch. 3). On this account Cicero observes that such enthusiastic attachments, readily contracted at games, are not to be trusted, and that men must come to maturity before their friendships can be regarded as solid and permanent (*de Amic.* ch. xx.). On the other hand, modern ethical writers (e.g. Schleiermacher and Rothe) properly allow that, when the tutelage of the family is left behind, and character is still open and impressible, friendships may be considered not only natural but invaluable. This fact suggests that the friendships of youth should not be arbitrarily hindered, but wisely fostered and directed. The question as to the place of friendship in modern education arises here, and has been commonly neglected. The Greek custom of turning friendship at this stage into a recognized institution, and of laying down rules to guide elder youths who are responsible for those under them, is worthy of imitation (Muirhead, *Chapters from Aristotle's Ethics*, 1900, p. 185 ff.; and E. Carpenter, art. 'Affection in Education,' in *IJE*, 1899, pp. 482-494). In a curious 'Fragment of an Essay on Friendship,' the poet Shelley refers to an attachment, at the age of eleven or twelve, to a school-companion as his introduction to 'the sacred sentiments of friendship.' In this sphere the discipline of healthy moral training is indispensable (cf. Lecky, *The Map of Life*, London, 1899, p. 237).

2. *The number and choice of friends.*—(1) If friendship is viewed as an example of the concentration of feeling and sentiment, then Aristotle's opinion that a plurality of friends is not possible or desirable seems justified. The classical friendships were in pairs, and it is contrary to human nature to stand the strain of intimacy or intense

occupation with many (*Eth. Nic.* bk. viii. ch. 6, ix. ch. 10). But it is unwarranted to say that we can have but one friend, and that our having many friends is a proof that we have not yet found the true friend (Rothe). On this point Hebrew Wisdom saw the danger of alliance with multiplied friends or advisers (Pr 18²⁴ [RV]; cf. Sir 6⁹); and Plutarch humorously observed that it is difficult to satisfy the conflicting wishes of a number of friends who would have one go on a voyage, appear at a law-court, and attend a marriage or funeral (Dugas, p. 321). The law of parsimony, or quality rather than quantity of friends, is the true principle. 'The condition which high friendship demands is ability to do without it' (Emerson). 'When a man has six friends, to introduce a seventh is usually hopeless' (R. L. Stevenson, *Letters*, ed. Colvin, ii. 133).—(2) Socrates lamented that men attended to trifling matters, but took so little trouble in choosing their friends (*Xen. Mem.* bk. ii. ch. 4). In the same vein Aristotle valued friendship as the outcome not of passing emotion but of settled moral purpose (*ἡσυχασμός*). The fact that friendship has this voluntary character, and is specially a bond of our own making, explains the severity of the punishment meted out by Dante to traitors to friends and guests, who have more claim on our loyalty than even natural kinsmen (*Inferno*, canto 33; cf. J. S. Carroll, *Exiles of Eternity*, London, 1903, pp. 429, 453). At the same time, there is a subtle and potent influence at work in friendship which defies analysis. In his sprightly manner, Montaigne (*Essays*, Eng. tr., bk. i. ch. 27) says: 'If a man urge me to tell wherefore I loved him, I feel it cannot be expressed but by answering: Because it was he, because it was myself.' In certain cases like draws to like, or one seeks in another what is wanting in himself (Tennyson, *In Memoriam*, canto lxxix.). But, again, the act of choice may be superseded, and friends come to our door 'unasked, unlooked' (Newman), with whom we associate no particular feeling of gain or advantage, and who rule by the irresistible spell of character and personality.

3. *Types of friendship.*—The varieties of friendship have been enumerated by different writers (see Lemme's treatise, ch. iv., 'Die Formen der Freundschaft'), and are noteworthy. In antiquity the heroic type appeared early and called forth admiration and self-sacrifice on the part of comrades. Among the philosophers and politicians of Greece, friendship assumed also specific forms, which will always find their opportunity in society, and may be classed as friendships of vocation. In modern times the rise in the spirit of friendship, and in the character of the services and benefits which friends seek to render, is mainly due to Christianity. Three standing types may be mentioned. (1) *Sentimental friendships.* This variety blossoms in the season of youth, and was seen in the shallow and romantic attachments that were fashionable in Germany in the 17th and 18th centuries. Feeling, rather than intellect or character, is the cause of their formation, and also of their want of durability.

Perhaps Lessing's light and amusing comedy, *Damon, oder die wahre Freundschaft* (1747), is the best example of this sort of friendship, and hits off admirably its foibles and absurdities. Damon and Leander, two of the principal characters in the play, are such conscientious and devoted friends that neither will claim the hand of the widow with whom they are in love, for fear of disappointing the other. Lessing employs the wit of the widow's maid to explode effectually this dry, lofty, and impracticable notion of friendship.

(2) *Intellectual friendships.* The capacity for friendship was traced by Aristotle to the exercise of man's intelligence or thinking faculty, and modern psychologists agree in holding that sympathy or friendship is in part an intellectual endowment, and cannot flourish under conditions

where the requisite amount of intelligence, in individuals or tribes, is not attained (Bain, *The Emotions and the Will*², London, 1865, ch. vi. p. 87). In this class, æsthetic, literary, and scientific friendships may be combined. The condition of freshness in these relationships is that minds keep growing, and are always capable of contributing something to enrich the common stock of ideas. To keep friendships in repair, in accordance with Dr. Johnson's maxim, is a matter of intellectual as well as social duty and difficulty. The friendship of Goethe and Schiller is a celebrated example of this class, and shows how men of culture come gradually to approach each other, and can subordinate differences of temperament and character to community of aim in pursuit of art and truth (see Carlyle's *Life of Schiller*, pt. ii. and App. no. 3).

(3) *Religious friendships.* Here friendship reaches its highest intensity (Rothe), and friends 'treat of the deepest of human affairs' (Martensen). The respect and reverence due to friends are seen at their best in this circle of relationships, and it is in the practical religious life that the fruits of friendship are most valuable and necessary, viz. 'peace in the affections and support of the judgment' and 'aid and bearing a part in all actions and occasions' (Lord Bacon). A typical example of this class is the friendship of Luther and Melancthon—another evidence that friendship at its deepest rests not on agreement of opinions, or identity of constitution, but on those underlying principles and convictions that are rooted in a common spiritual experience.

The characteristics and atmosphere peculiar to this type of friendship—a type unknown to the pagan world—are seen in a volume, now rare, published by Deltzsch in 1882, consisting of essays by others, and two by himself, on Christian friendship (quoted below). The titles are such as these: 'The Character of Christian Friendship,' 'The Observance of good Habits in Christian Friendship,' 'On friendly Prayer,' 'Indecent Trifling of God's Children with Friends,' 'The Eternity of Christian Friendship.' One of the authors of these essays was Susanna Cath. von Klettenberg, a friend of Goethe's mother, the 'Schöne Seele' of *Wilhelm Meister* (Carlyle's tr. bk. vi., 'Confessions of a Fair Saint').

Ordinary friendship, as was seen long ago, is rooted in nature and society. This highest type of friendship is rooted in God, and is the goal of man's spiritual experience and endeavour.

LITERATURE.—Plato, *Lysis*; Aristotle, *Nicom. Ethics* (bks. viii. ix. [Grant's commentary, 1874, full and valuable]); Cicero, *de Amicitia*; Kant, *Metaphysics of Ethics*, Clark's tr.³, 1871, pp. 278-282; H. Sidgwick, *Methods of Ethics*, 1884, pp. 265-268; C. E. Luthardt, *Moral Truths*, etc., Clark's tr.³, 1876, Lect. x.; H. L. Martensen, *Christian Ethics (Society)*, Clark's tr., ii. 1882, pp. 72-77; L. Lemme, *Die Freundschaft*, 1897 [a useful treatise in 5 chapters, and art. 'Freundschaft', in *PRE*³]; J. Taylor, 'Discourse,' *Works*, vol. xi.: the *Essays of Montaigne*, Bacon, Addison, and Emerson; F. Deltzsch, *Philemon, oder das Buch von der Freundschaft in Christo*³, Gotha, 1878; H. Clay Trumbull, *Friendship the Master-Passion*, 1892; L. Dugas, *L'Amitié antique*, Paris, 1894 [a learned and elaborate treatise on philosophic theories and ancient manners]; Hugh Black, *Friendship*, 1897 [popular and suggestive]; art. 'Friend,' in *HDB*, vol. ii., and 'Friendship,' in *DCG*, vol. i. Of poems inspired by this theme, Milton's *Lucidas*, Schiller's ballad, *Die Bürgschaft*, and Tennyson's classic tribute, *In Memoriam*, are examples. See also Hallam, *Lord Tennyson, Tennyson and his Friends*, London, 1911 [a charming volume], W. M. RANKIN.

FRIENDSHIP (Greek and Roman).—1. The Seven Sages.—Each of the seven sages had his say on the matter. Thales of Miletus admonished men to remember their friends whether present or absent (Diog. Laert. i. 37). Pittacus of Mitylene gave the advice, 'Speak not ill of a friend, adding, 'or even of an enemy' (ib. 78). Bias of Priene suggested 'loving as though one might hate,' giving as his reason that 'most men are bad' (ib. 87). Solon's word of wisdom to the world was, 'Get not friends quickly; but, when you have got them, do not reject them' (ib. 80). Cleobulus of Lindus said that 'one ought to benefit

a friend, so that he may be more a friend, and to make an enemy into a friend; for one ought to be on one's guard against the censure of friends and the plots of enemies' (*ib.* 91). Even Periander of Corinth had his amiable sentiment on this subject. 'Be the same to friends in their good and evil fortune' (*ib.* 98). Chilon the Lacedaemonian went further, by bidding men be 'more ready to join in the ill fortune than in the good fortune of their friends' (*ib.* 70). Plato (*Prot.* 343 A), in his list of the Sages, substitutes for Periander a very obscure person called Myson, who is not credited with any saying on friendship. It appears to have been alien to his temperament, for the story runs that he was caught chuckling when he imagined himself to be alone, and admitted that it was because he imagined himself to be so (*Diog. Laert.* i. 108). The reason for the exclusion of Periander by Plato was doubtless the detestation which that philosopher felt for tyrants. Anacharsis the Scythian, who was Greek on his mother's side, is sometimes reckoned as one of the Seven. His remark is uncontrovertible, that 'it is better to have one friend who is worth much than many who are worth nothing' (*ib.* 105). These sentiments of the Sages received general applause, with the exception of that of Bias, which became a scandal to idealists. Cicero makes Scipio single it out for condemnation (*Lael.* 59). Still, when coupled with its counterpart, 'to hate as though you might love,' which, if not said by Bias himself, was added for him (*Arist. Rhet.* ii. 13. § 4), it became part of the general Greek doctrine of moderation, and, as such, received poetical expression both from Sophocles (*Ajax*, 679-683) and from Euripides (*Hipp.* 253-260), and philosophical approval from Philo (ii. 401) and from Aulus Gellius (i. 3. 30).¹ Another remark made by Bias displays the same shrewd practicality. He said that it is better to judge between one's enemies than between one's friends; for in the latter case one is sure to become an enemy, in the former a friend (*Diog. Laert.* i. 87). The Sages lived in the early part of the 6th cent., being referred to the year 586 B.C. as a meeting point.

2. **Pythagoras.**—Let us now descend to the latter part of the same century, and come to the philosopher Pythagoras (*A.* 531 B.C.). As Pythagoras instituted a communistic brotherhood, it is natural that the proverbial saying, *κοινὰ τὰ φίλων*, should be attributed to him.² So is another word which goes deep into the heart of the matter—that about one soul in two bodies.³ No less penetrating is the saying that friendship is equality, which is ascribed to the same source.⁴ The addition of the adjective 'harmonious' to 'equality' is peculiarly Pythagorean (*Diog. Laert.* viii. 33).

3. **Socrates (Xenophon, Plato).**—The Ionic School was too much occupied with physics to attend to friendship. So we drop at once from Pythagoras to Socrates. He was the first of the Humanists, the first to say in effect that 'the proper study of mankind is man.' This was a reversion to the attitude of the Sages, who, with the exception of Thales, were more occupied with man himself than with his dwelling-place. The views of Socrates on friendship are preserved to us in the *Memorabilia* of Xenophon, and to some extent also in the *Lysis* of Plato. The second

¹ This last author attributes it to Chilon: 'Hac, inquit, finis ames, tanquam forte fortuna et osurus, hac itidem tenus oderis, tanquam fortasse post amaturus.'

² *Diog. Laert.* viii. 10. x. 11; Plato, *Lysis*, 207 C; *Arist. Eth. Nic.* viii. 9. § 1, *Eth. Eud.* vii. 2. §§ 33, 38; *Ter. Ad.* 803 f.; *Cic. Off.* i. 51; *Mart.* ii. 48.

³ *Arist. Eth. Nic.* ix. 8. § 2, *Eth. Eud.* vii. 6. §§ 7, 8, *Mor. Mag.* ii. 11. § 44; *Cic. Lael.* 81, 92, *Off.* i. 56 ('efficiturque id, quod Pythagoras vult in amicitia, ut unus fiat ex pluribus').

⁴ *Eth. Nic.* viii. 5. § 5 (φιλότης ἰσότης), viii. 8. § 5 (ἡ δ' ἰσότης αὐτὴ ὁμοιότης φιλότης), ix. 8. § 2 (ἰσότης φιλότης); *Diog. Laert.* viii. 10 (εἰς τὴν αὐτὴν φιλίαν ἰσότης).

book of the *Memorabilia*, with the exception of the first chapter, might be entitled *περὶ φιλίας*. The second chapter is a homily on filial affection, in which Lamprocles, the eldest son of Socrates, is exhorted to bear with his mother, in spite of her shrewish tongue. He is reminded of all that a child owes to a parent, especially to a mother, and it is pointed out to him that, while the State neglects all other forms of ingratitude, ingratitude towards a parent is punishable by law. As a fitting sequel to this chapter there is a little sermon on brotherly love, which might have been preached from the text:

'Behold, how good and how pleasant it is
For brethren to dwell together in unity!' (*Ps* 133).

Then, extending his view beyond the family, Socrates dilates in ch. 4 on the value of friendship, and insists that a good friend is the most useful of all possessions. In ch. 5 he even appraises the money-value of friends. Ch. 6 begins with advice as to the choice of friends, and ends with directions as to how to gain them. It appears in the course of it that there is a natural basis for friendship in men's need of one another, in the instinct of pity, in the benefits derived from co-operation, and in the feeling of gratitude (*χάρης*) which is thereby engendered; but it becomes plain also that friendship is possible only among the good. The rest of the book dwells on certain commercial aspects of friendship, closing with advice to a rich man to buy friends when they are cheap, on the principle enunciated by Horace (*Ep.* i. xii. 24):

'Vilis amicorum est annona bonis ubi quid deest.'

Thus we see that the views of Socrates on friendship were, as on other matters, thoroughly utilitarian.

The *Lysis* is a very 'Socratic' dialogue, of the kind known as 'maeutic' or elicitory. It is designed to stimulate, not to satisfy, inquiry; it discusses everything and decides nothing; opens wide vistas, where we seem to be laying hold of a principle which shall carry us far beyond the immediate subject, and then suddenly blocks our view by interposing some logical obstacle. In its pictorial setting it is among the most charming of Plato's dialogues, but, like others which reach the highest point of artistic perfection, it is poisoned by the taint of perverted amativeness. The Socrates of Plato begins where the Socrates of Xenophon left off. For the first position maintained in the *Lysis* is that whether a person will be loved must depend upon whether he is useful (210 C). Then, after some word-play on the active and passive meanings of *φίλος*, which lend themselves to verbal contradictions (212, 213), and during which the valuable idea is started that reciprocity is requisite for friendship (212 D), Socrates appeals to the poets as the fathers of philosophy (214 A).¹ Does not Homer authorize us to believe that likeness is the basis of friendship, when he says (*Od.* xvii. 218):

*αἶψά τοι τὸν ὁμοῖον ἀγαπᾷ θεὸς ὡς τὸν ὁμοῖόν;*²
But this principle, though it falls in with the philosophy of Empedocles (*q. v.*),³ is soon found to be only a half-truth, since there can be no friendship between the bad. It amounts, therefore, to saying that friendship is confined to the good. Against this, however, there lies the objection that like is of no use to like. Therefore the good are friends to the good, not in so far as they are like, but merely in so far as they are good. But against this, again, there lies the objection that the good man is supposed to be sufficient to him-

¹ Cf. Philo, ii. 407.

² The quotation is put in a more gnomic form than it really possesses in the text of Homer, which reads not *αἶψά τοι* but *ὡς αἶψά*.

³ Cf. *Lysis*, 214 B, with *Arist. Eth. Nic.* viii. 1. § 6, *Eth. Eud.* vii. 1. § 6.

self,¹ and, as such, does not stand in need of friends. Moreover, there is equal authority, both poetical² and philosophical,³ for quite the contrary doctrine, namely, that friendship is between opposites. But against this also there lies a fatal objection. For good and bad are opposites, and the good cannot be a friend to the bad. Perhaps, then, the indifferent is the friend to the good. If so, it must be owing to the presence of evil, before that evil has been able to corrupt the indifferent nature. Hence it is those who are conscious of ignorance that love wisdom, i.e., that are philosophers, not those who possess knowledge, nor yet those who are so ignorant as to think they do (218 A; cf. *Apol.* 29 B) without doing so. And generally it is that which is neither bad nor good that is a friend to the good, in order to rid itself of the bad. This seems to be a conclusion in which all are willing to acquiesce. But a doubt soon suggests itself. For, if one thing is loved for the sake of another, is it not the other thing that is truly loved? From this it would follow that what is truly loved must be loved for its own sake. Furthermore, can friendship be due to the presence of evil, while it might still exist in a world from which evil was removed (221 C)? A new basis for friendship is now discovered in desire. But one desires what one lacks, and one lacks what one has lost. Whence it follows that friendship is for one's own. But if one's own (*τὸ αἰετὸν*) is identical with one's like, we are back in our old difficulties. If it is not, then either good must be 'one's own' to all, or else good must be 'one's own' to good, bad to bad, and indifferent to indifferent. Either supposition lands the interlocutors in conclusions which seem already to have been refuted. Socrates, however, nothing daunted, is casting round for fresh lines of inquiry, when the pedagogues of the two boys, Lysis and Menexenus, with whom he has been conversing, swoop down upon their charges, and carry them off home. Socrates and the bystanders at first try to prevent them, but they are in no mood to be argued with, having had a little refreshment at the Hermaea. And so the Assembly breaks up, and we are left in perplexity as to the true nature of friendship. Still, many of the ideas have already been brought out which we shall find figuring later in the more systematic treatment of the subject by the Peripatetics.

4. *The Cynics, Cyrenaics, etc.*—Among the immediate disciples of Socrates we have dealt with Xenophon and Plato, but there remain others who may be spoken of. Antisthenes, the founder of Cynicism, held the two positions which are regarded as inconsistent in the *Lysis*, namely, that the sage is sufficient to himself,⁴ and also that 'good men are friends.'⁵ Among his numerous works, however, we find no mention of one on friendship. Neither does Aristippus appear to have written expressly on the subject, but we know the general view of the Cyrenaic school to have been that the end of friendship is utility.⁶ The followers of Hegesias accordingly denied that friendship is an end in itself (*Diog. Laert.* ii. 93); so also did those of Anniceris, on the ground that the happiness of a friend is not perceptible to oneself (*ib.* 96), while they risked their consistency by declaring that love for a friend would induce one to forgo pleasure and undergo pain. Diodorus the Atheist, however, was of sterner stuff than his master Anniceris. He denied that

friendship exists either among fools or sages. With the former it is a question of utility, with the latter it is superfluous (*ib.* 98). Of Simmias of Thebes, another of the immediate disciples of Socrates, we can say only this, that in his book containing twenty-three dialogues the fourteenth was *περὶ φίλου* (*ib.* 124).

Cicero mentions friendship among other topics connected with moral and political philosophy, which had been treated in ornate and weighty language by 'the old Peripatetics and Academics' (*de Fin.* iv. § 6), whom he always maintained to have been really one school under two names. Plato was succeeded in the Academy by his sister's son, Speusippus, among whose numerous works there was one *περὶ φιλίας* (*Diog. Laert.* iv. 4). His successor Xenocrates had also a treatise in two books on the same subject (*ib.* 12).

5. *Aristotle and his successors.*—We come now to Aristotle, to whom, directly or indirectly, we owe the greatest pronouncements of antiquity on the subject of friendship. These are to be found in bks. viii. and ix. of the *Eth. Nic.*; bk. vii. chs. 1–12 of the *Eth. Eud.*; and bk. ii. chs. 11–17 of the *Magna Moralia*. The treatment in *Eth. Nic.* is far more finished than in *Eud.*, but the two treatises proceed ultimately from one mind. The author of the *Magna Moralia* seems to have both the other writers before him.

The Greek word *φιλία*, which we render so inadequately by 'friendship,' corresponds more nearly to 'love.' It means the attractive principle in human nature generally. It is to mind what gravitation is to matter. It has its roots in animal nature, in the instinctive love of parents, especially of the mother, for offspring. It is the bond of the family, the tribe, and of the State, and generally the principle of political cohesion, the main object of the legislator being to bring it about. Just as in Christian ethics 'love is the fulfilment of the law' (Ro 13⁹), so Aristotle remarks that friendship supersedes justice, whereas justice does not supersede friendship (*Eth. Nic.* viii. 1. § 4).

Waiving aside the wider and quasi-physical speculation as to whether it is likeness or unlikeness that produces friendship, Aristotle confines himself to such questions as concern the philosophy of man. Friendships differ in kind according to the several objects of love. Now, there are three things that attract love—the good, the pleasant, and the useful. Hence there are three kinds of friendship according to the end that is sought to be attained. There are also three conditions of friendship: (1) that there should be a feeling of goodwill; (2) that this feeling should be reciprocated; (3) that the object of the feeling should be aware of its existence. Friendships for the sake of the useful and the pleasant are at bottom selfish, and are easily dissolved. The former is found chiefly among the young, the latter among the old. It is the friendship of the good, who love each other because they are good, which alone is lasting. And this includes the characteristics of the other two kinds, since the good are at once useful and pleasant, both in themselves and to one another. Such friendship is naturally rare, and is slow of formation, but, when formed, it is above calumny and distrust. It, therefore, is alone truly entitled to the name. Hence friendship in the highest sense is confined to the good, but the friendships of pleasure and utility are open to good, bad, and indifferent alike. In the highest sense also friendship implies equality and perfect reciprocity, though there are forms of friendship in all three kinds, in which there is a natural superiority on one side. In such forms reciprocity is not to be expected.

Any form of association among men, even down

¹ *ἑαυτὸς αὐτῷ* is Plato's term here (215 A); *αὐτάρκτης* does not occur until the later dialogues.

² Hes. *Op.* 25, 26; Arist. *Eth. Nic.* viii. 1. § 6.

³ Heraclitus. Cf. *Lysis*, 215 E, with *Eth. Nic.* viii. 1. § 6.

⁴ *Diog. Laert.* vi. 11: *αὐτάρκτης τε εἶναι τὸν σοφόν.*

⁵ *ib.* 12: *οἱ σπουδαῖοι, φίλοι.*

⁶ *Diog. Laert.* ii. 91: *τὸν φίλον τῆς χρείας ἕνεκα.*

to dining-clubs, is regarded by Aristotle as having its appropriate 'friendship.' And all these lesser associations are included in the great fellowship of the State, which aims at the common interest. There are three normal forms of constitution—kingship, aristocracy, and commonwealth or timocracy; and three perversions (*παρεκβάσεις*) of these—tyranny, oligarchy, and democracy. Among the latter, tyranny is the worst, as being the opposite of the best, and democracy the least evil, as it involves the smallest deflexion from the corresponding normal form. The analogues of the three normal forms of government may be discerned in family relations. Paternal rule corresponds to kingship, the relation between husband and wife to aristocracy, and that between brothers to timocracy. The relation between husband and wife is founded on a natural instinct, and continued on the principle of the division of labour. It involves both profit and pleasure, and its friendship may also be based upon virtue. Children constitute an additional bond; so that childless couples more often separate.

Returning to friendship as existing between individuals, Aristotle lays down that all the characteristics by which friendship has been sought to be defined are drawn from the relation in which a good man stands to himself. For a friend is one who has an effective desire, not merely for the being but for the well-being of another; companionship in life is deemed indispensable to friendship, and so are identity of purpose and sympathy in joys and sorrows. These characteristics are not found in the bad man, who is at war with himself, and cannot be said to have one soul. The good man's relation to himself, then, constitutes, as it were, the ideal limit of friendship, so that a friend is in very truth a second self. The happy man will need a friend, because man's nature is social, and that he may joy in his friend's existence, even as he joys in his own. The essence of friendship lies in loving rather than in being loved.

Theophrastus, who succeeded Aristotle as head of the Lyceum, also wrote a treatise on friendship in three books (*Diog. Laert. v. 45*), in which he discussed the casuistical question whether one ought sometimes to aid a friend contrary to strict justice, and, if so, to what extent, and on what sort of occasions.¹ He argued that, though rectitude is more valuable in kind than utility, yet on certain occasions a great utility to a friend may compensate a slight departure from rectitude, just as, though gold is more valuable in kind than bronze, yet a great weight of bronze may be of more value than a thin flake of gold. Another topic on which he touched was the inexpediency of recriminations on the part of friends who had become reconciled after a quarrel (*Aul. Gell. viii. 6*). He also gave the advice which has been crystallized by Seneca with his usual happy terseness—'post amicitiam credendum est, ante amicitiam judicandum.'

6. The Stoics and Epicureans.—The Stoics, of course, had their say upon friendship, but their style was execrable after that of their predecessors. It is told of Zeno that, when asked what a friend is, he replied, 'Another I' (*Diog. Laert. vii. 23*); but we have seen that the idea was familiar to Aristotle, and that in substance it goes back to Pythagoras.² The Stoics naturally confined friendship to the wise, as they did everything else to which they attached value (*Stob. Ecl. ii. 601*, Gaisford). They made friendship to consist in social intercourse coupled with harmony of opinion in relation to life (*ib. 565*). They also displayed their

usual verbal subtlety in the distinction of terms on this subject.³ Cleanthes, who succeeded Zeno in the Porch, is recorded to have written a treatise on friendship (*Diog. Laert. vii. 175*). Not so Chrysippus, or his great rival Epicurus. But the example of Epicurus on this subject was more powerful than his precept, and the Epicurean school, as is well known, was celebrated for the charm and fidelity of its friendships (*Cic. de Fin. i. 65*). Atticus, the friend of Cicero, inherited its traditions.

7. Cicero.—Theophrastus died in the year 287 B.C. Some two and a half centuries later Cicero, having enlisted his rhetoric in the service of philosophy, selected the work of Theophrastus as the basis of his celebrated treatise 'On Friendship.' The *Laelius, vel de Amicitia*—to give the work its exact title (*Aul. Gell. xvii. 5. 1*)—was part of Cicero's astonishing literary output during the year 44 B.C., when his demon must have warned him that his time was short. Admirable as this work is, it still does not possess quite the charm or the transparent lucidity of diction which characterize the companion treatise *de Senectute*, and therefore it suffers somewhat by comparison. While availing himself freely of the material provided by Theophrastus (*Aul. Gell. i. 3*), Cicero displayed his discretion by not following that philosopher into the casuistry of a clash between friendship and justice, but by passing the matter over with a vague generality (*Lael. 61*). His purpose in his philosophical writings was always to edify. His practical solution of the problem raised by Theophrastus is 'writ large' in the *pro Milone*. There is reason also to believe that Cicero in this treatise was indebted to Stoic works on the same subject.⁴ His obligation to Xenophon in one passage is obvious.⁵

The definition of friendship given in the *Laelius* appears unsatisfactory. For to describe friendship as 'agreement on all subjects sacred and secular, coupled with goodwill and affection' (§ 20), is to put intellect before feeling, where the latter ought to come first, while it also leaves reciprocity out of the account. In his juvenile treatise, the *de Inventione* (ii. 166), Cicero gave a happier definition of friendship when he declared it to be 'the willing good things to another person for his own sake, together with the same will on his part towards you.' Cicero follows the Peripatetics in tracing the origin of friendship to nature, not to utility.⁶ There is much in his work that reminds us of Aristotle, yet he has nowhere the air of directly borrowing from him. This fits in exactly with what we know of his relation to Theophrastus. The chapter 'de Amicitia' in Valerius Maximus (iv. 7) is merely anecdotal, after the manner of that writer.

8. Seneca.—Seneca has brilliant passages on friendship scattered up and down his works, especially in the *Moral Epistles*. His sentiments, indeed, are so fine as to suggest the question whether they were quite sincere. You ought to wish for a friend, he tells us, not, as Epicurus said, 'that you may have somebody to sit by your bedside when you are ill, and to succour you in imprisonment or poverty,' but that you may have somebody by whose bedside you may sit yourself, and whom you may rescue from the dungeon of the enemy (*Ep. ix. 8*). Now there are friends who will do these things for one another, without being sages, but even a Florence Nightingale or a John Howard

¹ e.g. *γνώριμότης* and *συνήθεια* (*Stob. Ecl. 566*). The four terms which follow—*εραπεία*, *ξενία*, *συγγενική*, and *ἰσχυρὴ φιλία*—were four species of friendship recognized by the Peripatetics (*cf. Stob. p. 636*).

² *Cf. Lael. 28* with *de Nat. Deor. i. 121*.

³ *Cf. Lael. 62* with *Xen. Mem. ii. 4. §§ 1, 2, 4*.

⁴ *Lael. 27*; *cf. Eth. Nic. viii. 1. § 3*.

¹ *εἰ δὲ βοηθεῖν τῷ φίλῳ παρὰ τὸ δίκαιον καὶ μέχρι πόνου καὶ πόνου* (*Aul. Gell. i. 8. 9*).

² In phrase even, according to Philo, ii. 659: *τὸ Πυθαγόρειον ῥήμα . . . ἀρὰ ἐστὶν φίλος ἕτερος ὡς ἐγὼ*.

hardly regards them as choice-worthy in themselves. No one, however, will challenge the truth or beauty of the maxim which Seneca quotes from Hecaton, a pupil of Panætius, 'I will show you a love-potion without drug or herb or any witch's spell: if you wish to be loved, love' (*ib.* 6). On the loss of friends, which he admits to be the greatest a man can sustain, Seneca, after the manner of his school, is not very sympathetic. Instead of mourning them, he tells us (*Ep. civ.* 11 f.), it is better to make new ones. 'But they will not be the same.' 'Neither will you be the same,' is the rejoinder; 'you are changing every moment of your life.' Yet he allows a measure of tears in one of his terse and glittering antitheses (*Ep. lxiii.* 1):

'Nec sicut sint oculi amissio amico nec fluunt. Lacrimandum est, non plorandum.'

Again, in the *Remedies against Accidents* (xv. 2), addressed to his brother Gallio, he has this not very consoling reply to one who complains that he has lost a friend: 'Be of good heart, if you have lost only one: blush, if he is the only one. Were you riding at one anchor in the storm of life?' Of his professed treatise 'On Friendship' there remain only mutilated fragments published by Niebuhr in 1820 from a Vatican manuscript.

9. Epictetus.—Among the discourses of Epictetus, as edited by Arrian, there is one labelled 'On Friendship.' Its theme is that friendship is confined to the wise, and it has a touch of the Cynicism which we trace in the stout-hearted slave-philosopher. You may see puppies, he says, fawning upon and playing with one another, so that you would say, 'How loving they are!' but throw in a bit of meat among them, and watch the result! Even so brothers may have been brought up amid mutual endearments; but throw in between them a pretty girl, or property, or honour, or power, and you will see what their affection is worth. 'For generally (be not deceived) every living creature finds its own interest nearest and dearest to itself.' It is, therefore, only those who identify their own interest with fidelity and justice and right who can be trusted not to pursue it to the detriment of another.

'For whosoever is the "I" and "the mine,"
Thither the creature must needs incline.'

This is Epictetus' way of saying: 'For where thy treasure is, there will thy heart be also' (*Mt.* 6²¹).

10. Marcus Aurelius.—In the *Meditations* of Marcus Aurelius Antoninus there is much about forbearance and consideration for others, but no word on friendship. Was it part of the tragedy of that crown of thorns that the monarch who would fain have been a friend to all was himself without a friend?

LITERATURE.—The original sources have been cited in the article. Cf. also the preceding art. and the Literature appended to it.

ST. GEORGE STOCK.

FRIENDS OF GOD.—A name current, chiefly in the 14th cent., for individuals and groups of individuals who aimed at cultivating a deeper piety and a closer spiritual fellowship than did those around them in the Church, or than the Church encouraged. What distinguished them from others was not anything in their mode of worship, creed, or dress, but aloofness of spirit from the world, and simple devotion to the will of God. Hence they were not a sect. As a rule, they remained within the bosom of the Church—not consciously disloyal to its dogmas, discipline, or practices. They were much rather a spiritual brotherhood comprehending men and women of all social grades, stages of culture, and forms of experience. Love of God—predominantly mystical in some cases or mainly practical in others—was the uniting bond.

1. Historical antecedents.—Any direct connexion with previous movements in the Church is not

traceable. But in the 12th cent. the name 'Friend of God' is applied to Bernard of Clairvaux. It was suggested by *Jn* 15¹⁴, but also by *Ps* 138¹⁷ (*LXX*) and *Ja* 2²³. In this last sense the word meets us in the German literature of the 12th and 13th cents. as an epithet for the Evangelists and Apostles, for OT heroes like Moses, and in general for all saints and pious people in heaven and earth. In the 13th cent., moreover, the expression *ausgewählter Gottesfreund* has already become a current one as applied to the pious and faithful believer. But not till the 14th cent. is the same expression reserved as a sort of formula for the ideal of a soul elevated through Christ out of slavery into the friendship and sonship (*Kindschaft*) of God (*Jn* 1¹² 11²², *Ro* 8¹⁴ 9⁸).

It has been asserted that there are documents of the Middle Ages in which the name 'Friends of God' is given to the Vaudois; and that, at any rate, the Friends of the 14th cent. were in secret union with the Waldenses. But this, as Gieseler says (*Eccles. Hist.*, 1858, iv. 177, note 1), is a mistake, due most likely to statements met with about the somewhat legendary Nicholas of Basel, and is inconsistent with the submissive attitude of the Friends to the visible Church—the Waldenses, on the contrary, being its declared antagonists.¹ But it is true that the spiritual attitude of the two was alike, and that the impulse which proceeded from the Waldenses—as well as from their precursors, the order of the Humiliates—would tend to produce an atmosphere in which the Friends flourished. Much the same may be said of the impulse derived from the Mendicant Orders.

2. Chief centres.—The foci of the movement were Strassburg, Cologne, Basel; but its circuit included the Rhine Valley, from Brabant up to the high valleys of Switzerland, with the upper regions of the Danube. It was in favour from the first with the Preaching Orders on the upper and lower Rhine. Among the nuns of their convents it found many adherents to whom especially some of the leaders addressed themselves—e.g., Tauler and Henry of Nördlingen to those at Basel, Nicholas of Strassburg to those at Freiburg, Suso to those at Zürich, etc. Two nuns in particular, Margaretha Ebner (of Maria Medingen, near Nuremberg) and Christina Ebner (abbess of the convent of Engelthal, near Nuremberg), stand out as devotees—the correspondence of Henry of Nördlingen with the former being 'the most important and reliable source of information respecting the Gottesfreunde of the South.' But its members were even more numerous among the laymen; and, if most of these were of the peasant class, they also included men of good station like Henry of Rheinfeld in Aargau, a knight of Pfaffenheim from Upper Alsace, a knight of Landsberg and his wife from Lower Alsace, Rulman Merswin, merchant of Strassburg, etc.

3. General characteristics of the movement.—

(a) 'It was distinctly a *laymen's* movement, and there is an evident purpose in the literature of the Friends of God to exalt the ordinary lay Christian, and to show how the Church can be saved and the ministry purified by unordained persons; but these men do not show any spirit of revolt from the ancient system, they have not gained the Protestant temper, and they never dreamed of dispensing with the mediation of the Church, though they occasionally admit that spiritual life is possible without such mediation.'²

Nevertheless, the prominence given to 'unordained persons,' whose authority as guides lay simply in the fact that they had been taught of God, marked a radical divergence in principle from the Church—a divergence which did not become 'Protestant' only because it had not yet become explicit.

(b) The movement was necessarily *supranaturalistic*. In this respect the Friends of God were children of their age. They shared the common belief in the virtue of relics, the objective reality of visions, the power of every sense—sight, touch, smell, taste, and hearing—to be the medium of a

¹ Harnack, however, points out (*Hist. of Dogma*, Eng. tr., 1894-99, vi. 90, note 1) that one section of the Waldenses, viz. the Lyonnese Poor, as distinguished from those of Lombardy, were less sharply opposed to the Church.

² Rufus Jones, *Studies in Mystical Religion*, London, 1900, p. 254.

Divine revelation. Visions especially were looked for and often experienced—visions which declare themselves at once as hallucinations born of the abnormal psychic conditions into which the subjects of them were brought by their too rigorous treatment of the body.¹

(c) It was strongly *apocalyptic*. The influence, on the one hand, of the 'great German prophetesses', St. Hildegard, St. Elizabeth of Schoenau, and St. Matilda of Magdeburg—of which there are marked traces—and, on the other hand, the state of Christendom around them account for this. As to the latter, it was the period of 'the Babylonish Captivity,' when (from 1309 to 1377) 'the papal seat was changed to Avignon, and the popes were more or less puppets of France'²—a period followed by the Great Schism (1378-1417), during which each of two rival popes demanded the allegiance of the Church. In addition, there were the terrible social evils due to the great civil war which followed upon a double election of Emperors. Finally, these human terrors were accompanied by what seemed to be dreadful signs of the Divine wrath—notably the 'Black Death.'³

The effect of such phenomena upon the Friends of God was such as might be expected from the simplicity and fervency of their faith. It made them seers and prophets of the End.⁴

(d) *Asceticism* was a prominent feature in the practice of the Friends of God, but not so much for its own sake as for the sake of the higher stages of spiritual experience to which it was supposed to open the way. Asceticism disciplined the soul through the body, and formed the lowest round of that mystical ladder whose top reached to the enjoyment of God by clear vision and perfect union. The leaders of the Friends, at least, were mystics of the usual mediæval type—with their idea of God as a Being absolutely transcendent, with their notion of the way to Him as a process of complete self-emptying, and with their yearning for those occasional leaps into immediate and vital contact with Him which were called ecstasies.⁵

(e) But the chief note in leaders and followers alike was not this or anything else abnormal. It was *inwardness*—a life of simple faith, hope, and love derived from personal fellowship with God and flowing out in all the moral virtues. What they sought and found was a first-hand spiritual experience. They believed in the living actual educative work of God in the soul. They were pupils in the 'upper school of the Holy Spirit'⁶—a school to which every one of humble and sincere heart may have free access.⁷

4. **Leaders.**—(1) For the friends of God the leader *par excellence* intellectually and spiritually was *Heinrich Eckhart* (see MYSTICISM [Christian]). He was so, at least in two respects: (a) in the first place, by his constant emphasis on the capacity of the soul for God in virtue of its very nature. Not merely in the soul of prophet, priest, or scholar, but equally in the soul of 'every man,' there is something which is Divine. It may be designated 'the ground of the soul,' or 'the spark,' or 'the soul's eye,' or 'right Reason.' Names do not matter. The essential point is that there is in man what can rise to God and know Him and enjoy the bliss of friendship with Him. (b) In the second place, the type of piety prevailing among the Friends of God was Eckhart's. For he taught them to think of religion as something practical as well as something inward and spiritual. He 'was a highly practical man, who did his day's work with fidelity and telling effect.'⁸ Similarly,

Eckhart proclaims liberty from the restrictions of local and ceremonial worship.¹

(2) One who was a Friend of God to his inmost soul, and may well be described as the 'spiritual splendour' of the movement, owed much to Eckhart—especially to his good sense at a time of crisis when good sense was the best counsellor. This was *Heinrich Suso* (c. 1300-65)—the 'Minnesinger of the Friends of God'—whose life-story was written down by his spiritual daughter, Elizabeth Staglin. He was a beautiful soul full of tender sympathy, 'not only with men, but with every little beast and bird and all the small creatures God had made.' After repeated painful spiritual crises, he went to Eckhart for comfort, and the latter 'set him free from a hell which he had long seen enduring.'² He knew nothing of Eckhart's so-called heresies, and was impervious to his philosophy. What the Master taught him was to believe in the love of God, and prefer God's yoke to any of his own invention. So he became no longer a servant, but—to use his own phrase—the knight of God; and entered upon that later stage of his career in which may be seen one of the brightest examples of the practical love for men which is inspired by an enlightened love for God.³

(3) Another of Eckhart's disciples was probably *John Tauler* (see MYSTICISM [Christian])—though the relation of the two has sometimes been reversed. He had opportunities of hearing him both at Strassburg and at Cologne, and in one sermon at least he quotes him (13th after Trinity, 2nd sermon). But perhaps disciple is hardly the right word—unless it be taken to mean no more than that Tauler derived from Eckhart his best impulses and his most characteristic view of the spiritual life. There is little trace in Tauler of Eckhart's philosophy or subtlety.

5. 'The Friend of God from the Oberland.'—According to a story printed in all the editions of Tauler's sermons from 1498 onward, there came a momentous break in his life, occasioned by the visit to him at Strassburg of a mysterious person known as 'the Friend of God from the Oberland.'

His visit was made, it is said, in obedience to a Divine intimation that a certain Master of Holy Scripture preached there whom it behoved him to hear. He heard him five times and perceived that the Master was 'a very loving, gentle, good-hearted man by nature, and had a good understanding of the Holy Scripture, but was dark as to the light of grace.' So the man persuaded the Master to preach a sermon in order to show how one may attain to the highest and utmost in spiritual things. This the Master did, and the man took down the sermon word for word. Then, coming with it to the Master, he said: 'You are a great clerk and have taught us a good lesson in this sermon, but you yourself do not live according to it.' At first the Master resented such words, especially from a layman. But presently he discerned his right to speak as one taught of God, and put himself under his direction. Hereupon the man convinced him: (a) that in the sense of being a self-pleaser he was so far a Pharisee; (b) that his deepest need was conversion, to which end he must at once break through all his ways and habits. With deep humility the Master followed the layman's counsel. Renunciation was the keynote; and the Master was put to the test by being enjoined to renounce 'all his proud ingenious reason which he has through his learning in the Scripture.' He was for a time neither to study nor to preach, though he must continue to fulfil his daily duties as a monk, and must yield obedience in all faithfulness to his superiors. The Master consented; and at a cost of great and varied suffering—foretold by his director—he persevered. At length, after two years, as he lay in his cell utterly weary and sad 'but fully awake, he heard with his bodily ears a voice saying: Stand fast in thy peace, and trust God, and know that, when He was on earth in human nature, He made the sick whom He healed in body sound also in soul. Straightway when these words were uttered, he lost his senses and reason, and knew not how, or where, he was. But, when he came to himself again, he felt within himself that he was possessed of a new strength and might in all powers outward and

³ See art. on Henry Suso—a review of Melchior Diepenbroek's *Heinrich Susos Leben und Schriften*—in *CQR* lxi. [1906] 164; also Rufus Jones, p. 289, for the lovely story of his search after his fallen sister.

inward, and had also a clear understanding in those things which aforesaid were dark to him, and he wondered greatly whence this came." His Friend assured him that now at last he had received the light of the Holy Spirit; and that thus illumined he would possess a much clearer insight into the Scriptures than he had before. He might now begin again to preach. He tried, and was overcome by emotion. This made him a laughing-stock. But, being allowed to deliver a lecture in Latin to the brethren only, the result was "such an excellent lecture as they had never heard in their lives before, so grand and deep and godly was his doctrine." Next, therefore, he was permitted to preach in the church where he was 'wont to preach.' He did so with amazing power. Thereafter for 'full eight years' the Master 'preached both to clergy and laity,' his influence growing all the time. Thus he drew to his end. For more than twenty weeks he suffered sorely. His last hour was laden with dreadful and amazing anguish, which the Master himself, in an appearance to the Friend three days after his death, explained as his purgatory.

This picturesque story was first questioned in 1719 by Quétif and Ehard, who, in their *Scriptores ordinis prædicatorum*, treated it as an allegory. More than a century later this view was accepted by Weiss in the *Biographie universelle*, art. 'Tauler' (1826). But the traditional view held its ground until H. S. Denifle, the great Dominican scholar, published his pamphlet (Strassburg, 1879) entitled *Taulers Bekehrung kritisch untersucht*.¹ Here he worked out the following conclusions:

(1) The epithet 'Master' means Master of Holy Scripture. This Tauler was not. (2) The Master's two years of seclusion (*Zurückgezogenheit*) are placed between 1346 and 1352. Tauler during this time was active as a preacher. (3) The Master died in the Dominican convent. Tauler died outside. (4) The Master shows himself (*bekundet sich*) a very second-rate, inexperienced, unimportant preacher. Tauler is seen in his sermons to have been the reverse of this. (5) The Master exhibits a distracted nature. Tauler is a harmonious personality. (6) The Master disowns any gift of eloquence in his style. Tauler in his appears as one of the great German speakers of his time. (7) The Master was not identified with Tauler until a hundred years after his death, and then as the result of conjecture, not evidence.

Who, then, was the Master? Had he really existed? Denifle at this time did not fear contradiction when he identified him either with the 'Gottesfreund' himself or with Rulman Merswin. Merswin certainly was a historical personage, a native of Strassburg, belonging to an important family of the city, and born in 1307. At the age of 40 he retired from his business as a banker with a large fortune, and devoted himself entirely to Divine things. Though married—to Gertrude of Bietenheim—he resolved to live henceforth as a celibate. But he did not give away his money; he kept it 'to use for God' as He might direct from time to time. In 1348, John Tauler became his confessor. In 1366 he found occasion for a pious use of his money in building a house for the Brethren of St. John on an island at Strassburg called the *Grünemwirth* ('Green Meadows'). In 1382 he died. A document entitled 'das Büchlein von den vier Jahren seines anfangenden Lebens,' purporting to be autobiographical, not only tells the story of the 'stages of spiritual experience' through which he passed during the first four years after his conversion, but also relates the first appearance of the Gottesfreund, and how, at his instigation, the book was written.

By Merswin the Friend is represented as the son of a rich family, who had spent a dissipated youth, was suddenly changed by the grace of God, withdrew into solitude and drew to him others like-minded, and by the illumination of the Holy Spirit became able, in the space of 30 weeks, to understand the Scriptures as thoroughly and speak as good grammar as if he had studied all his days in the best university. He appears at the castles of nobles and knights—even in the palace of the Pope—holding up to all alike, in writing and speech, a mirror of themselves; and effecting 'conversions' everywhere from the love of this

vain transitory world to the inner mystic love of God. Such a man surely could not be hid. Yet apparently he was. Though he visited Strassburg in 1346 and converted the Master, nothing was seen of him. Though he visited Merswin and sent frequent letters to him, none but Merswin was aware of it. In connexion with the purchase of the 'Green Isle' and the constitution of its convent, Rulman Merswin planned nothing and did nothing apart from the advice of his friend; but no hint of this came to the eyes or ears of the Brothers for whom he was acting. Nor did they at all realize till after his death that the good Merswin had been living so God-devoted a life—the life of a saint. Only when they discover his own account of the 'vier Jahren' in a sealed casket are they enlightened and made to wonder at his great humility.

The story bears upon the face of it suggestions of romance; and Denifle's final belief that Merswin was the romancer is not surprising.

But, meanwhile, quite another line had been taken by the Strassburg professor, Karl Schmidt, who in the years from 1839 to 1866 published, in almost unbroken succession, a series of writings which consisted chiefly of extracts from original documents found in the convent of St. John at Strassburg (*Die Urkundenbücher des Johanniterhauses*), and assumed by him to be those of the 'Gottesfreund' and Rulman Merswin. Not only did he identify the unnamed Master (of the *Meisterbuch*) with John Tauler, and credit the whole story of his conversion by the 'Friend,' but he also convinced himself that he had discovered the original of the latter in a certain Nicholas of Basel of whom nothing is otherwise known except that he was burnt as a Beghard at Vienne, near Poitiers, after 1382.¹

Schmidt's views carried the day for a time, even Denifle being among his adherents. At this time, however, Denifle, e.g., had to base his judgment entirely on the documents adduced by Schmidt. But before long the process of historical criticism brought to light the fact that Schmidt had exercised a quite arbitrary choice in his editing of the sources, and had—without due indication—altered rubrics and text in accordance with his own opinion. The first to reject Schmidt's identification of the Gottesfreund with the layman Nicholas of Basel was Preger (1869). Denifle's rejection, the result of still wider and deeper investigation, came next (1870, 1876). Schmidt did not retract. In 1875 he published his *Nikolaus von Basel, Bericht von der Bekehrung Taulers*, reaffirming his view. This brought about a complete refutation of it during the years 1879–81—mainly by Denifle, who came step by step to the conclusions already described. Denifle's work was so thorough and convincing that Schmidt's, on the chief point in question, was completely undermined. Even A. Jundt—whose *Les Amis de Dieu* (Paris, 1879) took the old ground to the extent that it still assumed the objective existence of the Gottesfreund—though identifying him with John of Chur (Coire) instead of Nicholas of Basel, was driven to concede the main point, viz. the fictional character of the Gottesfreund. But he was unwilling to think of Merswin as a conscious deceiver; and, in order to clear him of this charge, he suggested that 'Merswin was a "double personality," of a pathological type now well known to all students of psychology. In his *primary state* he wrote the books ascribed to him and experienced the events recorded in his autobiography; while in his *secondary state* he became the person known as "the Friend of God from the Oberland," and in this state he wrote the books, treatises, and letters ascribed to "the

¹ See Gieseler, *Epochs. Hist.*, iv. 186.

Friend of God."') In 1893, Preger (in the third part—'Tauler, der Gottesfreund vom Oberland')—of his *Gesch. der deutschen Mystik*, armed with some new material, made a fresh attack on Denifle's results, but utterly failed to do more than emend or correct them in details. Their foundation has stood sure. In fact, Denifle's view as to the non-existence of the Gottesfreund may be said to have found general acceptance among German scholars. See especially P. Strauch's art. on 'Rulman Merswin,' in *PRE*².

A completely new standpoint has been taken up by an equally eminent authority on the subject, viz. Karl Rieder, first in two magazine articles,² and then in an elaborate essay.³ According to this, Merswin had nothing to do with the unknown Friend. He was a fiction, but one not due to Merswin. The inventor of him was Merswin's trusted secretary, Nicholas of Louvain, who, after his master's death, falsified and forged documents in order at once to glorify him, and, by a heightened portrait of their founder, to stimulate the pious devotion of the Grüneworth brothers.⁴ As to Merswin himself, it is certain that no one knew, while he lived, of his being so favoured a friend of God (*ein so begnadeter Gottesfreund*). Nicholas says this expressly. Nor, apart from Nicholas, did any suspicion of the fact come to light after his death. He was not the impostor (*Betrüger*) he is made out to be by the theory which makes him the author of the writings in question. In their composition he had no part at all. We may picture him as a man who shared the deep, inward faith characteristic of the mediæval age—a faith intent upon good works and pious foundations. In order to create a home for himself, the childless man, in the days of his sickness and old age—a home and also an oratory and last resting-place—he acquired possession of Grüneworth. Then, further, he conceived the plan of fashioning it into a house which should be a pattern of its order (*ein Meister-Ordenshaus*)—a house where laymen as well as clerics should have a voice in affairs. And, if to reach his end he did not scruple to use some of the cunning and hardness which are peculiar to a man of wealth (*Geldmann*), we need not wonder. On the other hand, the devoted attachment of Nicholas to his early master is a beautiful feature, which reflects a certain glory upon the character of the latter.

Strauch showed himself sceptical of Rieder's view, when it first appeared, in his articles of 1902.⁵ When he developed his own view in the *PRE*³ art. already referred to, he had not seen Rieder's larger work.⁶ In a supplement, however, to that article he takes account of it; and he gives it as his opinion that even a superficial examination is enough to stagger belief, by reason of its difficulties and contradictions. Still, no difficulties can stand before a demonstration; and Strauch promised to test, later, Rieder's claim to have produced one. He redeemed his promise in the *Zeitschrift für deutsche Philologie*, Jan. 1907. Here he considers with great care and thoroughness how far,

¹ Rufus Jones, p. 252. He adds: 'This view, if proved sound, would surely make Rulman Merswin one of the most interesting psychological "subjects" in the entire range of history.' Cf. Rieder, *Der Gottesfreund vom Oberland*, Innsbruck, 1905, p. 12.

² 'Zur Frage der Gottesfreunde: 1. Rulman Merswin oder Nikolaus von Laufen; 2. Bischof Heinrich III. von Konstanz und die Gottesfreunde' (*Zeitschrift für Gesch. des Oberrheins*, new ser., xvii. [Heidelberg, 1902] 205, 480).

⁴ p. 18.

⁵ See Strauch's ed. of *Schreibbrand*, Halle, 1903, p. 55.

⁶ See 'Nachtrag' to the article, where he says that it was written in Sept. and Oct. 1904, though not published before 1906. Rieder's work was also written in 1904—at least the preface bears date Rome, 4 Nov. 1904—and came out in 1905.

if at all, Rieder's argument may be taken as valid. His conclusion, which is all we need give here, is as follows. Rieder's zeal and research are admirable, and not less so his penetration as regards particular points. But his investigation has not gone deep enough, and he has set out from rash and preconceived positions which are palpably untenable, and not likely to survive the second thoughts even of the author. Rieder does not claim to have dealt with the whole subject exhaustively, and only professes to have laid a foundation—though a sure foundation, and one upon which all subsequent inquiries must be built. Strauch denies this. The decisive test is not (as Rieder assumes) historical; it is stylistic and linguistic. It is, e.g., whether Nicholas, a man born and bred in the Netherlands, could compose all he did in Alsatian (Strassburg) German without disclosing a trace anywhere of his native speech. It is, again, whether there is unity, or difference, of style between the Tracts and the historical parts of the memorial-books—not merely in the case of the revised Tracts as we have them, but also in the case of their precursors, viz. those anonymous Tracts with which Rieder makes so free. Rieder, indeed, does not dare to evade this test altogether, and makes an occasional use of it. But he fails to see its decisive importance; and so his use of it is far too restricted. He must condescend to such a use of it as is thoroughly systematic before he can hope to reach a satisfactory solution of his problem.

Here the controversy rests for the moment. None but an expert can venture to decide between two such champions of their respective views; but the present writer may add that he finds it hard to see how the detailed evidence of Rieder is undermined by Strauch's objections, and even less how these invalidate the general soundness of his method.

FRED. J. POWICKE.

FRIENDS OF LIGHT. — See DEUTSCH-KATHOLICISMUS.

FRIENDS OF THE TEMPLE (*Tempelfreunde, Tempeler*). — A sect which originated in Württemberg in 1861; now Unitarian, with headquarters in Palestine, where the colonists form an important economic factor. It was derived from Pietism, as developed in Württemberg by J. A. Bengel, with a chiliastic trend. Early last century this gave rise to a scheme outlined by J. M. Hahn, and sanctioned by the king on the advice of G. W. Hoffmann. It contemplated new settlements, exempt from control by the Church authorities, where colonists should live model lives, morally, socially, and educationally. Germany has been prolific in such plans—the mediæval monasteries, the Bohemian Brethren, the Anabaptists in Moravia, the Moravians at Herrnhut being familiar instances. The first of the new colonies was planted in 1819 at Korntal, seven miles from Stuttgart, and was governed with much success by G. W. Hoffmann till his death in 1846. In its strongly chiliast atmosphere, under the influence of Philip M. Hahn, grew up his son,

Christoph Hoffmann (b. 1815). His experience as head of the Crischna College, near Basel, saddened him by the conventional morality and the dead formality of the State Church. He therefore founded a new college at Salon; and, when elected delegate to the Diet at Frankfurt, sought to bring about a reform within the Church. The effort failed; and at length he was expelled its communion in 1859, whereupon he prepared to organize independently, spreading his views by lectures and by the press.

Hoffmann recognized God's judgments on dead churches in the victories of Islam and the revolt under Luther. He commended Baptists and Methodists for their freedom and their life. Forecasting the future, he emphasized the Return of Jesus Christ, and studied the conditions precedent. He concluded that the time of bearing witness was expiring, and that the Return might take place in a generation or two—when Korntal was founded, a limit of 17 years had been expected. Penetrated with a sense of the value of the OT prophets, and of the types in the Jewish ritual dealing with circumcision, offerings, temple, priesthood, kingship, he elaborated a theory as to the Spiritual Temple which Christ would build. He recognized that this would be independent of nationalities and places, and that worship would be everywhere. To this ideal he saw an actual obstacle in that under Muslim rule all extension of Christian worship was illegal, and Jerusalem in particular was impossible as the capital of that kingdom where Christ might reign. The removal of this obstacle now became the object of his efforts.

First he thought of obtaining a firman permitting Christian colonies to be planted in Palestine. He failed to obtain political support in Germany, and a visit to Palestine convinced him that his scheme of 1855 would need serious change. He continued lecturing and publishing, chiefly in Stuttgart, and formulated a Confession in 1864. The first overt act was to establish a settlement at Kirschenhardtshof, where G. D. Hardegg († 1879) was put in control of the civil side, Hoffmann and twelve elders being the spiritual authority.

By 1868 a second step was possible. Since the Treaty of Paris the old Ottoman methods were largely abandoned, and the admission of Turkey to the European Concert seemed to bring the peaceful penetration of the East by the West into practical politics. An American colony under Adams settled at Jaffa, actuated by the same general idea of transporting a body of Christians, assured of local autonomy under the Treaty, destined to extend, and to leaven the native population. It might have been expected that this would fare better than the 1849-53 migration led by Mrs. Minor, also with the intention of preparing for the Return of Christ. But both American schemes collapsed, and Hoffmann saw his opportunity. Negotiations were opened through Basel, whence a previous German colony had gone to Jerusalem with slightly different aims; and by 1868 the Friends of the Temple acquired the Jaffa property. It was soon occupied, and a second plantation was opened at Sarona, a few miles away; also a new one close to the northwest of Haifa, which seemed better as a port, being sheltered by Mount Carmel, and lying at the mouth of the valley of Esdraelon, with easy access to the lake and to Damascus. These model villages absorbed most of the Kirschenhardtshof adherents; and, whereas in 1869 they had been the most numerous of all dissenters in Württemberg, though hard run by the Baptists, that centre rapidly sank to be little more than a recruiting and forwarding dépôt, so that Hardegg resigned in 1874. New colonies were planted at Nazareth and Tiberias, at Beirut and Ramleh, and even at Alexandria. To

secure immigrants, other dépôts were opened in Saxony and Russia, while the United States¹ furnished an even better seed-plot. Finally, the headquarters were transferred to Jerusalem itself, and this phase of the movement closed with the death of Hoffmann in 1885. Under his guidance the theology had become Unitarian.

Eight years later, his son Christoph became Guardian of the Temple, and the movement received an impulse from the visit of the German Kaiser in 1898. The colonies are an important German asset in the complicated politics of Syria; their economic value seems now to exceed their religious interest. After overcoming the legal difficulties as to holding land, they have settled down to steady work. Their example in agriculture and viticulture has greatly altered native methods. They have introduced new industries—brewing, improved milling, soap-making, wood-carving, silk-spinning, and good hotels. The settlements are laid out as garden cities, with substantial stone buildings; the colonists have built good roads to link Nazareth and Jaffa with Haifa. Here the community numbers 360, with church and school of its own; the total number settled in Palestine is variously estimated at 1200-1400.

W. T. WHITLEY.

FRIENDS, SOCIETY OF.—1. The name.—

The first Friends called themselves 'Children of the Light'—a name used by the oldest Quaker community at Mansfield in 1648; and 'Friends in the Truth' or 'Friends'—a term used as early as 1652. These unsectarian names correspond with the universal scope of the early Quaker message. The narrower title 'Society of Friends' is later. It occurs, though hardly yet as a formal title, in an anti-Quaker tract of 1665, John Wiggan's *Anti-christ's strongest Hold overturned*, p. 49: 'matriculated or registered into their Society of Friends.' Later in the century, Friends referred to themselves as a Christian society, but the form 'Religious Society of Friends' was not adopted till about 1800. The terms previously in general use were 'Friends,' 'the body of Friends,' and 'the people called Quakers.' In America the usual name is simply 'the Friends,' or, in some cases, 'Friends' Church.' The nickname 'Quakers' was given by a Puritan magistrate, Gervase Bennett, at Derby in 1650. In 1647 a sect of women from beyond sea, who shivered and shook under religious excitement, were known as 'Quakers' (see word in *OED*), and the trembling of Friends under 'the power,' as they called it, led to the term being applied to them.

2. Fundamental principles.—Quakerism is the product of the spiritual experience known as the Inward Light. The 'opening' came to Fox, 'that Every Man was enlightened by the Divine Light of Christ, and I saw it shine through all; And that they that believed in it came out of Condemnation and came to the Light of Life, and became the Children of it; But they that hated it, and did not believe in it, were condemned by it, though they made a Profession of Christ. This I saw in the pure Openings of the Light, without the help of any Man, neither did I then know where to find it in the Scriptures, though afterwards, searching the Scriptures, I found it' (*Journal*, 1694 ed., p. 22). This great affirmation, which was a thing of first-hand experience to the early Friends, conflicted with the Puritan disbelief in immediate revelation, and with current doctrines of election and reprobation. The Quaker, following the Inward Light,

¹ In the United States the sect is now known as the 'Temple Society in the United States.' In 1906 it returned 376 members in 3 congregations.

felt that Christ was come to teach His people Himself, and to call them away from the world's ways and teachers to His own living teaching. The indwelling life of Christ became to him the supreme fact of religion.

The far-reaching consequences of this experience, with respect to worship and ceremonial and ministry, and to the practical cross-bearing of daily life, are vividly shown in the following from Edward Burrough, who was 'convinced' in 1652:

'In all things we found the Light which we were enlightened withal, and all mankind (which is Christ) to be alone and onelie sufficient to bring to Life and eternal salvation. . . . And so we ceased from the teachings of all men, and their words, and their worship, and their Temples, and all their baptisms, and Churches, . . . and we met together often, and waited upon the Lord in pure silence, from our own words and all men's words, and hearkened to the voice of the Lord, and felt his word in our hearts to burn up and beat down all that was contrary to God, and we obeyed the Light of Christ in us. . . . and took up the Cross to all earthly glories, Crowns and waives, and denied our selves, our relations and all that stood in the way bewixt us and the Lord. . . . And, while waiting upon the Lord in silence, as often we did for many hours together, . . . we received often the pouring down of the spirit upon us, . . . and our hearts were made glad and our tongues loosed and our mouths opened, and we spake with new tongues, as the Lord gave us utterance and as his spirit led us, which was poured down upon us, on Sons and Daughters, . . . and the glory of the Father was revealed, and then began we to sing praises to the Lord God Almighty and to the Lamb for ever, who had redeemed us to God, and brought us out of the captivity and bondage of the world, and put an end to sin and death, and all this was by and through and in the light of Christ within us' (Epistle to the Reader, prefixed to Fox's *Great Mystery*).

In such a passage we see how naturally the 'distinguishing views' of Friends flowed as corollaries from the main proposition—their distrust of an instituted ministry, their position as to the non-necessity of all outward ordinances, their views as to a worship of creaturely silence and spiritual spontaneity, their encouragement of the ministry of women, their nonconformity to the customs of the world, their determination to make life a walking in the light. Seldom has a great spiritual truth been followed along its untrod consequences with more resolute steps. In the indwelling Light of Christ, the whole of life became sacramental and incarnational, penetrated with religion of the prophetic type, which draws its strength and its vision from intercourse with God. The cardinal principle of the Inward Light was, however, very imperfectly formulated, even by the Quaker Apologist, Robert Barclay, and has to be studied in experience rather than in statement. It was also held by Ranters and other mystical groups, who sometimes believed themselves freed thereby from all law. But the Quakers were 'children of the Light,' and from the first safeguarded the experience on the ethical side by insisting that there could be no real presence of Christ apart from a walking in the Light. In other respects their conception was seriously limited by the mental outlook of the age.

'They tried in vain to express this [the Divine] immanence in terms of the Augustinian dualism which had moulded the religious thinking of the Western world. So long as God and man were placed in separate chambers of thought, the light was necessarily either wholly human or wholly Divine. To make it human meant denial of the need for both revelation and salvation; hence it was claimed as absolutely Divine. But this involved the infallibility of each person to whom the Light was given, and the ousting of human faculties from any place in dealing with the things of God. Man had no religious faculty requiring cultivation; religious instruction was needless; the more his mind was emptied—the more it became 'like a sheet of blank paper'—the cleaner would it be for the writing upon it of Divine oracles' (Edward Grubb, *Authority and the Light Within*, p. 88).

The 'Light' or 'Seed' was, in Barclay's words, 'not only distinct, but of a different nature, from the soul of man and its faculties.' Especially was it to be distinguished from reason. As God gave two lights, the sun for day and the moon for night, 'so hath He given man the light of His Son, a spiritual Divine Light to rule him in things spiritual, and the light of reason to rule him in things natural' (Barclay, *Apology for the True*

Christian Divinity, prop. vi. sec. 16). As a result of this faulty conception of the Inward Light, the early Friends depreciated learning, and, in the sense of enhanced personality which came to them, thought themselves freed from human error and ignorance; and they were betrayed into extravagances of speech and conduct. Nayler's fall (see below) and other painful instances made them recognize the fallibility of the individual, which they sought to correct by bringing in the corporate judgment of the community. This had dangers of its own, especially at periods when the corporate enlightenment of the Society was low, though group-guidance proved of high value when it came from those who were spiritually alive and alert. The distrust of intellect long continued, and was a chief cause in bringing in a period of traditionalism, rigid in discipline but barren in vitalizing teaching and inspired leadership. In spite, however, of faulty formulation and intellectual sterility, the experience of the Inward Light maintained itself with the help of the prescribed ways of sober Quaker life, and the introspective silence of the Meeting for Worship. But the absence of a teaching ministry and systematic Bible study led, at the beginning of the 19th cent., to the merely subjective spirituality of Elias Hicks (see below), and then, in the evangelical reaction from such teaching, to official statements of belief which minimized the central Quaker experience.

It is, in fact, only under modern conditions of thought that this central experience has found adequate expression. Quakerism now sees no opposition between the human and the Divine, and, alike in the Scriptures, the Church, and individual experience, it expects to find the Divine illumination in partnership with human faculties. It recognizes the need for correcting personal illumination by the Light which has come to the race in science, history, and literature. It is beginning to realize that the prophetic type of religion calls in an especial degree for a broad and expansive education. A Society which has no ordained clergy or prescribed forms of service needs to be richly equipped with prepared men and women. It must live not by institutional strength, but by inspiration, by that personal and group-intercourse with the Divine which enriches man's highest faculties with the Light and Life of Christ.

3. Congregational principles and organization.

—The Church is regarded as a body of disciples of Jesus Christ, *plus* Jesus Christ Himself, as its very life and Head, the whole forming together 'one flock, one Shepherd' (Jn 10¹⁶). Friends do not practise water-baptism as a condition of Church membership, lest it obscure the necessity for the vital spiritual experience (see art. BAPTISM [Later Christian] in vol. ii. p. 405*), and they find their spiritual food and communion in Christ Himself, and not in the use of symbolic bread and wine. They distrust formal creeds, and their doctrinal statements have been intentionally framed with a close adherence to Scripture language. The earliest of these was put forth by the Quaker Mission to New England in 1657; the latest is the Declaration of Faith issued in America by the Richmond Conference in 1887. For Robert Barclay's *Apology*, see art. CONFESSIONS, in vol. iii. p. 888. Membership in the Society is now either by 'convincement' of the spiritual truths to which Friends witness, or, in England, by birth if both parents are Friends. Many American bodies give these children at first only an associate membership.

For fifty years or more after the founding of Quakerism there was no regular membership; those who were 'grown in the Truth' were invited to sit in the business meetings, and lists of such persons were kept. In 1737, in connexion with poor relief, a rule as to settlement was set up by the London Yearly Meeting, which incidentally directed 'the wife and children to be

deemed members of the Monthly Meeting of which the husband or father is a member, not only during his life, but likewise after his decease, until they shall gain another settlement elsewhere.'

The Society is opposed to sacerdotalism, believing that all true disciples—men and women—are channels through which grace may flow to others (Jn 7³⁷⁻³⁹). This involves a responsibility upon the whole membership to be good stewards of the manifold grace of God. Persons—men and women—whose gifts are approved by the Church may be 'recorded' as ministers, but they have no salary or separate duties. The spiritual stimulus of Quakerism has at many periods been provided mainly by ministers itinerating 'under religious concern,' and their expenses are then always gladly borne. The Meeting for Worship is characteristic of the Friends. Here there is no ritual or prearrangement; the Meeting gathers on a basis of silence, or, more accurately, of waiting upon the Lord, with freedom for the offering by any of prayer or praise, ministry or teaching, under the guidance of the Spirit. Where the group-fellowship and worship of such a meeting are strong, the spiritual communion is a very real thing; but other types of meeting for teaching and evangelistic purposes are also found helpful, now that the Society is again expanding its borders. In them all, group-fellowship, wide-spread responsibility, and spiritual guidance are usually emphasized. In many parts of America, however, a pastoral system has been established under the stress of local conditions.

The Quaker movement had at first little organization; it depended mainly on group-life and inspired leadership. General meetings of neighbouring groups were held, and each group had its local leaders or 'elders,' and received occasional visits from the itinerating leaders or 'Publishers of Truth.' In 1653 business meetings for county districts began in the North, and by 1660 we find a general business meeting for the whole country held at Skipton. This incipient organization did not survive the storm of persecution after the Restoration, and the present system is due to the labours of Fox in 1667 and succeeding years. The Monthly Meeting, consisting of a group of meetings, is the executive unit of government, receiving and 'disowning' members, appointing 'elders' and 'overseers,' and caring for the meetings composing it. A superior meeting held quarterly links together a group of Monthly Meetings, while the Quarterly Meetings form the Yearly Meeting, which legislates for the whole body and does centralized executive work through its own committees, the name of its general executive committee, 'the Meeting for Sufferings,' taking us back to the old days of persecution. These Church-meetings are now open to all members, both men and women, and questions are not decided by voting, but by the 'Clerk' recording 'the sense of the meeting' in a minute that expresses the weight of spiritual judgment on the matter in hand. The practical result is conservative and unifying, for minorities are respected, and there is no cleavage into parties.

4. Antecedents.—The first Friends spoke of their experience as the revival of primitive Christianity after a long and dark night of apostasy. R. M. Jones, in *Studies in Mystical Religion*, has pointed out how the Separatist sects of the Long Parliament period were the product of centuries of striving after an inward way to God. 'There was in England . . . a real contagion of the idea of God as indwelling' (p. 469). The Familists and Boehmists on the one hand, and the General Baptists on the other, show many points of affinity to Quakerism, although the proof of direct

connexion is forthcoming only in the case of the Baptists (see below). In *Journ. Friends' Histor. Soc.* viii. 104-106, A. Neave Brayshaw shows, out of Edwards' *Gangrena* (1646-47), that all the distinguishing views of Friends are found somewhere or other in Edwards' list of 'errors, heresies, and blasphemies.' 'It was as if George Fox had put a magnet into a mass of rubbish and drawn out what few bits of iron there were in it.' The 'Seekers' (cf. the parallel Dutch 'Collegiants') were the direct forerunners of Quakerism. They were persons who had used the new religious liberty of the time to make a quest after truth, and, having found no rest in current forms or doctrines, were waiting, in a fellowship of prayer, for a further revelation and a new demonstration of the Spirit. The message of Fox found a quick response in the honest and good ground of their hearts. See SEEKERS.

5. History.—George Fox, of Fenny Drayton, in Leicestershire (1624-1691), the founder and prophet of Quakerism, learnt the trade of a shoemaker, and developed a singular purity and sincerity of character. He spent some years, from 1643 onwards, in a fruitless quest for truth; no man could satisfy his search.

'And when all my hopes in . . . all Men was gone,' he says, 'so that I had nothing outwardly to help me, nor could tell what to do, then I heard a Voice which said, There is one, even Christ Jesus, that can speak to thy Condition; and, when I heard it, my heart did leap for Joy. . . . For, though I read the Scriptures, that spoke of Christ and of God, yet I knew Him not, but by Revelation, as He who hath the Key did open, and as the Father of Life drew me to His Son by His Spirit' (*Journal*, 1694 ed., p. 8).

A direct experience of truth came to Fox through these 'openings,' as he called them, and the Light and Life within him gave the young prophet a spiritual outlook on the whole of life, and sent him forth with a burning message. At Mansfield, in 1648, a company of 'shattered' Baptists accepted his message, and became the first group of 'Children of the Light.' In 1651 he gathered Quaker groups in Yorkshire, especially among Seekers at Bailly, near Doncaster, and at Wakefield, where William Dewsbury (1621-1688) and James Nayler (1618-1660) were 'convinced.' But June 1652 was the creative moment in the history of Quakerism. Fox found 'a great people in white raiment,' waiting to be gathered, in a large community of Seekers in Westmorland, who had meetings throughout the district, and who met from all parts once a month, for religious fellowship, at Preston Patrick. They were men of deep religious temper and wide Bible knowledge, and many hundreds of them, under the influence of a few powerful meetings, won for themselves the same first-hand experience of a Living Christ which Fox enjoyed. Their leaders, Thomas Taylor (1617-1682), Francis Howgill (1618-1669), John Audland (1630-1664), Edward Burrough (1633-1663), and others, furnished the movement with the 'Publishers of Truth' who, with help from the Yorkshire Seekers, carried the message through the North of England in 1653 and 1654, and then, in the summer of 1654, spread over the South, paying special attention to London, Bristol, and Norwich. By the end of 1655, Quakerism had run like fire through England, and was being carried to Ireland and Scotland. It was readily accepted by many Seekers and some Baptists, but roused the dominant Puritan sects to great hostility.

'Satan,' say the Cumberland and Westmorland ministers, 'desgorgeth from his hateful stomach a swarm of Quakers; these . . . came upon us like a furious Torrent: all is on fire on the sudden, many are unsettled, the foundations shaken, and some apostatize: here we are beaten off, and are forced to lay other things aside, that we might more fully binde ourselves to quench these flames' (*The Agreement of the Associated Ministers, etc.*, 1656, cited from B. Nightingale, *The Ejected of 1662 in Cumberland and Westmorland*, Manchester, 1911, i. 98).

Extravagances of conduct attended the beginnings of the movement, especially in the disturbance of ministers, virulent and aggressive controversy, and unwise testifying by signs, culminating in Naylor's Messianic entry into Bristol in October 1656, in sign of the cardinal Quaker experience that Christ was come and was revealed in His saints.

In spite of much sporadic persecution, the qualified religious freedom of the Commonwealth gave the ardent itinerating 'Publishers of Truth' their opportunity, and Quaker groups multiplied throughout the land. The storm of suffering in the early years of the Restoration period cut off many of the first leaders, and left the body weakened and distracted. Fox himself, during his imprisonment at Lancaster and Scarborough (1664-1666), was 'as a man buried alive.' On his release he devoted himself to binding Friends together in corporate life, especially by organizing 'Monthly Meetings' throughout England. Opposition, known as the Wilkinson-Story controversy from its two chief leaders, showed itself from those who distrusted all human arrangements; it lasted from 1673 till after 1700, but at the time the strengthening of organization greatly assisted the Friends, and their numbers increased in spite of persecution. Some men of great ability joined the movement: Isaac Penington (1616-1679), convinced in 1658; William Penn (1644-1718), convinced in 1667; Robert Barclay (1648-1690), also convinced about 1667; and George Keith (1638-1716), who about 1692 led a separation from Friends. With the passing of the Toleration Act (1689) a period of prosperity and traditionalism set in, during which the Society devoted itself to its discipline instead of to the raising of spiritual leaders and the aggressive work of the Church. In 1751, Samuel Bownas (1676-1753) wrote: 'The young generation of this age don't seem to come up so well as could be desired. The church seems very barren of young ministers to what it was in our youth, nor is there but very little convictionment to what was then.' But signs of revival showed themselves before the end of the century. John Fothergill (1712-1780) had founded Ackworth School in 1779, and Friends were being interested in education, while John Woolman (1720-1772), 'the consummate flower of American Quakerism,' was profoundly stirring Friends on both sides of the Atlantic to a living witness on great human causes, such as anti-slavery.

Friends, at their first entrance into America in 1656, had met with fierce hostility from the Puritan rulers of Massachusetts, and in 1659 and the following years four Quakers were hanged on Boston Common—William Robinson of London, Marmaduke Stephenson of Yorkshire, Mary Dyer of Rhode Island, and William Leddra of Barbados. Quakerism, however, gained great importance in the New World. Rhode Island welcomed the message, and for more than a hundred years Friends were continually in office. They came into possession of West Jersey in 1674, and of East Jersey a few years later; and in 1681, William Penn began the 'holy experiment' of Pennsylvania. North Carolina also owed much to their influence, while in other colonies, and even in Massachusetts, they became a growing power.

Their failure to appreciate the importance of the fullest expansion of human personality by education is the primary cause of their larger failure to win the commanding place in American civilization of which their early history gave promise. Their central Principle, properly understood, called for a fearless education, for there is no safety in individualism, in personal responsibility, or in democracy, whether in civil or religious matters, unless every individual is given a chance to correct his narrow individualism in the light of the experience of larger groups of men. . . . The absence of constructive leaders, the later tendency to withdraw from civic tasks, the relaxing

of the idea of reshaping the world, were due in the main to the lack of expansive education" (R. M. Jones, *The Quakers in the American Colonies*, xxvi. f.).

This same failure, leading to lack of Bible knowledge and of teaching ministry, paved the way for the serious 'Hicksite' division in America (1827-28). Elias Hicks (1748-1830) was a Quaker minister of commanding personal influence, whose emphasis on the 'spirit and power of God in the soul of man, as his Creator, Preserver, Condemner, Redeemer, Saviour, Sanctifier, and Justifier' (*Journal*, 1832 ed., p. 330), caused him to put into the background the person and work of Christ. Towards the close of his life he came into conflict with the section of Friends who held 'evangelical' views with regard to Christ and the Scriptures. In 1827 and 1828 a division took place in Philadelphia and some of the other American Yearly Meetings, in consequence of action by the 'elders' against Hicks, those who withdrew not necessarily identifying themselves with his views, but taking the position that God alone is Sovereign of the conscience, and that this inalienable right must be preserved 'unfettered by the hand of man and unalloyed with prescribed modes of faith, framed in the will and wisdom of the creature' (see Thomas, *Hist. of Friends in America*, 134 f.). The Society in America was cleft in twain, and each portion lost the balancing influence of the other. English travelling ministers had supported American Friends of the 'orthodox' school, and the separations powerfully reacted on the London Yearly Meeting. In 1829 a declaratory minute was passed, affirming belief in the inspiration and authority of the Bible and in the person and work of Christ. In 1835, Isaac Crewdson (1780-1844) of Manchester, a strong 'evangelical,' went beyond this by publishing *A Beacon to the Society of Friends*, in which he freely criticized the writings of Elias Hicks. The attack developed into a rejection of the central doctrine of Quakerism regarding the work of Christ in the heart; and, in 1836, Crewdson and about 300 other Friends left the Society. London Yearly Meeting, meanwhile, adopted a mediating position, asserting on the one hand, in 1835, the value of the writings of the early Friends, and on the other, in 1836, its faith in the authority of the Scriptures. The Society in England followed, as a whole, the leadership of men like Joseph John Gurney (1788-1847), an ardent philanthropist and Bible student, of evangelical but spiritual views, though a visit he paid to America in 1837 caused opposition from John Wilbur (1774-1856), who distrusted his views and his 'creaturally activities,' and led to a series of small 'Wilburite' secessions in some of the American Yearly Meetings. That in Ohio, in 1854, carried with it the sympathies of many Friends in the important Yearly Meeting of Philadelphia, which gradually retired into the semi-isolated position with respect to the other Yearly Meetings which it has since occupied. During the last half-century there has been much expansion and change in the group of Yearly Meetings styled 'Orthodox' in the United States Census, and a Pastoral System with arranged Services has gained great hold. This group has found a unifying and conserving force in a representative Five-years Meeting and a uniform discipline, which date from 1902, but sprang out of a Conference held at Richmond, Indiana, in 1887. Education is now provided for in a number of good schools and colleges, of which Haverford, Pennsylvania, is the best known. Philadelphia Yearly Meeting preserves a somewhat conservative type of its own. The so-called Hicksite bodies have declined in membership, but are now showing signs of fresh life, especially in philanthropic and educational directions. The

'Wilburite' bodies, though reinforced by other Friends who disliked innovations made in some of the 'orthodox' Yearly Meetings, are reduced in numbers and have little outlook.

In England, a great recovery of liberty has taken place as the fruit of a large tolerance. The fenced-in life of a peculiar people has passed away, and the spiritual experience and message of Friends have freely expressed themselves in home and foreign mission work, in philanthropy and education, in the service of business and public life, in the earnest study of social conditions, and, perhaps most characteristically, in the great 'Adult School' movement with a membership of over 100,000, which bears throughout the impress of its Quaker origin. The Manchester Conference of 1895 showed that the Society was receptive to the fresh life and thought of the age, and a strong educational and spiritual stimulus has been given through Summer Schools and the Woodbrooke Settlement at Birmingham.

Irish Quakerism, begun by William Edmondson (1627-1712) in 1654, became organized as Dublin Yearly Meeting. In the Rebellion of 1798, Friends maintained their peace principles and succoured the distressed at the cost of great peril and suffering. In the following year a separation took place, associated with the influence of an American travelling minister, of rationalistic views, Hannah Barnard. In more recent years the Society has responded to the same influences that have been at work in England.

Scotland forms part of London Yearly Meeting, which also includes some groups of Friends in Australia, New Zealand, and South Africa. Friends in Canada have their own organization.

English and Irish Friends have important foreign mission work in India, Madagascar, Syria, China, Ceylon, Constantinople, and Pemba, mainly under the care of the Friends' Foreign Mission Association which was begun in 1868. American Friends have work in Alaska, Mexico, Cuba, Jamaica, Palestine, Africa, and Japan.

Conscription has almost crushed out Quakerism in France and Germany. Holland at one time had a number of Quaker groups, and produced the Quaker historian, William Sewel (1654-1720). There are several small groups of Friends in Denmark and Norway.

6. Ethical and social features.—Quakerism has been called 'practical mysticism,' and has always had 'a moral earnestness and a social intensity which saved it from the easy pitfalls of mystical quests.' Fox laid constant emphasis on walking in the Light. Seeking to see the Light and to obey it, Friends gained clear vision on great moral issues. Their use of 'thee' and 'thou' to all ranks of men, and their refusal of 'hat-honour' and of oaths, were parts of their witness for reality in life and for a single standard of conduct before God and man. The Children of Light lived, as Fox said in 1651, 'in the virtue of that life and power that took away the occasion of all wars,' and the Society of Friends has steadily maintained the unlawfulness of war to the Christian. Friends were among the first champions of liberty of conscience, and kept their public meetings in the Restoration period in the face of terrible persecution, refusing to conceal or forgo their meetings, 'for such practices are not consistent with the nobility of the truth, and therefore not to be owned in the Church of Christ' (Yearly Meeting Minute, 1675). They were the first Christian body to free themselves from complicity in slavery, and became the back-bone of the anti-slavery agitation both in England and in America, and, later, of the anti-opium movement. They have taken a leading part in prison reform, temperance work, and

popular education; they have originated and shaped the 'Adult School' movement, and are keenly interested in the investigation and improvement of social conditions. In the American colonies, especially in Rhode Island, New Jersey, and Pennsylvania, they attempted the difficult task of righteous government, and have no reason to be ashamed of their record. The following states their present standpoint as to the duty of public service:

'Our conviction of the unlawfulness of war to the Christian, which prevents us from giving the military service to our country gladly rendered by many, should specially call us to voluntary service in other ways, even at the cost of much personal sacrifice. Those who devote themselves with public spirit to the building of national character, the shaping of righteous policy at home or abroad, or the manifold tasks of local or central government, are doing work of high value for the kingdom of God. But we feel the need in such service of continual watchfulness against bitterness of party-spirit, self-seeking, and disloyalty to the truth' (*Book of Christian Practice*, London, 1911, p. 126).

In private life, Quakerism has tended to produce a definite type of character—strong, straight, and serious—which has resulted from the habit of bringing the conduct of life to the test of the Inward Light, and from the personal responsibility in matters of religion thrown upon each individual member. The type stands out supremely in such men as John Greenleaf Whittier (1807-1892) and John Bright (1811-1889), and such women as Elizabeth Fry (1780-1845). The wide influence exercised by Friends seems primarily due to this cultivation of a spiritually enlightened judgment and an alert conscience.

7. Problems.—In this section especially, the writer cannot do more than give expression to his own personal views. The Society of Friends has to-day an opportunity not unlike that which it enjoyed at its rise, owing to the existence of numbers of earnest-hearted seekers after truth, to whom the sacerdotal and institutional forms of religion make little appeal, but who long for the help that comes from group-fellowship, penetrated by the living Spirit of Christ. At their best the Friends have this to offer; but, while they are now alive to the adequate intellectual presentation of their message, its actual embodiment in worship and in life is often feeble. The two pressing problems which are now being faced are (1) to re-interpret Christian discipleship under the social and intellectual conditions of the 20th cent., and (2) to give this group-discipleship free scope in moulding the meetings and other corporate activities of the Society. The social conditions and the aspirations of the age challenge such a body as Friends to a new taking up of the cross in daily life. George Fox in 1656 laid bare what has proved to be the besetting weakness of modern Christianity (*Ep.*, no. 131):

'There is the Danger and Temptation to you of drawing your Minds into your Business and clogging them with it, so that ye can hardly do anything to the Service of God, but there will be crying, My Business, My Business, and your Minds will go into the things and not over the things, and so therein ye do not come into the Image of God, in which is Dominion.'

As Friends open their hearts to see and obey the Light on the great social and moral problems of the day, their witness for truth will acquire fresh vigour, and they will be made 'friends of God and prophets.' Truer discipleship of this kind brings with it a kindling of group-fellowship which will make the meetings for worship and the other meetings of the Society glow with a new life. Thus only can Friends vindicate their great witness for the freedom and spirituality of the gospel order.

8. Statistics.—The following statistics relate to members only: there is also a large number of adherents. The figures in most cases are for the year ending 31st Dec. 1910.

EUROPE—	
Great Britain	18,840
Ireland	2,405
Denmark, France, Norway, Germany, Turkey	200
ASIA—	
Foreign Mission stations in Syria, India, Ceylon, China, and Japan	902
AFRICA—	
Cape Town, etc.	87
Foreign Mission stations in Madagascar	2,671
AMERICA—	
United States, so-called Orthodox branch	94,852
" " " " Hicksville	18,401
" " " " Wilburite, etc., branches	4,000
Canada " " " " Orthodox branch	1,060
" " " " Wilburite	200
Foreign Mission stations in Alaska, Mexico, and Jamaica	2,872
AUSTRALIA AND NEW ZEALAND	645
	147,085

LITERATURE.—A substantially complete bibliography up to 1892 is contained in three important works by Joseph Smith: *A Descriptive Catalogue of Friends' Books*, 2 vols., London, 1867; *Supplement to a Descriptive Catalogue*, do. 1893, and *Bibliotheca Anti-Quakeriana*, do. 1873. The following works will be found of special value:

(1) **POLITY.**—Robert Barclay, *An Apology for the True Christian Divinity*, Lat. 1676, Eng. 1678, and later editions; see also his collected works, 1692; various treatises of Isaac Pennington, collected works, 1681; do. of William Penn, collected works, 1720; Jonathan Dymond, *Essays on the Principles of Morality*, London, 1829, and later editions; John S. Rowntree, *The Society of Friends, its Faith and Practice*, do. 1901; *Christian Discipline of the Society of Friends*, do. (Doctrine) 1888, (Practice) 1911, (Church Government) 1906. For the Inward Light, see Caroline E. Stephen, *Quaker Strongholds*, do. 1907, and *Light Arising*, do. 1908; Edward Grubb, *Authority and the Light Within*, do. 1908; J. Rendel Harris, *The Guiding Hand of God*, do. 1906; W. C. Braithwaite, *Spiritual Guidance in the Experience of the Society of Friends*, do. 1909; and the religious poems of J. G. Whittier.

(2) **JOURNALS.**—Records of service undertaken under religious exercise are the most characteristic form of Quaker literature. Among the most important are those of George Fox, 1694, etc., the original draft of which for 1650-1676 has been edited, with full illustrative notes, for the Cambridge University Press by Norman Penney, 2 vols., 1911; George Whitehead (1636-

1729), *Christian Progress*, 1725; Thomas Ellwood (1639-1713), *Life*, 1714, etc.; Thomas Story (1692-1742), *Journal*, 1747; John Woolman, *Journal*, Dublin, 1778, etc., esp. ed. with J. G. Whittier's preface, London, 1900; Stephen Grellet (1772-1855), *Memoirs*, London, 1890; Elizabeth Fry, *Memoir*, 1847, and *Life* by Georgina K. Lewis, do. 1910; Joseph John Gurney (1788-1847), *Memoirs*, do. 1854.

(3) **HISTORY.**—The Friends' Reference Library, Devonshire House, Bishopsgate, London, contains the largest collection in the world of MSS and printed materials. Its librarian, Norman Penney, is one of the secretaries to the Friends' Historical Society, which publishes a quarterly *Journal*, 1904 ff., and valuable *Supplements*. The Friends' Historical Society of Philadelphia, founded 1904, also publishes a *Bulletin* (ed. Allen C. Thomas). For sufferings, see Joseph Besse, *A Collection of the Sufferings of the People called Quakers*, 2 vols., London, 1758. For general history: William Sewel, *Hist. of the Rise, Increase, and Progress of the Christian People called Quakers*, London, 1722, etc.; Samuel M. Janney, *Hist. of Friends*, 4 vols., Philadelphia, 1859-67; James Bowden, *Hist. of the Society of Friends in America*, 2 vols., London, 1850-54; Allen C. Thomas and Richard H. Thomas, *Hist. of the Friends in America*, Philad. 1906; T. Edmund Harvey, *The Rise of the Quakers*, London, 1906; Elizabeth B. Emmott, *The Story of Quakerism*, do. 1908. A history, planned by the late John Wilhelm Rowntree, which should adequately exhibit Quakerism as a great experiment in spiritual religion, and should be abreast of the requirements of modern research, is now in course of preparation and publication. Three volumes have been published: Rufus M. Jones, *Studies in Mystical Religion*, London, 1909, dealing with pre-Quaker mystical movements; Rufus M. Jones, assisted by Isaac Sharpless and Amelia M. Gummer, *The Quakers in the American Colonies*, do. 1911; and W. C. Braithwaite, *The Beginnings of Quakerism*, up to 1660, do. 1912. For other historical studies, see Maria Webb, *The Falls of Swarthmoor Hall*, London, 1866, and *The Penns and Penningtons*, do. 1867; Robert Barclay, *The Inner Life of the Religious Societies of the Commonwealth*, do. 1876; Thomas Hodgkin, *George Fox*, do. 1897; H. G. Wood, *George Fox*, do. 1912; John Wilhelm Rowntree, *Essays and Addresses*, do. 1906; John S. Rowntree, *Life and Work*, do. 1908. For the Adult School Movement, see J. W. Rowntree and Henry B. Binns, *Hist. of the Adult School Movement*, do. 1903. For the distribution of the Friends in the United States of America, see *Special Reports of the Bureau of the Census, Religious Bodies* (1906), Washington, 1910, i. Index, s.v. 'Friends', ii. 294-306. WILLIAM C. BRAITHWAITE.

FURIES.—See EUMENIDES, ERINYES.

G

GABARS.—The name popularly applied to the Zoroastrians still residing in Persia, in contradistinction to their co-religionists in India, the Parsis (q.v.).

1. **The name.**—The term 'Gabar,' 'Gabr,' or 'Guèbre' is of uncertain origin, but is connected by some Persian lexicographers with the Arab. *kāfir*, 'infidel,' which sense it bears, signifying both 'infidel' in general, and 'Zoroastrian' in particular (Vullers, *Lexicon*, Bonn, 1855-64, ii. 950). The abstract derivative *Gabrī* accordingly denotes 'the religion of Zoroaster'; the Perso-Turkish *Gia(v)ār* (popular Turkish *Kiāmār*), which is given as the source of *Gabar*, is itself derived from *kāfir*. Other variants of the Pers. form *Gabr* are *Gāvr* and *Gaur*. It is also noteworthy in this connexion to observe that in Balūchi *gaur* denotes 'infidel,' and in Kurdish the corresponding loan-words *gebir* and *gāvir* connote 'Armenian' and 'Russian' respectively (Geiger, in *ABAW*, I. Cl. xix. [1891] section 2, p. 449), thus favouring the derivation of the Pers. *Gabr* from the Arab. *kāfir*. The view sometimes advanced that *Gabr* represents the book-Pahlavi *gabrā*, 'man,' is far less likely. It should also be noted that for *kāfir* the Kirghiz say *keuz*, first noted by Vambéry as the name of an unidentified people who inhabited Turkestan in the pre-Islāmic times (Radloff, *Versuch eines Wörterbuches der Türkdiālekte*, St. Petersburg, 1889-98, ii. 51). Though in modern travellers the appellations 'Guèbres,' 'Gaures,'

'Gauvres,' and 'Gaori' are found, the latest English form is 'Gabar.' The Gabars designate themselves, however, as *Zardushtān*, 'Zoroastrians,' or *Bih-dinān*, 'those of the good religion,' and also *Pārsis*, from *Pārs* or *Pars*, the old province of Persia Proper. *Gab'ar*, on the other hand, is a derogatory term not used among Zoroastrians.

2. **Statistics.**—It was impossible before the beginning of the 19th cent. to form an idea of the numbers of the Persian population who, after the Arab conquest, remained faithful to the old Zoroastrian creed. From this time, however, we can refer to some approximate censuses taken by European travellers. Dupré (1807-1809) and Kinneir (1813) give an estimate of 4000 families; Trezel (1807-1809) mentions 8000 Gabars at Yazd and in the surrounding villages; Christie (1809) and Frazer (1821) 3000 families in the whole of Persia; Abbot (1845) 800 families at Yazd and in the neighbourhood; Petermann (1854) registers 3000 families in Persia, of which 1200 were at Yazd; Goldsmid (1866) 4500 at Yazd and Kirmān; Evan Smith (1870) 3800 families, etc. (cf. Houtum-Schindler, *ZDMG* xxxvi. [1882] 54).

If we consult the censuses taken in 1854 by order of the Persian Zoroastrian Amelioration Fund of Bombay, the first shows a total of 7711 individuals, distributed as follows: 6658 at Yazd (3310 men and 3348 women); 932 at Kirmān; 100 at Teheran; and 21 at Shirāz (cf. Houtum-Schindler, p. 56).

In October 1879, Houtum-Schindler obtained the following figures: total population, 8499 individuals (4367 men and 4132 women), distributed as follows: Yazd 1242, and in the neighbourhood 5241; Kirmān 1498, and in the neighbourhood 258; Bahrāmābād 58; Teheran 150; Kāshān 15; Shirāz 25; Bushire 12 (cf. *op. cit.* p. 55).

In the month of February 1892, Kaikhosrū T. Khorsend, Agent of the Persian Zoroastrian Amelioration Fund, after having visited Yazd, Kirmān, and the other localities inhabited by Gabars, gave the exact number of the Zoroastrian population in Persia as amounting to 9269.

In 1902, Ardashir Edalji, the Teheran Agent for the Parsis of Bombay, furnished Jackson with statistics (*Persia, Past and Present*, p. 425) which show that the total number of Gabars in Persia was about 11,000. The figures, as Jackson states, indicate that the number of Zoroastrians is increasing slightly instead of declining.

3. *Ethnography*.—Ancient authors are agreed in placing the Persians, especially the women, amongst the most beautiful types of the human race (e.g., Xenoph. *Anab.* iii. 2. 25; cf. Brisson, *De regio Persarum principatu*, ed. Lederlin, Strassburg, 1710, pp. 561-563). The sculptures of the Achaemenian and Sasanian periods have fixed the features not only of the Persians but also of the conquered races—evidence which allows of the establishment of valuable comparisons. After the Muhammadan conquest one can follow the intermixture of races which have successively obliterated themselves upon Persia through conquest or invasion—the Semites with the Arabs, the Turanians with the descendants of Tamerlane; under the Sefavid dynasty (15th-17th cents.) the Georgian and Armenian element prevailed and played a preponderating part in the crossings of race. It was only in the 19th cent. that Persia became restricted to its own national resources.

As for the Gabars, the isolation caused by their religious faith and by persecution must have created special conditions for them and perhaps assured the persistence of the type, if one could be perfectly sure that, in conformity with the sentiment which opposed marriage with non-Zoroastrians, legitimate or illegitimate unions were never contracted between the Gabars and the other nationalities. Travellers who have met them have often described them. It seems that the fine Persian type—absolutely Aryan with the Gabars of Yazd—has suffered because of their persecutions, their difficult life, and their toilsome occupations. The amelioration of their material welfare will naturally tend to the physical elevation of the race.

4. *History*.—The battles of Buwayb and Qādisiyya (A.D. 635-37) and the last defeat of Nihāwand (641) put an end to the great Sasanian empire which had lasted more than four centuries (226-652) (see art. SASANIANS). The king Yazdagird III. escaped, and after painful struggles at last fled for refuge to Merv, where he was murdered by a miller who coveted his jewels (651-2) (Tahari, tr. Zotenberg, Paris, 1867-74, ch. lxviii.). The Arab conquest did not spread at once throughout the whole kingdom; the Persians continued for some time to resist, entrenched in different countries, especially in Fārs, the heart of the dynasty and kingdom, and in the northern and hilly region of Tabaristān where the Ispahbads, or military governors of the Sasanian rulers, maintained their independence till 760. It was probably from this region that the Zoroastrians who settled in India came (see art. PARSIS). The results of the conquest were neither so rapid nor so complete as is generally supposed. The choice between the Qur'ān and the sword was not strictly imposed on

the population. The Zoroastrians shared the same fate as the Christians and the Jews, and were allowed to profess their religion on condition of paying the *jizya*—a just arrangement, on the whole, as the non-Muslim subjects of the Khalifs were exempt from military service and the alms (*sadaqat*) obligatory on the Prophet's followers. According to al-Balādhuri, it was a rule (see below), but it did not prevent the storming of citadels, bloodshed, and all the evils inseparable from military expeditions; hence the miserable fate of the conquered race, over which historians have always lamented.

If the position of the natives, including not only Zoroastrians, but also Jews and Christians, immediately after the conquest, was fairly tolerable, it grew worse under the Umayyad Khalifs; war had degenerated into raids, and strict orders from Damascus obliged the Governors of the Persian provinces to grind down the populations and to drain money from them. The subject races suffered much on account of that policy, and the burden of the exactions fell chiefly on the peasants, who were unable to make their complaints listened to by the rulers.

The old aristocracy and landed proprietors (*dihqāns*) were able to preserve power, money, and property by embracing Islām and serving the conquerors, who could not dispense with their administrative talents; but it was not so for the humbler class. As is pointed out by Van Vloten, the ambition and social pride of the Arabs, combined with their greed, offered an insuperable obstacle to the amelioration of their lot. The non-Arab Muslims were regarded by the Arabs as no better than slaves.

'Nothing,' says Tahari—in speaking of the revolt of Muktar (683-87), whose supporters consisted to a great extent of clients—'so exasperated the (Arab) Kufans as to see Muktar assign to the clients their share of the spoil. "You have taken from us our clients," they said, "who are the spoil which God hath destined for us, with all this province. We have liberated them, hoping for a reward from God, but you do not trouble yourself about this and cause them to share in our booty" (*Recherches sur la domination arabe . . . sous le khalifat des Omayyades*, Amsterdam, 1892, p. 16).

Under the cruel government of Ḥajjāj ibn Yūsuf, converts to Islām were compelled to pay the *jizya*, which caused great discontent among them, and led them to join a rebellion which was quenched in blood. The non-Arab Muslims were sent to the villages with their names branded on their hands. Their discontent was further increased by the loss of the hope of ever becoming the equals of their conquerors, and greatly contributed to the fall of the Umayyads and the rise of the Abbasids, in spite of the efforts of the tolerant and enlightened Umar ibn 'Abd-al-'Aziz.

This really pious man used to rebuke his officials when they complained of the large number of conversions in Egypt, as it was a loss to the revenue of the State, saying that God had sent His prophet to act as an apostle, not as a tax-collector. He gave almost the same answer to the governor of Khōrasān, who also complained that the people embraced Islām in order to be exempt from the *jizya*, and avoided circumcision, again saying that God sent Muhammad to make known His true faith unto men, and not to circumcise them (cf. Dozy, *L'Islamisme*, Leyden, 1879, p. 180 f.).

The revolt of Sindbād the Magian (755-56) is connected with the Shi'ite movement, and is considered as the last effort of the Persian nation to recover its independence.

Sindbād was a great friend of Abu Muslim, a pious and upright man who had embraced the cause of the Shi'ites and helped to raise the Abbasids to the Khalifate, but was most ungratefully treated by the latter, and finally murdered by al-Manṣūr. Though a great propagandist (he had converted many *dihqāns*), he was not intolerant, as is shown by his friendship with a Gabar and from the support given to him by the Magians. Sindbād started from Nishāpur, his native place, under the pretext of avenging Abū Muslim's murder, collected a numerous troop of followers, occupied Isf, where he took possession of Abū Muslim's treasures, and then declared that he was bent on Hijaz and the destruction of the Ka'ba. His army was composed of heterogeneous elements—Magians of

Tabaristān, Shī'ites, and others, whom he persuaded that Abu Muslim was not dead. Sindbad was defeated and killed by an Abbāsid chief, and so ended that insurrection which had lasted seventy days according to some, seven years according to others.

The fall of the Umayyad Khalifs marked the end of the purely Arab period, and the accession of the Abbāsid Khalifs inaugurated a new era, in which the Persian element played an important part. The seat of the Khalifate was transferred from Damascus to Iraq, and the administration was more and more entrusted to the Persians. Some of the old customs were revived; the festival of the *Naurūz* (first day of the Persian year; see FESTIVALS AND FASTS [Iranian]) was resuscitated; on the coins a Khalif appeared clothed in the true Persian fashion, while the Persian garb was the official court-dress. During fifty years a family (some say, of Zoroastrian origin), the Barmecides (752-804), wisely directed the affairs of the Khalifate, till the jealousy of Hārūn ar-Rashid led him to destroy the grandsons of Barmak and many members of that family. The Barmecides gloried in being the descendants of the Magian Barmak, the high priest of the temple of Nawbahār at Bulkh; and during the time of their favour the Zoroastrians enjoyed a sort of protection, since the Barmecides clearly retained a certain partiality for their former co-religionists (cf. L. Bouvat, 'Les Barmécides, d'après les historiens arabes et persans,' in *Revue du monde musulman*, Sept. 1912, pp. 3-131).

It was in the 9th cent. that some provinces began to separate from the Khalifate, and local dynasties were founded. The Tāhirids (820-872) made themselves independent in Khorasan; the Saffarids (872-902) were succeeded by the Samānids (902-999), who were the grandchildren of Sāman, a Zoroastrian converted to Islām by a governor of Khorasan; the other ruling families of Bulwayhids (932), Ghaznavids (973-1038), and Seljūqs (1038-1194) disappeared one after the other.

The murder of the last Abbāsid Khalif and the sack of Baghdad (1258) by the Mongols under Hūlāgū Khān, the grandson of Jenghiz Khān, put an end to the Khalifate. Next came Timūr and the horrors of his savage inroad. It is supposed that the small Zoroastrian communities of Gujarat were reinforced by the fugitives who fled before the invasion. Gabars and Muslims alike contributed to Timūr's ghastly pyramids of heads so often alluded to.

During this long period the Persians had gradually embraced Islām, and the number of the faithful worshippers of Ahura Mazdā yearly decreased. The Zoroastrians were still quartered in Fārs and Kirmān, but down to the present day their history is shrouded in obscurity. It was only under the Sefavid dynasty, after the conquest of Khorasan by Shāh Ismā'īl (1510), that Persia recovered for the first time a political unity. Under Shāh 'Abbās we find the Gabars at Isfahān, and we can obtain some particulars about them through the accounts of the European travellers who visited the Sefavid court. Shāh 'Abbās had sent for them and allowed them to settle in the outskirts of the city beyond the river Zandah Rūd. We owe to Pietro della Valle a good description of that settlement (1616-25):

'A few days ago I went to see their new town [that of the Gabars], which was near the new Giolta [the suburb Julfa] inhabited by the Christian Armenians. The new Tauris, or habited by the Muhammadans brought from Tauris, touches Isfahan as a suburb, and, though it is at present separated by gardens, yet, in course of time, the number of the inhabitants daily increasing in a wonderful way, and that residence of the Gabars with the two aforesaid Isfahan and that place of the Gabars has no other name than of our Rome, that place of the Gabars has no other name than

I know of than "the residence of unbelievers," just as we call the place inhabited by the Jews "the Ghetto." It is well built, the streets are large and straight, handsome by far than those of Giolta, because it was built more carefully; but all the houses are low, one-storied, and plain, quite in keeping with the poor condition of the tenants. In that respect they differ from Giolta, which are very good and well kept, because the Gabars are poor and destitute; at least they appear to be so' (ed. Paris, 1661, li. 104).

Don Garcías de Silva y Figueroa, in his description of Isfahān (*L'Ambassade de Don Garcías de Silva y Figueroa en Perse*, tr. Wicquefort, Paris, 1667, p. 179), mentions the four settlements outside the town, and gives a sketch of 'Gabarabad,' which was 'within a musket shot' of the building where the Ambassador had put up. He estimates the number of the houses at about three thousand, forming several long, broad, and straight streets, in some places shaded by trees to protect the people against the heat of the climate, so that it passed for a large and handsome borough, and even for a pretty town, though it was only ten years since the king of Persia had obliged the Gabars (called *Gares* by Don Garcías) to leave their native land and to come and live near Isfahān. (This gives the approximate date of the foundation of Gabarabad, Figueroa being in Persia in 1618.)

Tavernier, later on, referring to the bridge of the Gaures (Gabars) at Isfahān, says that it was built partly for the Gabars, 'who had their own ward beyond the river, in order to prevent them from passing through the great avenue of the Tchar-bag, and to allow them on their way home to take the shortest cut and reach their dwellings more rapidly.' That ward was simply a big village of which the first houses were not far from the river. The avenue which led from Isfahān to that bridge was larger and longer than that of the Tchar-bag, and was equally planted on both sides with a handsome row of trees, but without any channel in the middle (cf. Tavernier, *Six Voyages en Turquie, en Perse, etc.*, l. 409).

Chardin registers the destruction of that prosperous place. Besides the suburbs of Isfahān (already described by him), he mentions two others beyond the river, built on its banks and connected with it by two bridges; one of the suburbs, Sadat 'Abād, 'the abode of Felicity,' was the place where the Gabars were first quartered. They were expelled from it in order to turn their borough into a place for pleasure, with bazaars, baths, mosques, and palaces. It had been built by Shāh 'Abbās II., who transferred the Gabars to the other end of Julfa (cf. Kaempfer, *Amoenitatum exoticarum, etc.*, p. 164). Chardin explains that 'Abbās the Great had brought to Isfahān the Armenians and Gabars, but had located them outside the town, because they were artisans. Those families (Chardin says 1500) had come from Kirmān, and at 'Abbās' death many returned to their country (*Voyages en Perse et autres lieux de l'Orient*, iii. 76-77, etc.). Daulier still mentions Gabarabad as a handsome village. It was, of course, the new one (*Les Beautés de la Perse*, pp. 61-63). Its vestiges still existed in the early twenties of the 19th century.

Ker Porter mentions the settlement as follows: 'The liberal spirit of Shāh Abbas tolerated the existence of the Gabars at Isfahan, where afterwards the Afghan Mahmud gave them a mart and enlarged the suburb still called "Gabarabad," but, like that of the Armenian colony at Julfa, it is fallen to decay: nothing now inhabiting its ruined streets, but houseless dogs and the refuse of the people' (*Travels in Georgia, Persia, etc.*, li. 46).

No trace of Gabarabad can now be found. Three hundred yards below the bridge of Julfa, and at about the same distance above the Pul-i-Khaju, the river is crossed by the Pul-i-Jhubi, a brick bridge of fourteen arches—a sort of aqueduct to convey water to the palace of Haft-dast on the northern bank. The suburb upon the southern bank at this spot was known as Gabaristan because it was inhabited by the Zoroastrians; but the ground was cleared by 'Abbās II., who transformed the place into a royal residence (see above) which was named Sadat 'Abād, or 'Abode of Felicity,' where he kept his seraglio. The name alone has survived. Another souvenir of the Gabar suburb is preserved in one of the many appellations of the Pul-i-Khaju; it was called 'Bridge of the Gabars,' because it led to the suburb of Gabaristan and was built by 'Abbās II., in order that the Gabars might not pass across the main bridge of Julfa (Curzon, *Persia*, ii. 47-49).

The condition of the Gabars under the Sefavid kings, if not enviable, was still respectable; but it grew worse after the Afghan invasion. Mir Vā'iz having taken possession of Qandahār, the Persian king sent him emissaries who were treated with contempt, and Mir Vā'iz's son and successor, in order to invade Persia, took advantage of the opportunity which occurred when the Afghans of Herat threatened the N.E. frontier of the

kingdom and the Arab prince of Muskat settled on the shores of the Persian Gulf. That invasion caused the direst calamities to the Zoroastrian communities, Maḥmūd having chosen Kirmān rather than the deserts of Sistān. Kirmān and Yazd were the places where the bulk of the Zoroastrian communities were still important. Tavernier says (*op. cit.* p. 431) that, when he visited Kirmān (1654), there were ten thousand Zoroastrians there. Slaughter and enforced conversion distressed the faithful.

At the time of the second invasion of Maḥmūd, the prince persuaded the Zoroastrians of Yazd and Kirmān to join his troops and to avenge the wrongs they had sustained for centuries (Hanway, *The Revolutions of Persia*, ii. 149). The simple Gabars were easily persuaded, and enlisted under the banner of their old enemies. Their fate, after the siege of Isfāhān (21st Oct. 1722), is unknown. One of the captains of a Gabar corps bore the Musalmān name of Nāsrallāh, but Hanway considers him as a Parsi or Gabar (*op. cit.* p. 152). Under Nādir Shāh and his successors enforced conversions, exactions, and slaughter again harassed the Zoroastrians.

The siege of Kirmān by Muhammad Āghā dealt them a deadly blow, and they shared the general fate of the native population (1794). In 1810, H. Pottinger saw a pyramid of six hundred skulls, a trophy of the Kadjār eunuch's victory. As for Timūr's old trophy, skulls of Gabars were certainly blanching in the same pile with those of the Muhammadan victims. The ruin of the quarter of the Gabars is ascribed to that time as well as the loss of their valuable MSS. Khanikoff says that their number amounted to at least 12,000 individuals (*Mémoire sur la partie méridionale de l'Asie Centrale*, p. 193).

Ker Porter, who visited them after those awful calamities, describes the Gabars 'with eyes bent on the ground and pouring tears for lustal water on their dishonoured shrines.' Yazd still contained four or five thousand faithful, and, from the comparative respectability of so considerable a body, 'they more openly exercised the offices of their religion there, and from the same reason at Kerman, than is ever attempted by the poorer Gabars in the villages about.' But, on the whole, the condition of the Kirmānis was not so good as that of the Yazdis (*op. cit.* p. 66).

At all times the fallen condition of the former lords of the land had impressed travellers. We may quote the opinions of some of them.

Pietro della Valle, who saw them in their suburb of Gabrābād under the tolerant rule of the Šāfavid princes, describes them as poor, simple husbandmen, carrying on no trade, earning their livelihood (*op. cit.* p. 104). They were all dressed in the same manner and in the same colour, similar to the cement made of bricks (p. 105). Figueroa, at Gabrābād also (p. 179), points out the gentleness of their manners; the women were quite free, and used to sit at their doors, spinning and weaving. At Kirmān they had retained their old mode of living, dress, and religion (p. 177).

According to Thévenot, they were easily recognized by a dark yellowish colour that the men had adopted for their garments and the women for their veil; besides, the Gabar women, most of whom had fine features, never covered their faces (*Relation d'un voyage fait au Levant*, ii. 216).

Chardin thinks them not so well made or so white as the Muhammadan Persians (*op. cit.* p. 127). The men, however, were lusty, of a lofty stature, and had a good complexion. The women were coarse-looking, of a dark and olive-coloured complexion, which he ascribes to their poverty rather than to their nature, some of them having handsome features. The men had long hair and a full beard; they wore a short tight jacket and a cap of fine wool, very much like a hat. They dressed either in linen and wool stuffs or mohair, preferring the brownish or feuille-mort colour as being more suitable to their fallen condition. The women were coarsely dressed, and Chardin emphasizes his remark by saying that he had never seen anything that was so ungainly and devoid of elegance. In fact, he thought that the dress of the Gabars was so much like that of the Arabs that one would be inclined to think that the Arabs had borrowed it from them when they conquered the land. They were agriculturists, workmen, fullers, or furriers, and they made carpets, caps, and stuffs of a very fine wool.

Daulier (*op. cit.* p. 52) describes them as clad in a woollen stuff of a tawny colour; the dress of the men was of the same shape as that of the other Persians, but the women's dress was totally different. The latter used to go out unveiled, and

wore on their heads a scarf loosely twisted up (*fagotte à la négligence*) with another veil which covered their shoulders, after the fashion of the Bohemians. Their trousers were like the Swiss breeches which go down to the heels. Most of the materials worn by the Gabars were made at Kirmān.

The chief occupation of the Gabars was agriculture. According to Chardin (*op. cit.* p. 127), they considered it not only grand and innocent, but also noble and deserving—a view quite in keeping with their sacred books. Their manners were gentle and simple; they lived under the rule of their elders, who were their magistrates, recognized by the Persians (*op. cit.* p. 128).

That taste for agriculture was to be their chief characteristic up to the 19th cent. Ker Porter found them employed as labourers and gardeners. At Teheran they were for a long time gardeners in the precincts of the Seraglio on account of their strict morality (Dosabhoj Framjee, *The Parsees*, p. 32).

In the middle of the 19th cent. the poll-tax (*jizya*) had become more and more onerous to the non-Muhammadan subjects, not to speak of the Armenians and Jews. As regards the Zoroastrians, the annual taxation (it has been verified) amounted to the sum of 660 *tomāns* (£330), but, since the governors and collectors used to increase it, in order to make a profit, it was raised to nearly 2000 *tomāns* (£1000). According to statistics, a thousand Zoroastrians were compelled to pay; two hundred could do it easily; two hundred with difficulty; and the rest were utterly unable to pay, even under the threat of death. Considering the prosperous position of the Zoroastrians of India and the renewed intercourse between the two communities, it was highly desirable that something should be done through their influence in favour of their Iranian brethren.

The position of the latter was, in the main, as follows: they were branded with the appellation of 'Gabars' (infidels), and had to bear the same vexations as those experienced in India by the 'Mahars' at the hands of the high-caste Hindus. Houtum-Schindler, before the abolition of the *jizya*, stated (*op. cit.* p. 56) that the position of the Gabars was better than that of the Jews at Teheran, Kāshān, Shirāz, and Būshire, while at Yazd and Kirmān the status of the Jews was preferable. The chief grievances of the Zoroastrians were the following: they were threatened with forced conversion; the property belonging to a Zoroastrian family was forfeited for the use and benefit of the proselytes, in spite of the rights of the legitimate heirs, and property recently acquired could be taxed to the advantage of the *mullahs* up to the fifth of its value; it was forbidden to build new houses or to repair old ones; the merchants were subjected to taxes besides the ordinary customs-duties. The murder of Zoroastrians was not punished; and their sanctuaries were often desecrated. The Gabars could not wear new clothes or ride a horse; they were obliged to put on dull yellow garments—a permanent reminder of the disabilities which had been equally shared by the Jews and Christians who, under the reign of Muttawakil, were compelled by enactments (A.D. 850) to wear honey-coloured gowns, parti-coloured badges, and caps and girdles of certain ignoble patterns; to ride only on mules and asses, with wooden stirrups and saddles of strange construction. Again, any intercourse with the Gabars being pollution, all lucrative occupations were forbidden to them. Besides, the inequality of the law in any Muhammadan country, which gives only the Faithful help and assistance, but denies it to unbelievers, is well known.

The Parsis of India, whose lot had been so different, could not see the miserable destiny of their brethren without trying to better it. In the middle of the 19th cent. a Bombay Parsi wrote:

'Can we ourselves do nothing for our unfortunate co-religionists in Persia? Our community possesses considerable weight, and includes amongst its members names known all over the world for their exertions in the cause of humanity, and the amelioration of the condition of their countrymen generally. A deputation, therefore, of our race to the Persian court, duly accredited by the English government, and presented by the British Ambassador at Teheran, might, we believe, remonstrate with success against the cruelties now practised upon our Zoroastrian brethren in Persia. The amount raised by the capitation-tax now levied upon them, and which is attended by circumstances of so much cruelty, must be to the Imperial revenue insignificant in the extreme, and it is not improbable that a dignified representation on the subject made by a suitable embassy from the Parsis of India might succeed in abolishing it. Persian princes seldom know the true state of their subjects, and we cannot but think that our countrymen would reflect honour upon themselves by an adequate effort to relieve the miseries of our Zoroastrian brethren in the fatherland' (Doshaboy Framjee, *op. cit.* p. 40).

The Persian Zoroastrian Amelioration Fund was started in 1854, and the trustees sent an agent, Manakji Limji Antaria, who left India on 31st March and was soon able to communicate a report, which was quite calculated to rouse the general feelings of the Bombay Parsis. A meeting held under the presidency of Manakji N. Petit took place in January 1855, in order to pass resolutions according to this report. In spite of the numerous grievances and disabilities which were made known in that report, the abolition of the *jizya* was deemed the most urgent reform, and efforts were made towards it, although it took twenty-five years to bring it about (1857-1882). During that long period no opportunity was neglected to stir up public opinion in favour of the unfortunate Gabars.

Manakji Limji Antaria took advantage of the friendly disposition of Henry Rawlinson, British Ambassador at Teheran, to have an audience with the Shah and describe to him the miseries of his Zoroastrian subjects. Rawlinson obtained a reduction of 100 *tomans* annually wrung from Yazd and Kirmān.

Another interview with the Shah was granted to a few members of the Bombay community, supported by E. B. Eastwick and Henry Rawlinson, at Buckingham Palace, in June 1873. The Shah was pleased to give a sympathetic attention to the memorial presented by the Parsi deputation, and 'if he finds,' says the reply, 'that your co-religionists are subject to any undue severities, he will take care that redress is afforded them.' But, in spite of the kind dispositions of the prince, no change took place, and even a pressing appeal through the medium of the British Ambassador at Teheran did not reach the royal ear.

It was only in 1882 that Dinsha Petit, the President of the Persian Zoroastrian Amelioration Fund, received through R. Thomson, of the British Embassy, the welcome news that the royal firman abolished the *jizya*-tax and relieved the Zoroastrian communities of its payment, beginning with 21st March 1882. The firman was given at Teheran in the month of August 1882. This ended their long campaign of twenty-five years, which had cost the Persian Amelioration Fund more than £109,564 (£10,000) (for all particulars on the abolition of the *jizya*, see B. B. Patel, *Parsae Prakash* (Gujarati), pp. 657-662).

The devoted agent, Manakji Limji Antaria, died in 1890. His successor was Tīr Andaz Khorsend, an Iranian by birth, who died three years later. He worked at Yazd and Kirmān, where he started the *Anjuman naseri*. After him the Committee appointed Ardashir Edalji, who worked till 1896. From that time there has been no paid agent. The affairs of the Iranian community are now managed by small committees appointed by the Bombay Fund, which has a capital of 287,600 rupees, and issues reports.

At Bombay there is a *dharāmsāla* ('inn') at Chaupati for the use of destitute Iranians who come to India to find employment and help (1881); and an *agyāri* ('fire-temple') for the exclusive benefit of the Persian Zoroastrians. The head-priest is an Iranian *mobed*, and the ritual is purely Iranian.

5. Religion.—The Zoroastrians having lost for ever their political independence, we have now to describe the conditions under which they were allowed to outlive their national liberty and profess their religion.

At the time of the Arab invasion, Zoroastrianism, divided by sectarian controversies, was exposed to

the risk of perishing. The contact of Christians and Jews had created religious feuds and quarrels, and the primitive Zoroastrian doctrine was altered to such an extent that modern scholars have much difficulty in distinguishing the pure elements of the Mazdaean creed from foreign ones. To those sectarian controversies must also be added the intolerance of the Zoroastrian priesthood towards Persian sects such as the Manichaeans and Gnostics—an intolerance which made them hateful.

'Persecution had stirred up feelings of bitter hatred against the established religion and the dynasty that supported its oppressions and caused the Arab conquest to appear in the light of a deliverance' (cf. T. W. Arnold, *The Preaching of Islam*, London, 1896, pp. 177-184).

Zoroastrianism did not disappear at once; the Magians were tolerated and treated like 'the people of the book.' In support of this statement, we may quote al-Balādhuri:

'It seems that the Caliph Umar had some doubts as to how he ought to deal with them, but 'Abdu'r-Rahman b. Awf sprang to his feet and cried: "I bear witness of the Apostle of God that he said: Deal with them as ye deal with the people of the Book"' (ed. de Goeje, Leyden, 1866, p. 267).

We have another example in the treaty concluded with the people of Dabīl in Armenia. The safety of the lives of the Christians, Magians, and Jews was guaranteed as well as their property, churches, temples, and city-walls, as long as they consented to pay the land- and the poll-tax. Conversions, it seems, were not compulsory at first, some were quite free, especially in the higher classes, and took place even before the conquest, such as that of Salmān, one of the very first converts and a revered companion of the Prophet, to whom he was most serviceable at the siege of Medina on account of his talents in engineering and military science. He gave up Zoroastrianism, forsaking his father and his luxurious home at Isfahan. The bent of his mind had led him to study religions, and in his youth he had frequented Christian sanctuaries.

After the defeat of Qādisiyya, four thousand soldiers from the shores of the Caspian Sea embraced Islām, joined the Arabs, whom they helped in the conquest of Jalūla, and settled afterwards among Muslims in Kufa. It seems that the great influx of Persian converts made Omar anxious, as he could not reasonably trust them. His forebodings were unfortunately fulfilled; he died the victim of a Persian convert.

The great number of converts is explained by Arnold (*op. cit.* pp. 177-180), who points out the simplicity and elasticity of Islām, the numerous eschatological ideas borrowed from Zoroastrianism, and the relief from the purifications and elaborate ritualism imposed by that religion; and it is quite certain that the bulk of the conversions were voluntary. But all converts were not sincere; the famous Ibn al-Muqaffa appears to have been a bad Muslim, and, speaking of Mihyar, a native of Daylam, al-Karīm ibn Buhārān remarked that by embracing Islām 'he had merely passed from one corner of hell to another' (Ibn Khallikān, tr. de Slane, London, 1842-71, i. 432 and iii. 51) (8th cent.). Ibn al-Muqaffa was one of the ten most eloquent writers of Arabic, and with this combined a thorough knowledge of Pahlavi. He was put to death about A.D. 760.

E. G. Browne has admirably defined the period of the two or three centuries which followed the Arab conquest; that period is generally supposed to be a blank page in the intellectual life of the people.

'It is, on the contrary,' he says, 'a period of immense and unique interest, of fusion between the old and the new, of transformation of forms and transmigration of ideas, but in no wise of stagnation or death. Politically, it is true, Persia ceased for a while to enjoy a separate national existence, being merged in that great Muhammadan Empire which stretched from Gibraltar to the Jaxartes, but in the intellectual domain

she soon began to assert the supremacy to which the ability and subtlety of her people entitled her' (*Literary History of Persia*, London, 1902 ff., i. 204).

In fact, the Persian converts were to give firmness and strength to Islām (Dozy, *L'Islamisme*, p. 156). The Arab and Persian scholars have at their disposal ample materials for that study, but as regards the status of the Zoroastrian communities the information is meagre and disappointing. The historian has simply to register the rapid decline of the creative faculties in their members, and to be grateful that, in spite of the most terrible persecutions and centuries of ignorance, some fragments of their religious literature have been preserved down to the present time.

At first, as we have already remarked, liberty of worship was not denied to the Zoroastrians. The fire-temples, even when their destruction was ordered by law, were not much injured, and severe punishments were sometimes inflicted by the Muhammadan authorities upon those who attempted to overthrow or damage them. The high-priests were still important personages; the Pahlavi literature continued to be cultivated for several centuries; and, if the most valuable books of the Sasanian period disappeared through the carelessness of the priests and the contempt of the Arabs, some souvenirs of that period have been preserved, and we can glean from the post-Sasanian literature information as to the position of the proscribed religion.

As an example we may cite from the Pahlavi *Dāstān-i Dīnik* the opinion of Manušehar, son of Yūdan-Yim, the high-priest of Fārs and Kirmān in the 9th century. According to another Pahlavi work of the same century, the *Dinkart*, the high-priest, 'the *mōbed* of *mōbeds*,' was a sort of supreme pontiff, whose decisions were listened to by the Faithful (*Dinkart*, ed. Sanjani, Bombay, 1874 ff., Eng. tr. p. 69). We can trust Manušehar to disclose to us the real status of the communities.

That which you ordered to write about the way of knowing and understanding not being for any one else but for your servant, was owing to your affection, and for the sake of kind regard; but on account of the importance of truth it is more expressly to be regarded as being proper to write also to other spiritual men, as to the learning which is more fully studied by them. For, even with the perplexing struggle of the fiend, and the grievous devastation and collapse which have happened to religious people, after all, through the persistence of the sacred beings even now there are pontiffs, priests, high-priests, judges, and also other religious leaders of those of the religion in various quarters. Moreover, the other priests and spiritual men here enumerated have well considered the commentary (*zand*) of the text (*mānušar*) which is muttered, are acquainted with opinions explaining the religion, and are, in many places, the cause of preferring good works' (*Dāstān-i Dīnik*, i. 5-7, tr. West, *SBE* xviii. [1882] 51.).

Passing over three centuries, we shall now turn our attention to the northern part of Persia, Azarbaijan, at Rai, the capital of ancient Media, the *Ragha* of the Avesta (*Yasna*, xix. 18; *Vendidad*, i. 15), one of the most flourishing cities of the East, next to Baghdad. It had been the theatre of Muhammadan sectarian struggles: Khanītes, Shāh'ites, and Shī'ites had killed each other in its streets. In 1220 it was pillaged by Jenghiz Khān's hordes. In spite of all these evils, the small Zoroastrian community had endeavoured to maintain its integrity (13th cent.). The high-priest had still retained the title of *Maubad Maubadān*, and had among his disciples the author of a Persian poem on Zoroaster's life, who is our best informer.

This author was young Zartušt, son of Bahrām, son of Fajū. Bahrām himself was a well-read *mōbed* and an astrologer; as for Zartušt, he was conversant with the Pahlavi language, and could read a book wherein were recorded the chief events of the world, and the great deeds of the ancestors and kings, along with the explanation of Avesta and Zand and an account of the birth and events of the life of the prophet Zoroaster (cf. Rosenberg, *Zartušt Nāma*, St. Petersburg, 1904, p. 2).

That book, however, had grown old, and men were no longer able to read it, and an old *mōbed*

advised the young man to put it into verse; lest the traditions—the origin of which nobody could remember, no one being able to understand their writing—might be lost.

'Thou wilt do well to turn them into verse,' says the old man, 'in a pure style and in Persian writing. Thou wilt adorn this holy law with thy skill and restore rites and holy laws.'

We see how much rites and laws had suffered in the 13th cent.; they were doomed to suffer still more through Timūr's invasion.

It was in the end of the 15th cent. that the intercourse with the Parsis of India was renewed. The exodus of the little band of refugees to the shores of Gujarat had not been the only one (8th cent.); others had fled to foreign countries in quest of security and liberty of conscience, but all record of them is lost; no one can trace the place of their settlements or tell the sad tale of their vicissitudes and collapse. Now and then the historian catches a glimpse of the intercourse of Iranians with India.

In the 14th cent., Māhyār, a traveller from the city of Uchh, on the Indus, stayed six years with the herhads of Sīstān; he was taught by them the Zoroastrian faith and returned to India. He brought with him a copy of the *Vendidad* which had been made in Sīstān in 1205, by one Ardashir Bahmān. From this copy other copies were made. The oldest now extant are copies made on a Cambay MS of the *Vendidad* brought by Māhyār (14th cent.).

Westergaard says (*Zend-Avesta*, Copenhagen, 1854, Intro. p. 22) that the Parsis never troubled themselves with the books on which their faith was based. Had it not been for the communication with Persia in modern times, Anquetil would probably not have found in India a vestige of a book. It is said elsewhere that, if those books had not been brought to India before the siege of Kirmān, none would have survived in Persia.

It was at the suggestion of Changah Shāh, the *dāvar* ('head-man') of the Parsis of Navsari, that messengers were sent to Persia in order to obtain a satisfactory solution of several questions concerning religion and forms of ceremonies. In the year A.D. 1478 the Parsis of Navsari, Surat, Broach, Cambay, and Ankleswar agreed to send Nariman Hōshang, a layman of Broach, to the learned *dasturs* and *mōbeds* of Persia. Some passages of the answers transmitted by the Iranian brethren help us to see the position of the Zoroastrian communities at that time under the rule of the Turkomans. The Iranians pathetically declared:

'From Kayōmars up to this day, no time has been harder and more calamitous than the end of this millennium; and neither the period of Zohāk Tāzi, nor that of Afrāsyāb, nor that of the Sorcerer Tūr, nor that of Alexander the Greek,—of whom the Creator Hormazd says that they are gross sinners—no period has been worse than the end of this millennium, of which Hormazd has made mention, of which 847 years have already passed. Moreover, at this time the faithful have little help to perform meritorious actions in the path of Hormazd; and only a little of Nirang, Barsam, Purification, Purity, and Abstinence has remained; the rest has gone out of use' (Patel, in *Cama Memorial Volume*, Bombay, 1900, p. 171.).

In a letter brought by Narimān, they similarly deplore their condition:

'Among us, poor persons, there are four or five individuals who know their way in Pahlavi writing. But which is original is not known, for this reason, that, owing to oppression and tyranny, our fortunes, bodies, and clothes have all been contaminated' (Bombay University MS of Darāb Hormuzdiār's *Rūdayat*, i. fol. 18v, ff. 61.).

One of the messages—the first—concludes with a pressing invitation.

We wish that two intelligent priests may come hither, and study the Pahlavi writings, and distinguish the proper from the improper. The traveller is carefully guided. 'As to the route, the land-route is short, and from Kandahār to Sīstān the distance is short, and from Sīstān to Yazd there is no fear' (Patel, *op. cit.* p. 172).

Narimān Hōshang seems to have enjoyed the journey, as in 1486 he went a second time to Persia in order to elucidate new questions. It is stated in this reply that,

'since many years the Faithful of Persia, who are few in number, are very anxious and desirous, that they may receive some clue to the existence of the Faithful in any other country' (Patel, *loc. cit.*)

In 1511 a third epistle came from Persia. The Zoroastrians of Iran had found their co-religionists' silence very long.

'Until the decline of the Arab dynasty and the succession of the Turks, we did not know whether the Faithful existed in the country of India. . . . Thirty-five years previous to this date, the late Narimān Hōshang came here, bringing with him letters addressed to us by the late Behrānshāh, and Changah Shāh, and by the assembly of the Faithful and the head-priests. We had sent our reply twenty-nine years ago, written by Nōshirwān Khurūd and Marzbān Aspandiyār. You have not written to us anything during this long interval of years, and we do not know anything of the condition of the Faithful on your side' (Patel, *op. cit.* p. 1721.).

Inquiries and explanations were made in this way down to the year 1768. The collection of the replies or explanations is named *Rivāyats*, or reports. Twenty-two such *Rivāyats* were formed out of the explanations brought from Persia from 1478 to 1768. These *Rivāyats* form our most precious source of information on the customs of the two communities, and through them old works, fragments of the most precious books of sacred literature, found their way to India, jumbled up with questions of pure ritualism or social life. Now and then Persian travellers happened to come to Gujarat. Two Persians, Kāūs and Asfād, visited Navsari in 1536 and wrote a poem, a copy of which is in the Mulla Firoz Library at Bombay. Later on Ardāshīr Kirmāni was summoned to the Mughal court by Akbar in order to help the compiler of the *Farhang-i Jahāngiri* (end of the 16th cent.). In 1614 a *dastur* named Azar Kaivān bin Azar Gasp died at Patna at the age of 85. He had disciples, and Muhammadans and Hindus are said to have joined the latter (cf. *Dāhistān*, tr. Shea and Troyer, Paris, 1843, i. 87, 88, 89). In the 18th cent. (26th Nov. 1720) a *mohed*, Jāmāsp Vilayati, came to India. He vainly attempted to enlighten his co-religionists in matters of religion (Patel, *Parsae Prakash*, p. 23; Anquetil du Perron, *Zend Avesta*, Paris, 1771, Prelim. Discourse, p. 327). He brought several religious books, a Pahlavi *Vendidad* which served Anquetil's teacher, Dastūr Dārāb, and is the one from which his famous translation was dictated. Jāmāsp found that there was a difference of one month between the Persian and the Indian Zoroastrians in the *roz mah* ('calendar') reckoning. It is the starting-point of the *kabisah* or 'intercalation' controversy (see art. CALENDAR [Persian]). He was able to teach Avesta to three intelligent priests—Dastūr Dārāb Coomana of Surat, Dastūr Jāmāsp Asā of Navsari, and a *dastur* of Broach (probably Dastūr Fardinjī): then he went back to Persia. In 1736 a *bihdin* named Jamshid, conversant with astronomical calculations, took up the reform of the Indian calendar. During the long discussion of the *kabisah*, which lasted for more than a century, applications were often made to Muhammadan authorities, e.g. Hājī Nasham Isfahān and Aghā Muhammad Shustari. All this shows that the Gabars were not absolutely ignorant.

The Gabars, who were so communicative with their Indian brethren, carefully kept aloof from the non-Zoroastrians. All the travellers have recorded this reserve, which was based upon the principles of self-defence.

'Never,' says Chhnon, 'was the Cabbala of the Jews so averse to disclosing its secrets or so jealous of unveiling the mysteries of its science as the Gaires, or ancient Fire-worshippers, are of its science as the Gaires, or ancient Fire-worshippers, are careful to conceal their religion from those who ask for information. I have been obliged, in order to learn from them the little I know of it, to go many times to their place and to dissemble, lest they might suspect the design I had' (*Relations nouvelles du Levant*, Lyons, 1671, p. 429). 'They know by heart a big book written in characters differing from those of Persian or Arabic. They could read it, but they used to say that they did not understand it, and therefore held it in still greater reverence, stating that it sufficed that the words of their prayers to God could be heard by Him alone' (*ib.* p. 437).

It was with a Gabar of Yazd that Chardin was able to converse, and almost to obtain the sacred books. That Magian was one of the most erudite among the Isfahān Gabars. He used to read some passages to the stranger every day out of a book

for which he asked '1500 *lirres*.' Chardin was allowed to keep the manuscript for three months, and, as he would not spend so much money on its purchase, the man disappeared (*L'oyage en Perse*, iii. 128). Daulier found the Gabars so reserved about their religion that it was difficult to obtain any certain information (*Beautés de la Perse*, p. 52). Sanson was able to ascertain that the tenets of their religion were consigned to parchments, the contents of which their Magians, or priests, read to the community on some occasions, and they considered it a point of religion not to show them to any one. Their mysteries and creed were known only to their Magians, who were not more clever than the bulk of the community (*État présent du royaume de Perse*, p. 25). Chardin was, in fact, the most successful of the travellers, and he lost a unique opportunity of securing the Avesta books.

We have no reason to be surprised at the care taken to conceal the teachings of their religion, or at the obscurity in which their beliefs are involved, in view of the oblivion of their sacred language. It was in a sense the logical consequence of some of their religious injunctions. If we consult the old treatises, we find in them strict regulations to confine the teaching of the sacred language and the tenets of their religion to adepts alone. Some very curious things are said in the *Šad Dar* on this subject.

The characters of the Avesta had to be taught to those of the good religion 'in the presence of priests and teachers, so as to read, and that no error may continue in the *Nyāyias* and *Yasts*' (ch. xviii.; tr. West, *SBE* xxiv. [1885] 359 t.).

The incompetence of the priest in teaching is referred to in the following verses, such incompetence being considered as a sin, according to the words of Ormazd to Zoroaster:

'As to every priest and teacher who commits a blunder in teaching those of the good religion, I make him just as far from heaven as the width of the earth' (*ib.*).

The priests, moreover, were not allowed to teach Pahlavi to every one.

Zaratušt enquired of Hormazd thus: 'To whom is it proper to teach Pahlavi?' And Hormazd, the good and propitious, gave a reply thus: 'To every one who is of thy family, an officiating priest, a high-priest, a spiritual chief, and every one who is an intelligent priest. Besides these that I have mentioned, if one teaches it to others it is a great sin for him; and if he has performed many duties and good works, the end for him may still be hell' (*ib.* xcix. 2-4).

We can easily understand that the more the Zoroastrians were persecuted, the more they kept aloof from the non-Zoroastrians. In fact, any intercourse with the latter was forbidden to the true believer. About that we find in the *Rivāyats* injunctions which were as useful to the brethren of Persia as to those of India, who had just experienced the effects of the conquest of Gujarat by the Muhammadans; the main point was to keep the faith of the forefathers. A *Rivāyat* of Šhāpur Bhārūcha tells that, if a Zoroastrian was forced to become a Muhammadan with his family, it was better for him to poison himself and his family than to give up his religion. But if, after the Zoroastrian had changed his religion, he wished to be re-admitted among his co-religionists, he should be received after making him pray a *putēt* and giving *barašnūm* (*Narimān Hōshang Rivāyat*, 15th cent.). Yet conversion to Zoroastrianism was allowed. A non-Zoroastrian could be admitted to the Zoroastrian religion if willing to observe carefully its laws, and provided that no harm was thereby done to the community (*Kāūs Māhyār Rivāyat*, 16th cent.). The last sentence is suggestive, and shows a great deal of discrimination in the leaders. Above all, the Zoroastrian was enjoined to guard himself against contact with a non-Zoroastrian. A Zoroastrian should purify himself with cow's urine (*nirang*) after touching a non-Zoroastrian (*Kāūdīn Šhāpur Rivāyat*, 16th cent.). Some other regulations, such as the following, have even a polemic character: a Zoroastrian should not partake of any food prepared by a non-Zoroastrian, even when travelling (*Kāūs Māhyār Rivāyat*), neither of *ghī* (clarified butter), nor of honey prepared by non-Zoroastrians (*ib.*); fruit touched by the latter has to be washed before it is eaten (*Narimān Hōshang*

Rivāyat); even so, a Zoroastrian should not use an earthen or copper utensil made by a non-Zoroastrian except after having washed it three times; and a *dastur* must not cook food in an earthen vessel made by a non-Zoroastrian (*Kāus Māhyār Rivāyat*). It was necessary, therefore, for the Faithful to protect themselves against the impure, mischievous non-Zoroastrians, or *Darvands*. At the end of the 15th cent. and on the eve of the 16th, we find in the *Rivāyat* of Narīmān Hōshang the following privilege allowed to the Indian brethren—a privilege used, no doubt, by the Iranians during their daily life of struggle and misery.

If a non-Zoroastrian is committing great sins and causing harm to Zoroastrians and does not listen to reason, and if a Zoroastrian kills him, he shall not be considered guilty of murder (for all these references, see the Bombay University MS of Dārāb Hormuzdiār's *Rivāyat*).

The correspondence with the brethren of India, so active during the rule of the Sefavid kings, slackened during the Afghan invasions. The last messenger in the 18th cent., Kāus Rustam Jalāl of Broach, took with him his son, the famous Mullā Firūz, who has left an account of his journey (*Derīch kerde nanjūni*). The siege of Kirmān put a stop to that literary and to all religious intercourse.

6. Social and religious customs.—The Zoroastrians are divided in Persia, as in India, into two classes—laymen (*bīhdīns*) and priests (*athornans*). We have seen their unhappy fate, and the ruin of their national life. Their social life was a failure. In many cases they were obliged to conceal their religious faith and to feign to adopt Islām. Even in the *Rivāyats* we find permission to practise dissimulation. 'If a man is obliged to become a Muhammadan by force and if he has no faith in the Muhammadan religion, he cannot be called a Muhammadan'; and we have seen that the readmission of the renegade into the community was easily granted. Some of the *bīhdīns* sent their children abroad in order to have them brought up in their own faith.

i. LAYMEN (*bīhdīns*).—The *modus vivendi* of the Iranian Zoroastrians has in general improved since the middle of the 19th cent.; yet at Yazd and Kirmān they continue to live in separate quarters, and are still kept at a distance by the Muhammadans. Their position, in the main, is respectable; they are no longer agriculturists only, but merchants; and their trade with India has been the source of fortune to some of them, and has even added (at least at Yazd) to the commercial reputation of the city, although they still labour under certain restrictions—being forbidden, for example, to sell food in the bazaars.

They occupy (at Yazd), says Lord Curzon, a position not unlike the Chinese *compradores* and agents in the Treaty ports of Japan, the bulk of the foreign trade passing through their hands (*Persia*, ii. 241). Some of them are naturalized British subjects. E. G. Browne has given many interesting details of their life, which he was able to learn during the time he resided amongst them at Yazd and Kirmān (cf. *A Year amongst the Persians*, chs. 13, 14, 15, 16). Other travellers have added valuable information since 1887 (cf. Jackson, *Persia, Past and Present*, pp. 358–400, and Malcolm, *Five Years in a Persian Town*, passim).

At Yazd the head of the community is [1912] Ardāshīr Mīhrābān, a wealthy merchant. He is the President of the *Nam-e Anjuman* of Yazd, and an influential representative of the Irāni Zoroastrians. Ardāshīr Mīhrābān was obliged to become a naturalized British subject to obtain certain liberties: in 1907, Arbāb Jamshīd, a merchant at Teheran, was elected deputy of the National Persian Assembly. It is known that the elections have been made by colleges: (1) of the provinces, (2) of the communities. The political inequalities of the Gabars have totally disappeared, and the Zoroastrians are gradually regaining all their civil rights and their equality before the law and further liberty of cult.

(a) Ceremonies.—The chief ceremonial occasions in a Gabar family are the same as in a Parsi family (see art. PARSIS). For a description of them we must refer to the accounts of the first European travellers, although we cannot place much reliance on them, the Occidentals being always more or less

inclined to tax the Gabars with an exaggerated degree of ignorance or superstition. As regards their religious practices, intimately connected as they are with their social customs, we may refer to their *Rivāyats*, or correspondence with their brethren in India; for, though these *Rivāyats* contain no graphic account, they are still the best and surest source of information in matters of their own faith.

The ceremonies which mark the life of a Gabar are:—(1) The investiture of the *sudra* and *kusti*, called the *naujot* in India, and *sudra kustī dādan* in Persia (cf. Jackson, *op. cit.* p. 380 f., where it is stated that the wearing of the *sudra*, and even the formal investiture of the *kusti*, are not common at Yazd).—(2) The marriage ceremony, stripped of the Hindu finery and pageant imposed on the Persian refugees by the Rāna of Sanjan, and reduced to prayers and admonitions (Jackson, pp. 384–386). Any marriage with non-Zoroastrians is still strictly prohibited, as Chardin has pointed out. The Gabars, he says, could not marry wives of another faith; they asserted that the wife was to be by education and birth of the same religion and race as the husband (*Voyages en Perse*, iii. 128).—(3) *Funerals*.—The funeral rites are conducted in Iran, as in India, according to the pure Avesta form (Jackson, 387–398). Most of the question sent to Iran by the messengers of the *Parsi anjuman* of Gujarat referred to funeral rites, prayers, purifications, and disposal of the dead on the platforms of the *dakhmas*. These *dakhmas* have been described by many travellers, who have even seen the inside and have given us particulars as to their structure. In Persia, the Zoroastrians could not ensure the inviolability of their *dakhmas* and keep at a respectful distance the curious wayfarers or mischievous Muhammadans, as their co-religionists endeavoured to do in India, and at last succeeded in doing under British rule.

The *dakhmas* in Persia are not numerous: at Yazd, there are 6–4 old ones and 2 in use. At Kirmān we have to note a cluster of 9 towers: 3 are in use; 6 are old and out of repair. At Teheran there is a *dakhma* built at the expense of the Bombay Fund (A.Y. 1231=A.D. 1861). There is likewise a very ancient *dakhma* near Rai, about 30 feet high, but with neither door, *bāndar* (or central pit to receive the bones), nor *sagrt*. The *pavis* are arranged in rectangles instead of wheel-fashion (from the census of the Persian Amelioration Fund; cf. Browne, *A Year amongst the Persians*, 88 f., and Jackson, 439 f.).

(b) Dress.—The dress of the modern Zoroastrians in Persia is carefully described by Houtum-Schindler (*op. cit.* 68 f.). The people still retain the custom of wearing dark colours pointed out by ancient travellers. The men wear the turban, or *dastar*, rolled up around a small cap; the *kolā*, or black wool cap of the Persians, is adopted only at Teheran, Kāshān, Shirāz, and Bushīre; they put on the *penāra* (mod. Pers. *pirāhan*), 'shirt,' over their *sudra* ('sacred shirt'), and tie the *kustī* ('sacred thread') on their naked body; the trousers are called *tonbūn*. There are three other garments: the *dotāt*, a mere jacket, short and wadded; the *alkalyk*, another sort of jacket worn under a third called *kēma*. A *shal* (mod. Pers. *sal*) is passed over the *kēma*. The stockings and shoes have Persian names.

The women retain the ancient custom of winding pieces of cloth around their head, 'fagotées à la négligence,' as Daulier says (p. 51), and of using the same 'nippes colorées' mentioned by Raphael du Mans (*État de la Perse en 1660*, p. 43). They wear five different head-cloths: the thin *jul-shiv-sar* is bound round the head like a cap and kept in place by the *lachek* (which is a ribbon rather than a cloth) tied under the chin. The *dastmāl-sar* falls on the shoulders, and is fastened under the chin; in fact, the head of a woman is visible only from the eye-brows to the chin; the brow is covered by the *maknō*. The women wear the *kustī* over the

shoulders on the under shirt, which is not the *sudra*, but is called *shiv-kustī*; over the *shiv-kustī* is worn the short shirt or *penāra*. The women do not wear petticoats, but trousers called *shelvar*, made of coloured cloth, either wadded or light, according to the season; they are broad and loose, but are drawn in tightly about the ankles. The tight-fitting jacket with narrow sleeves is called *mināsukh*. The other jackets have Persian names.

The women of rank, when they go out, throw over themselves a veil of striped stuff, blue and white, called *chādar*, which is worn only by the poorest Muhammadans. The other women, viz. the townswomen, go out unveiled; a Muhammadan never looks at them, as he considers them impure.

(c) *Education*.—After having so often alluded to the ignorance of the Gabars, let us consider their intellectual status during the great campaign made by Manakji Limji Antaria in favour of the amelioration of the lot of his co-religionists. Houtum-Schindler gives reliable information (p. 82). At that time very few Irāni Zoroastrians could read the Avesta characters; in the province of Kirmān there was only one man, the *dastur*, who could read Zend; at Yazd there were several. All except the agriculturists could read and write modern Persian; many had some knowledge of Arabic. Among the women it would have been hard to find one who could either read or write. Some laymen were conversant with astrology, and knew as much of astronomy as was required for astrological calculations. They could, with the help of the astrolabe, find the latitude of a place within a degree. They had limited notions of geography; all their knowledge of history was derived from Firdausi. A few could study the *Avesta*, *Dasātir*, *Dābistān*, *Dinkart*, and such other works, but quite superficially. All the class-books and the Qur'an came from India. A Kirmāni or Yazdi Zoroastrian was not permitted to attempt to read the Qur'an in the presence of a Muhammadan, and no copy would be sold to him. The improvement, even since the beginning of the 20th cent., is notable. Now there are 9 schools in Yazd, Kirmān, and Teheran. At Yazd there are 6 schools: a large *madrasa* built at the expense of Ardāshir Mirhabān's father (149 pupils); another where Avesta and English are taught (53 pupils); Khurramshah (84 pupils); Taft (24 pupils); Sarfābād (32 pupils); Mubarka (no pupils). These six schools are branches of the Yazdi *madrasa*. At Kirmān are two schools, one near the Ātash-Bahrām (32 pupils); and one at Zufar (19 pupils). At Teheran there is one school built by N. M. Petit (13 pupils).

ii. *PIESTS (athornans)*.—The modern Iranian priesthood is the humble representative of the great clergy of the Sasanian period, but one would hardly recognize in the persecuted *mobeds* of Yazd and Kirmān the *dasturs* and advisers of the mighty kings of Persia. Immediately after the Arab conquest, the priests were not ill-treated by the Muhammadans; we have seen that in the 9th cent. there were still *mobeds* and *ervads* who had learnt the *mantras* and studied the commentaries. They were men of position, and were allowed to take a share in the religious discussions held in the presence of the Khalifs themselves. This is proved by the *Ulamā-i-Islām* (ed. Mohl, *Fragmentes relatifs à la religion de Zoroastre*, Paris, 1829, pp. 1-10; tr. Vullers, *Fragmente über die Religion des Zoroaster*, Bonn, 1831, pp. 43-67), in which is preserved a controversy between Mazdāvan priests and Muhammadan doctors in the presence of Ali; and again by the *Mātiqān-i-guyastak Abālīsh* (ed. and tr. Barthélemy, Paris, 1887), which relates another controversy between a Zendik called Abālīsh and the Zoroastrian high-priest Ātūr Farnbarg before the great Khalif al-Mā'mūn, whose taste for disputes

on the merits of different religions is attested by al-Mas'ūdi (*Prineries d'Or*, ed. Barbier de Meynard, Paris, 1861-77, i. 30).

The presence of the Zoroastrian priests was thus tolerated at the court of the Khalifs, and their evidence was even accepted in lawsuits—that of a *mobed* in the case of Afshin the heresiarch (9th cent.) (cf. Browne, *Lit. Hist. of Persia*, i. 331 f.); but this toleration gradually disappeared, and the Zoroastrian priests were taught to expect obedience and respect from true believers only. The priesthood continued to form a class separated from the rest of the community and to recruit new members from itself.

Nevertheless, an example of the possibility of admitting a layman into the priestly class is found in the 17th century. One *dastur*, Rustam Gushasp Ardāshir, is said to have sprung from the laity and not from a priestly family (*SBE* v. [1880] Introd. p. xxxiii). In the time of this *dastur*, the Muhammadan king of Persia had ordered a general massacre of Zoroastrians, unless they proved that they were not idol-worshippers. Rustam Gushasp, though a layman, proved this to the satisfaction of the king, and he was made a *dastur*. It is quite in keeping with the old tradition of the division of men into four classes, restored by king Ardāshir, with the exception of those who, by special merits for examinations, were qualified for a profession different from that of their forefathers. Such was the case of this Rustam Gushasp Ardāshir.

In the 17th cent., the head-quarters of the priestly class was still Yazd. According to Chardin (*op. cit.* p. 131), the great pontiff had settled there, and was called *Dastur Dasturān*; he was an example to the other priests who lived with him, and to the students who formed a seminary under his auspices. The Muhammadans allowed this liberty, since the officers derived handsome presents from such toleration.

The ignorance of the priests is emphasized by the travellers, but in many cases that reputation is due to the ignorance of the travellers themselves. Yet, as with the laity, so with the priestly class, a general darkening of the intellect was but too real, especially after the siege of Kirmān (1794). Westergaard, at Yazd and Kirmān, noted that Pahlavi had been almost forgotten; Houtum-Schindler, as already stated, found in Yazd some priests who could read the Avesta characters, but at Kirmān only one—the *dastur*.

There is now at Yazd a *madrasa* where Persian and Avesta are taught, whilst in the village schools Khorda-Avesta and Persian only are taught. A certain number of young men come to study at Bombay. As a learned and distinguished priest, we must mention Dastur Tir Andaz Ardāshir, who has translated the *Khorda Avesta* into Persian.

The initiatory ceremonies for priesthood are the same as in India—*navar* and *martab*, with some slight differences in the ritual (cf. art. PARSIS).

At Yazd the *mobeds* live in a separate quarter; the *bīhdāns* are spread over different villages and localities. Their duties consist in keeping up the sacred fire, the performance of the offices and religious ceremonies, and the like. For the distribution of the work and fees, they proceed as follows. Once a year, all the *mobeds* hold a meeting at the house of the high-priest and assign all the *bīhdāns* of the different places to as many divisions as there are *mobeds*. They write down the names of the different villages on small slips of paper, which are folded and distributed by a young *mobed* to the *mobeds* as in a lottery. The religious ceremonies of the locality inscribed on the paper are performed by these *mobeds* and by no one else. Many of the *mobeds* appoint others to their place or ask others to help them; but they must always give their permission for any substitution.

A *mobed* who has just been made a *navar* cannot be employed until three years have elapsed after the ceremonies have been performed. The distribution of work is made yearly, and according to the increase or decrease of the number of the *mobeds*.

Temples.—Fire, the symbol of the Mazdean faith, after having burnt in the Zoroastrian temples of the Sasanian period with all pomp and majesty, is now hidden, in Persia as well as in India, in dwellings whose outside does not differ from that of other houses. It is the worship of, or rather reverence for, fire professed by the Parsis and Gabars that has earned them the appellation of *ātash-pārustān*, or 'fire-worshippers,' given to them by travellers. Before the abolition of the *jizya*, their sanctuaries were desecrated daily. The history of the post-Sasanian temples has still to be written; the remains of the old temples are very few, and the poor modern *ādarāns* have nothing to remind us of the splendour of the former.

It is said that after the battle of Nihāwand, King Yazdagird fled from Bai and took with him the sacred fire that was revered in that place, one of the oldest *pyræ* of Persia. He went to Isfahan, then to Kirman, Nishāpūr, and Merv, where he erected, in a place two parasangs from the town, a *pyra*, where he enthroned the sacred fire that he had brought with him. The *pyra* was surrounded by gardens (Tabari, tr. Zotenberg, cf. lxviii.).

At first the Muhammadans seem to have given a real protection to the fire-temples and to have prevented their destruction. Thus in the 9th cent., under the reign of al-Mu'tasim (833-842), priests and doctors were flogged because they had destroyed the temple of Sughd and built a mosque in its place (Arnold, *Preaching of Islam*, p. 179).

At the time of Mas'ūdi (9th cent.) *pyræ* were to be found in Iraq, Fārs, Kirmān, Sīstān, Khorasan, Tabaristān, Azarbaijan, etc. (Mas'ūdi, ed. Barbier de Meynard, iv. 86); but on account of the invasions and wars the number of the Zoroastrians decreased, and the sanctuaries fell into decay. Travellers have all recorded how carefully the Gabars concealed their fire from the eye of non-Zoroastrians. The exceptions are few. Chinon went to the temple, but could not see the fire (p. 448), although Careri saw it (*Giro del mundo*, 1699, p. 134). In modern times, E. G. Browne and Jackson were introduced into the sanctuaries of Yazd and Kirmān (*A Year amongst the Persians*, pp. 373 f., 441 f., and *Persia, Past and Present*, pp. 366 f.). One of the first duties of the Persian Amelioration Fund was to repair the fire-temples.

7. **Language.**—All the travellers noted that the Gabars had a language of their own; they had retained the Avesta characters and their scriptures, but the Pahlavi language and literature had gradually disappeared and were replaced by a sort of jargon, unintelligible to strangers and different from the New Persian. The modern dialect of the Persian Zoroastrians is the *Gabri*, spoken at Yazd, Kirmān, Rafsinjan, etc. It seems that Hyde knew of the existence of the *Gabri* (*Veterum Persarum . . . religionis historie*, Oxford, 1700, pp. 364-429; cf. Anquetil du Perron, *Zend-Avesta*, ii. 429). There has been no literary activity amongst the Persian Zoroastrians of Yazd and Kirmān in recent times; and, though among themselves they continue to speak the peculiar *Gabri* dialect, their speech in mixed society scarcely differs from that of their Muhammadan fellow-citizens, and their letters are entirely copied from the ordinary models. E. G. Browne studied it at Yazd. He says that the *Dāri* (as he calls it) is used by the Gabars only among themselves. When they speak their own dialect, even a Yazdi Muhammadan cannot understand what they are saying, or can understand it only very imperfectly; it is not written.

Cf. Houtum-Schindler, pp. 57-82, etc.; E. G. Browne, *A Year amongst the Persians*, pp. 187, 189, 388, 389; Huart, 'Le prétendu Déri des Parsis de Yazd,' *JA* xl. (1888) 298-302; E. G. Browne, *A Literary History of Persia*, i. 43, 86, 100; Geiger, in *GlrP* i. li. (1896) 381 f., 404 f., 422; E. G. Browne, 'A Specimen of the *Gabri* Dialect of Persia,' *JRAS*, 1897, pp. 103-110.

It is also interesting, in this connexion, to note that the Iranian pronunciation of Avesta differs

considerably from that current in India. The spirants are either despirantized or changed to aspirates (δ becoming either d or d' , etc.; t becomes d , and bh becomes nh). Besides becoming t or t' , θ is frequently interchanged in pronunciation with s ; and the vowels a , o , u are often confused, while there is a tendency to monophthongize diphthongs. On the other hand, anaptyxis and epenthesis are strictly observed. Knowledge of the metrical structure of large portions of the Avesta is lost, and all is read as prose (Jackson, *op. cit.* pp. 363-366).

LITERATURE.—I. HISTORY, ETC.—Foucher, 'Sur le Manichéisme et les Gubres,' in *MAIBL* xxxi. (1884); B. B. Patel, *Parsæ Prakash* (Gujarati), Bombay, 1888, *passim*; Dosabhoj Framjee, *The Parsæ; their History, Manners, Customs, and Religion*, London, 1858, pp. 29-51; D. F. Karaka, *History of the Parsis*, do. 1884, i. 53-90; D. Menant, 'Les Parsis, histoire des communautés zoroastriennes de l'Inde,' *AMG*, Paris, 1898, ch. ii. pp. 25-48, and 'Les Zoroastriens de Perse,' in *Rev. du monde musulman*, Oct.-Nov. 1907.

D. MENANT.

GAELS.—See **CELTS**.

GALLICANISM.—Under this name two doctrines are designated, which were once current in France, but which are quite distinct. The one was directed against the claims of the clergy, the other against the Papacy. The first, which was odious to the clergy, was supported by kings and parliaments, and may be called 'royal or parliamentary Gallicanism.' The second had the sympathy of the episcopate and of the French clergy, and is known as 'episcopal Gallicanism.' Each of these two doctrines, which have often been confused, has its own history, and they ought therefore to be separately treated.

I. **ROYAL OR PARLIAMENTARY GALLICANISM.**—Royal or parliamentary Gallicanism comprises three maxims. (1) The first proclaims the right that civil society possesses to defend itself against

the invasions of the clergy. It may be formulated thus: the clergy ought to be confined to the spiritual domain. (2) The second affirms the superiority of civil over religious power. Its formula is: the king is the head of the Gallican Church. (3) The third teaches that, to defend civil society against the encroachments of the clergy and to impose his authority on the latter, the king (represented by Parliament or the King's Council) should act in a practical manner, viz. by appeal by writ of error, which entails various penalties, notably the seizure of temporalities.

1. **Defence of civil society against the encroachments of the clergy.**—This is the very soul of the disputes which broke out from time to time between laymen and ecclesiastics. Profiting by the disorder caused by the invasion of the barbarians, the Church, in the 6th cent., had placed herself at the head of the social services. She had left her spiritual domain and invaded the domain of things temporal. But the day came when society became conscious of its growing strength. Then it thanked the Church for her past services and announced that it would henceforth look after its own administration. The Church, however, did not see things in the same light. She claimed a Divine sanction for rights which she owed to circumstances, and which she was unwilling to abandon. Hence arose the disputes which broke out as early as the reign of Charles the Bald, but more especially in the 13th century. In 1205, under Philip Augustus, then in 1225, under Louis VIII., the French barons formed a coalition to drive back the clergy into their spiritual domain and rescue laymen from their tribunals. At this latter date the Duke of Brittany, Pierre Mauclerc, assembled his vassals at Redon, urged them to work towards this end, and made them promise to brave the censures of the clergy. At the Assembly of Saint-Denis (1235) the most powerful lords of France discussed the matter again, and wrote to Pope Gregory IX. asking him to put an end to the continual encroachments of the bishops. Finally, in 1246, another League was formed—this time at the instigation of the Emperor Frederick II.—which proposed to limit the jurisdiction of the Church over laymen to cases of heresy, marriage, and usury. All these attempts failed. In 1235, Gregory IX. informed the lords that they were making an attempt against the 'liberty of the Church,' and threatened them with all sorts of penalties. Innocent IV. went still further: he excommunicated the members of the League of 1246. The bishops, supported by Rome, continued to bring before their tribunals a great number of civil affairs. The laymen, who thought themselves capable of administering their own affairs, continued to revolt against the humiliating guardianship to which they were subjected. During the whole of the 13th cent. matters underwent no change.

But, although the conflict went on as far as laymen and the Church were concerned, the interests of the former were no longer, towards the year 1300, entrusted to the same hands as formerly. At the time of Philip Augustus and Saint Louis, the opposition against the usurpations of ecclesiastical jurisdiction began with the barons. At the approach of the 14th cent. the attack came from the king, Philip the Fair, an imperious man and a great organizer, who proposed to entrust the execution of justice to lay officers nominated by himself, and to relegate the Church to the spiritual domain. The success of this project, however, was hampered by the king's quarrels with Boniface VIII., which compelled him to conciliate the clergy in order to secure their support. In fact, he had to concede to the Church unlimited jurisdiction in

civil affairs. At the same time he instituted a body of royal legists and notaries who should represent the lay spirit and form a kind of fortress of anti-clericalism. In the 14th cent. a power arose over against the Church—that of the legists—which had always an open eye for the ambitious schemes of the clergy and was ever ready to thwart or curb them. To the attacks to which she had to submit the Church replied with excommunication; but the legists seized the temporal belongings of the author of the ban and did not let their prey escape until the censures were cancelled. These ever-renewed disputes gave rise to a chorus of mutual recrimination. The Church complained that her 'liberty' had been violated; the legists, on their side, complained that the clergy interfered in the regulation of sale contracts, estates, etc.—in a word, that they interfered with many things that were altogether outside the spiritual sphere.

King Philip of Valois imagined that this discontent was occasioned by misunderstandings, and that, if light were thrown on the question of the jurisdictions, harmony between the laymen and the clergy would be re-established. In order to obtain the necessary light, he called an assembly of the prelates and barons of his kingdom, and each of the two parties was invited to state its side of the question with absolute freedom. The Assembly (well known as the *Assembly of Vincennes*) met in December 1329.

Pierre de Cugnières, Knight and King's Councillor, took up the defence of the interests of the laymen. He contended, enforcing his arguments by frequent reference to Scripture texts, that God had established two jurisdictions, the one temporal, the other spiritual; and that these could not be in the same hands; from which he concluded that the Church, which had received spiritual jurisdiction, could not exercise temporal jurisdiction. Then, descending from the region of principles to the realm of facts, he enumerated the abuses committed by the clergy who encroached without scruple on the domain of temporal jurisdiction.

The argument was replied to by Pierre Roger, Archbishop of Sens, and Pierre Bertrand, Bishop of Autun. These two advocates of the clergy argued that the two jurisdictions, the spiritual and the temporal, could be united without any inconvenience in the same person, and that, as a matter of fact, the Church had received the power of judging temporal as well as spiritual affairs. They admitted that abuses might have slipped in here and there, and promised to do what was necessary to correct them.

The most obvious result of this great debate was to show that the legists were separated from the clergy, not by misunderstandings, but by views irreconcilably opposed, and that any concessions by either must be imposed by the authority of the king. But Philip refused to take part in the strife. He made fair promises both to the clergy and to the legists, and left the quarrel where he had found it. It is not till the reign of Charles V. that we find the intervention of royal authority—and that on the side of the laymen. At this time the usurpations of the clergy were more irritating than ever to the laymen, whose discontent found vent in a curious book entitled *Le Songe du Verger*. Charles, who had inspired the book, justified its claims by the Ordinance of 8th March 1372, in terms of which the bishops were in future to have nothing to do with 'real' actions, i.e. with the sale of landed property, heritages, etc., and the royal officers were to prevent, by seizure of temporalities where necessary, all action of the ecclesiastical tribunal in such matters.

The Ordinance of 1372 was the first measure taken by the king of France to stem the flood of ecclesiastical power. It was confirmed, in the reign of Charles VI., by the Bill of 1385. Then came the Ordinance of Villers-Cotterets of 1539, and the Edict of 1695, which restrained ecclesiastical power in other directions. Jurisprudence, on its side, devoted itself to a similar task and obtained important results. In the 17th cent. the State had recovered possession of most of its essen-

tial privileges which had formerly been usurped by the Church. Nevertheless, the clergy still possessed the registers connected with civil affairs, and retained the monopoly of education. It was the Revolution which deprived them of these privileges. On 19th June 1792 the Legislative Assembly decided that births, marriages, and deaths should be registered in the Meeting Hall of the municipality. Several years later, the Convention, and afterwards the Empire, gave the management of education to laymen. The clergy were, by these measures, expelled from two positions which they had held for many centuries. In the course of the 19th cent., however, they had the consolation of partially repairing the losses which the Revolution had inflicted upon them in the domain of intellectual affairs. In 1833 they were authorized to provide, in line with the University, elementary education. To this first authorization a second was added in 1850—that of providing secondary education. Finally, in 1875 they obtained the liberty of providing higher education. The Church, then, even at the present day, may give instruction, but only under State control: education has been secularized.

2. **The authority of the king over the Gallican Church.**—The king of France considered himself head of the Gallican Church, the guardian of its teaching and discipline. We may add that he supervised it in order to prevent the great force at its disposal from being turned against the monarchy. His authority was exercised by several means: the nomination of bishops, the convocation of councils, the *regale*, the taxes, the control of doctrine and worship.

(a) *The nomination of bishops.*—Clovis, Charles Martel, Charlemagne, and some others encountered no obstacle in the exercise of this right. But complaints and grievances made themselves heard not infrequently. These varied according to circumstances. Sometimes they were confined to protesting against the choice of incompetent bishops, and the shameful traffic which went on in this connexion. Such was the attitude of Pope Gregory (in his letters to Brunehaut and to the Frankish princes), of Boniface (742-744), and of the Council of Paris of 829. At other times a return was demanded to the electoral régime which had held sway before the coming of the Franks (Council of Paris of 614, Abbé Wala in the Council of Aix-la-Chapelle of 828, the *False Decretals*, Hincmar, Gregory VII.). Or, again, a compromise was resorted to, and the king was authorized to confirm the choice of the electors (Council of Orleans of 549). It was this compromise which, theoretically, finally prevailed (the first time under Clothaire II. [615], then in the middle of the 9th cent.)—theoretically only, for in practice the elections were corrupted by official candidature. The king thrust his candidate upon the electors; the electoral régime was only a mask to disguise the royal nomination. Moreover, the bishops, before obtaining episcopal consecration, had to receive investiture from the king and take an oath of allegiance to him. This oath of allegiance, however, soon dwindled to a simple promise of fidelity, which, instead of preceding the episcopal consecration, followed it, and so lost much of its value. Nevertheless, during the whole of the 13th cent. the king was still, so to speak, recruiting officer of the episcopate. With Boniface VIII. the Papacy proposed to reserve to itself the nomination of the French bishops, and little by little it made considerable progress in this direction. The Great Schism modified the situation. It was then, in fact, that the French clergy tried to re-establish election, and it succeeded, thanks to the *Pragmatic Sanction* of Bourges, 1438. But its success was

fleeting, for the king gradually recovered lost ground and, in spite of the *Pragmatic Sanction*, nominated his bishops as often as he could. Finally, he completed and consolidated his victory by the Concordat of 1516. From this time onwards the king directed the appointment of the French episcopate under the control of the Pope, who confined himself to giving them canonical orders. This was not a complete return to the tradition of the early Middle Ages, seeing that at that period the nomination of the bishops was completed without any intervention from the Pope; but it was all that the recent increase of Papal power would permit. So in the Concordat of 1801, Bonaparte, who reserved for the civil power the right of nominating the bishops, accepted the conditions prescribed by the preceding Concordat, and granted the Pope the right of confirmation.

(b) *The convocation of councils.*—During the whole of the Merovingian period the councils did not assemble except by order, or, at least, with the authorization, of the king. From this fact arose the formulae which we meet so frequently: for instance, 'A council of bishops assembled in the town of Orleans by order of His Most Glorious Majesty, King Clovis' (Council of Orleans of 511); 'By order of Their Most Glorious Majesties, we assembled in the town of Orleans to deliberate to the glory of God upon the observation of the Catholic law' (Council of Orleans of 533), etc. It was the same in the time of Pépin, of Charlemagne, and of Louis le Débonnaire. But, in 843, the Empire fell to pieces with the Treaty of Verdun. Then the Pope, who had become powerful, took the place of the kings, who were weakened by internal strife. As early as 846 the Council of Paris was assembled by Sergius II., who was on this occasion, however, merely the instrument of the Emperor, Lothair. Several years later, Nicholas I., acting in virtue of the superior rights of the Papacy, convoked the Councils of Metz (863), Soissons (868), and Troyes (867). Yet the Carolingian prince had not renounced the right exercised by his ancestors. He asked his bishops to meet in conciliar assemblies, and they obeyed. At least they still obeyed in 871 (Council of Douzy); for, in 876, it was as 'vicar' of John VIII. and 'in virtue of the Apostolic authority' that Charles the Bald convoked the Council of Ponthion.

To find French councils again convoked by the king of France we must come down to the end of the 10th cent., when we see Hugues Capet assembling the Councils of Saint-Basel near Rheims (991) and of Chelles (993). This action is rendered still more curious by the fact that these Councils supported Hugues in his struggle against Rome. In the 12th cent., King Louis le Gros assembled the Council of Etampes (1130). Then at the time of the Great Schism, Charles VI. convoked in Paris the Councils of 1395, 1398, 1406, and 1408. Next appears the Council of Bourges, assembled by Charles VII. (1438). On this last occasion it was a question of adopting a definite attitude in the struggle which had arisen between the Council of Basel and Eugenius IV. In 1130 it was a case of deciding between two competing Popes. And it is well known that the Councils of Charles VI. had as their object the restoring of Christianity to unity of obedience.

On the whole, the king of France for many centuries did not convocate councils except in times of strife. In normal times he seemed to have forgotten the right which his Merovingian and Carolingian predecessors exercised. Yet, if we look into the matter closely, we find that he had not forgotten it, but had merely modified its use. From 1561 onwards, he periodically assembled the pre-

lates and the principal ecclesiastics of the kingdom to demand money from them. The councils of former times were succeeded by the 'Assemblies of the Clergy,' which were also convoked by the king and charged with finding supplies for the royal exchequer. These 'Assemblies' often relegated to the background the financial questions, which were the only reason of their existence, and concentrated their attention on problems of a theological or disciplinary character. They were, indeed, councils without being called by that name. In 1811, Napoleon, who was at strife with Pope Pius VII., reinforced the old tradition and convoked the Council of Paris.

(c) *The 'regale.'*—The king, who nominated his bishops and convoked the councils, also administered the property of the vacant bishoprics. He took possession of them through the medium of his officers, he managed them, and collected the revenues as long as the vacancy lasted—and it did not expire till the day when the new titular had registered his oath of fidelity at the Court of Accounts. Further, during the whole time of the episcopal vacancy, the king took the place of the bishop and filled up all vacant benefices that the latter had the right to confer. The king's collecting of the revenues of episcopal property during the vacancy was called the temporal *regale*; the collation of the benefices which chanced to become vacant during this time was called the spiritual *regale*. Both are testified to as early as the 12th cent., and no doubt go back still further. For a long time they gave rise to no difficulty. The spiritual *regale* was accepted as the logical consequence of the temporal *regale*, which itself appeared to belong to the king, inasmuch as he was the virtual owner, or, in any case, the guardian, of the property of the Church.

Not infrequently the king's officers plundered the property which they were commissioned to manage. These misdemeanours caused complaints, which found expression as early as 1274 in the second Council of Lyons (can. 12), and from that time onwards they were periodically renewed. As always happened, dissatisfaction did not long remain confined within its original limits. After the abuses of the *regale* had been protested against, a protest was next registered against the *regale* itself. In order to satisfy the complaints of the clergy in the 15th cent., Charles VII. promised to give the proceeds of the *regale* for some time to the chapter of the Sainte-Chapelle in Paris. But this temporary edict, rendered perpetual by Charles IX., was probably only a clever trick to deceive the public. In reality, the king of France, far from depriving himself of his right of *regale*, strove to extend it and introduce it into provinces that had not yet submitted to it. It was thus that Brittany was, after 1598, included under the common law. At the beginning of the 17th cent., four provinces were still exempt, viz. Languedoc, Provence, the Dauphiné, and Guyenne. Louis XIV. put an end to their privilege by the Edict of 1673, which imposed the right of *regale* on all the bishoprics of the kingdom.

The measure of 1598 which brought Brittany under the yoke was accepted without a murmur by the episcopate as well as by Pope Clement VIII. The measure of 1673 was also accepted by Pope Clement X. then reigning, and by all the bishops of the provinces affected except Pavillon, Bishop of Aleth, and Caulet, Bishop of Pamiers. It did not at first seem as if it would be a difficult task to reduce these two to reason; but, contrary to all expectation, they defied the government of the king, and, in 1678, Pope Innocent XI., whose help they demanded, sent to Louis XIV. two briefs of complaint, followed by a third threatening brief

(29th Dec. 1679). Although irritated by the attitude of the Pope, the king attempted to avoid a rupture. He negotiated with Rome, made fair promises, and relied on time to put everything right. But all his diplomacy was set at naught by a fourth brief—that of 1st Jan. 1681—in which Innocent excommunicated the Archbishop of Toulouse and all the ecclesiastics who had sided with this prelate in favouring the introduction of the *regale* into the diocese of Pamiers. Even bishops thought that the Church of France could not let this challenge pass without reply, and the convocation of a General Assembly of the Clergy was decided upon. It met in Paris at the end of October 1681, and opened its proceedings with the eloquent discourse of Bossuet on the *Unité de l'Eglise* (9th Nov. 1681). On 3rd Feb. 1682 it gave a decision in favour of the claims of the king. The same day it advised Innocent XI. to come to terms. The Pope replied by the brief of 11th April, in which he annulled the Assembly's decision; but the brief had no effect.

(d) *The taxes.*—Ecclesiastical wealth was, during the feudal period, the property of the king and the lord who gave the use of it to the bishop. Gregory VII., thanks to the quarrel about the investitures, managed to obscure this idea without absolutely abolishing it. After him and through his influence, the clergy began to foster sentiments of independence which found vent in the maxim that ecclesiastical property is exempt from the royal tax. This maxim, which remained uncontested in theory, was without effect in practice. In 1146, Louis VII., to provide for the expenses of the Second Crusade, imposed a tax on all his subjects. The clergy yielded on this and many other occasions, for Louis returned again to the charge. But they soon grew tired of paying, and in the Council of Tours of 1163 demanded that no subsidies on their property should be deducted without their being previously consulted. Philip Augustus accepted this condition. He asked the clergy for permission to take their money; but he took a great deal of it, notably in 1188 ('Saladin tithe'). Then Rome intervened. In the Lateran Council of 1215, Innocent III. forbade laymen to tax the property of the Church; he authorized bishops, however, in certain grave cases to come to the help of the country, but never without having first consulted the Apostolic See. Henceforth the ecclesiastical 'title'—so called because the king deducted the tenth part of the revenue of the clergy—was a contribution authorized by the Pope, who made this concession public in a Bull. But Philip the Fair, after 1294, freed himself from this humiliating subjection, and demanded a subsidy from the clergy without first obtaining the Pope's sanction. Boniface VIII. then launched the Bull *Clericis laicos*, which forbade princes, on pain of excommunication, to levy taxes on ecclesiastical property without the authorization of the Apostolic See, and prohibited ecclesiastics, under the same penalty, from paying any tax not authorized by Rome (24th Feb. 1296). A year later, Boniface, terrified by the threats of the king of France, retracted (in the Bulls *Romana mater* and *Etsi de statu*, 1297; there was already a veiled withdrawal in the Bull *Ineffabilis amor*, Sept. 1296). But on 5th Dec. 1301, he resumed the offensive by the two Bulls *Salvator mundi* and *Ausculta fili*, in which, as lord of the ecclesiastical property, he forbade all levy of subsidies on that property without his authorization. Boniface, however, was thwarted; his successors apologized to Philip the Fair, and the Bull *Ausculta fili* was suppressed. But further, scarcely had the above dispute begun when Boniface turned it into another channel (the Bull *Ineffabilis* of Sept. 1296) by

claiming to control the political authority of the king of France. It was this claim, accentuated in the *Ausculita fili*, and still more in the *Unam sanctam*, which led to the defeat of the Papacy. As to ecclesiastical property, it remained in the position in which it had been placed by the Lateran Council of 1215. Thus in 1337 we find Philip of Valois demanding tithes from Pope Benedict XII., who did not render them till 1340. And, in 1356, Innocent VI., hearing that the States General of Paris had collected a tithe from the clergy, recalls that 'these impositions are illicit without the permission of the Apostolic See.'

In the middle of the 14th cent., then, the king of France was still theoretically bound to ask permission from the Pope to demand money from the clergy. In practice, however, he had begun to free himself from this bondage; and soon the Popes, taking their cue from a state of things which they could not remedy, ceased to protest. The king, when he taxed the clergy, no longer needed to take Rome into account. But he had to take into account the unwillingness of the clergy, who claimed that the sacredness of their calling placed them above the financial burdens common to the rest of the nation. In 1489, Charles VIII., who had demanded a tithe from the clergy, received nothing. As a last resort, he had recourse to the Pope, and begged him to impose the tithe himself on the Church of France. It was not until the 16th cent. that the clergy finally submitted to the tax. But even then, to protect their principles, they strove to give their contribution an air of spontaneity. They promised the king a gift of money each year for a period of ten years. When the ten years had elapsed, they renewed their agreement for another period of ten years. The king, whose chief desire it was to be paid, allowed this innocent fiction to pass. He seemed to have forgotten the time when, as the owner of the bishoprics and abbeys, he conceded the right of occupying them to those whom it pleased him to make his feudatories.

But, if the king had forgotten the past, others remembered it. In the States General of 1560 the nobility and the *Tiers Etat* declared that ecclesiastical property belonged not to the clergy, who were only the usufructuaries, but to the king, and that he could in consequence transfer it. This idea was expressed in 1639 by Richelieu; in 1749, by the Comptroller of Finance, Machault. In 1788 the Minister of Justice formulated it again. Finally, in 1789 the *Assemblée Constituante* adopted it and everything it involved; the property of the Church was given back to the nation, which indemnified the ecclesiastics by giving them a salary.

(c) *The control of doctrine and worship.*—The king of France looked after the purity of faith and discipline. In 556, Childebert, hearing that Pope Pelagius had become implicated in the affair of the *Three Chapters*, submitted him to two successive examinations on orthodoxy, to which the Pope willingly consented. In the middle of the 8th cent., Pépin le Bref, on the advice of Boniface, abolished the Gallican liturgy and substituted for it the Roman liturgy; Charlemagne completed the work begun by his father, and in addition assembled several councils to deal with the Adoptianist heresy. In 811 he commanded all his archbishops to set forth in writing the true doctrine on the subject of baptismal vows. In 813 he commissioned the councils to work towards the reform of the customs of the Church. In 790, since he was of opinion that the Second Council of Nicæa and Pope Hadrian had taken up a wrong attitude on the question of images, he ordered their arguments to be refuted in the *Caroline Books*. He governed the Frankish Church.

The disorders which closely followed his death

put an end to this state of affairs for a long time. For several centuries the king of France, weakened by feudalism, and kept in check by the triumphant Papacy, gave up all attempt to hold that place in the Church which his predecessors had occupied. It was not until the middle of the 13th cent. that he again claimed the right of control in the domain of religion. It was Saint Louis who formulated this claim. His demand was but a modest one. Summoned by the clergy to force all excommunicated persons to give satisfaction to the Church, he was quite willing to obey, but on condition that the justice of the sentences should first be examined (1263). Forty years later, Philip the Fair went still further. He desired Clement v. to admit that Boniface VIII., in his dispute with the king of France, had been guilty of abuse of power. He obtained entire satisfaction, for Clement confirmed the absolution which his predecessor Benedict XI. had already granted Philip, annulled all the innovations contained in the Bull *Clericus laicos*, and exempted France from the orders contained in the Bull *Unam sanctam* (1305).

Since the time of Charlemagne, however, no king of France had penetrated the domain of doctrine properly so called. Philip of Valois renewed the tradition.

Hearing in 1333 that Pope John XXII. held very questionable views on the subject of the Beatific Vision, he consulted the most enlightened scholars, and received information from them as to the position of the matter; then, when he was thoroughly convinced on the subject, he wrote to the Pope and demanded that he should abandon the false position he had taken up (1334). In a word, he defended orthodoxy against the Pope.

Two centuries later, Philip's successors fulfilled their task with great vigilance. Protestantism had made its appearance in France; the object now was to get rid of it.

Francis I. proceeded with great vigour against heretics and had them burned at the stake (from 1534). His son, Henry II., was still more ferocious (Edict of Chateaubriant, 1551). Catherine of Medici, after having accorded the Protestants a provisory liberty by the Edict of Jan. 1562, had them massacred on St. Bartholomew's Eve (1572). Henry IV. promulgated in their favour the Edict of Nantes (1598), which guaranteed them safety; but this Edict was revoked by Louis XIV. in 1685. Not until the eve of the Revolution did Protestants recover their liberty (Edict of Louis XVI. of 14th Nov. 1787).

While the king of France was striving to preserve his subjects from heresy, he was attempting at the same time to free them from the yoke of Rome. It was towards this goal that the institution of the *placet* tended—a measure which subjected to royal authorization the circulation of Papal Bulls in France. In the memorandum of 1247, Saint Louis complained bitterly of Papal administration and of the harm it did to the French; but at the same time he took no measures against this scourge. In 1302, Philip the Fair burned the Bull *Ausculita fili*; this is an example of a violent *placet*. In 1423, Charles VII. placed an interdict on all the Papal Bulls which granted benefices in France: here we have the *placet* raised to the height of a legislative act. This act of legislation was developed by Louis XI. (Ordinance of 1475); after this date it was made use of by all succeeding governments in France down to 1870. It was on it that Catherine of Medici, Henry III., and Henry IV. relied when forbidding the acceptance of the decrees of the Council of Trent relating to reform. In 1639 the King's Council had recourse to it in order to set aside a decree of the Parliament of Bordeaux, which had registered briefs from Rome. In 1802, Bonaparte inserted it in the *Organic Articles* which followed the Concordat. In 1865, Napoleon III., taking as his authority the *Organic Articles*, forbade the French bishops to publish the Syllabus.

The king of France, who supervised Rome, also supervised her bishops and priests. He repressed the Jansenist theories which were spreading among

the clergy; he repressed the quietism of Fénelon. Although, as a rule, he only seconded the action of the Pope, sometimes he anticipated it.

In 1697, Louis XIV. asked Innocent XII. to condemn Fénelon. In the following year (Dec. 1698) he reproached the Pope with his slowness, and declared that he desired without further delay a 'clear and well-defined' condemnation. Some months later (March, 1699), hearing that Rome was trying to conciliate Fénelon, he expressed his violent displeasure with the Pope, and ordered him imperiously to do his duty. Finally, he had the joy of seeing the Pope obey, and launch against the Archbishop of Cambrai the condemnation which had been extorted from him. In 1705 he again pestered Rome, and demanded from Clement XI. a solemn Bull against the Jansenists. Clement, like Innocent XII. before him, yielded, and drew up the Bull *Vineam Domini*. Being pressed by the king a second time to issue a Bull against Quesnel, he again obeyed, and drew up the Bull *Unigenitus*.

The anxiety which the civil power evinced to maintain orthodoxy took an unexpected turn in the 18th century. Parliament then protected the Jansenists, and protected them against the clergy, who, from time to time, refused these unfortunate men the last sacrament when they were dying. Each time that an act of this kind came to the knowledge of Parliament, they condemned it and forced the bishops either to dispense the last sacrament themselves or have it dispensed by their priests to all Christians who asked it. In 1731, Parliament drew up a measure in this direction, which was followed by other measures of a similar kind in 1749 and in 1752. The king tried to resist; but his resistance, though energetic at first, gradually grew weaker, and finally he capitulated. After 1754 the refusal of the sacrament to Jansenists who asked for it was forbidden by civil law.

3. Seizure of temporalities: appeal by writ of error.—In the exercise of the rights which he possessed over the Church of France, the king was often in conflict with the clergy. He was then reduced to employing violent measures, the chief of which was the seizure of temporalities.

In 869, Charles the Bald, to avenge himself on Hincmar of Laon, confiscated the property of his church. In 1092, Philip I., who was dissatisfied with Yves of Chartres, gave the belongings of his bishopric over to plunder. In 1107 the same king pillaged the property of the church of Rheims to avenge himself for the insult that had been done him in the rejection of Gervais, his candidate for this church. In 1142, Louis VII. prevented Pierre de la Châtre from taking possession of the bishopric of Bourges. In 1232, Blanche of Castille seized the temporalities of the Archbishop of Rouen, of whom she had cause to complain, and resisted Pope Gregory IX. when he tried to make her yield. In 1302, Philip the Fair seized the temporalities of the bishops who had gone to the Council of Rome in spite of his prohibition.

Towards the end of the Middle Ages the seizure of temporalities was divested of the brutal character which it had possessed for several centuries; it was preceded by a legal act which was called the appeal by writ of error. Of obscure origin, this appeal by writ of error came into more extensive use after the *Pragmatic Sanction* of 1438. It gained full force in the time of Jansenism.

Under Louis XV. the appeals by writ of error were frequent and effective. The curé of Paris, Bouettin, was put in prison (1749). The Archbishop of Paris, de Beaumont, and the Archbishop of Aix were exiled. The Bishops of Vannes and Nantes submitted to the penalty of confiscation (1754).

In 1802 the appeal by writ of error was inserted by Bonaparte in the *Organic Articles* which followed the Concordat: 'There will be recourse to the Council of State in all cases of abuses on the part of superiors and other ecclesiastical persons.' It remained in force till the day when the law of separation put an end to the Concordat (1905).

It has been said that royal Gallicanism was hateful to the clergy. It could not help being so from the fact that it proposed to limit the power of the ecclesiastics and put an end to their encroachments. In the 9th cent., Hincmar of Rheims presented a long memorandum to Charles the Bald, in which he accused the king of France of having, by his conduct with regard to the Bishop of Laon, violated the privileges of the clergy. Complaints of the same nature were

brought by Pope Gregory IX. (1232, 1233, 1238), by the Bishop of Angers, Guillaume Lemaire, in petitions addressed to Philip the Fair (1294 and 1299), and by ecclesiastical orators of the *Assembly of Vincennes* (1329). The clergy claimed that their 'liberties' had been crushed by civil society, and were determined to defend them. But civil society also claimed a right to defend her liberties against the invasions of the clergy. The disputants were thus quite irreconcilable. The controversy became still more grave from the day when Pierre Pithou published his treatise on the *Libertés de l'Eglise gallicane* (1594), which Dupuy completed by the *Preuves des libertés de l'Eglise gallicane* (1639). Emboldened by this exposition of the rights of civil society, Parliament took measures for the defence of the laymen, which did not meet with the approval of the clergy. Fénelon writes that 'the liberties of the Gallican Church are real servitude' (letter of 3rd May 1710 to the Duke of Chevreuse). Bossuet declares that the liberties claimed by the clergy have nothing in common with the liberties of which the magistrates talk (*Defensio declarationis*, ii. 10; letter of 1st Dec. 1681 to d'Estrées). In the middle of the 18th cent. the complaints became more bitter. In 1755 the Assembly of the Clergy denounced Parliament before the king for having arrogated to itself the right of legislating on the administration of the sacrament. In 1765 the Assembly published a theological dissertation entitled *Actes du clergé* to prove that the teaching of religion and the administration of the sacrament are not under the control of laymen. It will be seen later what the attitude of the episcopate was in 1790 with regard to the Civil Constitution. After the Revolution, the clergy accepted the situation laid down by the Concordat of 1801, and confined themselves to raising intermittent protests against the *Organic Articles*. But the hope of recovering the advantages of the past has led many of the clergy to take part in the attempts to restore the monarchy which have been made since the war of 1870.

II. EPISCOPAL GALLICANISM.—Episcopal Gallicanism imposes two limits on Papal authority: the one, from the side of the monarchy, rescues political authority from Pontifical jurisdiction; the other, on the side of the General Council, places the latter above the Roman Pontiff. It comprises, then, two fundamental maxims, which may be stated as follows. (1) The Pope may neither depose kings nor exempt their subjects from the duty of obedience; in other words, kings are independent of the Pope. (2) In the domain of spiritual things the supreme authority belongs to General Councils and not to the Pope, who, on the contrary, must obey their canons. It would occupy too much space to illustrate these two maxims in full historical detail; consequently we shall study Episcopal Gallicanism only from the year 1682 onwards.

We have seen (above, p. 159) that the Assembly of the Clergy of 1682 was brought together to solve the matter of the *regale*, and that it gave full satisfaction to the king on this point (3rd Feb. 1682). It must be noted here that the prejudices of the clergy carried them still further. They saw in the dispute between the French monarchy and Rome an opportunity for cutting short in a painful but salutary way the doctrinal and juridical pretensions of the Papacy; and they did not mean to let this opportunity slip. 'The Pope laid hands on us, he will repent of it,' said de Harlay, Archbishop of Paris; and this expressed the sentiment of the other prelates. They wished it to be understood that Pontifical omnipotence was rejected by the Church of France; and, in

order that Rome might not remain in ignorance of this fact, they charged Bossuet to draw up, in the name of the whole French clergy, a profession of faith combating this omnipotence. They intended the statement to be violent and radical—schism was hanging in the balance; but Bossuet drew it up with calculated moderation. This document was the famous *Declaration of 1682*. It comprised four articles, of which the following is the substance. (1) Popes may not depose kings, for the reason that their authority concerns only things spiritual and does not extend to things temporal. (2) Even in the domain of things spiritual, the authority of Popes does not extend beyond the limits fixed by the Council of Constance. (3) In so far as it is legislative and judiciary, this authority is—conformably to the decisions of the Council of Constance—limited by the canons and also by the usages and constitution of the kingdom of France. (4) In so far as it is doctrinal, it is subordinate to the judgment of the Church, which may reform it.

The Church of France rallied round her king. The king, to show his gratitude, established the Declaration as a law of the State, and made the teaching of it compulsory throughout the kingdom (Edict of 20th March, 1682, registered 23rd March). The French clergy and their king offered combined resistance to Rome. But Rome well knew how to return the blows which were dealt her. Innocent XI.'s first idea was to condemn the Declaration (Bossuet, letter of 28th Oct. 1682 to Dorois; letter of 30th Oct. to de Rancé); but, changing his tactics, he decided to refuse canonical institution to those among the new bishops who had, as simple priests, sat in the Assembly of 1682. By this boycott he hoped to force the king to withdraw his edict. But the king, by way of retaliation, forbade those among the new bishops whom the Papal measure did not affect to provide themselves with their Bulls of investiture.

The hostilities, opened in 1682, had lost nothing of their acuteness in 1688. They were even more violent than ever, for it was at this date (24th Sept. 1688) that Louis XIV. ordered the Procurator General to lodge an appeal with the coming Council against all the procedures taken or to be taken by the Pope against him. The Church of France was not a handsbreadth from schism. But, at this moment, the king, who was at war with the whole of Europe, was obliged to have recourse to political intrigues of which Rome alone could ensure the success. And then he remembered very opportunely—his counsellors recalled it to his memory—that he owed to the Concordat of 1516, i.e. to an agreement with Rome, the right of nominating his bishops himself, and that a schism, by restoring the episcopal elections so highly recommended by the *Pragmatic Sanction*, would favour the emancipation of the clergy. Obedient to the voice of his own interest, he conciliated the Pope and entered into negotiations with him. His first advances, the motive of which was clearly discerned at Rome, were coldly received; and, further, Alexander VIII., the successor of Innocent XI., annulled the Declaration without, however, branding it with any censure (30th Jan. 1691). Finally, under Innocent XII., matters were arranged. In a letter addressed to the Pope (14th Sept. 1693), Louis XIV. renounced his edict; in other words, he gave up making the doctrine of the Declaration compulsory. The same day those of the nominated bishops who had taken part in the Assembly of 1682 sent a letter to Rome, the ambiguous and cleverly chosen expressions of which might be construed either as a doctrinal retraction or as a simple apology. Innocent XII. was content to let bygones be

bygones, and refused no one canonical investiture.

Peace had been made; but each of the rival parties held to its old position. In 1695 the Spanish prelate, Rocaberti, made a violent attack on Gallicanism in three volumes, to which Rome gave approving briefs. Immediately Bossuet presented a memorandum to Louis XIV., in which he proposed that the king should forbid the sale of Rocaberti's work in France and demand from Innocent XII. 'explanations as to the intention of his briefs.' By a royal edict of 20th Dec. 1695, the sale of Rocaberti's book was forbidden. The Pope probably did not explain why and in what sense he approved of the work. In return, eighteen years later (1713) he asked the king for explanations as to the freedom with which Gallican maxims were circulating in France. The king replied that he had in 1693 given up enforcing these maxims as laws of the State, but that he had never undertaken to interdict them. Bossuet, who in 1682 had undertaken the *Défense de la Déclaration*, laboured till the end of his life to complete this important work. Fénelon, who strove to conciliate Rome, admitted nevertheless that she had 'too great pretensions' (letter of 3rd May 1710 to the Duke of Chevreuse); he even maintained that the Popes 'had desired to crush the episcopate' (*De summi pontificis auctoritate*, 4). And in 1705 the Assembly of the Clergy, called to receive the Bull *Vineam Domini*, adhered to it only after having submitted it to a thorough examination.

From all these and other indications, Rome could see that the French episcopate had, at the beginning of the 18th cent., remained faithful to the doctrines of the Declaration of 1682. But a new proof of this was given in 1728. At this date Pope Benedict XIII. extended to the Universal Church the observance of the festival of Gregory VII., and inserted in the breviary prayers for this Pope—most warlike prayers, in which Gregory was lauded for having deposed the Emperor Henry IV. On 27th July 1729 the Parliament of Paris—followed shortly afterwards by the Parliaments of Brittany, Metz, and Bordeaux—passed a statute suppressing the leaf containing these prayers, and prohibiting its use in public under penalty of the seizure of the temporalities of the Church. Six Jansenist bishops hastened to take advantage of this occasion to rebel against Rome. They joined the campaign of Parliament, and solemnly condemned the cult of Gregory VII. The great majority of the episcopate, without being so violent, were equally unprepared to submit to it. They did not condemn the cult of the Pope who had deposed Henry IV., but they rejected it as well as the prayers which had come from Rome. It was a case of revolt; but, instead of being violent like that of the Jansenists, it was silent (see, in the Assembly of the Clergy of 1730, the address to Louis XV.).

In 1790 the *Assemblée Constituante* established the *civil constitution* of the clergy, which broke the Concordat of Francis I., and reinforced the *Pragmatic Sanction*, but at the same time suppressed several bishoprics, overturned the dioceses, and restrained the authority of the bishops. This new state of affairs was in accordance with the wishes of the lesser clergy and of the *tiers état*. But the bishops, with four exceptions, began to wage war against it. To give to their hostility an air of disinterestedness, they discovered most opportunely that the spiritual jurisdiction of the Pope over the Church of France was a dogma, and they defended their action under the name of orthodoxy. These clever tactics made an impression on the people, and even on a considerable

part of the lesser clergy. By their means, the civil constitution of the clergy was rejected with horror by pious laymen, and in the ecclesiastical world it did not gain the support of more than a third of the cures. Eleven years later, when Bonaparte concluded the Concordat of 1801 with Rome, it was seen what the theological dissertations of 1790 were worth. Many of those bishops who were so attached to the Pope when their own interest demanded that they should rally round him refused to resign their office for Pius VII., when he required them to do so (15th Aug. 1801). Thirty-six out of the eighty remaining bishops rose in rebellion against Rome. And, among those who gave up their property, more than one did so on a promise of advancement.

The episcopate of Napoleon I. was Gallican, and so were his clergy, with a few exceptions, amongst those of lower rank. Sixty years later, the French bishops and priests rejected most of the maxims of 1682. In the space of two generations the Church of France had changed its point of view. The evolution began from the bottom, with the clergy of the second rank. The principal workers were Lamennais, the Jesuits, and Veuillot. The work of Lamennais was violent and brilliant. That of the Jesuits was silent, hidden, but more profound. Yet it was not more profound than that of Veuillot, who from 1839 onwards, through the medium of the daily paper, *L'Univers*, never ceased from inculcating the maxims of Rome into the mind of the clergy. The Concordat of 1801, by the prestige it gave to the Pope, may have had a certain influence, which, however, some historians have exaggerated. Finally, the books of Joseph de Maistre, *Du Pape* and *L'Eglise gallicane* (1820), did not fail to render some service to the Papacy.

Whatever was the reason, when the Vatican Council assembled (Dec. 1869) the Gallican doctrine of the superiority of Councils over Popes had only a small number of defenders in France, the best known of whom were Darboy, Archbishop of Paris; Dupanloup, Bishop of Orleans; Maret, Titular Bishop of Sura and Dean of the Faculty of Theology in Paris; Gratry, oratorian and member of the French Academy; Loysson, Carmelite and preacher at Notre-Dame in Paris; Montalembert, a layman. These defenders were vanquished, for in its fourth session (18th July 1870) the Vatican Council assented to the Pope's infallibility and full jurisdiction over the whole Church. Henceforward Episcopal Gallicanism became a heresy, and its upholders had either to repudiate it or leave the Catholic Church. Loysson chose the latter course, and tried unsuccessfully to found a national Church. A few priests left the ranks of the Catholics and took refuge in Switzerland, where they were admitted into the party of the Old Catholics. Montalembert died before the decision. The other Gallicans submitted to the Vatican Council. Episcopal Gallicanism was dead, and in its place the maxims of Rome reigned. As a matter of fact, these maxims have since made some concessions to circumstances. Pontifical omnipotence, which, before the French Revolution, embraced the political as well as the religious world, has, since the Revolution, allowed the political world to slip from its grasp. The Popes of the 19th cent. did not talk of deposing kings. No doubt they did not renounce the right, but they no longer exercised it (Pius VII., who excommunicated Napoleon in 1809, says in his Bull that he does not mean to pass judgment against temporal power and the obedience of subjects); they did not even dare to formulate it except in terms which were purposely vague (Proposition xxiv. of the Syllabus). On the whole, it may be said that French Catholics—like those of

other countries—think that they may be Gallican on this point without violating orthodoxy.

LITERATURE.—A. INDEPENDENCE OF KINGS IN THEIR RELATION TO THE PAPACY.—O. Delarc, *Saint Grégoire VII. et la réforme de l'Eglise au XI^e siècle*, 3 vols., Paris, 1889-90; P. GAMBLING.—I. Diffusion of the practice.—Games of chance are as old and as wide-spread as humanity (see art. GAMES). They are probably derived from the various methods of divination (*q.v.*) by which primitive man seeks to gain knowledge of the future, some of them serious, like the throwing or drawing of lots; some of them more playful, like the Greek *kottabos* and the 'willow bough' (Hall Caine, *Manzanar*). The game of chance is a kind of secularized divination. In order to give zest to the game, the players stake some possession on the turn of chance. The N. American Indians bet on the different colour of pips or stones, the Siamese on the musselfish, whether the opening turns upwards or downwards; the Greeks already in Homer had their *ασπάγαια* (knuckle-bones from the hinder feet of sheep, goats, and calves) marked with numbers on four sides to serve as dice. Later came the six-sided dice (*κόβαι*, derived, according to Hyde, from Arab. *qāb*, *qa'b*). Among the Romans, children played at 'heads or tails' (*caput aut navis*) with coins; there was also dice play, and the game of *morra* (*micare digitis*). Knuckle-bones are found in Egyptian excavations as far back as the XVIIIth dynasty,

and imitation knuckle-bones for gaming purposes were made of glass and shell. A gaming-board of gold and silver inlaid with crystal, ivory, and *kyanos*, discovered in Crete, dates back to between 1800 and 1650 B.C. Six-sided dice have also been found in pre-historic remains of Hradischt in Bohemia. In Babylonia, headless arrows were used for gaming as well as divination ('belomancy,' Ezk 21²¹); these have a very wide distribution over both hemispheres. The principle of the roulette is found in the spinning coco-nut (Tylor, *PU* i. 80) and the spinning dice of the Chinese. Card games are a later introduction; they give scope for calculation and skill. There is no mention of gambling among the Israelites until the days of the Exile (Is 65¹¹ 'forsaking Jahweh and forgetting my holy mountain, preparing a table for Luck and filling up mixed wine to Fortune'; cf. FORTUNE [Biblical and Christian]). The Israelites used the drawing of lots to ascertain the Divine will in regard to such matters as assignation of lands (Nu 26⁵⁴), choice of an officer (Ac 1²⁶), determining the rotation of office (1 Ch 24⁵, Lk 1⁹), or to identify an offender (Jos 7¹⁵, 1 S 14⁴², Jon 1⁷); but, so long as they remained agricultural, they seem to have been singularly free from the evil of gambling. In Babylon they became mercantile, and mixed with people among whom games of chance were part of regular ordinary life. The gambling habit infected the purity of the early Christians. Instruments of gambling are found in their tombs. Councils of the Church forbade it to the clergy. Christian preachers denounced it as worldly. 'If you say that you are a Christian when you are a dice-player, you say you are what you are not, because you are a partner with the world' (cf. Tertullian, *de Spectaculis*, xvi.; Clem. Alex. i. 325 [Charles's tr.], p. 29 [Potter's tr.]).

On the Aryan races gambling has had a special hold. A famous hymn of the Rigveda (x. 34) vividly sets forth the woe of the ruined gambler, and the length to which gambling was carried in India is well illustrated by the episode of Nala and Damayanti in the *Mahābhārata* (iii. 59-61) where the prince loses all that he has. The Sanskrit drama *Mrchehhakatikā* (tr. Ryder, *The Little Clay Cart*, Cambridge, Mass., 1905) contains in its second act a lively picture of a gambler's quarrel, and Sanskrit literature abounds in allusions to the evils of play (Böhtlingk, *Ind. Sprüche*, St. Petersburg, 1870-73, nos. 615, 750, 1246, 1618, etc.; on gambling in ancient India generally, see Zimmer, *Altind. Leben*, Berlin, 1879, pp. 282-287; von Schroeder, *Mysterium und Mimic im Rigveda*, Leipzig, 1908, pp. 377-395; Lüders, *Würfelspiel im alten Indien*, Göttingen, 1907). For Greece, reference may be made to the picture of the ruined gambler presented by Alciphron (iii. 42). Greek boys gambled away their mothers' money (Herondas, *Mimes*, 3; Isocrates, *Areiop.* 149 CD). The Germans, according to Tacitus (*Germ.* 24), when they had the dice in their hands, knew no bounds, and were ready to gamble away even that which they valued above everything else in the world, their personal freedom. Generally speaking, it may be said that gambling has its chief hold on races which exist by hunting, and also on the pastoral, military, and mercantile types of culture. These modes of life are by nature less stable, and seem to generate a craving for sudden and exciting reversals of fortune, without which life seems colourless. The peasants, on the other hand, who have to work hard and steadily for their sustenance, are comparatively free from the habit.

2. Motives of gambling.—The demonic power of the passion seems due to three main causes: (a) the desire for gain, (b) the desire for excitement,

(c) the instinct of combativeness.—(a) *The desire for gain.* Human nature is impatient of the delays of regular work. It wants to acquire at one stroke, without trouble, and without the laborious accumulation of little by little.—(b) *The desire for excitement* is in one sense a revolt against the narrowness, the limitations, the ordinariness of existence. Man craves for intensified life; and gambling, with its risk, its suspense, its thrill, its hope, and its shock of surprise, supplies all the necessary catastrophic elements. Hence it is, on the one hand, the last resource of the *blasé* who wishes to goad his jaded senses; and, on the other hand, the outlet of the energetic and adventurous nature which finds ordinary peaceful existence too humdrum and lacking in sensation.—(c) In betting, a man backs his own powers, his judgment, or his luck. In a game of pure chance men *pit themselves against each other*, and, if there is no deception, each has an equal chance.

'If Hercules and Lichas play at dice
Which is the better man, the greater throw
May turn by fortune from the weaker hand:
So is Alcides beaten by his page'
(Shakespeare, *Merchant of Venice*, II. 1. 32).

Even when all seems lost, a sudden overmastering victory is still possible. Success lends a sort of supernatural glory to the winner, who is regarded as a 'favourite of fortune'; defeat does not wound the self-respect of the loser.

3. Cost of gambling.—The extent to which gambling prevails at the present time is difficult to assess with any approximation to accuracy. Most of it is centred in horse-racing. J. M. Hogge (*The Facts of Gambling*) calculates that, allowing for Sundays, there are only 10 days during the year in which there is no horse-racing of some kind in England. On every other day there are either one or more steeplechases or flat races. In all, there is an equivalent of 542 days' racing in the year. The amount of money which changes hands can be estimated only indirectly. The returns from the *totalisateurs* on two race-courses at Paris come to £5,000,000 yearly. The total amount of money betted through the *totalisateurs* in France is stated as £13,000,000 for the year 1910. It is within the mark to assume that there is, in England, at least three times the amount of racing that there is in France, so that a very moderate estimate of the betting on English race-courses would be twice the French total, viz. £26,000,000. But for every bet made on the race-course, there are probably two made by those who are not present, on the 'starting-price' system, so that, if the amount spent on the race-course is doubled, we have a moderate estimate of the amount of money which changes hands in gambling on horse-racing alone, viz. £52,000,000 per annum. To this must be added the coupon-betting on football, which is diligently fostered by many newspapers and weekly journals, especially in the North, under the guise of 'Skill Competitions.' A great deal of betting goes on also in connexion with professional bowling, cycle-racing, and other sports. There are the 'gambling schools,' chiefly found in the mining districts, where a glorified kind of pitch and toss is played on a large scale, and everything depends on the spin of a coin. There are, again, all the private bets, and the money which changes hands over cards, especially Bridge. On the whole, it may be safely asserted that little short of £100,000,000 changes hands every year in England in connexion with gambling transactions.

When money changes hands it is clear that the winners do not gain as much as the losers lose. At Monte Carlo the rate of profit made by the Bank works out, according to the published Balance-Sheets, at 1·4 per cent of the turnover. Stock-

brokers charge usually 25 per cent. In horse-racing the percentage is much higher, and in football betting, according to Ainslie Robertson (see *Literature at end*), the brokerage charge is more exorbitant still. It is, therefore, clear that, if one keeps it up long enough, the element of probability will even itself out. Any one, however long his purse, is bound to be ruined by the mere continual payment of brokerage. The brokerage mounts up steadily with the amount of play and eats up the gains, which have no tendency to increase with the amount of play.

That the practice is on the increase is clear from the large amount of space devoted by the evening and morning papers to the publication not merely of sporting but of betting intelligence. There is also a notable increase in the number of papers devoted entirely to sport, many of which circulate only through the post. At the time of the 'Limerick' craze, no fewer than 170,000 sixpenny postal orders were issued in one day, and one publishing firm received £41,586 in a single month in connexion with Limerick competitions.

Gambling has exploited most successfully for its own propagation the improved means of intercourse afforded by modern civilization, viz. the Post Office, the Telegraph, and the Printing Press. It exploits also the work of the schools, for without universal education it would be unable to carry on its business.

4. Legislation affecting gambling.—The vicious tendency of gambling has never been called in question. Lord Beaconsfield spoke of it as 'a vast engine of national demoralization.' Side by side with the betting odds and betting tips, the newspapers record the tragic results on those who yield to the temptation. In 12 years (1895-6 to 1906-7) there were 156 suicides or attempted suicides in England assigned to this cause, as well as 719 cases of theft or embezzlement, and 442 bankruptcies. In view of these facts, it is not surprising that, in all civilized countries, gambling is subjected to definite legislative restraints.

The earliest English statute in 1542 prohibited 'sundry new and crafty games' of a gambling nature, and prescribed that no folk of the working class should 'play at the tables, tennis, dice, cards, bowls, clash, cloyting, loggetting or any other unlawful game.' The purpose of this statute was to arrest the decay of archery, but the preamble alludes also to impoverishment, crime, neglect of Divine service. The first act directly aimed at gambling, apart from playing games, was in 1665. In 1698 lotteries were made illegal. Other Acts were passed in 1710 and 1751. The Acts of 1845 and 1853 were directed towards the suppression of public gaming-houses (though they did not touch private clubs like Tattersall's). Also, in 1854, it was made an offence to publish advertisements showing that a house was kept for the purpose of betting. The Act applied only to ready-money betting, and did not cover bets by letter, telegram, or telephone. The Act of 1868 prohibited the playing of pitch and toss in the streets, which had become a nuisance in the colliery districts, and the Vagrancy Act of 1873 extended the prohibition to all kinds of betting and wagering in public places. Municipal Boroughs and County Councils in some cases adopted by-laws for the repression of betting in public places. In 1892, Lord Herschell's Act made it a misdemeanour to send to an 'infant' any paper inviting him to enter into a betting or wagering transaction. In 1901 a Select Committee of the House of Lords was appointed 'to inquire into the increase of public betting among all classes, and whether any legislative measures are possible and expedient for checking the abuses occasioned thereby.' The inquiry brought to light the enor-

mous increase in the numbers of the professional bookmakers (estimated at over 20,000), and in the practice of betting among working classes—a practice which, when carried to excess, they found to be opposed to the true interests of sport, injurious to the general community, and apt to degenerate into one of the worst and most mischievous forms of gambling. The Committee considered that the best method of reducing the practice was to localize it as far as possible, by restricting it to race-courses and other places where sport is carried on. With a view to effecting this, they considered the advisability of (a) the licensing of bookmakers, and (b) the establishment of the *totalisateur* system. But they rejected these expedients, because either would imply legal recognition of the bookmaker, and necessitate the making of betting debts recoverable by law.

The law does all it can to discourage gambling, without attempting the impossibility of prohibiting it. Betting or gambling in a private house has never been treated as an offence at law, but no gambling debt can be enforced at law. The contract is void; it is not illegal. In bankruptcy, all claims of 'debts of honour' are struck out. All moneys deposited as cover before an event with turf commission agents or bookmakers having an address in the United Kingdom, whether deposited with them or with their bankers, can be recovered with costs (*Lennox v. Stoddart*, and *Davis v. Stoddart*, 1902).

The present state of the law in Great Britain is defined by the Street Betting Act of 1906. The object of the Act is to suppress betting in streets and public places. It is a criminal offence to frequent or loiter in a street or public place for the purpose of bookmaking, betting, wagering, agreeing to bet or wager, paying or receiving bets, or settling bets. This applies to all persons, whether acting for themselves or on behalf of another. Any constable may take into custody, without a warrant, any person committing an offence under the Act, and may detain all books, cards, papers, and other articles relating to betting which are found in such person's possession. The public places coming within the definitions of the Act include all regular football and cricket fields, and generally places where outdoor sports are carried on. But race-courses and the ground adjacent are exempt from the operation of the Act on the days when horse-races take place. The exemption applies only to horse-racing. The penalty for a first offence is a fine not exceeding £10; for a second offence, not exceeding £20; for a third or any subsequent offence, (a) under the Summary Jurisdiction Acts the penalty is a fine not exceeding £30, or imprisonment with or without hard labour for a term not exceeding 3 months; (b) on conviction on indictment, the penalty is a fine not exceeding £50, or imprisonment for a term not exceeding 6 months, with or without hard labour. It is made a special offence to bet with any person under 16 years of age; and, if it is proved that any person, whilst committing an offence under the Act, had 'any betting transaction' with a person under 16 years of age, he is to be treated as an offender for the third time, and is liable to the penalties above scheduled.

The Betting and Gambling Bill of 1912 proposed to suppress all gambling advertisements, and betting tips in newspapers and other publications; also all incitements to gambling by means of football coupons and gambling competitions.

Among the Redjang of Sumatra, gambling is prohibited—excepting cock-fights at certain times—under penalty of a fine of \$50, a sum which is also exacted from a householder who permits gambling on his premises. Games of chance are for-

bidden in China; the keeper of a gambling house is liable to punishment, and his establishment is confiscated by the State; while in older Japanese law the gambler appears to have been liable to capital punishment. Islamic law forbids gambling. On the other hand, gambling agreements were valid in Aztec law if the parties making the agreements were legally competent to enter into compacts of any nature. By early Teutonic law, gambling agreements were legally valid—a situation which changed only by degrees to strict prohibition. See, in general, Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–95, ii. 412 f., 684 f., and the literature there cited.

5. *Ethical bearings of gambling.*—That the results of immoderate gambling are deplorable, no one will dispute. But, apart from the effects, it remains to inquire into the morality of the act in itself when kept within bounds. *Usum non tollit abusus.* The economic aspect needs no discussion. Gamblers add nothing to the wealth of the community. They may claim that gambling provides a form of recreation and pleasure which is not only legitimate but helpful, so long as the sums staked are such as a man can afford to lose. But (a) such a contention draws a line of distinction between rich and poor; what is right for the rich man is pronounced wrong in the case of the poor man. (b) The argument implies that the wrongness of gambling consists in losing the money staked; it is right, if one wins, because one can afford to win; but it is wrong, if one loses, because one cannot afford to lose. Any argument based on prudential grounds is only an appeal to enlightened self-interest, and the spirit of selfishness cannot cast out selfishness. (c) Though it is in society that the temptation comes, gambling itself is anti-social. It is, as Herbert Spencer says, a kind of action by which pleasure is obtained at the cost of pain to another. The happiness of the winner implies the misery of the loser. This kind of action, therefore, is essentially anti-social; it sears the sympathies, cultivates a hard egoism, and so produces a general deterioration of character. It is a habit intrinsically savage (see his *Ethics*, pt. iii. ch. 7, 'Amusements,' § 227; *Facts and Comments*, 'Essay on Rebarbarisation'). In an atmosphere of brotherhood no form of gambling could exist. In some cases, success appears to depend on superiority of judgment; but this is fallacious. It is never possible to be certain of a result, because all the factors which go to produce that result are not known. When the odds are 4 to 1 on a horse winning a particular race, and these odds are supposed to be 'fair,' the man who accepts the adverse odds does so because he relies upon the unknown factors of the problem; in fact, his appeal is to the unknown and incalculable element in human affairs, which men call chance. The appeal to chance implies a negation of all the nobler powers of man—reason, skill, the sense of justice and responsibility. In the habitual gambler, these higher faculties, through disuse, become atrophied, and his life, out of touch with honest labour, intoxicated by the excitement of his favourite passion, becomes besotted and depraved.

The Christian view of property exacts a still higher standard. Though in relation to his neighbours each man may be regarded as the proprietor of his goods, yet in relation to God he is only a steward. This higher view, by destroying the right of property relatively to God, gives the true basis for its use in the relations between man and man. A man may not claim to do as he likes with his own, because what he possesses is not his own, and he must render exact account for his use of it; he must also respect the property of his neighbours, because it does not belong to his neighbour, but to God, who entrusted him with it.

It has been urged that Herbert Spencer's condemnation applies only to the after effects of gambling, and not always then, because many losers feel no 'pain,' being so well off that they are not affected by the loss of the stake. This is true; but an act must be judged by its general tendency, and not by its effect under specially selected circumstances. It is also urged that what the loser pays for is the pleasure of excitement and anticipation he feels before the wager is decided. This argument will not stand, because the winner experiences an equal pleasure without paying for it—indeed, he receives in addition the forfeited stake.

But the immorality of gambling may be argued on higher grounds than a calculation of pleasure. (a) Every gambling transaction involves a transfer of property in one shape or another. When the gambler is asked why he stakes his money on a game or a race, his reply is, 'To add an interest to the game.' The interest thus added is, simply stated, the interest of acquisition. If the real object were, as is claimed, merely the sport and the excitement, then men might just as well wager counters, or, for the matter of that, agree to hand over all winnings to public charities. But this is not done. The transfer of property, in one shape or another, is essential to the act. There are only three ways in which property can be legitimately acquired—by gift, by labour, and by exchange. Gambling stands outside all of these. (b) Its motive is, however carefully disguised, covetousness. It is an attempt to get property without paying the price for it. It is a violation of the law of equivalents. It is a kind of robbery by mutual agreement; but it is still robbery, just as duelling, which is murder by mutual agreement, is still treated as murder. It is begotten of covetousness; it leads to idleness. (c) It is, moreover, an appeal to chance. If in any contest skill comes in, odds are given or handicaps arranged so as to equalize the chances as far as possible. To make chance the arbiter of conduct is to subvert the moral order and stability of life. (d) It concentrates attention upon lucre, and thereby withdraws attention from worthier objects of life.

Captious analogies have been drawn between gambling in sport and commercial speculation. There is, it is true, a kind of speculation which is merely betting on prices. Men buy or sell cotton or corn for future delivery, without ever intending to handle or distribute the actual commodities, but merely with a view to closing the contract before it is due, and profiting by the fluctuation of prices. A man may buy and sell stocks and shares in the same way. But there is also a commercial speculation which is necessary and legitimate. The merchant has to make provision for a social need, and, in buying ahead, chance must inevitably enter into the calculation. The gambler's business is wholly self-centred; he subserves no need of the community. The merchant's whole policy is to eliminate risk as far as possible. The gambler desires risk. No special legislation has been devised in Great Britain to restrict this commercial speculation; but Chief Baron Polles, in the King's Bench Division Court, Dublin, ruled that in the case of a contract for the purchase of any commodity, whether shares or not, if the real intention of the parties was that the commodity sold should never be delivered, and that the whole price of it should never be paid, but that at some future time the difference in value should be ascertained, and the excess or deficiency paid by one party or the other, then that contract was a gambling transaction, and was void under the Gaming Acts. Legislation to prohibit gambling in 'options' and 'futures' and margins in prices has been attempted

in Switzerland (1881), Canada (1892), Germany (1894 and 1896), Russia (1893-1895), Belgium (1896), Norway (1904), Austria (1903). [See Board of Trade Returns, 1904.] In the same way, it is said that to insure one's life or one's property is to make a bet with the Insurance Company. But the whole object of insurance is the very opposite of the gambler's; it does not create risk, it counteracts the inevitable chances of life, and equalizes them by wide distribution. These risks are ascertainable in their aggregate incidence, though not ascertainable in any individual case. The general effect, therefore, of insurance is to add to the stability of life. The general effect of gambling is to destroy that stability.

LITERATURE.—*Report of Select Committee on Betting*, London, 1902; J. M. Hogge, *Facts of Gambling*, do. 1904; B. S. Rowntree, *Betting and Gambling*, do. 1905; J. Percival, 'Speculation', in *Church Congress Report*, 1904; W. D. Mackenzie, *Ethics of Gambling*, London, 1905; C. Booth, *Life and Labour of the People in London*, do. 1889-97, see Index; Ainslie Robertson, *Football Betting* (and other pamphlets), National Anti-gambling League, York. The effect of gambling on character is studied in various novels: Walter Scott, *Fortunes of Nigel*; W. M. Thackeray, *Virginians*; H. Fielding, *Amelia*; R. L. Stevenson, *Kidnapped*; A. Colbeck, *The Fall of the Stainliffes*; G. Moore, *Esther Waters*.

J. L. PATON.

GAMES.—1. Definition and classification.—A game is an organized occupation, undertaken by two or more persons, the primary intention of which is not utility but pleasure or pastime by means of the exhibition of the skill or good fortune of the players. It proceeds according to definite rules, and sometimes necessitates special instruments or apparatus. Games may be broadly divided into three classes—games of skill, games of chance, and games of imitation. The rules of games of skill are framed to bring out the various qualities, physical, mental, or moral—strength, agility, quickness of the senses, rapidity of calculation and induction, endurance, patience, and so on—of the players. Games of chance, on the other hand, regard only the luck of the players, and are decided by events, such as the fall of dice, over which they have no control. The rules, therefore, are arbitrary conventions, designed to emphasize coincidences. Many games combine the elements of chance and skill in varying proportions. In games of imitation the rules are prescribed by the actions to be imitated—limited, however, by certain conventions appropriate to the circumstances of the players; and the result is measured by the verisimilitude of the performance as thus limited. Such games involve the germ of Drama (*q.v.*). Both in games of chance and in those of skill there is a contest. In games of imitation there is often little or none; and the pleasure sought is attained by co-operation, rhythmic movements, and song.

Games as thus defined are social institutions, owing their origin to the inherent restlessness of human beings and the necessity for constant use and practice in order to the development and preservation of their physical, mental, and moral powers. They enter very early into the life of the individual, and are of incalculable value in the training of children for the graver pursuits of adult years. To the adult—especially the adult savage—they are little less important; and from the lowest plane of culture upwards, games, either in the form of contest or of rhythmic movement (dances), are among the commonest activities.

2. Ceremonial (religious and magical) significance; origins.—Like other human institutions, games have grown from vague and undefined beginnings. Their vague beginnings contained also the germs of ritual, dance, and song. It is but gradually that they have been differentiated from

these; even yet, as we shall see, complete separation has not been achieved. Games of imitation bear obvious witness to this origin. It is impossible (the observation is trite) to watch the games of children, whether savage or civilized, without being struck by the fact, on the one hand, that ceremonies are the favourite subject of imitation, and, on the other hand, that rhythmical movement and the utterance of a set form of words, rhythmical also and married to musical notes, are essential features. In the game of 'Jenny Jones,' common throughout England, Scotland, and Ireland, for instance, the ritual of courting, death, and burial is the subject; while in some places the game becomes a regular drama, which ends with the restoration of the heroine to life, or her reappearance as a ghost, to the pretended terror of her companions. The dialogue is throughout sung to a tune. Nor is the distinction between ritual and games everywhere clear even in the case of adults.

'It is not altogether easy,' remarks Rivers (*Todas*, London, 1906, p. 596), 'to draw the line between *Toda* games and *Toda* ceremonies.' Among the Eskimo it is usual, when a stranger comes to a settlement, to receive him with a feast. In the south-eastern tribes of the Central Eskimo 'the natives arrange themselves in a row, one man standing in front of it. The stranger approaches slowly, his arms folded and his head inclined toward the right side. Then the native strikes him with all his strength on the right (*sic*! left?) cheek and in his turn inclines his head awaiting the stranger's blow. While this is going on the other men are playing at ball and singing; and thus they continue until one of the combatants is vanquished.' Among other proceedings a wrestling match and the game of 'hook and crook' are recorded as played by various tribes. The latter is a trial of strength, at which the victor has even the right to kill his opponent; but generally, we are told, the feast ends peaceably. The account given by the Eskimo themselves is that 'the two men in meeting wish to know which of them is the better man' (Bosq, *8 BBEW* [1888], 609).

Here we have contests of strength and skill, which possibly, as Frazer suggests (*GB* 3 iii. ['Taboo'], 1911, p. 108), have a magical significance, which in any case are ceremonial, yet which appear to be regarded by the people themselves as not entirely serious, but games leading up to a hospitable entertainment.

Many nations, in fact, play ceremonial games. These games, though the element of pleasure is large, are essentially rites of religious or magical import. Either the aborigines of America are specially addicted to such performances, or our information is unusually full on the subject of their games. The Zuni inhabit an arid tract of country in New Mexico. Rain is a prime necessity of life; but it comes rarely, and the droughts are long. The object of the games the Zuni play is, therefore, the bringing of rain, that their crops may grow. We read of races, ball games, games of chance played with split reeds corresponding to our dice, round games, and others.

Shokine, a game of chance, was esteemed by the rain-priests so efficacious in bringing rain that 'they organized a fraternity which they called *Shonekine* ("Arrow-reed people"), for the express purpose of playing the game for rain.' The fraternity in question has now degenerated into a body of professional gamblers; 'but the game is still played by the priests and others in all its sacredness for rain' (*25 BBEW* [1904], 328 ff.).

The Omaha, a Siouan tribe dwelling in what is now the State of Nebraska, whither it had migrated, according to tribal traditions, from the east, was divided into two sections called the 'sky-people' and the 'earth-people.' The ten *gentes* of which the tribe was composed were distributed between these two sections. In their ceremonial encampments they were ranged in a circle with the entrance to the east, the earth-people on the southern side, and the sky-people on the northern. 'In former times a ball game used to be ceremonially played between the young men of the two divisions.' It was the duty of a member of the Wind sub-gens of the Kone gens (one of the earth-people) to start the ball. A circle with two lines crossing each other at right angles towards the points of the compass was drawn on the ground,

and the ball was placed at the centre. It was first rolled towards the north along the line drawn from the centre to the edge of the circle, and then back on the same line to the centre. It was then rolled in a similar way successively towards the east, south, and west, and back. On returning to the centre from the west, it was tossed into the air, and the game proper began. 'The game is said to have had a cosmic significance, and the initial movements of the ball referred to the winds, the bringers of life. It was played by the two divisions of the *huthuga* [tribal circle] as representatives of the earth and the sky' (87 *RBEW* [1911], 198). But we are not told what, if any, significance attached to the victory. The Wichita, a tribe of the Caddoan stock settled on the Red River in Oklahoma, however, played a game of shinny, which beyond all reasonable doubt represented the contest of winter and spring, and was played in the spring, doubtless for the purpose of assisting by magical means in the conquest of the evil power of winter and the renewal of life. Tradition declared that it was originally played by Afterbirth-boy and his brother, two mythical heroes of the tribe, against a headless monster, who used a black shinny-stick and black ball; and the stakes were the lives of the players. The tribal heroes tried to stipulate for the use of their ball, which was green; but the monster refused. So they knocked his ball to pieces, and thus compelled the use of their own. With it they succeeded in winning the game, and the monster was put to death. They played with green sticks as well as a green ball, representing, we are expressly told, the spring of the year. 'Since that time the shinny game is played in the spring, under the power of Afterbirth-boy' (Dorsey, *Myth. of the Wichita*, Washington, 1904, p. 99). The Central Eskimo play a game resembling cup and ball, in the spring, to hasten the return of the sun. In the autumn, on the other hand, when the sun is going southward, they play cat's cradle to catch the sun in the meshes of the string and prevent his disappearance (*Bull. Am. Mus. Nat. Hist.* xv. [1901-7] 151, 422). The Kai of German New Guinea also play cat's cradle ceremonially, but for a different purpose. It is played after the yams are set, that their foliage may sprout luxuriantly and may become green and spread widely. Every figure in the game has its name (Neuhauß, *Deutsch Neu-Guinea*, Berlin, 1911, iii. 125, 256).

Indeed, wherever we find games played at a special season of the year, we may suspect that now, or at one time, they have, or had, a ritual value. In our own island the game of football, though doubtless not unknown at other times, used to be regarded as proper to Shrovetide. Sometimes it was played between two rival parishes. More usually, as in the parish of Scone, Perthshire, it took the form of a match between married and unmarried men. In the parish of Inveresk, in the county of Midlothian, it was reported in the latter years of the 18th cent. that 'on Shrove-Tuesday there is a standing match at Foot-ball between the married and unmarried women, in which the former are always victors' (Brand and Ellis, *Pop. Antiq.*, London, 1813, i. 76), quoting *Statist. Acc. of Scotland*, Edinburgh, 1795, xvi. 19). This implies that the victory of the married women was pre-arranged, and consequently that the game was not a real contest, but rather a piece of ritual. The object of the game was probably, like that of the shinny played by the Wichita, to aid in the conquest of winter by spring. The unmarried men and women represent the barren winter, and the married men and women the fruitful season ushered in by the spring. A similar ball-game, sometimes analogous to our football, sometimes to our hockey, is widely

played in Algeria in the spring. It is called *koura*. In Morocco it is equally prevalent; but in many districts it is reserved to the *tolba*, or those learned in the Muhammadan law; and, even where not so reserved, the *tolba* often play apart or in a special manner. Though played more particularly in spring, in case of persistent drought games of *koura* are organized, the playing of which is believed, at Miliana, Laghouat, and other places, to bring the rain (Doutté, *Magie et relig. dans l'Afr. du Nord*, Algiers, 1910, p. 554).

As an example of a ceremonial game of another kind, mention may be made of that played by the Khäsi, a hill-tribe of Assam, for the purpose of expelling demons.

'The ceremony takes place in a fixed month of the year, and part of it consists in a struggle between two bands of men who stand on opposite sides of a stream, each side tugging at the end of a rope which is stretched across the water' (Frazer, *GB*, 1900, iii. 95).

This is what we call 'the tug of war.' Frazer (citing Bastian) suggests that the men on one side represent the demons. Comparison, however, with the ceremony as practised by the related tribe of the Syntengs, at their annual festival for driving away disease, renders it doubtful whether this explanation quite hits the mark. The Syntengs first cut down long poles, and, holding them across the stream where the goddess Aitan dwells, jump on them to break them. A pole is then fixed across the stream, and the players divide into two parties contending for its possession. The successful party is supposed to gain health and prosperity for the coming year (P. R. T. Gurdon, *The Khasis*, London, 1907, p. 157). The contestants thus appear to be purely human, striving for superiority in luck. The tug of war is applied in the Tanembar and Timorlaut archipelagoes in the Moluccas as a rain-charm whenever the westerly monsoon comes in without a fall of rain. Hymns are sung to Dudilaa, the male principle resident in the sun, for rain. The assembly then divides into two parties—those of the eastern side of the village, and those of the western side. The rope is a rattan of about 30 metres in length. Men, women, and children all join and pull with all their strength. Those of the eastern side must, we are told, put forth more strength than those of the western, as if to draw forth the west wind which brings the rain (Kiedel, *Sluik- en kroeshurige rassen*, Hague, 1886, p. 282). (Cf. the Burmese game, *ERE* iii. 26.) The same game is, in fact, played for analogous purposes in both Eastern and Western hemispheres.

In many of these half-serious contests clan is pitted against clan, or community against community. Numerous examples are found in N. America; the Omaha game has already been cited. By no means all of them are regarded as having any magical influence—at least, if our information be complete. In California a game resembling shinny is played by the Hupa, village against village, 'or tribe against tribe.' It seems to have no greater result than our football or cricket played between team and team (Goddard, *Life and Culture of the Hupa*, Berkeley, 1903, p. 60; cf. pp. 149, 214). Such cases are to be found all over the world, in Great Britain as well as elsewhere; and every reader's memory will furnish him with illustrations. The games so played may take their origin from racial or tribal distinctions; they may be relics of old enmities; or they may be magical ceremonies. The facts are usually so blurred by the process of time and the progress of civilization that it is impossible to read their primitive meaning. One thing only stands out clearly: the game is something more than a game; it is a ritual, the recurrence of which at stated seasons is imposed on the rival social units by force of custom and tradition, though its real meaning has been lost.

Games consecrated to special seasons are very common. In addition to those already mentioned, a few other typical instances may be adduced. In the south-west of England it is common to play thread-the-needle all down the street on Shrove Tuesday, or, in some places, on Easter Monday. There can be little doubt that it once had a religious or magical significance. Syrian and Armenian immigrants at Boston have been found addicted to a game with eggs at Easter. It is played by two persons, each having an egg. One holds his egg, and the other player strikes with his. The game is a contest similar in principle to those which boys play in England with chestnuts (*JAF* xii. [1899] 107, xvi. [1903] 138). At the solemn harvest festival of the Natchez a game of ball was played for a prize by two parties, each estimated by an eye-witness on one occasion at 800 men (Swanton, *Bull.* 43 BE, 117, 119, citing du Pratz and Dumont). By way of concluding the Green Corn, the Harvest, and the New Year festivals, the Iroquois used to play in the public council-house a betting game with a bowl and peach-stones, in which the peach-stones were dice (Culin, 24 *RBEW* [1907], 114). The Tigua of New Mexico also played a game with a species of dice all night on 'the day of the dead,' Nov. 3 (*ib.* 195). There appears to be no tradition recording its connexion with the day. Its meaning must probably be sought among the rites celebrated for the benefit of the departed. When the crops are ripe, the A-Kamba of British East Africa meet, hold dances, and play *mutingwano*, a game somewhat like what we call knuckle-bones or dibs (Hobley, *Ethnol. of A-Kamba*, Cambridge, 1910, p. 55). Among the Valans, a fishing caste of Cochín, the adult girls play a swinging game on the Thiruvathira festival in Dhanu, the month corresponding to our Dec.-Jan. (Anantha Krishna, *Cochin Tribes and Castes*, Madras, 1909, i. 257). At an early date after the accession of a new king of the Baganda, he paid a ceremonial visit to Nankere, a chief of the Lung-fish clan, who was never permitted to see the king on any other occasion. The object of the visit was the performance of a rite to prolong the king's life. This involved the putting to a cruel death of Nankere's son. The king then went to another chief. On the way he stopped to play a game of spinning the stones of a wild fruit-tree. It is played ordinarily by two children, who spin their stones together, and the stone that strikes the other and knocks it down is called the winner. The king played with one of his attendants; and on reaching the chief's house he played with him. The next morning he would again call for fruit-stones to play the game; but 'whoever ran to bring them would be caught and speared to death on the spot, with the object of giving the king long life' (Roscoe, *Baganda*, London, 1911, p. 210 ff.). Here the game is not played at a definite season of the year, but in connexion with the king's accession, and as one of the rites to procure him a long life. Funeral games have been discussed in art. DEATH AND DISPOSAL OF THE DEAD, vol. iv. p. 437.

To games a Divine origin has sometimes been ascribed. Thus the Olympic games were variously attributed to the Idaeian Herakles or to Zeus himself, who was said to have wrestled at Olympia with Kronos, or to have instituted the games to celebrate his victory (Pausan. v. 7. 4). Whether the divinity in such a case was held to have invented or first taught the specific games, or whether he merely appointed the occasion on which they were to be played, may be arguable. In the belief of many of the N. American tribes they were indebted for the games themselves, as well as for the occasion, to Divine or quasi-Divine beings. The

Micmacs ascribe the invention of one of their dice-games to their hero Glooscap, and of another to one of his supernatural companions (24 *RBEW*, 76). The Wichita game of shiny was first taught to the people by one of their mythological characters; and, as we have already seen, it is played in a special fashion in the early spring, in accordance with the example and 'under the power of' another, for the purpose of accelerating the revival of Nature and the victory of vegetation. Other examples might easily be adduced.

3. Ritual surviving as amusement.—But, even if held to be of Divine origin, and though played for ceremonial purposes, games fall back into mere amusement, or are abandoned to children, when the stage of civilization proper to such beliefs or to such purposes is passed, or under the influence of the overmastering desire for excitement in gambling. Thus several of the games of British children have been conjectured by Lady Gomme to owe their origin to religious or magical rites, and others have been shown by her to be degenerate representations of ancient social customs and conditions. The game of London Bridge, in which two of the children hold up their hands to form an arch, and the others pass below it in long line holding one another's waists, 'remains unexplained by any appeal to modern life.' The children all sing a rhyme beginning, 'London Bridge is broken down,' and going on to inquire 'How shall we build it up again?' Silver and gold, iron and steel, wood and clay, and other materials, according to the version, are mentioned only to be rejected. Finally the arms of the two children forming an arch fall down on the string of players as they pass beneath; the last one is captured struggling, and thenceforth stands out of the game. This is interpreted as a reminiscence of the foundation sacrifice (see art. BRIDGE, vol. ii. p. 850 ff., and FOUNDATION, vol. vi. p. 112). The refrain of the song, which has usually to do with 'a gay lady,' seems to render the interpretation fairly certain (Lady Gomme, *Traditional Games*, i. 333; Haddon, *Study of Man*, 347 ff.). The game of 'Eller Tree' is one of several in which one of the children represents a tree, and a tree is the subject of the song. The children all take hands singing, and wind round the 'tree.' Usually it ends with a rough and tumble; but in at least one case the string of players unwinds, under the direction of youths with long leafy branches in their hands as standards; and the operation is said to be performed 'with almost military precision.' As thus played it is performed at St. Roche and some of the adjacent parishes in Cornwall, at the annual feast in the second week of June (Lady Gomme, ii. 386). Lady Gomme refers it to 'some religious observance, such as encircling sacred trees or stones, accompanied by song and dance.' Again, many games turn on love and marriage, and some of them doubtless enshrine archaic ritual, such as bride-capture. One of the most striking of these is called in Scotland 'Babbity Bowster' (Dance with the bolster). There is evidence that it actually used to be the last dance at weddings and merry-makings. Lady Gomme's conjecture is probably right that it was pre-eminently the nuptial dance at a wedding, and that the bride and bridegroom on performing their part in it retired from the company to their own chamber. But, if so, it was even then the degenerate representative of a rite by which the bridegroom took forcible possession of his bride in spite of her real or pretended reluctance (*op. cit.* i. 9, ii. 486).

Nor is it only in Britain that the process is found. Sicilian boys also play a game called *A vola vola lu mortu*, in which one of them feigns death and lies stretched on the ground, another

stands at his head as a magician and utters incantations to restore him to life, four others stand round him and, with a low continuous whistle made by drawing in the breath, extend their hands above the corpse, gradually raising them with a slow movement. The game is to keep up this movement and whistling while the incantation is repeated seven times without interruption by the magician. It is said to be the children's firm belief that in this way the corpse becomes as light as a feather, and that he ought to be able to raise himself in the air and there remain suspended so long as the whistling proceeds, but that with any interruption for the purpose of taking breath by those who perform the spell, he again becomes heavy and falls. The game, begun with more or less solemnity and secret terror, frequently ends with some trick upon the corpse, and laughter, or blows, and a quarrel (Pitrè, *Bibl. Trad. Pop. Sicil.* xiii. 263). But probably one of the most convincing examples is a game played by the children in Java. It presents the conjuring of a spirit, called Nini Towong, belonging to the ancient Javanese mythology, into a puppet, and its cult with prayers for help and protection. The serious worship of Nini Towong has ceased; the significance of the ceremony is no longer understood by the people; and the ceremony itself has become degraded to a puerile amusement (*ARW* vii. [Leipzig, 1904] 512).

Before quitting the subject, it may be observed that the bull-roarer (*q.v.*), one of the most sacred religious implements of the lower savagery, employed to produce sounds which the uninitiated are taught are the voice of a supernatural being, and carefully concealed at all times from the sight of women, suffers the same fate as society passes away from the stage of civilization which gave rise to its ceremonial use. Among the Bangala of the Upper Congo there is still, on the part of the elders, some aversion to its use as a plaything, while among the Kikuyu of British East Africa, as among ourselves, it is purely a toy (*JRAI* xl. [1910] 427, 446).

Games of chance are usually played with instruments of the kind familiar to us as playing-cards and dice. In more barbarous states of culture the instruments are the stones of fruits, pebbles, shells, split reeds, and so forth, marked in different ways. They are drawn from a promiscuous heap, or tossed in the air and allowed to fall on the ground or on some other flat surface. According as they fall (or are drawn) the player scores. This process is precisely the same as that by which divination is practised and auguries obtained in almost all parts of the world. Indeed, the very instruments used are the same, even in Europe, where fortune-tellers habitually exercise their profession by means of playing-cards. There is, therefore, a very large body of evidence in favour of Tylor's theory that the primary purpose of the appeal to chance was augury, and that games with the same or similar instruments are secondary. Many American tribes employ games of chance as well as games of skill for divinatory objects. One example may stand for all. The Onondaga play with peach-stones tossed up from a bowl or dish struck on the floor. It is common at the New Year's, or White Dog, feast.

'Clan plays against clan, the Long House against the Short House, and to foretell the harvest the women play against the men. If the men win, the ears of corn will be long like them; but, if the women gain the game, they will be short, basing the results on the common proportion of the sexes.'

This game is said to be intensely exciting. It was once much used in divination. It is, like other games, also still played for the sick; but, whereas it was formerly supposed to be a means of healing, it is now regarded more as a diversion of the patient's mind. In fact, it is ordinarily at the

present time a merely social amusement (*JAF* lix. [1896] 270), though specially played for divination at the New Year's feast.

In India, where, as has been shown in the art. GAMBLING, dicing was carried to extremes, the casting of dice was employed not merely to divine the future, as is exemplified by the Skr. *Pāsaka-kevali* (ed. Weber, *MBAW*, 1859, pp. 158-180, Schröter, Borna, 1900; tr. Weber, *Ind. Streifen*, i. [1868] 286-307), but also as a part of the ritual of the kindling of the *sahhyāgni*, or 'fire of the assembly-house' (it is highly significant in this connexion that *sabhā* means especially an assembly-house for gamblers), which formed a portion of the *agnyādheya*, or setting up of the sacred fire.

According to the *Apastamba Gṛhyasūtra*, v. xix. 2 f., a gambling table was set in the midst of the *sabhā* and sprinkled. Dice were thrown on the table, and gold was cast on them, and all were mixed up and then spread out; after two sacrifices had been made, the dice (100 in number) were given to the sacrificer with the words, 'Play for the cow against the rice,' etc. (see Hillebrandt, *Ritualit.* [*GIAP* iii. (1897) 2], p. 108, *Vel. Mythol.*, Bonn, 1891-1902, ii. 119-121). It is plausibly suggested by von Schroeder (*Mysterium und Mimus im Rigveda*, Leipzig, 1908, p. 386) that the famous 'gambling hymn' of the *Rigveda* (x. 34) is intended for this portion of the ritual; and Hillebrandt holds, with good reason, that this ritual gambling was 'probably the survival of an old dice oracle connected with the new moon' (*Rit.* 108). In the ceremonial of *ṛjasya*, or consecration of a king, ritual gambling is an important feature. Here the dice are cast on gold, with the injunction that, 'ying with the sun's rays, they make the king become the firm centre of the people'; and later on in the *ṛjasya* a second game of dice of minor importance is played (Hillebrandt, *Rit.* 146).

A large number of children's games are either themselves used for divination or contain divinatory formulæ. This is especially noticeable in the 'counting-out,' which is preliminary to many games. By the process of 'counting-out' it is determined who is to take a certain part in the game. Simple though it generally is, the number of children concerned and the positions they take in the counting series are so variable that to the players, who do not stop to calculate seriously, the result seems a chance. Nor is it only the counting-out formulæ that betray a divinatory origin; games of skill are often referable to the same source. Lady Gomme assigns various ball-games (including cricket) to this source, and Pitrè reckons no fewer than sixty games of Sicilian children, or one-third of the entire collection he has made, as based upon 'the sacred processes of divination' (*op. cit.* xxxv.).

4. Prizes and stakes: gambling.—The winning of games, whether of chance or skill, is among all nations frequently rewarded with prizes. By an easy and natural gradation the prize passes into the bet, and games are played for stakes. This enhances the excitement, and, therefore, the pleasure of a game. Gambling is a passion confined to no race or country, to no rank of society, to no plane of civilization. The savage hunter is as much addicted to it in his hours of ease as the civilized stockbroker or horse-racer in his hours of business. No peoples were ever more passionate gamblers than the N. American Indians, both men and women. Throughout the length and breadth of the great continent they occupied, gambling was the favourite pastime. They betted on their games of chance, they betted on their games of skill, they betted on their most solemn ceremonial games. They even ascribed to gambling a Divine origin, and believed that it was the common occupation of the departed in the spirit-world. We may expect to find that so wide-spread a passion as gambling originated in very early times. The famous deposit of painted pebbles in the cave of Mas d'Azil may be conjectured to yield evidence pointing in this direction. If so, something more than a respectable antiquity may be claimed for the practice. For hardly had the Ice Age and the reindeer disappeared when the men of the south of France were

preparing their rude dice or counters, and enjoying the excitement of staking the produce of their more serious activities on games of chance. Certain it is that those of the pebbles that represent numbers must have been painted with some end in view other than an introduction into the mysteries of the higher mathematics (*L'Anthropologie*, vii. [Paris, 1896] 385, and the accompanying atlas of plates).

Gamblers are proverbially superstitious folk. Every gambler has his amulet or his prescribed observance, on which he depends for his luck. In this he does but emphasize a more general habit. But the emphasis is probably the natural product of his dependence on chance in his favourite amusement. Everywhere in N. America gambling is the subject of practices which are not merely superstitious—that is, performed with an unreasoned expectation of benefit—but distinctly religious. The gambler fasts and prays, he seeks supernatural aid in dreams, he observes continence, he burns tobacco in honour of his *manitou*. Where the interest or the glory of a village or tribe is at stake, the whole community join in a religious ceremony. Fetiches ('medicine'), of course, are universal. The intimate connexion of gambling with ceremonial games already alluded to may be thought to be responsible for such a development. The N. American Indians, however, are by no means singular in seeking supernatural aid for victory in their games. To take only a single instance—the Fijians play a game of skill called *tiga*. It consists in throwing along a course a ball with a pointed end like the head of an eel, and a tail formed of a reed one metre in length. It is played by two sides, often two villages or two tribes, and causes much excitement. Before playing, the Fijian weeds the graves of his ancestors and offers sacrifice to their *manes*, to render them propitious. The stakes are a feast of pork, which the losing party gives to the victors (*Anthropos*, vi. [1911] 476).

Almost everywhere games have been played for stakes involving the entire possessions of the players, their wives and children, their freedom, their life itself. Not many years ago a Cheyenne, having lost all his property, put up his sister as the stake in a game of cards. He lost her. Though the occurrence aroused great indignation throughout the tribe, nobody suggested that the unfortunate girl should not go and live as the wife of the man who had won her (*JAFI* xi. [1898] 301). This is a modern instance of an event which has formed the basis of many a folk-tale east and west. In Irish legend, Mider, the fairy chief, plays with king Eochaid Airem for his queen Étain. In the great Indian epic of the *Mahabharata*, Yudhiṣṭhira loses to Sakuni all his property, and finally Draupadi, the joint wife of the five brethren. In a Korean tale the hero is made to play chess for his bride (*JAFI* x. [1897] 291). The incident of playing for life or freedom is also common in folk-tales. A greater stake still—that of future happiness—is occasionally represented in European tales. A supernatural monk is said to haunt the *mielles* (dunes) of Normandy and play with passers-by for their souls (*RTP* xii. [1897] 304, quoting Souvestre, *Les Derniers paysans*, Paris, 1852, p. 79). More remarkable still is a dramatic ceremony annually performed at Lhasa for casting out the demon of ill-luck. In the course of the performance the Grand Lama is represented playing at dice with the demon, to prove the truth of his teaching. But the dice are false: the Lama can throw nothing but sixes, the demon nothing but ones. Consequently the demon is hopelessly beaten and chased away, to the no small amusement, comfort, and edification of the faithful (Waddell, *Buddhism of Tibet*, London, 1895, p. 512).

In view of the grave evils undoubtedly entailed on society by the practice of gambling, it may not be deemed impertinent to call attention to its utility at an early stage of culture. This can hardly be better done than in the words of the accomplished author of the *History of the New World called America*, whose untimely death a few years ago left the great work he had projected and partially executed no more than a precious fragment. He says:

'From invoking the decision of chance [by divination] as to whether a hunting expedition shall be undertaken, and who shall take part in it, the transition is easy to the distribution of its produce by this method; gaming does but extend the same process to the distribution of property in general between man and man. Gaming, as it develops, involves number in three different ways. Number enters (1) into the system and implements used in the game, (2) into the mode of scoring, and (3) into the reckoning of the stakes or forfeits; and, as gaming is the natural pastime of barbarism, it may fairly be assumed to have been a powerful factor in the development of arithmetic. The same counters and the same tables serve as the instruments of gaming and of ordinary calculations; in Mexico, as in Europe, calculation generally and some favourite game of chance bore the same name' (Payne, *Hist. Amer.*, Oxford, 1892-99, ii. 279).

See, further, art. GAMBLING.

LITERATURE.—On games in general, E. B. Tylor, art. 'The History of Games,' in *Fortnightly Rev.*, May, 1879; A. C. Haddon, *Study of Man*, London, 1898, chs. viii.-xv. On games of chance and some other games: Tylor, *Primitive Culture*, London, 1872 [1903], i. 65-75, and *JAFI* viii. [1879] 116-131, ix. [1880] 23-30 (it must, however, be stated that the illustrious author's conclusions as to derivation of the Mexican game of *patolli* from the Hindu game of *pachisi* are by no means generally accepted). On games of special areas: A. B. Gomme, *Traditional Games of England, Scotland, and Ireland*, 2 vols., London, 1894, 1898; W. W. Newell, *Games and Songs of American Children*, new ed., New York, 1903; G. Pittre, *Biblioteca delle Trad. pop. Siciliane*, xlii. 'Giuochi fanciulleschi Sicil.', Palermo, 1853; S. Culin, *24 RBEW*, 1907, 'Games of the N. Amer. Indians'; E. Falkener, *Games ancient and oriental, and how to play them*, London, 1892.

E. SIDNEY HARTLAND.

GAMES (Hebrew and Jewish).—For the purpose of the present article it will be convenient to divide the entire range of Hebrew-Jewish history into Biblical, Talmudical, and post-Talmudical times, the Biblical period extending, roughly speaking, to the age of the Maccabean rising; the Talmudical commencing at the epoch just named, and ending about A.D. 500; and the post-Talmudical reaching down to the present day.

1. In Biblical times.—The games and other amusements that were prevalent among the ancient Hebrews could not have been prominently bound up with the popular cult and the moral habits of the race; otherwise the authors and compilers of the Hebrew Scriptures, who were guided throughout by a religious and ethical purpose, would naturally have introduced, with more or less frequency, some detailed references to these pastimes and recreations of their countrymen. The games and diversions indulged in were merely, as for the most part they are everywhere now, so many ways of recruiting strength and whiling away an idle hour in a pleasant and attractive manner; and all that can be found in the OT on these matters consists of some general references and a number of more or less definite allusions to certain amusements and sports that were in vogue among the Hebrews of those days. Our task, therefore, in this part of the article is to collect the extant data in some orderly and serviceable manner.

The Hebrew verbs expressing something approximate to our idea of playing games and engaging in other social diversions are *pnw* and its synonym *pnx* (infin. *šahēk*, *šahēk*). The use of the last-named form in Ex 32⁸ (in connexion with the rejoicing at the making of the golden calf) is quite indefinite, and may possibly be best translated by 'to make merry.' But quite definite is the mention of a kind of tournament (or possibly best described as a game-of-war) in 2 S 21¹²⁻¹⁶, where the verb *pnw* is employed. Abner said to Joab: 'Let the young

men arise and play before us,' and there seems to be no reason to doubt that a mere soldierly trial of skill and strength¹ was originally intended, and not a prelude to a battle on a large scale, although the hostile passions which were aroused by it quickly led to a disastrous result.

Other exercises requiring the employment of physical strength or skill mentioned or alluded to in the OT are the *lifting of stones* (Zec 12⁹), *slinging stones* (e.g. Jg 20¹⁴, 1 S 17⁴⁰⁻⁴², Zec 9¹⁵), *ball-games* (Is 22¹⁸, where—judging from the later use of the word, as can be seen from the Rabbinical dictionaries—the term for ball is *ḥam*, and not *ḥay*), *archery* (1 S 20³⁵, Job 16¹², La 3¹²), *racing* (Ps 19⁶ [EV 19⁶], 2 S 1²⁸ 2¹⁸), and *jumping* (Ps 18³⁰ [EV 18³⁰]). One may also assume that the way in which Samson had to amuse the assembled Philistines at Gaza (Jg 16²⁵, where both the roots *pnv* and *pnx* are used) was by exhibiting feats of physical strength. More popular than any other kind of physical exercise was naturally *dancing*. A reference to children's dances is found in Job 21¹¹, and to that of adults on various occasions—e.g. Jg 21²¹ ('the daughters of Shiloh' to be captured, whilst dancing, as wives by the Benjamites), 1 S 18⁴ (the women saluting Saul and the victorious David), 2 S 6¹⁴ (David dancing before the ark).

With regard to the amusements of children, there is, besides the mention of dances already referred to, the significant fact that in Zec 8⁵ the vision of happiness in a restored and prosperous Jerusalem is made complete by the picture of boys and girls playing in its streets. The kinds of games indulged in are not mentioned, but one may safely fill in the canvas with frolicsome dances, racing, a primitive and quite innocent form of dice (see E. Sellin, 'Tell Ta'annek, *DWA*, vol. I. [1904] p. 112), and diminutive terra-cotta figures of horses, dogs, and other animals (see H. J. Van Lennep, *Bible Lands*, London, 1875, p. 573 ff.). It is also possible that there is a reference to character displaying itself in children's games in Pr 20¹¹ ('even in his doings does a child make himself known, whether his work be pure, or whether it be right'). Another interesting though very vague reference to the diversions of young people is that contained in Job 40³⁶ (EV 41⁶): 'Wilt thou play with him (i.e. Leviathan) as with a bird? or wilt thou bind him for (or unto) thy maidens?'² The vagueness of these two forms of amusement is in no way diminished by a reference to Ps 104³⁶ and Bar 3¹⁷ ('They that had their pastime with the fowls of the air').³

Instrumental music would naturally accompany dancing. Vocal music (and, of course, instrumental also) is, as may be expected, mostly referred to in the OT in connexion with religious services; but there are also a few passages relating to purposes of amusement, so particularly the 'men singers and women singers' spoken of in 2 S 19³⁵ [EV 19³⁵] and Ec 2⁸.

As for amusement by means of *dramatic performances*, it is difficult to say to what extent—if at all—the ancient Hebrews engaged in it; but it is certain that their imaginative talent was lyrical rather than dramatic. If, indeed, the Song of Songs and the Book of Job are to be regarded as

compositions of a more or less dramatic character, these great literary works would themselves justify the proposition just indicated; for it is in their lyrical element and vivid impressionism that their greatness consists rather than in elaborate dramatic representation.

The *proposing and solving of riddles* (רִידָה, pl. רִידִים) as an intellectual pastime finds an illustration in Jg 14¹². (Samson's riddle). The riddles proposed to Solomon by the Queen of Sheba (1 K 10¹) are not specified in the Biblical text, though the elaboration contained in later Jewish writings¹ may possibly embody some early amplifications. Akin to riddles proper is a certain kind of *māshal* (simile), as exemplified in Ezk 17². It has also been supposed that riddles lay originally at the base of Pr 30¹⁸.

2. In the Talmudical period.—As the ancient Hebrews do not appear to have been addicted to games of chance,² one may assume that such games were adopted by them from their neighbours during the Greek and Roman overlordship in Palestine and the adjacent countries. In agreement with this supposition is the fact that ethical considerations in relation to games are first met with in Talmudical times. The Mishna declares in two different places (*Kōsh hash-Shānāh*, i. 8; *Sanh.* iii. 3) that dice-players and participants in pigeon-racing are disqualified to act as witnesses in a court of justice. The principle underlying the enactment is that the winner is, in the Rabbinic sense of the term, guilty of robbery, and that, therefore, the mere act of participation is tantamount to engaging in a criminal act. The general designation of dice in all its varieties is קוביא (*kubēia*). In modern works קוביא (*ψῆφος*, *ψηφίς*) is often spoken of as another game of chance lying under the same condemnation, but it is in reality merely the principal variety of קוביא, other varieties named in *Sanh.* 25b being nut-shells and pieces of orange peel, each of these objects having been used in a manner analogous to the throw of dice as known in modern days. The participants in pigeon-racing are called יוֹנֵי מַרְיָה, but it is explained in the same passage of *Sanh.* that racing on a similar principle carried on with נֶחֱמִי חֵי וְקֵי (domesticated quadruped, wild quadruped, and any kind of bird) involves the same disabilities on its participants.

The introduction of Greek athletic games into Jerusalem about 170 B.C. is recorded in 1 Mac 1¹⁴ and 2 Mac 4¹⁰⁻¹². 'A place of exercise' (gymnasium) was built 'according to the customs of the heathen' close to the Temple, where men and boys forthwith ardently engaged in wrestling, boxing, archery, swimming, and other exercises; and 'such was,' according to the account given in 2 Mac., 'the height of Greek fashions, and increase of heathenish manners, . . . that the priests had no courage to serve any more at the altar, but . . . hastened to be partakers of the unlawful allowance in the place of exercise.'

The restoration of a conservative type of Judaism by the Hasmonaeans naturally resulted in the abolition of these games and feats of strength, which were so revolting to the purer Hebraic spirit, partly on account of their close connexion with foreign cults, and partly because most of them were practised *in puris naturalibus*. But

¹ Thus, e.g., Solomon Yishāki (known as Rashī): רִידָה ('by way of amusement'). H. P. Smith, *ICC*, in loco, remarks that the verb is 'used nowhere else of fighting'; but this consideration is alone sufficient to decide one against his opinion 'that the proposition was to have a combat of picked men as a prelude to the main battle.'

² Most commentators quote in illustration of this from Catullus, ll. 1, *Passer delicias meas puellae* (Gibson, *Oxf. Com.*, in loco).

³ In the *Variorum Apocrypha*, C. J. Ball, in loco, refers for comparison to 'the hunting scenes of Assyrian sculptures, and the tributes of rare and curious foreign animals depicted and recorded on such monuments as the obelisk of Shalmaneser.'

¹ In the Second Targum on Est 1⁵ only three such riddles are recorded, but nineteen are given in a MS from Yemen published in *FL* i. [1890] 349-58.

² The primitive kind of dice found at Tell Ta'annek (see above) was probably of a very innocent infantile kind. The spreading of sacrificial tables to Gad and Meni (deities of luck and destiny), referred to in Is 65¹¹, may, indeed, be taken to suggest a tendency to seek fortune by methods of chance rather than by hardy exertion; but it must be noted that the prophet, writing from the true Hebraic point of view, condemns the worship in question, which, besides, may have come in late in post-exilic times (see, further, *Fortuna* [Biblical and Christian]).

about a hundred years later the same un-Hebrew practices, under a different form, were introduced by Herod the Great. The pre-Hasmonean high priests built gymnasia to please Antiochus Epiphanes, and, similarly, Herod established circuses and theatres in order to ingratiate himself with Augustus. Both the theatre at Jerusalem and the 'very great amphitheatre in the plain,' writes Josephus (*Ant.* xv. viii. 1; see also ix. 6, and xvi. v. 1), 'were opposed to the Jewish customs; for we have had no such shows delivered down to us as fit to be used and exhibited by us; yet did he celebrate these games every five years, in the most solemn and splendid manner.' The general Talmudical attitude¹ towards these innovations may be described as an intensification of the opinion expressed by Josephus. In Jerus. *'Aboda zara*, 40a (ed. Krakau, 1609), the view is taken that attending a circus is equivalent to an act of murder; in the Bab. recension of the same tractate (18b) the close connexion of theatres and circuses with idolatrous worship is emphasized; and in Jerus. *Berākhoth*, 7b, col. 2 (ed. Krakau, 1609), a thanksgiving² is offered by a pious Rabbi for having had his lot cast 'in the house of learning and the house of prayer,' and not 'in theatres and circuses.'

It must not be supposed, however, that strict Hebraism laid all athletic exercises indiscriminately under a ban. The pious spirit fostered and developed by Talmudism regarded, indeed, everything as trivial in comparison with the study of the Torah; but the Jews were at the same time sensible enough to countenance a reasonable amount of amusement and recreation—so long as the un-Hebrew and heathen element remained excluded. In his Com. on *Zec* 12² (mentioned in § 1), Jerome relates that, when visiting Syria in the 4th cent., he saw 'large heavy stones which Jewish boys and youths handled and held aloft in the air to train their muscular strength.' In Bab. *Nedarim*, 104a, a reference is found to games, practised by women, with nuts and apples (apparently arranged in a heap, the object of the player being to hit and upset it), which were forbidden only on the Sabbath. Archery is referred to in Mishna *Kelim*, xii. 1, where *קומה חזקה* (i.e. the target for arrows; see Bacher, *REJ* xxvi. [1893] 63–68) is spoken of. That the art of swimming was practised is proved by the account given by Josephus in *Vita*, § 3, of how he, with a number of others, saved himself by swimming 'all the night'³ after a shipwreck, until taken up by another ship (cf. *Ac* 27⁴⁵).

A picture of Judean children engaged in mimic performances in the market-place (cf. *Zec* 8⁵, referred to in § 1) is found in Mt 11^{16, 17} ('We piped unto you, and ye did not dance; we wailed, and ye did not mourn' (see also Lk 7³²)). The nature of the game named *מסקרי* mentioned in *Nedarim*, 25a, *Kiddushin*, 21b, has not yet been satisfactorily determined; possibly it may have had affinities with what is known as skittles (Abrahams, *Jewish Life in the Middle Ages*, p. 379). Dancing, swimming, and other forms of diversion are referred to in Bab. *Begh*, 38b (forbidden on the Sabbath day as well as on festivals). In Jerus. *Hagiga*, 7b (ed. Zitomer, 1866), jumping and dancing are mentioned as hav-

ing been indulged in at the circumcision of Elisha b. Abūyāh. Worth noting also is the extraordinary feat of a chief like Simon b. Gamaliel I., who, by way of amusing the people on the occasion of the Water Feast at Jerusalem, engaged in a grotesque dance with eight lighted torches in his hands (Bab. *Sukkah*, 53^b); cf. art. FEASTING (Heb. and Jewish), vol. v. p. 806^b. Hunting is put into the same category as attendance at theatres and circuses in Bab. *Aboda zara*, 18b. This is, of course, in agreement with the ancient Hebrew view of the sport, Esau having been a man of the chase, whilst Jacob was given to agricultural and pastoral pursuits, though it should not be forgotten that Nimrod is described as 'a mighty hunter before Jahweh' (Gn 10⁹). Herod's proficiency as a hunter (see Jos. *BJ* i. xxi. 13) cannot, of course, be properly regarded as a Hebrew characteristic.

It had been supposed that chess was mentioned in the Talmud under the name of *נרשר* (Bab. *Kethuboth*, 61b), but the idea is no longer prevalent.¹ The subject must therefore be treated in the next section. The Jews were, however, at all times fond of intellectual pastimes, as is evidenced, e.g., by their love of riddles in all periods of their history. The Talmud and Midrash contain a fair number of enigmas; so, for instance, *Gen. Rabba*, lxvii. 6 (in a conversation between Marcus Aurelius and Rabbi Yehūdā han-Nāsi),² and Bab. *Shabbath*, 152a ('Two are better than three,' i.e. two young legs are better than two old ones with a staff in addition). The Rabbinical elaboration of the riddles proposed to Solomon by the Queen of Sheba has been referred to in § 1.

3. In post-Talmudical times.—Strict Rabbinism from the 6th cent. onwards down to the present day has continued to regard games, sports, and other amusements from a severely ethical point of view, treating with indifference or benevolent toleration amusements and physical exercises of a harmless nature, but unhesitatingly condemning gambling as well as sports and amusements involving cruelty, or likely to excite the passions.

Dice continued to exercise its baneful attractions, and in addition the Jews adopted from their Gentile neighbours such games of chance as 'Odd and Even' and 'Back or Edge,'³ besides lotteries and various kinds of betting. At the beginning of the 14th cent.⁴ the Jews fell, moreover, under the dangerous fascination of card-games. Rabbinical ordinances, entitled *takkānoth*,⁵ were from time to time issued with the object of checking the evil in its divers forms, and prominent teachers and authors employed both satire and admonition of a more direct form in the hope of counteracting the destructive tendencies to gambling among their people (thus, against the earlier forms of it, Maimonides in his *Yad*, *הלכות נירה*, vi. 7–11; Kalonymos b. Kalonymos in his *Sefer ha-ḥinukh*, composed in 1322); but the most pathetic means resorted to were the self-imposed vows of individuals, solemnly undertaking to abstain from games of chance either in perpetuity or

¹ References to a milder view are found, e.g., in *Babā bāmā*, 83a, *Genesis Rabba*, lxxx. 1. In the first-named passage the general reference is to *חכמה* ('Greek wisdom,' including manners and customs).

² This thanksgiving is still printed in several editions of the Jewish Prayer-book (at the beginning). In Bab. *Berākhoth*, 28b, *קרנא* ('street-corners') is substituted for 'theatres and circuses.'

³ No doubt an exaggeration, however.

⁴ For different forms of the word, see the Dictionaries (Buxtorf, Levy, and Jastrow). In Fleischer's ed. of Buxtorf (Leipzig, 1860–82), the suggestion is made that the origin of the word is *δωρακαίον*. Levy renders *kleine Steinhaken oder Scherben*. Jastrow derives the word from the Persian *iskodar* ('despatch-bearer'), and thinks that it was a kind of chess.

¹ Rashi († 1104) explains *נרשר* by *אשקשק*, 'chess.' The word was therefore used in that sense in his day; but Franz Delitzsch (in 'Über das Schach,' in *Orient*, Jan. 1840, pp. 42–63) shows that the term could not have denoted chess in the Talmud, as the Persians, from whom the Jews might have learnt the game, did not know it themselves before the close of the 6th century. Levy (*Neuhab. u. chald. Wörterbuch*, Leipzig, 1876–89) translates the word by 'chess'; but Jastrow (*Dict. of the Targumim*, New York, 1903) renders 'checkers.'

² The identifications are, however, by no means certain (see L. Ginzberg, art. 'Antoninus in the Talmud,' in *J.E.* i. 656).

³ 'This game was played with a knife, which apparently was thrown in the air, and the decision depended on which side fell uppermost' (Abrahams, *op. cit.* p. 391, note 2).

⁴ Card games (*קלפים*) are already mentioned in 1322 as being passionately engaged in (see Kalonymos in the work entitled *Sefer ha-ḥinukh*).

⁵ For an interesting account of such *takkānoth*, see Abrahams, *op. cit.* p. 394 f.

for a given number of years. Conscience tried in this way—and not always successfully—to protect itself against the inroads of overpowering temptation. Such vows of abstinence are found written on the fly-leaves of sacred and cherished MSS in the possession of those wishing to free themselves from the ruinous vice, thus adding pathos to the intensity of their desire for reform.

An example of a vow to be binding in perpetuity is found in fol. 200b in the British Museum Additional MS 17,053. The entry is dated in the year 1535, and the resolution 'not to play in any manner whatsoever' was taken in the presence of several witnesses. As an example of a vow limited to a given period of time may be quoted the entry on fol. 294b of the British Museum Additional MS 4709. The entry is dated the 1st of April 1491, and the person concerned pledges himself by an oath on the Ten Commandments neither to play, nor to engage any one to play for him, any game except 'the game of the board' (פנח 'פנח', apparently draughts or chess), and to play even that game only occasionally, during the next ten years. No fewer than five persons were witnesses of the oath.

One of the most prominent Jewish victims to the attractions of card-games was Leon di Modena, who was Rabbi at Venice at the end of the 16th and the beginning of the 17th century. He must have been well aware of the dangerous tendency within him in his early youth, for he composed an interesting dialogue against gambling (entitled חסידים וחסידות, 'The Gambling Scholar,' or 'Depart from Evil') when but fourteen years of age (see, e.g., H. Gollancz's English rendering in *Translations from Hebrew and Aramaic*, London, 1908). He was, however, never able to free himself from the vice. In 1623 the Rabbis of Venice published an order of excommunication against any member of the community who should indulge in card-playing within six years from the date of the decree, which, though not necessarily directed against Leon alone, must have been calculated to affect him as the most prominent offender. But he unfortunately defended the habit with great dexterity, and remained confirmed in it (see Abrahams, *op. cit.* p. 392).

Passing on to the game of chess, which, though not very prevalent among the Jews until the 12th cent., was, no doubt, known for several centuries before, one may remark that the fondness of so many of them for the game and their frequent skill in playing it may be regarded as an additional testimony both to their sense of strategy and to the high degree of intellectual clearness to which they are often able to attain.¹ The attitude taken up towards the game by Rabbinical authorities varied considerably. Maimonides (†1204) places persons who play chess² for money in the same category as dice-players and participants in pigeon-racing (Com. on the Mishna *Sanh.* iii. 3), thus declaring them unfit to give evidence before a court of justice. If by the word גמול Kalonymos b. Kalonymos (in his work אגן בן אגן already named, ed. Cremona, 88) meant the game of chess, he clearly intended to express, in satirical form, an even severer judgment than that of Maimonides. From Isaac Lampronti's פנח חסיד, iii. 54a, col. 1, we learn that in the year 1575 three Rabbis of Cremona decreed, in consequence of a plague, that neither man nor woman, and not even young persons, from the age of ten upwards, living in that city should for a given time play any game except chess, provided that the latter was not played for money. In שו"ת סו"ט (beginning of ch. 42) of Elijah Kohen of Smyrna (†1729), on the other hand, chess is disapproved of absolutely on the ground that it is a waste of time, and that the mental energy spent on it should be reserved for sacred study. The preponderant view was, however, in favour of the game as an intellectual pastime, and it was, as a

¹ It might at first sight seem strange that chess should have been popular among Jewesses also (see Schudd, *Jüd. Merk-würdigkeiten*, 1714-18, iv. ii. 381); but one should bear in mind that indoor games generally were in the Middle Ages chiefly engaged in by Jewish women, no doubt partly because they had more leisure than the men.

² גמול, *shitranj*, borrowed by the Arabs from the Persians. It must be stated, however, that the point is not sufficiently clear, for Maimonides appears to give גמול as one of the renderings of קובץ.

³ Even if the word does not mean chess in the Talmud, it at any rate in some quarters acquired that sense later (see the previous note on the word, showing that Solomon Yiphāki already understood it to denote chess).

matter of fact, often played without compunction even on the Sabbath, when, in honour of the day, chessmen made of silver were used (see Abrahams, *op. cit.* p. 388).¹

The Jews have also produced a number of interesting works on chess, the three most important compositions in Hebrew being זמיר, or rhymes on the game, attributed to Abraham ibn Ezra,² a poem by Benseior ibn Yahya (14th or 15th cent.), and a work entitled ספר מלך ('Delights of the King'), which Steinschneider is inclined to attribute to Leon di Modena, the talented Rabbi already referred to in this part of the article.³

An adequate idea of Jewish interest in chess-playing in our own time may be obtained from parts of the article 'Chess' in *JE*; see particularly the page giving portraits of ten 'Eminent Jewish Chess Masters,' and the list of tournaments ranging from 1851 to 1902. It may in addition be mentioned that it was through chess-playing that Moses Mendelssohn gained the friendship of Lessing. Another interesting, though legendary, point to note is that in *Das Leben Elehanans oder Elehanons* (Frankfurt a. M., 1753; see also, e.g., the English presentation of it by G. H. Händler, *Elehanan: The Legend of a Jewish Pope*, London, 1910) Rabbi Simeon recognizes the Pope as his son, in the course of a game of chess, through a particular move which he had taught him in his youth.⁴

The ethical considerations militating against games of chance, and, if played for money, also in a minor degree against chess, were, of course, absent in the case of amusements of an innocent athletic character. We thus find that in the 12th and 13th centuries ball-playing was engaged in on festivals on public grounds (see *Tosafot* on Bab. *Bēṣāh*, 12a, near the bottom of the recto, where children's games appear to be referred to). In Joseph Caro's *Shulḥān 'Aruḥ*, part *Orah Hayyim*, § 308⁵, on the other hand, ball-playing is prohibited on Sabbaths and festivals (the more lenient view of it being at the same time mentioned in a note). Among other amusements borrowed by Jewish children from their neighbours, and specially mentioned in the sources, were skittles, blind-man's buff, and leap-frog (see Abrahams, *op. cit.* p. 379 f.).

Of hunting a decidedly adverse view was taken, the sport not only involving cruelty to animals, but also being incapable of yielding a direct advantage to Jewish participants, who were by their law precluded from eating the meat obtained in the chase. The severest judgment ever passed on the sport is found in a decision of Meir Rothenburg (†1293): 'He who hunts game with dogs, as non-Jews do, will not participate in the joy of the Leviathan' (i.e. take part in the great meal of the righteous off the flesh of Leviathan in the Messianic kingdom).⁶ Another cause which in most countries strongly operated against Jews taking part in the chase was the frequent prohibitions against the carrying of arms by them (so, e.g., in an enactment of 1181 in England; see Joseph Jacobs, *The Jews of Angevin England*, London, 1893, p. 260). Jews are, however, occasionally found participating in this and other hardy sports, even including duelling (see Depping, *Les Juifs dans le moyen-âge*, Paris, 1834, p. 182).

¹ For some further account of Rabbinical opinion for and against the game, see *JE* iv. 19. It is, however, not correct to say that in the *Sefer Ha'ardim* ('Book of the Pious', 12th-18th cent.) the game is strongly recommended (ib. p. 18, col. 1). It is, indeed, very far from certain that chess is even meant by the piece of wood wherewith one plays' in the paragraph referred to (§ 400); see Steinschneider, *Schach bei den Juden*, p. 6.

² Steinschneider (p. 7 ff.) denies the authorship of Ibn Ezra, but the early date of the poem remains unquestioned. English readers may refer to the translation by Nina Davis (now Mrs. Salomon) in *Songs of Exile*, issued in Philadelphia and London in 1901. In the *JE*, art. 'Chess,' the translation is reproduced, with the addition of remarks on certain special 'moves' indicated in this early composition.

³ For a fuller list of works, see Steinschneider, *op. cit.*; for modern Jewish publications on the game, see *JE* iv. 20. The three Hebrew works here named were printed, with Latin translations, in Hyde's *De ludis orientatibus*, Oxford, 1694.

⁴ Steinschneider, *op. cit.* p. 36, holds that the origin of the story can be traced to the beginning of the 14th cent., though the Rabbi Simeon of the work is probably meant to represent a famous Rabbi who lived about the beginning of the 11th century.

⁵ See Abrahams, *op. cit.* p. 376.

The drama as a species of literary art, and as calculated to rouse the emotions and inform the intellect, does not concern us here. It can only be referred to as a means of amusement and diversion. The pious Jew of the Middle Ages disliked the theatre quite as much as did his ancestors during the Roman domination of Palestine. He regarded everything connected with it as frivolous and indecent. There were, however, two occasions in each year when he allowed himself considerable licence, though not indeed by way of attending the theatrical performances of his neighbours, but by means of certain dramatic productions of his own. One of these occasions was the Feast of Purim, which falls in March; and the other was the Day of the Rejoicing of the Law (חג המצות), following the Feast of Booths (חג הסוכות) in October. Besides the Ahasuerus Play, which, of course, was specially designed for Purim, representations of the sale of Joseph and of the encounter of David with Goliath were particularly popular.

'The synagogal merry-making on these anniversaries,' moreover, writes Abrahams (p. 262)—for the Synagogue itself was often the scene of these festive amusements—'sometimes included dancing, the introduction of amusing effigies, the playing of musical instruments, the burning of incense, and even the explosion of fireworks. Pageants, approaching very closely the real drama in its pantomimic phase, thus early fell within the scope of Jewish recreations.' Cf., further, DRAMA (Jewish).

Riddles, popular—as we have seen—both in Biblical and Talmudical times, continued to be cultivated in the period now under consideration, the Jewish intellect having always loved to seek occasional relief from the severer tasks before it in the quibbles, quips, and cranks which are part and parcel of the constructing and solving of riddles.

As prominent authors who seem to have taken a delight in composing riddles may be mentioned Moses Ibn Ezra (11th-12th cent.); Abraham Ibn Ezra,¹ already referred to; Yehudah Harizi († 1236); and Immanuel of Rome (14th cent.).

Special mention should be made of a series of enigmas on the numbers 1 to 13 at the end of the Passover-night domestic ritual (beginning: 'One who knoweth? One I know: One is our God in heaven and earth,' and ending: 'Thirteen who knoweth? Thirteen I know: thirteen are the attributes of Deity' (i.e. the thirteen attributes of mercy counted in Ex 34⁶⁻⁷).

Special mention should also be made of the trick of *Gematria* (גימטריא), consisting in the manipulation of words in accordance with the numerical values of their letters. This kind of arithmetical amusement (for it can, in many instances, hardly be called by any other name) is common both in Talmudical and in post-Talmudical times. As an example may be given the counting up of the full number of Haman's children by adding together the values of the letters in רב (=208) in Est 5¹¹ (רב, the multitude of his children). There is also a possibility of *Gematria* having been employed in Biblical times as well (see ZATW, Giessen, 1896, p. 122, where the number of sayings contained in Pr 10¹⁻²² is shown to be 375, i.e. numerically equal to שלמה [Solomon] occurring in 10¹; and the 136 sayings comprised in chs. 25-29 are similarly believed to be indicated in חקיקי [Hezekiah] named in 25⁵).

LITERATURE.—Most of the sources used for this article (including parts of the OT and the Apocrypha, Talmud, Midrash, Josephus, early Commentaries, Talmudical Compendia, and other works in different languages) have been already mentioned. In the chapters on 'Games and the Theatre,' in I. Abrahams' *Jewish Life in the Middle Ages*, London, 1896, which has been frequently referred to in § 3, an additional number of both medieval and modern authorities will be found. The art. 'Splele bel den Hebraern,' in *PREP*, though not covering the entire field, and worked on a different principle, has been found very useful. On the subject of chess, M. Steinschneider's *Schach bei den Juden* (originally published as part of A. van der Linde's *Gesch. u. Litt. des Schachspiels*, Berlin, 1874) is still indispensable. G. MARGOLIOUTH.

¹ One of the best known riddles of Abraham Ibn Ezra is that on the grammatical use of the letters נחמ.

GĀNAPATYAS.—The name of this Hindu sect is derived from Skr. *Gaṇapati*, one of the many names of the Hindu god Gaṇeśa, the eldest son of Śiva (see BRĀHMANISM, in vol. ii. p. 807). Gaṇeśa is considered to be the leader of the *gaṇas*, or attendants on Śiva, and first appears in Hindu literature as a creator of obstacles, and, as such, hindering success.¹ He was thus primarily worshipped in order to induce him to abstain from impeding; but in modern practice, especially at his festival in August-September, he is looked upon as the remover of difficulties, the god of wisdom, and the guardian of the public ways. His image stands in nearly every well-to-do Hindu house, and there are numerous temples in his honour, not only in Benares,² but scattered over India. His image is also found in temples dedicated to Śiva. Every Hindu book commences with the words *Gaṇeśāya namaḥ*, 'Reverence to Gaṇeśa'; and in parts of Southern India, such as Travancore (*State Manual*, ii. 51), children on being put to school begin their writing lesson with the invocation *Harīḥ, Sri-Gaṇapataye namaḥ*, 'Hari, Reverence to the holy Gaṇapati,' instead of the more usual *Om, namo Nārāyaṇāya*, 'Om, Reverence to Nārāyaṇa.' In Travancore there are special shrines, called *homapuras*, in which *homas*, or sacrifices, are daily offered to Gaṇeśa for the prosperity of the country; and, occasionally, *mahā-Gaṇapati-homas*, or great sacrifices to Gaṇeśa, involving considerable expense and trouble, are performed.³ Although the god is venerated and worshipped throughout Northern India, and is often adopted as a guardian deity, his cult among the general population is not so direct and public as it is in the South, and especially in Travancore.

Wherever we go in any part of India, there are few traces of any special sect devoted to the cult of Gaṇeśa in preference to that of other Hindu deities. The close connexion between Gaṇeśa and Śiva was, however, responsible for the existence of a group of sects in ancient India, classed together under the title of *Gāṇapatya*, which transferred the adoration of the worshippers from the latter to the former. Our authority for the tenets of these Gāṇapatyas is chs. xv.-xviii. of a work entitled the *Śaṅkara-vijaya*, claiming to be from the pen of one Anandatīrtha, and to have been written in the 10th cent., but probably pseudonymous and of much later date. According to it (xvii.), the Gāṇapatyas were divided into six sects—the worshippers of Mahā-Gaṇapati, Haridrā-Gaṇapati,⁴ Uchchhiṣṭa-Gaṇapati, Navanita-Gaṇapati, Svārṇa-Gaṇapati, and Santāna-Gaṇapati, respectively. These differed mainly in the form or title under which the god was adored, and in the words of the *mantras*, or initiatory formulæ, which were taught to converts. They all agreed in looking upon Gaṇeśa, and not Śiva, as the great First Cause, who alone exists eternally, and through whose *māyā*, or illusion, Brahmā and the other gods are created (xv.). Gaṇeśa, therefore, although endowed with personality, fills much the same position as the Brāhma of the Vedānta philosophy of Śaṅkara. In the *Śaṅkara-vijaya*, Śaṅkara is introduced arguing with and confuting each of these sects.

The one sect that deserves particular notice is that of the worshippers of Uchchhiṣṭa-Gaṇapati. They followed some Śaiva sects in adopting the

¹ See the article above referred to; also Hopkins, *Religions of India*, London, 1896, p. 451. A common name given to Gaṇeśa is Vighneśvara, 'Lord of obstacles.'

² See E. Greaves, *Kashi, the City Illustrious, or Benares*, Benares, 1908, pp. 63, 81, 84.

³ For details, see *State Manual*, loc. cit.

⁴ For the legend connected with this name, see Ward, *View, etc.*, i. 59. The same author (58) remarks that those Hindus of Bengal who adopt Gaṇeśa as a guardian deity are called 'Gāṇapatyas.'

so-called 'left-hand' worship, considering Devī as the *śakti*, or energetic power, of Gaṇeśa, not of Śiva. Their esoteric section, the Hairambas, abrogated all obligatory ritual, distinction of caste, and the marriage tie. Promiscuous intercourse of the sexes was to them the highest act of worship, the male worshipper identifying himself with Heramba, i.e. Gaṇeśa, and the female with his *śakti*. The name of the deity worshipped by this sect — Uchchhiṣṭa-Gaṇapati, 'left-food- or orts-Gaṇeśa' — has been variously interpreted. The *Śaṅkara-vijaya* (xvii.) states that he is so called because his followers follow the foul left-handed path; but, according to Colebrook (*Misc. Essays*, i. 212), the origin of the name is the fact that the worshipper pronounces his prayers with his mouth full of victuals, apparently in pursuance of the theory of abrogation of all solemn ritual. The same authority states that the distinguishing sectarian mark of the Gāṇapatyas was a circlet of red minium on the forehead.

The principal scriptures of these Gāṇapatyas were the *Gaṇeśa-khaṇḍa* of the *Brahma-vaivarta Purāṇa*, and the *Gaṇeśa Purāṇa* (one of the Minor- or *Upa-purāṇas*). For an account of the former, see Wilson, *Essays on Sanskrit Literature*, London, 1864, i. 103. It narrates the birth and actions of Gaṇeśa in a series of legends. It is noteworthy that in a subsequent section of the *Brahma-vaivarta Purāṇa* dealing with Kṛṣṇa's life and adventures, his spouse, Rādhā, is represented as adoring Gaṇeśa (Wilson, 117). For the *Gaṇeśa Purāṇa*, see the analysis by Stevenson in *JRAS*, 1846, p. 319 ff. Besides containing, like the *Gaṇeśa-khaṇḍa*, a series of legends,¹ it describes two ways of worshipping the god. In one, he is identified with the Supreme Spirit, Paramātmā, and is to be worshipped by mystical contemplation alone. In the other, an image of the god is crowned with flowers, and has offerings made to it on the occasion of the annual festival in his honour. Śiva himself is represented as waiting on him with the most austere devotion for ten years, and as thereby winning from him the boon of victory over the demon Tripurāsura.² Monier Williams (*Indian Wisdom*, London, 1875, p. 139) also mentions a *Gaṇeśa-Gītā*, which is identical in substance with the *Bhagavad-Gītā* (q.v.), the name of Gaṇeśa being substituted for that of Kṛṣṇa. In both the *Gaṇeśa Purāṇa* and the *Gaṇeśa-Gītā*, the important doctrine to be noted is that Gaṇeśa is identified with the Supreme Deity, and is superior even to Brahmā, Viṣṇu, and Śiva.

The worship of Gaṇeśa, though not at the present day the cult of a particular sect, is, as we have seen, specially popular in Southern India. He seems to have been originally a Dravidian sun-god³ adopted into the Hindu pantheon. A well-known verse, attributed by tradition to the sage Manu, but not occurring in the lawbook associated with his name, says that Sambhu (i.e. Śiva) is the god of Brāhmins, Mādhava (Viṣṇu) of warriors, Brahmā of the mercantile classes, and Gaṇeśa of the Śūdras, or aboriginal population,⁴ and it is probably more than a coincidence that the rat, on which, according to Hindu mythology, Gaṇeśa rides, is a totem of at least one Dravidian tribe, the Oraons.⁵

We meet relics of the old special cult still in

Southern India. The Travancore *homās* have been already mentioned, but much more striking is the celebrated case of the human shrine of Gaṇeśa in the village of Chinchvād, near Poona in the Bombay Presidency. The story runs that some three hundred years ago a pious youth named Morobā was an ardent worshipper of Gaṇeśa. As a reward the god came to him in a dream, and promised to live in him and his descendants for seven generations. Thenceforward the family was believed to possess miraculous powers, and the temple founded by Morobā became richly endowed, even the Emperor Aurangzib giving the family a hereditary grant of eight villages. The representative of the seventh generation died childless in 1810, and a distant relative of the deceased was set up in his place by the priesthood in order to preserve the valuable grants to the temple. The present representative, although not a descendant of Morobā, is still venerated as a deity.¹

LITERATURE.—The scriptures of the ancient sect have been noticed above. The only account in English of their tenets is to be found in H. T. Colebrooke's *Miscellaneous Essays*, London, 1837, i. 212. The *Śaṅkara-vijaya* has not been translated. The text is published in the *Bibl. Indica* (Calcutta, 1868). The sections devoted to the Gāṇapatyas will be found on p. 106 ff. Anfrecht gives an analysis of their contents on p. 249 of his *Catalogus Codicum Sanscritorum*, Oxford, 1864.

For the modern worship of Gaṇeśa and the so-called Gāṇapatyas of the present day, see H. H. Wilson, *Religious Sects of the Hindus*, London, 1861, i. 266; *Aurangabad Gazetteer*, 1884, p. 348; *Poona Gazetteer*, 1885, i. 246; *Mysore Gazetteer*, 1897, i. 469; and *Travancore State Manual*, 1906, ii. 51. It will be observed that, with the exception of the first, all these refer to Southern India. For Northern India, the worship of Gaṇeśa is so much mixed up with that of other, and more prominent, divinities that no separate notices have been recorded concerning his cult. Cf., however, M. A. Sherring, *Hindu Tribes and Castes*, Calcutta, 1872-81, i. 10, 12, 13, 253. W. Ward, *View of the History, Literature, and Religion of the Hindoos*², London, 1817, i. 56 ff., may also be consulted.

There are many accounts of the human shrine at Chinchvād. The earliest and fullest is that of E. Moor, written in the year 1800, during the lifetime of the sixth of the seven incarnations, and published in *Asiatic Researches*, vii. [1801] 383 ff. Another account will be found in the *Poona Gazetteer*, 1885, iii. 125 ff. The latter quotes as authorities the *Transactions of the Literary Society of Bombay*, ii. [1820] 69; Murray's *Handbook of the Bombay Presidency*³, 1881, p. 178; G. A. Valentia's *Voyages and Travels, 1803-1806*, published London, 1809 and 1811, ii. 152; and Maria Graham's *Residence in India*, Edinburgh, 1812, p. 270.

G. A. GRIERSON.

GANDHĀRA.—The Sanskrit name for the modern District of Peshawar (British India). It is a vast undulating plain, almost entirely surrounded by a girdle of mountains which is linked in the S.E. by the right bank of the Indus. These mountains separate Gandhāra on the S. from the District of Bannu; on the N. and N.E. from the Swāt and Buner valleys, which were formerly known as Udyāna. On the Afghanistan side they are inhabited by the tribes of the Orakzais in the S.W., the Afridis in the W., and the Mohmands in the N.W.—all equally under the control of the Anglo-Indian Government. The district is watered by the Kabul-rūd (the *Kubhā* of the Indians, the *Kōphēn*, *Kōphēs*, or *Kōas* of the Greeks) and by its tributaries, which are only temporary torrents, with the exception of the river Swāt (*Suvastu*, *Souastos*). Beyond the immediate banks of these watercourses, which are the richest and most populated parts of the country, the scourge of drought has everywhere laid hold on the shadeless plains and on the classic bareness of the hills. Whatever may be the cause, the climate of Gandhāra has lost the moisture which used to be so much praised in the old texts, and the springs have completely deserted a number of sites where the ruins of buildings of considerable size prove that they used to flow. The English administration, however, is now employed in restoring its old fertility to the country by the opening of canals, some of which can be traced back to the Indian

¹ These are reproduced by Rice in the *Mysore Gazetteer*, 1897, i. 469.

² Both Stevenson and Rice look upon this legend as an allegory representing the former ascendancy of Buddhism, and its overthrow by the revival of the worship of Śiva. The details are too numerous to quote here. Compare the similar theory regarding Gayāsura (see *GAYĀ*, § 4).

⁵ Risley, *TC*, 1891, ii. 113.

¹ *Aurangabad Gazetteer*, 1884, p. 348.

period, but had been allowed to fall into disuse by the Pathāns. The greater part of the land, indeed, belongs at the present moment to the Yūsufzai, Mohamedzai, and Gigiani clans of the Pathān Khakhai tribe, which is supposed to have spread over the district in the 15th century. In spite of the persistence, in the village bazaars, of the commercial castes of the old Hindu population and the recent immigration of Hindkis (as the Pathāns call the natives of India proper), more than half of the 600,000 inhabitants are of Afghan race, and 90 per cent speak Pāshṭū (Afghan) in the native country of Pāṇini, the great authority on Sanskrit grammar.

At all epochs the district has been traversed from W. to E. and from S. to N. by two main roads. The former is the great trade route and the road taken by the invasions of former times. Emerging from the famous Khyber Pass beside Peshawar (Purushapura), it used to run through Puṣkarāvātī (Peukelaotis, now Charsadda) and Po-lu-sha (now Shāhbāz-garhi), and finally reached, at Udhahya (Und), the vast bed of the Indus, which was crossed in winter by a ford and in summer by a ferry, and from which Takṣaśilā (Taxila) was reached by three stages. This natural road has been abandoned in modern times, owing to the exceptional facilities offered by the narrow gorge of Attock (several miles down the river from Und) for the construction of a permanent bridge, either one of boats or an iron one; but nothing could be more artificial than the actual route of the Grand Trunk Road and the railway, all composed of bridges and embankments across marshes and ravines—a triumph for the straight line and a feat of engineering skill. Similarly the Swāt was reached either from Puṣkarāvātī, along the river, through the District of Haṣṭnagar, or 'the Eight-Towns,' or from Po-lu-sha by the great Pass of Shahkotā, which the natives still call the Elephants' Neck; but now the new Swāt, Dir, and Chitral road—which, branching off at Nowshera and passing through Hoti-Mardān and Dargal, reaches the Malakand Pass, while alongside of it a little narrow-gauge railway runs as far as the foot of the mountains—has completely supplanted its old rivals on the right and on the left. Nevertheless, the country still remains what Nature made it, the ante-room of India, and the meeting of the ways to and from Upper Asia and the West.

It will readily be understood that the possession of this frontier-country was long disputed by the two races, the Indians and the Iranians. Going back to the earliest mention of it that we can trace in history, we find that Gandhāra was one of the Indian conquests of Darius Hystaspis (521–485 a.c.). According to the chroniclers of Alexander, India, at the time of his raid in 326, still began at the Indus. Twenty years later, by a treaty with Seleucus, the Emperor Chandragupta annexed, along with Gandhāra, a good part of Ariana on the right bank of the river. His grandson, Aśoka, had his pious edicts engraved there about 257 b.c. But, fifty years later, the Greek kings of Bactria regained the upper hand in a most decided way and conquered N.W. India. From the hands of Demetrius and Menander it passed into those of the Indo-Parthian satraps—one of the last of whom is said to have been the Gondophares who was visited by the Apostle Thomas about A.D. 50—and then into the hands of the chiefs of Indo-Scythian hordes. Peshawar became the winter capital of Kaniska, and after him, of his successors; for, although the country had been utterly ruined at the beginning of the 8th cent. by an invasion of the Huns, a Turushka dynasty of Buddhist religion had kept its ground there under the traditional title of 'Śāhia.' This dynasty was supplanted, about the year 900, by a minister of Brahman caste, but his line in its turn was destined to perish a hundred years later, under the blows aimed at it by Mahmūd of Ghazna. From that time onward, Gandhāra shared the fate of the Musalman kingdoms of N.W. India. After the Persians, the Greeks, the Parthians, the Scythians, the Turks, the Huns, and the Afghans, it saw the passage of the armies of Muhammad Ghori (1175), Tīmūr (1398), Bābar (from 1506), Nādir Shāh (1738), and finally Ahmad Shāh, of the Afghan clan of the Durrānis (1748). It was from these last that, at the beginning of the 19th cent., the European generals in the service of Ranjit Singh re-conquered the district, which, at the time of the annexation of the Panjāb (1849), passed directly from the Sikhs into the hands of the British administration. Such is, in short, an account of the vicissitudes experienced by this unfortunate country, which always had so much to suffer from the fact that it was situated on the great land-route of the conquerors of India.

In the present work, Gandhāra is specially worthy of notice on account of its importance in the history of Buddhism. If we judge by the terms of his 5th rock-edict, Aśoka still considered it as a country which had to be evangelized; if we believe the Sinhalese Chronicle it already was so, even in Aśoka's reign, through the working medium of the monk Madhyāntika. The one thing certain is that the doctrine of Buddha here met with exceptional and lasting success. In the eyes of the Chinese pilgrim Fa Hian and his companions, about the year 400 of our era, Gandhāra was now

on the same footing as Central India, and had become the second 'Holy Land' of Buddhism. It must be admitted that no one had dared to locate there the great events of the last life of the Master; but his previous existences were seized upon, and in the territory of Gandhāra or its immediate neighbourhood there were counted 'four great pilgrimages' to the four *stūpas*, now in ruins, which marked the places where the future Buddha had formerly dispensed in charity his eyes, his flesh, his head, and his body. Finally—not to speak of the great religious foundation of Kaniska in the neighbourhood of Peshawar, the relic-deposit of which was excavated in March 1909 by the Archaeological Survey—the country was covered 'with one thousand monasteries'; their ruins still slumber for the most part either in the hollows of the hills, or on the stony mountain spurs, or under the enormous tumuli which everywhere break the level of the country. If we bear in mind that Gandhāra, in virtue of its geographical situation, has been from all time the region of India most open to Western influences, we shall easily understand the double rôle which it has filled in the evolution of Buddhism when this religion crossed the frontiers of its native country. On the one hand, many of its learned monks contributed to the transformation of the old rational, but egoistic, doctrine of the *arhat* into the theory, more actively charitable but at the same time more metaphysical and devout, to which its followers gave the name *Mahāyāna*. On the other hand, by using the resources of Hellenistic art for the decoration of their buildings, its lay donors created the centre from which Buddhist iconography afterwards spread over the whole continent of Asia. At least it is from the soil of Gandhāra that a small number of excavations, unfortunately at first indifferently conducted, have drawn the vast majority of the so-called Greco-Buddhist sculptures, the best collections of which are preserved in the museums of Lahore, Calcutta, Berlin, London, Paris, and, in recent years, Peshawar.

A. FOUCHER.

GANDHARVA. — See BRĀHMANISM, VEDIC RELIGION.

GANGĀ, GANGES (Skr. *Gaṅgā*, possibly from rt. *gam*, 'to go').—The great river of N. India, draining the lower Himālayas and the N. and E. slopes of the Vindhya range. It is held sacred by a larger number of worshippers than any other river in the world.

1. Geography.—Under the name Bhāgirathi, the river rises in the Tehri State (lat. 30° 55' N.; long. 79° 7' E.) from an ice-bed near Gangotri (q.v.), 13,800 feet above sea-level. After receiving the Jāhnavi and the Alaknandā (q.v.), it enters the plains, passing Hardwār (q.v.); and lower down its course, with the Jumnā which joins it at Allāhābād (q.v.), it encloses the fertile tract known as the Doāb or Antardvī, 'the region between the two rivers.' In the United Provinces its chief tributaries are the Rāmgaṅgā, Jumnā, Tons, Gumti, and Gogṛā. When it reaches the frontier of Bengal, it is joined by the Gāgrā, and near Patnā (the Pātāliputra of the ancient Hindus, the Palibothra of early Greek travellers) by the Son; lower down by the Gaṅdak; and, when it approaches the Bay of Bengal, by the greatest of it—

affluents, the Brahmaputra. The total length of its course is 1557 miles. From a religious point of view, the most important cities and towns situated on its banks are Hardwar, Kanauj, Allahabad, Benares, Patnā, Sonpur (*q.v.*); with Sagar Island (*q.v.*) at the mouth of the Hooghly.

2. **Early allusions and legends.**—The sanctity of the river does not date from the earliest Vedic period. According to the oldest traditions, the Hindus (then settled in the E. Panjāb) regarded with special reverence the Sindhu or Indus, and the Sarasvatī, which at the present day, partially lost in the Rājputāna desert, joins the Ghaggar within the Patialā State. The Ganges is mentioned only twice in the *Rigveda*: in one passage (vi. 45. 31) its high banks form the subject of a simile; but in the hymn to the rivers (x. 75. 5) it is invoked with the Yamunā (Jumnā), Sarasvatī, Sūtudri (Sutlej), Paruṣṇī (Rāvi), Asiknī (Acesines, Chināb), Vitastā (Jhilam), and Arjikiyā (Biās) (J. Muir, *Original Skr. Texts*, pt. ii, London, 1880, p. 355 f.; A. A. Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 86 ff.). When the Hindus moved eastward along the Ganges valley, their Holy Land was fixed between the Ganges and the Jumnā (*Vasiṣṭha*, i. 12; *Baudhāyana*, i. 1. 2, 10 [*SBE* xiv. (1882) 3, 147]). In the *Mahābhārata* the sanctity of the river and its holy places is fully established.

'In this age Ganges is holy' (iii. 85, 90). 'He who bathes in Ganges purifies seven descendants. As long as the bones of a man touch Ganges water, so long that man is magnified in heaven.' 'No place of pilgrimage is better than Ganges' (iii. 85, 94-96; see E. W. Hopkins, *The Religions of India*, London, 1902, p. 372 f.).

Buddhist writers naturally pay little attention to the river, though its cult must have prevailed in their time. Buddha uses the pilgrim's attempt to reach its source as an emblem of the unreality of earthly things, and the obstructions in its channel represent the many miseries experienced in the course of re-birth (*Jātaka*, Cambridge tr., ii. [1895] 179; H. C. Warren, *Buddhism in Translations*, Camb., Mass., 1896, pp. 153 ff., 440). Anchorites live on its banks (*Jātaka*, i. [1895] 156, iii. [1897] 283). The 'heavenly' Ganges is mentioned, and the river is spoken of as 'Mother of rivers, known among men as Bhāgirathī' (ib. iv. [1901] 263, v. [1905] 51, 64). The earliest knowledge of the river gained by the people of the West was due to Megasthenes (Arrian, *Indika*, iv.), who describes the river as greater than the Indus and possessing seventeen tributaries, which Pliny (*HN* vi. 22 [18]) raises to nineteen. Strabo (xv. 35) calls the river (ὁ Γάγγης) the greatest in the three continents, next to it being the Indus, Danube, Nile; he states that the Indians worship Zeus Ombrios, 'the rainy' (Indra), the river Ganges, and local deities (see J. W. McCrindle, *Ancient India as described in Classical Literature*, London, 1901, p. 77, *Ancient India as described by Megasthenes and Arrian*, Bombay, 1877, p. 186 ff.; W. Smith, *Dict. Greek and Roman Geog.*, London, 1856, i. 972 ff.).

Many legends naturally gathered round the sacred river. In the *Rāmāyana* (i. 42) the royal saint Bhāgiratha, descendant of Sagara, performs austerities to induce Gaṅgā to descend from heaven and purify the ashes of the sons of Sagara, who had been destroyed by the offended sage Kapila, and thus to elevate them to Paradise. On his failure, Brahmā advises him to propitiate Śiva, who alone could sustain the shock of the falling Gaṅgā. Accordingly Śiva ascends the Himālaya and calls upon the goddess to come down. In her rage she tries to sweep the god down with her to Pātāla, the nether world. But Śiva compels her to circle for ages in the labyrinth of his matted locks, perhaps the icicles at the river source. Hence he is named Gaṅgādharā, 'Ganges-sup-

porter.' At last, being again propitiated by Bhāgiratha, Śiva allows her to flow to the sea and purify the ashes of Sagara's sons (J. Muir, iv., 1873, p. 365; R. T. H. Griffith, *Rāmāyana*, Benares, 1895, p. 51 ff.). Later bards endeavoured to associate the heroes of the *Mahābhārata* with the earlier Nature-gods, describing, for instance, Bhīṣma as son of Gaṅgā by Sāntanu. A curious tale is told by Plutarch (Περὶ ποταμῶν, ed. Paris, 1624, p. 1151 f.), in which the name of the river is explained by the tale that the nymph Kalauria bore Indus a son named Ganges, who committed incest with his mother, and in remorse threw himself into the river Chliaros, which was called after his name (see G. Oppert, *Original Inhabitants of Bharatavarṣa or India*, Madras, 1893, p. 128 f.; for other legends in the Purāṇas, see E. T. Atkinson, *Himalayan Gazetteer*, Allahabad, 1882-84, ii. 286 ff.).

3. **Cult-titles, temples, images.**—(a) The cult-titles of Gaṅgā are numerous. She is called Jāhnavī, because she was drunk up by the offended sage, Jāhnu; Varanadi, 'excellent river'; Devabhūti, 'flowing from heaven'; Harasēkharā, 'crest of Śiva'; Mandākinī, 'gently flowing'; Bhāgirathi, 'brought down by Bhāgiratha'; Tripaṭhagā, Trisrotah, 'triple-flowing,' i.e. in heaven, earth, and hell, under the respective titles of Mandākinī, Bhāgirathi or Gaṅgā, and Bhogavati (see J. Dowson, *Classical Dict.*, London, 1879, s.v. 'Gaṅgā'; B. Ziegenbalg, *Genealogy of the S. Ind. Gods*, Eng. tr., Madras, 1869, p. 57). The primitive, animistic spirit of the river is now completely anthropomorphized. — (b) Temples dedicated to Gaṅgā are found in many places, especially at the sacred places along the river-bank, of which one of the most important is that at Hardwar (*q.v.*). But in many places she is identified with Pārvatī, or one of the other forms of the Mother-goddess, like Annapūrnā, goddess of food at Benares; and many of the goddesses worshipped by the non-Aryan-speaking tribes have been adopted as her manifestations. Thus Tuimā, the river-goddess of the Tipāras of E. Bengal, who is worshipped in Agrahāyana (Nov.-Dec.), by stretching from the nearest bathing-place to her shrine a thread which no one may cross, is now identified with Gaṅgā (E. A. Gait, *Census Rep. Bengal*, Calcutta, 1901, i. 186 f.). — (c) Her images appear in many of the W. cave-temples (Fergusson-Burgess, *Cave Temples of India*, London, 1880, pp. 326, 439, 455, 460, 470); and her image and that of Jumnā guard the entrances of Gupta temples, that is to say, they are in process of admission to the orthodox pantheon (V. A. Smith, *Hist. of Fine Art in India and Ceylon*, Oxford, 1911, p. 32; and see a photograph of her image from Besnagar in Bhopāl, ib. 160, fig. 112; for a photograph of the Hardwar image, *PR*, 1896, i. 35). In S. India she is represented as a siren, half-woman and half-fish, swimming in water and folding her hands as if in prayer; on her head she wears a crown, and on her forehead the Śaiva mark in holy ashes; she is covered with jewellery (Ziegenbalg, 56). In Bengal she is represented by a white woman, crowned, sitting on the sea-monster makara (a kind of crocodile), having in her right hand a water-lily, in her left a lute (W. Ward, *The Hindoos*, London, 1815, ii. 206). At the great temple of Rāmnagar near Benares the three goddesses, Gaṅgā, Jumnā, Sarasvatī, have each a separate niche; and in another temple at the same place Gaṅgā is represented by a richly-dressed image in white marble, seated on a crocodile, with a crown on her head; she has four hands, one hanging down, the second uplifted, the third grasping a lotus flower, the fourth holding a brass vessel (M. A. Sherring, *The Sacred City of the Hindus*, London, 1868, pp. 170, 174).

4. **The place of the Ganges in popular worship.**—Gangā is everywhere regarded as benign, the giver of health, children, and other prosperity, the great purifier from the pollution of sin. This is specially the case at the points of junction with her tributaries, and in particular those with the Jumna, Son, and Gandak. Though, according to the *Bhāviṣya Purāṇa*, her sanctity was fated to disappear in 1895 and to be replaced by that of the Narbadā, the prophecy has not been fulfilled (*PR*² i. 40). The pollution of her waters is regarded as a heinous outrage on Hindu feeling, as was shown in the strange scenes of general mourning and penance which followed the Benares riots in 1809 (*ERE* ii. 466; Sherring, 193 f.). According to Ward (ii. 212), many Brāhmins will not cook while sailing on the river, or throw saliva into it, or wash themselves or their clothing. Though attempts have been made at Hardwār and other places to connect the cult of Gangā with that of the orthodox gods, she remains non-sectarian, and all castes seek purification and blessings by bathing in her waters. To those who have been present at one of the great bathing-fairs nothing is more impressive than the reverence and fervour with which the wearied pilgrims greet the first view of the river, shouting *Gangāji kī jai*, 'Victory to Lady Ganges!' She is commonly addressed as Gangāmā, 'Mother Ganges.' Besides the bathing at auspicious moments prescribed by the local Brāhmins, a special rite is the shaving of the pilgrim and the dedication of his hair—a form of initiation whereby the physical bond between him and the deity is reinforced (cf. W. R. Smith, *Rel. Sem.*², 1894, p. 327 ff.; J. G. Frazer, *Totemism and Ecogamy*, London, 1910, iv. 230, who suggests that it is intended to increase the resemblance of the neophyte to that of a new-born babe; for dedication of hair to rivers, see *GB*², pt. ii. [1911] p. 261). The special festival of the goddess is Gangā Saptamī, 'Ganges' Seventh,' held on the 7th light half of Baisākh (April-May), or in Benares on the 7th of the following month, Jeth. On the 10th of this month, at Benares, her birthday is celebrated by bathing and bestowal of alms; little girls, probably as a rain-charm, float their dolls down the river, and for the next four months refrain from using dolls or other playthings (Sherring, 216; cf. Frazer, *Adonis, Attis, Osiris*², London, 1907, pp. 183, 195). In Bengal, with the exception of some special prayers to the goddess, most of the rites at the daily ablution are in honour of the greater gods. Bathing in the months of Vaisākhā (April-May), Jyāishā (May-June), Kārtika (Oct.-Nov.), and Māgha (Jan.-Feb.) is specially efficacious. After bathing, the attendant priest says prayers and pours offerings into the water; at this time, if a worshipper places ten kinds of fruit on his head and immerses himself in the river, the sins of ten births will be removed (Ward, ii. 210 f.). At Hardwār, every twelfth year, when Jupiter enters the sign of Aquarius, one of the great bathing-fairs is held (A. Cunningham, *Rep. Arch. Survey*, Calcutta, 1871, ii. 236).

We have records of the merit of bathing in the Ganges from the time of the Buddhist pilgrim Hiuen Tsiang (A.D. 634), in the *Purāṇas*, and Muhammadan historians, to the present day (S. Beal, *Si-yu-ki*, London, 1884, i. 198; H. H. Wilson, *The Vishnu Purāṇa*, do. 1840, p. 228; H. M. Elliot, *Hist. of India*, do. 1867, i. 49 f.). The superintendence of these bathing-festivals is in the hands of a special class of local Brāhmins, known as *Gangāputra*, 'sons of Ganges,' who have an evil reputation for roguery and rapacity (W. Crooke, *TC*, Calcutta, 1896, ii. 387 ff.). Bathing at eclipses removes the tabu (see the remarkable account by F. Bernier, *Travels in the Mogul Empire*, London,

1891, p. 301 f.; *BG* ix. pt. i. p. 395; *PR*² i. 22 f.). Many springs are supposed to have an underground connexion with the Ganges, and bathing in them is regarded as equally efficacious with that in the river itself (*Āin-i-Akbarī*, tr. H. S. Jarrett, Calcutta, 1891, ii. 224; *Rājputāna Gazetteer*, 1891, iii. 219; M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, iii. 26). The other holy rivers, including the Ganges, are believed to come to bathe in the Godāvari (*q.v.*) when Jupiter enters the sign of Leo (*BG* xvii. 527).

The river plays an important part in the domestic rites of the Hindus. If possible, the dead are cremated on its banks; or, if death occurs at a great distance, the ashes are dispatched to be thrown into its water, special priests arranging to perform this duty, if the ashes are sent by the Government parcel-post. Pilgrims at Gayā (*q.v.*), the most suitable place for the performance of death-rites, offer to Gangā the first rice-cake (*pinda*) in the name of the ancestors (E. A. Gait, i. 190). The water is carried to all parts of India by pilgrims or professional carriers; it is used as a charm to repel evil spirits, dropped into the mouths of the dying, sprinkled at marriages over bride and bridegroom, poured into new tanks which thus become sacred, and used as a medium for taking oaths. In Bengal, at a cremation, the water is poured round the pyre, and a trench is cut in the ground so that it may flow back into the river (Ward, ii. 199). Suicides, with the object of gaining eternal felicity and freedom from grievous disease, were common on the banks of the river, and still sometimes occur. The sick are often taken to die near the river, and in former days what is called the *Gangā-jātrā*, or 'Ganges rite,' was common, when the moribund were immersed, river mud was spread on the breast, and a friend wrote on it with his finger the name of some god (Ward, i. 195 f., ii. 313; N. Chevers, *Manual of Med. Jurisprud. for India*, Calcutta, 1870, pp. 625, 628 ff.). As a propitiation for grievous sin, such as the killing of a cow, offenders perform the rite of walking, by the left bank, from the mouth of the river to its source, and return by the right bank, this movement being known as *pradakṣiṇa*, 'going to the right,' the *deasil* of the Scotch, or *parikrama*, 'circumambulation' (*q.v.*); the same rite is also performed at the Narbadā (*BG* ii. 349; *PR*² i. 10 f.). In Bengal, some women worship Gangā after childbirth, and ascetics spend every night in the month of Māgh (Jan.-Feb.), seated stark naked on a platform erected over the river, engaged in such prayer and meditation as their sufferings from the cold will allow (E. A. Gait, i. 190). A male spirit, sometimes regarded as a consort of Gangā, Koilā Bālā, 'Father Charcoal,' an old grey-bearded personage, is worshipped as the navy (*beldār*) of the river, who swallows whatever opposes her current (J. Wise, *Notes on the Races, Castes, and Trades of E. Bengal*, London, 1883, p. 347; H. Risley, *TC*, Calcutta, 1891, i. 296).

LITERATURE.—For the geography and general particulars, see *IGI* xii. [1908] 132 ff. The legends connected with the course of the Ganges in the Himālaya are given by E. T. Atkinson, *Himalayan Gazetteer*, Allahabad, 1882-84, and E. S. Oakley, *Holy Himalaya*, London, 1905. The earlier narratives of exploration are still worth reading: T. Skinner, *Excursions in India*², London, 1833; H. T. Colebrooke, 'On the Sources of the Ganges in Himadri or Emodus'; and F. V. Raper, 'Narrative of a Survey for the purpose of discovering the Sources of the Ganges' (both in *Asiatic Researches*, vol. xi., 1812). Further information will be found in the *Gazetteers of the Districts* through which the river passes. For the references in the *Mahabharata* see S. Sørensen, *Index to the Names in the Mahabharata*, London, 1904 ff., p. 297 ff. The remaining literature has been fully quoted in the course of the article.

W. CROOKE.

GANGAIKANDAPUR, GANGAIKONDAPURAM (Tamil, *Kangaiṇṇandappuram*, 'city obtained from the Ganges,' believed to be so called

from the well in the temple precincts, which is supposed to have underground communication with that river; but the name is really a corruption of *Gangai-konda-chola*, 'the Chola king who conquered the lands near the Ganges, a title of Rājendra Chola I. [A.D. 1064-1113].—A town in the Trichinopoly District of the Madras Presidency, lat. 11° 12' N., long. 79° 28' E., containing one of the most remarkable temples in S. India. It has been fully described by B. R. Branfill, who regards it as 'the largest and best specimen of a S. Indian temple proper'; roughly speaking, it is a facsimile of the temple at Tanjore (*q.v.*); and is possibly its prototype, but perhaps more probably a copy of the latter. But, as it has never been restored, and was built of very hard stone, it retains more of the pristine design and purity which are wanting at Tanjore. It consists of a sanctuary-steeple 100 ft. square, the dimensions of that of Jagannāth (*q.v.*) at Puri and that of Tanjore being 80 and 82 ft. respectively. Its height is 174 feet. It stands on a terrace decorated with a rail-ornament below, the upright posts being engraved with griffins, and on every third or fourth post an elaborate scroll-enveloped animal or figure. The double storey below the pyramid and immediately above the terrace is vertical, with five compartments, or towers, in each face of the temple, separated by four deep recesses, each containing a fine sculptural decoration. The figures are chiefly Śaivite, but important Vaiṣṇavite representations are also found; and the plain intervals of the flat wall are covered with what pretend to be historical scenes of *ṛṣis* (ancient Hindu saints), kings, worshippers, and attendants, celestial as well as terrestrial, in low relief. Above the double storey rises the pyramidal steeple in seven storeys to the neck, which is spacious, and supports, as at Tanjore, four bulls below the dome and semi-dome. The whole building is of stone, and the domed top is carved to represent a copper tile or leaf-pattern covering, like that of the five halls (*sabhā*) at Chidambaram (*q.v.*). The only ornaments of the pyramidal tower are the square and oblong cells of 'car' (*rath*) or 'spire-roofed' pattern, with elaborate fan-shaped windows, like spread peacocks' tails. East of the great tower is the high court, a three-storeyed portico or transept, covering the cross-aisle between the N. and S. entrances to the temple. This, as at Tanjore, is built to match the *vimāna*, or pyramid-tower. To the E. is the outer court, planned on the most magnificent style, but never completed. The courtyard is 610 ft. E. and W., by 350 ft. N. and S., with a fine entrance-tower (*gopura*) on the E., not half the height of the temple itself. 'The architecture,' says Branfill, 'struck me as grand, simple, and pure, with many traces of the wooden construction of which it is, in many respects, a copy.' The town was probably once an important city, one of the principal seats of the Chola kings. Fergusson fixes the date of the Tanjore temple in the beginning of the 14th cent., which is approximately the date of this edifice.

LITERATURE.—B. R. Branfill, *JASE*, vol. xlix. pt. 1. p. 1 ff.; 1917 xlii. [1908] 128 ff. W. CROOKE.

GANGOTRI (probably *Gaṅgā-avātāra-purī*, 'the sacred manifestation of the Ganges').—A temple and place of Hindu pilgrimage, situated in the Tehri District of Native Garhwāl; lat. 31° N., long. 78° 57' E. At a short distance below the temple the Kedār Gaṅgā river meets the Bhāgīrathī at a place called Gaurikūṇḍ ('the pool of the goddess Gaurī,' spouse of Śiva), where pilgrims wash away their sins in the holy river. There is a small temple dedicated to Gaṅgā, the goddess of the Ganges, which was built by a Gurkhā officer

in the 18th cent.; and another of Bhairōn, one of the non-Aryan gods elevated into the Hindu pantheon, who is, like all gods on their promotion, regarded as the warden (*dvārapāla*) of the greater gods who have their seats here. The real source of the sacred river is called *Gaumukh*, 'the cow's mouth,' a glacier cavern from which the head waters of the river issue as the ice and snow melt. But Gaṅgotri itself is regarded as the source of the river, and few pilgrims venture higher up its course, though it is a popular error to suppose that the route is impracticable.

'Though this ablution,' writes Frazer (in Atkinson, iii. 235 f.), 'with due donations to the officiating Brāhmins, is considered to clean from all offences, the number of pilgrims is not considerable, in consequence of the great length and ruggedness of the journey, and the difficulty of procuring subsistence by the way. Flaeks and similar vessels are filled at Gaṅgotri with the sacred water of the stream, and, being sealed by the officiating Brāhman, are conveyed to the plains, where they are highly prized.'

Skinner, *Excursions in India, including a Walk over the Himalaya Mountains to the Sources of the Ganges*, do., 1833; F. Parkes, *Wanderings of a Pilgrim in Search of the Picturaque*, do., 1850, ii. 263 ff.; E. T. Atkinson, *Himalayan Gazetteer*, Allahabad, 1886, iii. 234 ff. W. CROOKE.

GAONISM.—See RABBINISM.

GARHMUKTESAR (Skr. *Gaḍa-mukṣīśvara*, 'fort of the Lord of liberation,' a title of Śiva).—A celebrated bathing-place on the Ganges, in the Meerut District of the United Provinces of Agra and Oudh, lat. 28° 47' N., long. 78° 6' E., a town of considerable antiquity, and popularly supposed to have been a ward of the capital, Hastināpur (*q.v.*). But the place now pointed out as the site of Hastināpur is 25 miles distant. The chief temple, like the place itself, is named after Mukṣīśvara Mahādeva, and is dedicated to Gaṅgā, the goddess of the Ganges. Bathing-fairs are held here, and it is a favourite place for the cremation of the dead or for the disposal of their ashes in the sacred river. No fewer than 80 *satī*-pillars commemorate widows who in the old days immolated themselves on the funeral pyre of their husbands. The local cultus is now entirely devoted to Gaṅgā, who possesses four shrines, two on the Ganges cliff and two below it, in which her image, formed of white marble and clothed in brocade, is worshipped, especially at the great bathing-festival held at the full moon of Kārttika (Oct.-Nov.).

GARLAND.—See CROWN.

GATE.—See DOOR.

GĀTHĀS.—See AVESTA.

GAUR (Skr. *Gauḍa*, 'prepared from sugar or molasses,' the name being possibly derived from the characteristic product of that region).—A ruined city, the site of the ancient capital of Bengal; lat. 24° 4' N., long. 88° 8' E. The ruins, known also by the name Lakhnauti, or Lakṣmanāvati, are situated 8 miles E. of Angreẓābād, or 'English Bazar,' the chief town of the Maldah District of Bengal, and on the E. bank of the Bhāgīrathī, a stream which joins the Ganges below Gaur.

The city was not in existence in the time of Ptolemy; but he indicates the site (M'Crindle, *Ancient India as described by Ptolemy*, Calcutta, 1885, p. 215). The Hindu history of the city is lost, save that it was the metropolis of the Hindu kings of Bengal, and all that is known is that the name

was more strictly applied to the surrounding region than to the city itself. In A.D. 1194, or in 1198—the latter the date fixed by Blochmann (*JASB* xlv. 276)—it was conquered by the Muhammadans, and it was under them that it attained its magnificence. The Portuguese historian, Faria y Souza, in the 16th cent., states that it contained 1,200,000 inhabitants, and that its streets were so crowded that at religious festivals and processions numbers of people were trodden to death. It is now a scene of ruin, the destruction of the city being largely due to vandalism.

'There is not a village, scarce a house in the district of Māldah, or in the surrounding country, that does not bear evidence of having been partially constructed from its ruins' (Ravenshaw, p. 2).

The original walled city was probably about 10 miles long by $\frac{1}{2}$ mile broad; but the environs extended to 20 by 3 or 4 miles, and it was surrounded by immense embankments faced with masonry. At present, the whole country within the fortifications and for many miles round is wild, studded with numerous reservoirs, generally overgrown with grass and reeds, and abounding in alligators.

The chief religious buildings now standing complete, or in a partially ruined condition, are: (1) the pretty tomb of the saint Makhdūm Akhī Sirāj-uddin, who died in A.D. 1357, built in 1510; (2) an elegant mosque of embossed brick, known as Jān Jan Miyān, after a lady builder of that name, and dated A.D. 1534-5; (3) Sa'adullahpur Chāṭ, the only place connected with Hinduism now used for the cremation of the dead; (4) Bārahdwārī ('twelve-gated'), or Great Golden Mosque, perhaps the finest monument of Gaur, 180 feet long, 80 wide, with eleven arches on either side of the corridor, and one at each end (whence its name), built by Husain Shāh, and completed by his son, Nugrat Shāh, apparently in A.D. 1526; (5) Qadam-i-Rasūl mosque, so called because it contains a stone bearing the impress of the foot of the Prophet, said to have been brought from Medina by Husain Shāh, the sanctity of this relic having ensured the safety of the building, which is dated A.D. 1530; (6) the fine *minār*, or pillar, 80 feet high, which Fergusson (*Hist. of Indian and Eastern Architecture*, p. 550) dates between the years 1302-1315; he considers it to be a *jaya-stambha*, or 'pillar of victory'; but, according to Ravenshaw, it was erected as a place to call the faithful to prayer, and was probably built about A.D. 1487-9; (7) Tāntipāra, or 'the weaver's mosque,' dated about 1475; (8) the Lattan, or painted mosque, beautifully decorated with encaustic tiles of vivid colours, of which Franklin (see *Arch. Surv. Rep.*, 1902-03, p. 51 ff.) says: 'I have not myself met with anything superior to it for elegance of style, lightness of construction, or tasteful decoration in any part of Upper Hindustan'; it is supposed to have been built by Yūsuf Shāh, A.D. 1474-81; (9) the small Golden Mosque, better preserved than most of the Gaur ruins, which has been called 'the gem' of the city; oblong in form and roofed with fifteen domes, supported by massive pillars of hornblende stone, of which the whole building is constructed. The inscription is obliterated, but it is known to have been erected in the reign of Husain Shāh (A.D. 1494-1524).

The series of inscriptions on the buildings of Gaur are in the Tughra character, and in two of them the penmanship is described by Blochmann as unrivalled. They date from A.D. 1369 to 1535, and are most important in fixing the chronology of the rulers of Bengal and as illustrations of the progress of Arabic calligraphy in the early centuries after the Hijra, or flight of the Prophet.

Reproductions of these beautiful works of art are given by Ravenshaw (p. 69 ff.).

The last king of the Musalmān dynasty of Gaur was Firūz Shāh III. (A.D. 1532-7). It was sacked by the Afghāns in 1537. From that time its decay began, and its ruin is said to have been completed by an outbreak of plague about 1575. But this story is discredited by Buchanan Hamilton, who states that the city was occupied from time to time by the Musalmān viceroys of Bengal, until the capital was removed to Rājmaḥāl by Shāh Shuja', brother of Aurangzib, after 1639, when the place was deserted. On the other hand, Hedges, Governor of the English Factories, who visited the place in 1683, found the chief buildings standing, and describes the 'Pallace, which has been (as appears by ye gates of it yet standing), in my judgment, considerably bigger and more beautiful than the Grand Seigneur's Seraglio at Constantinople, or any other Pallace that I have seen in Europe' (*Diary*, i. 88).

GAUTAMA.—See BUDDHA.

GAYĀ.—The name of a south-Gangetic District in the Bihār Province of British India, and also of its chief town. The area of the District is 4712 square miles, with a population (1911) of 2,159,498. It is bounded on the north by the District of Patna, on the east by the Districts of Monghyr and Hazāribāgh, on the west by Shāhābād, and on the south by the plateau of Chotā Nāgpur. As an administrative area the Gayā District is of late origin, dating only from the year 1865. Before that it formed part of the District of Bihār, and the whole roughly corresponded to the ancient kingdom known as Magadha (*q.v.*). At the present day the District is composed of two tracts—a northern and a southern—with very distinct characteristics. The northern half of the District,¹ together with the present District of Patna, is still known as 'Magah,' a corruption of 'Magadha,' and is well irrigated and fertile. The southern half, which locally bears the name of 'Rāmgarh,' is imperfectly irrigated and covered with forest. Magah, or Magadha, received its Aryan civilization from the North and West, and was the area from which Buddhism spread over India. Rāmgarh has received such civilization as it possesses from the South and South-West. Although the religion has long disappeared, Magah to the present day is a Buddhist country. It is covered with ruins of Buddhist shrines, and Buddhist images are frequently turned up in fields by the plough. Buddhism seems never to have penetrated Rāmgarh. During the times of Magadha sovereignty that country must have been a dense forest, inhabited only by wild tribes and by a few solitary hermits—outposts of Aryan civilization. It is now dotted over with remains of rude forts which local tradition attributes, and no doubt rightly, to the Kōils, or aboriginal tribes of Central India. In later years clearances were made by enterprising immigrants from Rājputānā, who were the ancestors of such Rājput families as those of Deo and Chandragarh. Magah is Buddhist, ancient, highly cultivated, and thickly populated. Rāmgarh is

¹ The boundary line runs east and west about ten miles south of Gayā Town, and a mile or two south of Bodh Gayā.

Hindu, modern, half-cultivated, and sparsely populated.

1. **History.**—It will thus be seen that it is unnecessary to give any detailed account of the history of the District. The history of Magah is merged in that of Magadha, of which the capital cities, Rājagriha and Pāṭaliputra, were in what is now Patna District; for further information the reader is referred to the article MAGADHA. No historical events of importance have occurred in Rāmgarh.

2. **General aspect of the District.**—From the Chotā Nāgpur plateau, which forms the southern boundary of the District, a number of ridges and spurs project into Rāmgarh. These here and there attain to an altitude of nearly 1800 feet above sea-level. As one goes north towards Magah, the country becomes a plain, with a decided slope, averaging four feet to the mile, towards the north. From this plain there stand out numerous semi-isolated hills and ranges; and, still farther north, separate ridges and wholly isolated rocky peaks crop up at irregular intervals.

The most remarkable of these long, low, outlying ranges is the Ganjās-Bhindās-Jethian range, which extends from near Bodh Gayā north-eastwards for a distance of forty miles with only two breaks, and rises at the Handiā Hill to a height of 1472 feet. The other ranges seldom exceed 1000 feet, and few of the isolated peaks are of any great height, the highest being the Mahār Hill (1612 ft.). . . . Of the other hills the most notable are the Barāhar Hills, lying partly in the head-quarters and partly in the Jāhānābād subdivision; the Haṣṛā, Pahrā, and Chirkī Hills, the Brahmjūni Hill, which rises some 400 feet above Gayā Town, the precipitous peak Kauwāḍol, the Lohāhar Hill (1799 ft.) in the head-quarters subdivision, . . . and Śringīrkh in the Nawādā subdivision.¹

These hills have been mentioned in some detail, as many of them are intimately connected with the religious history of the country.

3. **Sacred places.**—The interest of Gayā District depends entirely on the numerous sacred places that lie within its boundaries, and upon its association with the religious history of India, or rather, of the greater part of Asia. Every Hindu is expected to visit the town of Gayā at least once in his life, and there to make offerings to the spirits of his deceased ancestors. It was at Bodh Gayā that Gautama became 'The Buddha,' or 'The Enlightened One'; and this little village is now the most holy spot on the earth to something like a hundred and forty millions of people.²

4. **Gayā Town.**—The town of Gayā, a municipality with a population of 49,921 (1911), is divided into two parts, Old Gayā and Śāhibganj. The latter was laid out in the end of the 18th cent. by a Mr. Law, then Collector, and possesses no archaeological interest. The old town is built upon a rocky hill, separated from a neighbouring hill, called Brahmjūni (Skr. *Brahmayoni*), by a narrow defile, through which runs the road to Bodh Gayā. Brahmjūni is a pile of blackened rock and boulders rising to a height of about 450 feet. The old town hill is not so high, and has to its north the Murlī and Rām Silā (372 ft.) hills, the new town lying in the plain between. On its east runs the river Phālgū. A great part of Gayā, therefore, lies in a valley, and, owing to the reflexion of the sun's heat from the black rocks by which it is encompassed, it is extremely hot and dusty.³

The old town of Gayā is often called Brahmā Gayā, as being sacred to Brahmā,⁴ or else in order

¹ *Gayā Gazetteer* (1906), p. 3.

² So holy is it that there are Tibetan Buddhists who believe that it is no longer on earth, but is now in heaven.

³ The Chinese pilgrim Hiuen Tsiang (7th cent. A.D.) noticed these rocky hills of black stone, which translators have turned into 'a sombre valley,' and 'steep dangerous crags' (Beal), and 'dark gorges and inaccessible cliffs' (Watters). The valley is really far from sombre. It is all day under the blazing sun—as one who has lived in it for five years can testify—and any active person can climb the low hills without difficulty. The one gorge is black in colour, not sombre.

⁴ See *A'm-i-Albārī*, tr. Blochmann and Jarrett, Calcutta, 1878-84, II. 162.

to distinguish the Hindu shrine from the Buddhist Bodh Gayā. Its sanctity and that of the country immediately surrounding it—the *Gayā-kṣetra*—depend upon a remarkable legend in the *Gayā-māhātmya* section of the *Vāyu Purāna*.¹ The main circumstances of the story are as follows:

There was an *asura*, or demon, named Gaya, who was a devout worshipper of Viṣṇu. He practised austerities till the gods became alarmed at the power he was acquiring by his accumulated merit. At Viṣṇu's suggestion they approached him and offered him any boon he might desire. He asked to be made perfectly pure—purer even than the purest gods. The gods granted the boon and returned to heaven. The result of his purity was that every mortal who touched or even beheld him at once ascended to Brahmā's heaven. The rest of the universe, including hell, became empty, and Indra, Yama (the Regent of hell), and other minor deities all found their occupations gone. Headed by Brahmā, they again approached Viṣṇu. Acting under his advice, they asked Gaya to allow a sacrifice to be performed upon his body. He consented, and lay down, his head being where the present Brahmjūni Hill is situated,² and his feet extended to the north. They began the sacrifice, but were surprised to find the demon still moving. Yama then brought a sacred rock from his home and placed it upon Gaya's head. This rock is the present hill. He still moved. Then all the gods sat upon the stone, but, even so, they failed to keep him quiet. Again they appealed to Viṣṇu, who, after unsuccessfully trying the expedient of sending an emanation from himself, came in his own person. He first rendered the demon motionless by striking him with his mace, and then, with all the gods, sat upon the stone. Gaya expostulated, saying that he would have remained quiet if Viṣṇu had only asked him, without using the mace. The gods, delighted, again told him to ask a boon. Gaya replied: 'As long as the earth and the mountains, as long as the moon and the stars shall last, so long may you, Brahmā, Viṣṇu, and Śiva rest upon this stone. May you, Devas, rest upon it too, and call this place after me the "Gayā-kṣetra," extending over five *krośas*, or ten miles, of which one *krośa* will be covered by my head. May therein abide, for the good of mankind, all the sacred pools on the earth, where men, by bathing and offering oblations of water and funeral cakes, may attain high merit for themselves, and translate their ancestors, blessed with a happy salvation, to the heaven of Brahmā. As long as Viṣṇu shall be adored by the learned, so may this place be renowned as the "Gayā-kṣetra," and may resort to it wash away even the sin of killing a Brāhmana.' Viṣṇu and the gods granted this boon, promising that the offering of funeral cakes (*pindaś*), and the performance of the funeral rites (*śrāddha*) in the Gayā-kṣetra, should translate a hundred generations of ancestors and also the performer to the desired haven. Moreover, by their worshipping Viṣṇu's feet he would obtain supreme salvation in the after life.

This legend is evidently of comparatively modern origin. In the *Rigveda*, the name of Gaya appears only as that of one of the seers (x. lxiii. 17, lxiv. 16). In the *Mahābhārata*, he is not an *asura*, but a pious king (III. xcv. and VII. lxii. ff.), who, amongst other acts, performed a sacrifice at Gayā (ix. 2205). Gayā is also mentioned as a holy spot remarkable for its sacred fig-tree (*aśvaya-vaṭa*), a pilgrimage to which secures a large family of sons (iii. 8075, 8305, xiii. 4253); but there is nothing about any benefit secured to ancestors (for further references, see Sørensen, *Index to the Names in the Mahābhārata*, London, 1904 ff., p. 303). In the *Rāmāyaṇa* (II. cvii.), however, Gaya is said to have chanted a hymn at Gayā, to the effect that a man should have many sons, so that one at least may go to Gayā and rescue him from hell.

So far Gayā has been represented as a town sacred to Hinduism. We next find it mentioned in a Buddhist work, the *Lalitā-vistara*, dating perhaps from the commencement of our era. It was still a Hindu town, and is described as the first place visited by Gautama on his journey from Rājagriha to Urūvilvā. He had been invited there as a learned Hindu ascetic by certain householders, who received him with a cordial welcome. After his enlightenment it was one of the first places that received his doctrines, and became the headquarters of the faith. If this account be true, Gayā became a Buddhist town in the 5th cent. B.C. Fa Hian³ (5th cent. A.D.) found it desolate and a

¹ Given in full by Rājendralāla Mitra in *Buddha Gaya*, 9 ff.

² According to Rājendralāla Mitra, p. 19, the true *Gayā-kṣetra*, or Gaya's Head, is not the Brahmjūni, but the adjoining hill, on which the old town and the Viṣṇupada temple have been built.

³ Beal, *Buddhist Records*, I. p. lxi.

desert; but, when Hiuen Tsiang¹ visited it in the 7th cent., it was a city strongly situated, but with few inhabitants. There were only about 1000 Brāhmana families, descendants of the original saint. These Brāhmanas were evidently the ancestors of the modern *gayāvāls* to be described subsequently. It appears, therefore, that Gayā was originally a Hindu shrine with a sacred fig-tree that granted offspring; then it became Buddhist; and finally, between the 5th and 7th centuries A.D., it again became Hindu, with the modern legend of the salvation-giving *asura*.

Rājendralāla Mitra² argues with great show of probability that this last legend is really an allegory of the triumph of Brahmanism over Buddhism. The ancient king of the *Mahābhārata* is converted into (curious contradiction!) a pious demon. As such he devotes himself to austerities and protracted meditation, and at a later stage cultivates the highest purity. His mere touch suffices to cleanse mankind from the most heinous sin and to give them salvation. His crime is that he made the acquirement of salvation too simple and too summary. As such, to Brāhmanas he was a heretic of the character that is assigned to the chiefs among the Buddhists. They were pious and self-mortifying, and devoted to penance and meditation, but they did away with the sacrifices and ceremonies of the Brāhmanas. The head-quarters of Buddhism were at Gayā, and the blow from Viṣṇu's mace indicates force used when persuasion failed to attain the end.³ 'The rock of religion was placed on the head of the infidel, and the force of the gods kept it fixed and immovable.' Just as happened elsewhere—at Puri, Bhuvaneśvari, and other Buddhist centres—the blessing of the gods sanctified the seat of heresy into a principal sanctuary of the Brahmanical faith. Buddhist emblems, Buddhist shrines, and even Buddhist idols, were made subservient to Hindu worship. In the great temple of Old Gayā, the object of worship is a stone on which is carved a representation of the feet of the Buddha. This is now the 'Viṣṇupada,' the footprint of Viṣṇu, by whom its worship is specially commended in the *Gayā-māhātmya*. In fact, the sacred Bodhi-tree, the most holy object in the world to the pious Buddhist, and situated, not in Hindu Old Gayā, but at the Buddhist Bodh Gayā, has also been made an object of Brāhmanical cult, and a special prayer to be offered to it is contained in the same work.⁴

Whether the above theory is correct or not, it does not affect the ordinary pious Hindu, who sincerely believes in the literal truth of the legend. Since the 10th cent. A.D.,⁵ Gayā has been celebrated all over India as a great place of pilgrimage. The various shrines are in charge of a caste of priests known as *gayāvāls*. These claim to be descended from Brāhmanas specially created by Brahmā on the occasion of the sacrifice on Gayā's body, when the then existing Brāhmanas refused to accept the offerings. With five important exceptions, these priests preside over all the ceremonies performed by the pilgrims. There are altogether 45 *vedīs*, or shrines, at each of which the pilgrim, under the guidance of a *gayāvāl*, has to make an offering. If he is poor, or hurried, the list may be cut down, but it is absolutely necessary that *piṇḍas* should be offered to the spirits of the dead at three places—the river Phālgī, the Viṣṇupada temple, and the

undying fig-tree (*aksayavata*), which, we have seen, is the real old object of worship, dating from the time of the *Mahābhārata*.¹ Having finished his round, the pilgrim offers *piṇḍas* to the spirits of his ancestors and a final gift to the *gayāvāl*, before whom he prostrates himself. The *gayāvāl* touches him on the back, and blesses him with the word *suphal*, or 'fruitful,' assuring him thereby that his worship has been accepted.

Five shrines visited by pilgrims deserve particular notice. These are Rām Silā, a hill close to Gayā Town on the north, Pret Silā (540 ft.), about 5 miles to the N.W., and three others of less importance. Although a visit to these forms part of the regular tour of pilgrimage, the priests in charge are not *gayāvāls*, but an entirely distinct order, called *dhāmins*. These shrines are devoted to Yama and to evil spirits. An offering at Pret Silā, the Hill of Ghosts, is enjoined, so that Yama may not beat and bruise the ghosts of the dead. Similarly, at Rām Silā, his hell-hounds must be worshipped that they may not bark and bay at the unhappy spirits.² So, also, for the other three shrines. Here apparently we have Brāhmanism covering with its mantle not Buddhism, but the aboriginal demon-worship.

LITERATURE ON THE GAYĀ PILGRIMAGE.—Buchanan-Hamilton, *The History, Antiquities, Topography, and Statistics of Eastern India* . . . collated from the original Documents at the R.I. House by Montgomery Martin, London, 1838, vol. i. p. 51 ff. (this is B.H.'s MSS [1807-1810], edited by Martin, commonly cited as 'Martin's Eastern India'); Rājendralāla Mitra, *Buddha Gayā, the Hermitage of Śākya Muni*, Calcutta, 1878, p. 9 ff.; L. S. S. O'Malley, *Gazetteer of Gayā*, Calcutta, 1906, pp. 59 ff., 214 ff., 217 ff.

5. Mahābodhi.—Gayā's chief title to fame lies in the famous temple of the Mahābodhi (the Great Enlightenment), situated in the village of Bodh Gayā (Gayā of the Enlightenment, often miscalled Buddha Gayā), about six miles to the south of Gayā Town on the west bank of the river Nīlājan. Here is the *Bodhi-druma*, under which Gautama sat and received enlightenment. For nearly 2400 years this tree has been as sacred to Buddhists as the cross is to Christians. Pilgrims from all parts of eastern Asia have flocked, and still flock, to it; and its surroundings have been adorned with temples and monasteries by kings, not only of India, but of distant countries such as Ceylon and Burma.

For an account of Gautama's experiences of this spot, reference may be made to the art. BUDDHA (vol. ii. p. 882). Here we shall confine ourselves to such facts as are necessary for the description of the locality. When Gautama visited Gayā as a Hindu ascetic, he passed some time on the Gayā-śirṣa hill, the modern Brahmjūnī; but, finding there no peace, he went on, with his five disciples, to the village of Uruvilvā, the modern Urāl, close to Bodh Gayā. Here he passed six years in the most extreme asceticism, and then, becoming convinced that this was not the way to win the truth, he resumed the life of a mendicant, living upon alms. His disciples deserted him, and he wandered forth seeking for the place where he should obtain perfect knowledge. On the way he met a grass-cutter and asked him for some grass. This he spread under a neighbouring pipal tree (a kind of fig, *Ficus religiosa*)³ and sat upon it, taking his famous vow that, though his body were to shrivel up, though his skin, flesh, and bones were to rot to nothing, never would he rise from the seat till

¹ This fig-tree must not be confused with the Bodhi-tree, which is a pipal tree, an altogether different kind of fig. The *aksayavata* is a banyan tree.

² *Gayā Gazetteer*, 71 ff.

³ According to Bloch, 141, the worship of this sacred tree can be traced back to very ancient times, long before the foundation of Buddhism, and the Buddhists selected it as the actual site of the Great Enlightenment merely on account of its previous sanctity. At the same time, Bloch does not question the Buddhist tradition as to the main facts of the Buddha's enlightenment occurring at Uruvilvā.

¹ Beal, *Buddhist Records*, ii. 118; Watters, ii. 111.

² *Buddha Gayā*, 16 ff.

³ We know that, shortly before the time of Hiuen Tsiang, Buddhism had suffered much from the persecution of the Hindu Śaśānka.

⁴ The site of the Viṣṇupada temple is almost certainly the same as that of the *stūpa* built by Aśoka on the place where the Buddha uttered the *Pao-p'un* and other sūtras (*Buddha Gayā*, 19).

⁵ *Gayā Gazetteer*, 61.

he had obtained the true knowledge. Then commenced the assaults of the Tempter, Māra, and the long night vigil. During the first watch he completed the meditation which enlightens the understanding; during the second he accomplished the meditation of ecstasy; during the third, the meditation which has no object of thought—a simple, but absolute, concentration of the mind upon itself; and, lastly, during the fourth, the meditation which is devoid of all pleasure and pain, and is absolute knowledge.¹

The place where Gautama spread the grass, and on which he sat, was evidently the mud platform which to the present day is built round the largest pipal tree in each village of North India, where the elders meet, and where learned men discourse on religious topics. In later times it was called the *Bodhi-manda*,² or 'Seat of the Enlightenment,' and in still later tradition it became the *Vajrāsana*,³ or 'Adamantine Throne,' believed to be the stable, indestructible centre of the universe. The tree itself was the *Bodhi-druma*, or 'Tree of the Enlightenment.' Gautama, now 'The Buddha,' or 'The Enlightened,' on accomplishing his vow, remained meditating for seven days under the tree. His subsequent actions are described in *ERE* ii. 882, and need not be repeated here. Suffice it to say that the remains of a cloister still exist which was built by Aśoka over the place where Gautama is said to have walked up and down for seven days in his first raptures of emancipation, and where flowers sprang up beneath his feet.⁴

6. The *Bodhi-druma*.—A pipal tree universally known as the *Bodhi-druma*, with a stone platform beneath it, identified as the *Vajrāsana*, exists on the west side of the great temple at the present day, and the question of the authenticity of the former naturally arises. The pipal is a quick-growing and comparatively short-lived tree, and it is impossible that the present one should be the identical tree under which the Buddha sat. There is, however, credible evidence that it is a descendant of the original *Bodhi-druma*, propagated by seed from generation to generation. According to Hiuen Tsiang,⁵ that tree, or one of its successors, was cut down and burnt in the 3rd cent. B.C. by Aśoka in his unregenerate days, but was miraculously restored from its ashes. Overcome by the portent, the king worshipped it so zealously that he forgot to return home. The same night, in her jealousy, his queen had it cut down again, but again it came to life. Śaśāṅka, the enemy of Buddhism, again destroyed it about the 6th cent. A.D., but a few months afterwards Pūrṇavarṇa, the last descendant of Aśoka, by pious efforts restored it to life, and in one night it became ten feet high. He then built a wall round it, which Hiuen Tsiang saw. In 1811, Buchanan-Hamilton⁶ described how the tree in his time was in full vigour, but did not appear to be more than a hundred years old. Cunningham⁷ in 1862 found it in the last stage of decay, and in 1876 what remained of it was blown down in a storm, and a seedling from it was planted in its place. This is now the tree which is the object of

Buddhist worship. We have already seen that the *Bodhi-druma* is also worshipped by Hindus as part of the Gaya pilgrimage. When the new seedling was set up in the old site, another was planted a short distance off by J. D. Beglar, then in charge of the restoration of the temple, and allotted specially to Hindus. There are thus now two *Bodhi-drumas*—one Buddhist, and the other Hindu.

The legends of the miraculous resuscitation of the tree are no doubt to be explained by the simple expedient adopted on the last occasion, or by the method of dropping a seed into a hollow of the dead or dying tree. In the course of centuries, owing to inundations from the Nīlājan river, the whole level of the ground has been greatly raised, and in 1880, Cunningham found, thirty feet below the present level of the *Vajrāsana*, two pieces of an old pipal which may well have been fragments of the tree destroyed by Śaśāṅka 1300 years before.

7. The temple.—In the 3rd cent. B.C. the Emperor Aśoka built a temple and a monastery close to the Bodhi tree at a cost of 100,000 pieces of gold. A representation of the temple as it stood in the 2nd cent. B.C. exists in a bas-relief of the Bharut *stūpa* in Central India. It was an open pavilion, supported on pillars. In the middle lay the *Vajrāsana*, immediately behind which was the tree. Nothing now remains of Aśoka's temple but the *Vajrāsana*, a stone step of the entrance, portions of the foundations, the ruins of the cloistered walk, and a portion of the surrounding stone railings. The walk has been already referred to. The portion that has survived is nearly the whole row of bases of the pillars on the northern side of the walk, with a large fragment of what was probably one of the pillars. The bases of the southern row of pillars also exist, but are hidden within the foundations of the later temple.

Much better preserved is the famous so-called Aśoka railing.¹ It originally consisted of sixty-four stone pillars connected by massive stone rails. It was altogether about 250 feet in length and surrounded the whole building. The pillars and rails are covered with sculptures, and several can be dated by the fact of their bearing inscriptions in the Aśoka 'Brahmi' character. When, in later times, the present temple was built, the circuit had to be enlarged to about 520 feet, requiring double the number of pillars; and the original railing was evidently rearranged and added to. The remains of 62 of the pillars of this greater enclosure are approximately *in situ*. About half a dozen have been removed to South Kensington and to the Indian Museum in Calcutta, and 23 more, which until recently have been in the various courts of the present Saiva monastery near by, have been restored to their proper place round the temple.² The railing forms one of the oldest sculptured monuments in India. The pictures carved in the stone are of the most diversified character—spirited and often graceful—and, considering their age, are in a wonderful state of preservation.

Aśoka's temple fell into ruins from lapse of time, and we learn from a Burmese inscription found in the neighbourhood that a new one was built at a date not stated, but which Cunningham³ fixes as during the reign of the Indo-Scythian kings in the 2nd cent. A.D. This he considers to be the existing temple. It was visited by the Chinese pilgrim Fa Hian in the 5th, and by Hiuen Tsiang in the 7th century. The latter gives a detailed description of the building as he saw it, and this closely

¹ *Buddha Gaya*, 39; cf. *Lalitā-vistara*, xxii.

² *Lalitā-vistara*, xix.

³ Hiuen Tsiang (Beal, ii. 116; Watters, ii. 114).

⁴ See G. A. Grierson, in *Proc. As. Soc. of Bengal*, 1896, p. 52 ff. The bases of most of the cloister-pillars still exist *in situ*, and not only do some of them bear masons' marks in the Aśoka alphabet, but one supplies a missing character, that for *ā*, not found elsewhere.

⁵ Beal, ii. 117; Watters, ii. 115. Bloch, p. 140, considers that Aśoka's action in destroying the tree was due to his objection to tree-worship, which he considered to be included among those 'despicable and useless rites' that are 'unproductive of any results,' and should be avoided. He also (p. 141) maintains that Śaśāṅka's destruction of the tree occurred in the course of a war with Pūrṇavarṇa, and that it was dictated by political considerations and not necessarily by hatred to Buddhism as a religion.

⁶ *Martin's Eastern India*, i. 76.

⁷ *Mañabodhi*, 80.

¹ According to Bloch, p. 147, the oldest pillars of this railing date from the middle of the 2nd cent. B.C., or a hundred years after the time of Aśoka. It has hitherto been believed that the Bharut sculpture represents the original temple of Aśoka, but Bloch (p. 144 ff.) does not agree.

² *Gaya Gazetteer*, 56; Bloch, 142.

³ *Mañabodhi*, 21.

agrees, even to the measurements, with what we have before us now.¹ He also tells us of hundreds of *stupas* and *chaityas* with which the precincts were crowded. These, together with numerous monasteries and minor temples erected in later times, are now represented by mounds covered with trees to the north of the main building. This in the 11th cent. had fallen into ruins and was twice repaired by missions from Burma. At the end of the 13th cent. came Musalmān domination, and the place became a scene of desolation, although still visited by pilgrims. Cunningham believes that the holy tree and temple were, as above described, appropriated for Hindu worship in the first years of the 14th century.² At the end of the 15th cent. a Hindu ascetic founded a *maṭha*, or Śaiva monastery, close to the temple. It was largely built from materials taken from the ruins, and several valuable sculptures have since been disinterred from its wall. In or about the year 1727 the then *mahanth*, or abbot, received the village in which the temple stood, in grant from the Emperor of Delhi, Muḥammad Shāh; and since then the Buddhist shrine has been in the possession of Śaiva ascetics, although Buddhist pilgrims are freely allowed to come and worship, their gifts being made to the *mahanth*. In 1811, Buchanan-Hamilton³ described it as 'in the last stages of decay compatible with anything like a preservation of its original form.' In 1876 the king of Burma deputed officers to repair it, and, the attention of the Government of Bengal being drawn to the matter, in 1877 a celebrated Sanskrit scholar, Rājendralāla Mitra, was asked to visit the spot and to report as to what was being done. His report is embodied in the work entitled *Buddha Gayā*, published in 1878. It was evident that the Burmese repairs were being done without any regard for archaeological fitness. The Government accordingly took the work of restoration into its own hands, and completed it in 1894. This was carried out by J. D. Beglar, under the superintendence of Cunningham. The work done has been subjected to much adverse criticism; but, in the opinion of competent judges, the temple has been repaired as effectively and successfully as funds permitted, and the site immediately surrounding it has been excavated in a manner which will bear comparison with the best modern work elsewhere.⁴

As it now stands, the temple consists of a main tower, rising to a height of 180 feet, in the form of a slender pyramid springing from a square platform, on the four corners of which are similar towers of smaller size. The outside walls have niches for the reception of statues, and access to the temple is obtained through an eastern gate, supported by pillars, which opens into an ante-room in front of the sanctum. In the latter is the principal image, a large mediæval statue of the Buddha. On an upper floor another chamber contains a statue of Māyā Devī, his mother. Owing to the general rise in the level of the country, the temple now stands in the centre of a great sunken courtyard, and one of the most interesting sights is the immense number of votive *stupas* of all sizes, from actual small temples to little stone models hardly a foot high, with which the surface of the latter is crowded. These are only a small proportion of those dug up. Room could not be obtained for more. Several others are stored in a bungalow near by; and, before their removal was forbidden, hundreds were

carried away by visitors as mementoes of the birthplace of Buddhism.

LITERATURE ON MAHĀBODHI. — Buchanan-Hamilton, *op. Martin's Eastern India*, as above; *Archæol. Survey of India*, esp. vols. i. lii. xi. and xvi. (Preface) (Cunningham), and viii. (Beglar), Calcutta, 1871, 1873, 1880, 1883, and 1878 respectively; Rājendralāla Mitra, *Buddha Gayā*, as above; A. Cunningham, *Mahābodhi, or The Great Buddhist Temple under the Bodhi Tree at Buddha Gayā*, London, 1892; L. S. S. O'Malley, *Gazetteer of Gayā*, as above; T. Bloch, 'Notes on Bodhi Gayā', in *Rep. Arch. Surv. Ind.* 1904-5, Calcutta, 1912, pp. 139-158. The travels of Fa Hsien and Hsien Tsiang should also be consulted. The editions referred to are S. Beal, *Si-yu-ki, Buddhist Records of the Western World*, London, 1884, for both; and T. Watters, *On Yuan Chwang's Travels in India (630-645 A.D.)*, do. 1904-05, for Hsien Tsiang (Yuan Chwang).

8. Other sacred places. — The District is so covered with sacred spots, nearly all of great antiquarian interest, that only a selection of the more important can be mentioned here. Amongst the Hindu sacred places may be mentioned the temples of Deo, Umgā, and Konch. In Deo, which is about 40 miles S.W. of Gayā Town, there is a fine temple built of cut stone without cement, and sacred to the sun, dating from the 15th century. Six miles distant, at Umgā,¹ which was formerly the head-quarters of the present Rājā of Deo's family, there is another very similar temple now in ruins. It was built A.D. 1439, and was dedicated to the Vaiṣṇava deities Jagannātha, Bala-bhadra, and Subhadrā. The temple at Konch, about 20 miles N.W. of Gayā, is of brick, and is lighted by a tall opening in front formed with overlapping courses of brick, after the fashion of the Mahābodhi temple. In general appearance, however, it is more in the style of the Deo and Umgā buildings, and probably dates from the same period. According to orthodox Hinduism, the name of the ninth of the ten great incarnations of Viṣṇu is the Buddha. The merciful and gracious Viṣṇu took this form to secure the damnation of heretics by leading them still further astray. Curiously enough, in this temple there is a carving representing the ten incarnations, in which the Buddha incarnation is omitted, the total of ten being made up by dividing the fifth, or dwarf, incarnation into two scenes.

About thirty miles east of Gayā, at Sitāmārhi, there is a notable isolated boulder, in which has been hollowed out a small chamber 16 ft. long by 11 ft. wide. The interior is highly polished, and contains several sculptures. It is said to have been the residence of Sitā, the wife of Rāma Chandra, during her exile; and here her son Lava was born. The rock-cave was constructed for her by Viśvakarman, the architect of the gods, at the request of the poet Vālmiki, the author of the *Rāmāyaṇa*. He lived at the neighbouring village of Bārat. The wide high level ground near the boulder is said to have been the field of the battle fought by Lava and his brother Kuśa against Rāma's army. This is not the only site connected with the Rāma saga. Some twenty miles to the S.E. of Sitāmārhi lies the romantic Singar valley. Here, on the mountain of Sringirikh, was the home of the saint Rīṣya-śringa. The legend regarding him is long and fantastically poetical. In this place it is sufficient to say that he ultimately married Sāntā, the daughter of King Daśaratha, and performed the sacrifice for his father-in-law that brought about the birth of Rāma.

For Buddhistical remains we may first mention the Barābar Hills, about 16 miles north of Gayā. Here there are seven artificial caves or chambers hewn out of the solid rock. Inscriptions show that four of them were excavated by Aśoka, and three about 231 B.C. by his grandson Daśaratha, for the use of ascetics called Ajivikas. It has not been definitely settled who these people were.

¹ So Cunningham, *Mahābodhi*, 18. Watters, while admitting the possibility of the two buildings being the same, contends that Hsien Tsiang's description does not agree (ii. 117 f.).

² *Op. cit.* 58 f.

³ *Op. cit.* i. 72.

⁴ *Gayā Gazetteer*, 52. The account of the temple immediately following is taken from p. 51 of the same work.

¹ See Kittoe, in *JASB* xvi. [1847] 656 and 1221; *Rep. Arch. Surv. Ind.* xi. [1880] 140.

They may have been Hindu Vaiṣṇavas, or Jains, or Buddhists.¹ Most of the caves have been left in the rough, with the marks of the chisel still visible, but in one or two the surface inside is highly polished, and there are handsome carved entrances. Near the Barābar Hills are Dharāwat, the site of the Buddhist monastery of Guṇamatī, and the lofty Kauwāḍol Hill, at the foot of which lay the monastery of Silābhadrā. Both were visited by Hiuen Tsiang in the 7th century.² Rājagriha, the old capital of Magadha, where the Buddha lived and preached for many years, is just beyond the border, in the Patna District, but in Gayā there is the Jethian Valley leading into it. This is full of remains, and many legends of the Buddha are connected with it. The name is a corruption of *Yastivana*, or the forest of the staff, so called from a bamboo staff which was used to measure the Teacher's body, and then took root and developed into a forest. Hiuen Tsiang has left a detailed account of the locality and of the associated legends.³

The Kukkuṭapāda Giri, or Cock's-foot Hill, is another site mentioned by Hiuen Tsiang.⁴ Here Mahā-Kaśyapa, one of the earliest and greatest of the Buddha's disciples, lies buried, the mountain having cleft asunder to receive him. Here the Saint sleeps, awaiting his resurrection, when the coming Buddha, Maitreya, shall arouse him and cause him to enter into *nirvāṇa*. Three different places have been suggested as the site, and Stein's identification⁵ of the Haṣrā Hill, about 12 miles east of Gayā, is the one which is now generally accepted. There are many other Buddhist sites of great archaeological and historical interest in the District, regarding which reference must be made to the authorities quoted at the end of this article.

9. Popular religion and folklore.—The popular religion of Gayā does not differ in its general character from that of the rest of Bengal (see *ERE* ii. 482 ff.). Uneducated Hindus and Musalmāns alike have a whole pantheon of village godlings, ghosts, and malignant spirits, whom they worship, or, when occasion arises, exorcize. As for Hindus, the elastic nature of the orthodox form of belief allows all these to be included in the religious system. There are practically no traces of Buddhism, although the present writer, in the year 1891, found a few ignorant villagers in the north of the District who worshipped a certain 'Baudh Deo' (Skr. *Bauddha Deva*), whom the educated clerks in charge of the census then being carried out identified with the Buddha incarnation of Viṣṇu.⁶

We have seen (p. 183^b) how Hinduism has absorbed a part of the folk-religion of demon-worship into the official cult at Rām Silā and Pret Silā. On the other hand, the Buddhist images and broken sculptures which can be dug up in most villages in Magah have been utilized by the common folk as idols, representing in each case any particular god or godling with whom the superstition of the finder wished it to be identified. As a good example, in the early nineties the writer discovered a fine image of the Buddha buried in the ruins of Rājagriha. After cleansing it from the encrusted earth, he sent it off to his camp in charge of a village

watchman of the Duṣādh caste. When he himself returned to his camp in the evening he found the sculpture covered with a mess of oil and vermilion. On inquiry, he learnt that on the way to camp the watchman had made up his mind that it was an image of his tribal godling, had set it up *en route*, anointed and worshipped it, and made oblations to it.

Evil spirits, called *bhūt* and *dānk*, are worshipped with intent to propitiate. If properly treated, they are useful as field-guardians, striking with disease any one who pilfers crops under their protection. In the jungle-covered Rāmgarh, such spirits have a market value, and an *ojhā* (Skr. *upādhyāya*), or wizard-exorcist, will charge a good price for such a one safely shut up in a bamboo bottle and delivered to a low-caste cultivator. Most of these maleficent spirits are ghosts of some one who has come to an untimely end. Sometimes they enter into and possess a man or woman, and the services of an *ojhā* are required to expel them. Cf. *DEMONS AND SPIRITS* (Indian), vol. iv. p. 607^a.

Several of the castes worship deified heroes, each having its own. Thus, the Bhogtās worship Bān Singh; the Duṣādhs, Goraiyā and Sālhes; and the Goālās, Lorik. The last two are the subjects of folk-epics of great interest. Sālhes was the great Master-Watchman, who conquered Chuhār Māl, the corresponding Master-Thief. Duṣādhs themselves are usually either thieves or watchmen. The epic of Lorik is of interminable length, and his exploits were not confined to Gayā. He was an Indian Paris who carried off a dusky Helen, and ultimately became a just and powerful ruler. He conquered Sālhes, here a thief, and ended his days at Benares, where, with the members of his family, he was turned into stone. He is also localized and sung of by Goālās in other neighbouring districts, such as Shāhābād, Mirzāpur, and Ballā.⁷

Musalmān villagers also have their own godlings. The most famous are the five *Pirs*, worshipped all over northern India. These are, properly, the five Holy Persons of Islam,—Muḥammad, 'Alī, Fātima, Ḥasan, and Husain,—but practically they mean any five saints whom a man remembers or worships.⁸ All that is required is that a *Pir* must be a holy man, and that he has departed this life. Another Musalmān saint of wide celebrity, Chānd Saudāgar, is said to be buried at Dariyāpur Pār-bati, in the north-east of the District. The shrine at which he is worshipped is on the site of an ancient Buddhist *stūpa*, probably that erected by Aśoka to commemorate one of the Buddha's miracles.⁹

Other mythical personages are also worshipped by Musalmāns. Amongst them we may mention Shaikh Saddū, a sort of Aladdin, who found a wondrous lamp that controlled genii, and who lost his life through its misuse. Kamālo Bibi, a female saint, who is said to have lived in the time of a Buddhist Rājā Kanaka, and regarding whom many wondrous miracles are reported, is specially worshipped by women who desire offspring; but Hindus and Musalmāns of both sexes resort to her shrine for exorcism or the cure of any disease.¹⁰

More distinctly Hindu is the worship of Sultān Shāhid. Both Musalmāns and low-caste Hindus pay adoration to him. His shrine is commonly close to a temple of the Hindu goddess Devī, and cocks are offered in his honour before the worship of Hindus directed to her. Some regard him as the bodyguard, and others as the paramour, of Devī.¹¹

¹ For the story of Sālhes, see G. A. Grierson, *Maithilī Chrestomathy*, Calcutta, 1882, p. 3 ff. For Lorik, see *Arch. Surv. Ind.* viii. 79 ff. It is noteworthy that in the latter the principal god is the old Aryan deity Indra.

³ *Arch. Surv. Ind.* viii. 108 ff., xv. 6 ff.

⁴ For Shaikh Saddū, see *Gayā Gazetteer*, 79. For the legends of Kamālo Bibi, see *Arch. Surv. Ind.* xvi. 37 ff.

⁵ *Gayā Gazetteer*, 80.

¹ See G. Bühler, in *IA* xx. [1891] 361 ff. Bühler, following Kern, considered them to be Vaiṣṇavas; see, further, art. AJIVIKAS. K. B. Pāthak (*IA* xli. [1912] 88 ff.) shows that Jains considered them to be Buddhists. D. R. Bhandarkar, with whom the present writer agrees, maintains (*JRAS* xxi. 403 ff.) that they were a distinct sect, neither Buddhist nor Jain.

² Beal, ii. 104 ff.; Watters, ii. 108 f. Hiuen Tsiang narrates some interesting stories about both these places.

GENERAL LITERATURE REGARDING GAYĀ DISTRICT.—Buchanan-Hamilton, *op. Martin's Eastern India*, as above, vol. i., London, 1838; *Archaeological Survey of India*, vols. i. iii. viii. xv. and xvi., Calcutta, 1871, 1873, 1878, 1882, and 1883 (vol. viii., by Beglar, is especially full of information, and contains an immense amount of folklore); G. A. Grierson, *Notes on the District of Gayā*, Calcutta, 1898 (the author does not now maintain the correctness of the economic chapters of this work, which are out of date); L. S. S. O'Malley, *Gazetteer of Gayā*, as above.

G. A. GRIERSON.

GAYATRĪ.—See HYMNS (Vedic).

GEHENNA.—See ESCHATOLOGY.

GENIZAH.—The name of the room in which damaged manuscripts of the Bible or other writings withdrawn from use are preserved, as well as a collective term for the writings so preserved. The substantive *g'nizāh* signifies properly the act of preserving, as *nomen actionis* to the verb *gānaz*, and occurs in the ancient Jewish literature which has been handed down to us only in the collocation *bēth-g'nizāh*, with which (in the meaning 'treasure-house') an old Tannaitic note explains the word *yēhasen* in Is 23¹⁸ (see *Pesahim*, 118b). *Bēth-g'nizāh* is the same as Aram. *bēth-ginzn* (Ezr 5¹⁷ 6¹), from which the New Hebrew word *bēth-g'nāzn* is derived (occurring in many passages of the Bab. Talmud: *Shabb.* 10b, 105b; *Pesah.* 119a; *Kethub.* 111b; *Sanhed.* 104a, 109a). The verb *gānaz* means 'to conceal something,' 'to preserve carefully,' as one preserves things of value or treasures. In the *Halākāh* (the tradition of religious law) the verb is applied to describe the laying aside and concealing of such sacred objects as for some reason or other can no longer be used but may not be destroyed. In order to prevent such objects from being profaned, they must be carefully concealed and preserved. In the instructions on the subject, the expression used is *gōn'zn*, or in the passive *yiggānez* or *ta'ūn* (plural *t'ūntn*) *g'nizāh* ('marked for preservation'). Besides the instructions of the *Halākāh* there are also reports, partly of a historical and partly of a legendary character, which—with the use of the verb *gānaz*—relate of certain articles that they were 'concealed.' The Hasmonæans, when they purified the temple, concealed the stones of the desecrated altar in one of the temple chambers (M. *Middoth* i. 6); it is the same fact which is mentioned in 1 Mac 4⁴⁶. (According to *Tosefta*, *Megilla* iv. 15, the stones of the temple building which had become worn were concealed.) According to a tradition of a priestly family, there was a room in the temple where the sacred ark was concealed (M. *Sheqalim* vi. 1, 2). It was said that king Josiah, in order to prevent the ark from being carried away to Babylon, concealed it, and 2 Ch 35³ was adduced in support of this view (Tos. *Soṭa* xiii. 1; *Yoma*, 52b, and elsewhere). In connexion with this view it was also asserted that the tent of meeting, i.e. the sanctuary erected by Moses, was concealed at the building of Solomon's temple (Tos. *Soṭa*, *ib.*). According to the view expressed by the Palestinian Jews in the writing at the beginning of 2 Mac (2⁸), it was not King Josiah, but the prophet Jeremiah (cf. Jer 3¹⁶), who concealed the ark, along with the tent and the altar of incense, and in fact hid them in a cave on the mountain (Nebo) which Moses had ascended before his death. In the same source we read too (1³⁸) that at the destruction of the first temple the priests, before they went into captivity, had concealed the fire of the altar. Here the Greek word used (*ἀνέκρυψαν*) is the same as we find in *Apocrypha*, and corresponds to the Hebrew *gānaz*. The information supplied by a well-known Tannaitic reporter, Abba Saul, seems quite credible, namely, that a sacrificial knife, which had become notched and unfit for killing the sacrificial animals, was concealed in accordance with a resolution of

the priests (*Zebahim*, 88a). In an old commentary on Lv 16²³ we are told that the linen garments worn by the high priest on the Day of Atonement must be concealed and not used again on the next Day of Atonement (*Sifra*, l.c. 82c, ed. Weiss; *Pesahim*, 26a, etc.). The command to conceal is especially emphasized with reference to the written text of the Bible and the writing of the Divine name. Those copies of the Bible which present an abnormal form of letters, or in which the sections are not divided in the traditional way, or in which portions of the text which ought to be written in *stichoi* are written continuously and inversely, are to be concealed as well as those in the preparation of which the prescribed ink was not used or in which the Divine names were written in gold (*Sifre* on Dt 6⁸; Bar. *Shabb.* 103b). It is also related (*Sopherim* i. 10) that the scribes ordered a manuscript belonging to a certain Alexander (v.l. 'the Alexandrians'), which had been shown to them and which had the Divine names written in gold, to be concealed. The command to conceal refers also to copies of the Bible which a heathen had written (*Gittin*, 45b), to remnants of those copies which had been eaten by cockroaches (M. *Shabb.* ix. 6), and to covers and holders which had been used to preserve Bibles (*Megilla*, 26b). Many other objects of this kind which had served a sacred purpose (*tashmishē q'dushshā*), as, e.g., the bands of the phylacteries, were concealed (*ib.*). If a heathen offered a beam of wood for the purpose of building a synagogue, and the dedication with the name of God was written on the beam, then the part containing the name of God must be cut out and concealed (Tos. *Megilla* iii. 15; *Arakhin*, 6a). The same instruction applies to stones on which the name of God is written (Mas. *Sopherim*, v. 13), to handles of house utensils, or the feet of bedsteads on which the Divine name had been inscribed (*Shabb.* 61b; *Arakhin*, 6a). Other instructions belonging to the casuistry of the Tannaim on this subject, as it meets us in the *Halākāh*, are the following. If a wife suspected of unfaithfulness refuses to drink the 'bitter water' that causeth the curse prescribed for her in Nu 5^{17a}, then the roll on which the words of cursing are written (5²²) must be concealed and not used on another occasion (M. *Soṭa* iii. 3). If the whole property of a city which has gone over to idolatry (Dt 13^{12a}) is given up to destruction, then the tenth of all that is found in it as well as the copies of the Bible must be concealed (*Sanhed.* 112b). From the casuistry of the 'Amoraim we have the decision that a roll of the Pentateuch which had on every page (column) three errors must be hidden (*Menahoth*, 29b). With regard to sacred books written in any other language than Hebrew, the Tannaitic tradition tells us (M. *Shabb.* xvi. 1) that they must be concealed. That is a command which is to be treated with the same consideration as the prohibition of the use of written translations of the Bible, which, in fact, remained only theory, like the prohibition of fixing the oral tradition in writing. But, as an ancient piece of evidence for that command, the instance of Gamaliel I. is adduced (Tos. *Shabb.* xiv. 12; Bar. *Shabb.* 115a), who ordered a Job Targum, which was laid before him as he stood on the temple mountain, to be walled into a layer of stone (*nidbāk*) which was just at the moment being laid. His grandson, Gamaliel II., after he had heard of the action of his grandfather, as he on one occasion read the Job Targum in Tiberias, caused it also to be placed in concealment (*ib.*). This double anecdote shows us, first of all, how this 'concealing' of books was at times carried out, but also that the books so removed from use were preserved in other copies, and that the fact of their concealment was often

forgotten. Regarding the intentional 'concealment' of individual books of the Bible, we possess definite information about the prophecy of Ezekiel (*Shabb. 13b*) and the writings of Solomon (Proverbs [*Shabb. 30b*]; Qoheleth [*ib. Leviticus Rabba*, c. 25 *ad init. Qoh. R.* to 1^a and 11^a]; both along with Canticles [*Aboth of R. Nathan*, c. i.]). In the last-mentioned source (ed. Schechter, p. 2) the tradition held by Abba Saul, the Tannaitic teacher already referred to, is as follows: 'In the beginning people said that Proverbs, Canticles, and Ecclesiastes were "concealed" (*gnúztim*), because they were only fictions and did not belong to the Holy Scriptures, and for this reason they ought to be concealed. It was the men of the Great Synagogue who first came and, by means of their explanation of those passages of these books which gave offence, brought it about that they were again received among the sacred writings.' This tradition is the only one in which the expression *gnúztim* (= Apocrypha) occurs as the term for such writings as are no longer in use. King Hezekiah is praised for having concealed a 'book of means of healing' (*M. Pesu'im* vi. 58a; *Berakh. 10b*; cf. *Jerus. Sanhed. 18^a*). Regarding the 'Book of the Genealogies,' which, according to *Pesahim* (62b), was 'concealed,' see Schechter in *Expt* xvi. (1905) 186. In relation to the Apocrypha of the OT, especially the Book of Sirach, which alone is mentioned in the Jewish traditional literature, there is no mention in the Tannaitic sources that it had been 'concealed.' But the Amora Joseph (head of the school of Pumbeditha, who died 333) speaks expressly of the fact that the scribes (the old authorities) have 'concealed' (*gan'ed*) the Book of the Son of Sira (*Sanhed. 100b*; see *Expt* xvi. 236).

No particulars regarding the act—how the 'concealment' of sacred writings no longer in use and of fragments of the text was to be carried out—are contained in the traditions either of the Tannaim or of the Amoraim. Only a 4th cent. utterance of a Babylonian authority (Raba) is preserved, according to which a Pentateuch roll, which through age had become unfit for use, was concealed by placing it beside a scholar in his grave. Another of the Babylonian Amoraim (Aha b. Jacob) remarks in reference to this, in connexion with *Jer 32^a*, that it was done by previously placing the roll in an earthen vessel (*Megilla, 26b*). On the authority of these two statements, the following precept is accepted in the Codex of Maimonides (*Mish. Torah, Hulch. Sefer Torah* x. 3): 'A Pentateuch roll which has become old or unfit for use is to be laid in an earthen vessel and buried beside a scholar. In this consists its concealment' (*gnizatah*). This has been verbally carried over into the Codex of Joseph Karo (*Yoreh De'ah*, ch. 282, § 10).

The practice of the Jewish congregations had so developed that not only Bible manuscripts (and in later times printed Bibles) which had become unfit for use, but all Hebrew writings or fragments of these, as soon as they were useless, were brought to some room or other in the synagogue-building which was difficult to reach, and in this way preserved from profanation. Since the special aim here in view was to protect the Divine names contained in these hidden writings, the whole of the latter came to be called *Shemóth* ('Names,' i.e. Divine names). From time to time the contents of the Genizah, in accordance with the instruction mentioned above, were deposited in the cemetery. That takes place still with great pomp—e.g. in Jerusalem. In the *Revue des Ecoles de l'Alliance Israélite*, 1901 (p. 103), there is an article on the burying of the Genizah which took place in Rustchuk (Bulgaria) in April of the same year:

'A large tent is erected in the cemetery; several rows of chairs are placed before the tent, in the neighbourhood of an erection after the form of a holy ark. Into this, after a sermon by the Rabbi, there are brought about two hundred small sacks, containing the writings which are to be buried. Then the right to take part in the burial is put up for auction among those assembled. Thereafter each carries his sack, and lays it into a grave which has been previously prepared. Then the grave is covered in, and receives later a monument with the inscription: "Genizah of the year 1901, Rustchuk."

Regarding similar burials of the contents of the Genizah in the Jewish congregations of the East or of North Africa, see *JE* v. 613.

The instruction to bury the Genizah was, however, not always or in all places carried out. And so the Genizah has been preserved which in our day, like a real treasure-house, has disclosed its riches in precious remnants of the ancient Jewish literature—the Genizah of the ancient Ezra synagogue in Cairo. It was discovered in 1864 by the learned Jewish traveller, Jacob Saphir (see his book of travels, *Eben Sappir*, Lyck, 1866, p. 21b), who, however, had no idea of the importance of his discovery, and took with him only a few worthless leaves. Elkan N. Adler, too, who in 1888 visited the synagogue, did not succeed in getting the Genizah opened. A. H. Sayce was the first who succeeded in securing a considerable amount from the Cairo Genizah, after a part of the contents of the same had in the meantime, on the occasion of the synagogue undergoing repairs, been taken out and buried. This circumstance brought it about that, even before the whole Genizah was taken out by Schechter, many parts of it were offered for sale in Egypt. Among the parts purchased by the learned sisters Mrs. Lewis and Mrs. Gibson was that fragment which was recognized on 13th May 1896 by Schechter's acuteness as belonging to the Hebrew original of Sirach, and thus in so unexpected a way prepared for the rediscovery of this original. It was Schechter, too, who in 1897 went to Egypt, and, being authorized by the Jewish congregation there, removed the whole Genizah from Cairo, and brought these fragmentary manuscripts, whose value cannot be overestimated, to Cambridge. Under the name of the 'Taylor-Schechter Collection' this unique collection is now the glory of the Cambridge University Library. Many parts of the Cairo Genizah, some earlier, and some later, came into other public libraries, particularly the Bodleian in Oxford, as well as into the hands of individual scholars and collectors in Europe and America.

The whole riches of the Genizah fragments will not be fully discovered till the Taylor-Schechter Collection has been completely catalogued. It is expected to cast a new light upon large departments of Jewish literature, and to increase in an unusual degree the material for the history of the literature and the culture of Judaism. The portions of these fragments which have already been published show us how they are fitted to enrich and deepen our knowledge. The discovery of the Hebrew Sirach, which was due to them, has already been mentioned. The fragments are particularly rich in literature of the Gaonic period, both in Hebrew and in Arabic, some very important pieces being extant. A great deal coming from Saadya himself, or relating to him and his time, has been published by Schechter, under the general title 'Saadyana,' in the *JQR* (also published separately, Cambridge, 1903). This periodical has, since the year 1896, given us very remarkable and interesting selections from the Genizah fragments, sometimes with facsimiles, and including specimens of the handwriting of Moses Maimonides. With regard to the Arabic portion of the Cairo Genizah in Cambridge, H. Hirschfeld commenced in January 1903 (*JQR* xv. 167 ff.) to publish immensely valuable communications. From his introductory

remarks on this part of the Cairo Genizah the following details, indicative of its contents, are supplied:

'Roughly estimated, they [the Arabic fragments] count about 12,000, mostly written on paper, but many (about one-fourth) on vellum. . . . At first sight it seemed advisable to divide the whole mass into two large sections, viz. those written in Hebrew characters, and those written in Arabic script. . . . The following is an alphabetical list of subjects ascertained up to the present: Astronomy and Astrology, Bible (text, translation, and commentaries), Bills and Accounts, Calendar, Children's exercises, Cufic pieces, Documents, Dreams (interpretation of), Fiction, Geography, Grammar, History, Homilies, Legends, Letters, Lexicography, Liturgy, Māsārik, Mathematics, Medicine, Midrash, Mohammedan Tradition, Natural History, Philosophy, Poetry, Polemics, Polite Literature (*Adab*), Proverbs, Qabbālāh, Qaraites, Qorān, Responsa, Šūfiām, Talmud and Rabbinnics.'

To complete this list, we call attention to another remark in Hirschfeld's introduction, that among the Arabic fragments of the Cairo Genizah there are many containing Muhammadan texts in the Hebrew script as well as Hebrew texts in Arabic script. This shows us to how great an extent the Jews of Egypt—from whose midst the greater part of these fragments has come—had adopted the Arabic culture of their environment.

Apart from the MSS fragments, which for the most part were brought to Cambridge, there are also in the Cairo Genizah fragments of very ancient Hebrew printing, from which important information was gathered as to the history of Hebrew typography as well as contributions to Hebrew bibliography. Elkan N. Adler reports, as a result of personal observation, on the Genizahs of some other ancient synagogues (Feodosia in the Crimea, Bukhara, Teheran, Aleppo), in art. 'Genizah,' in the *JE* (v. 613).

GHAIR MAHDĪ.—'Ghair Mahdī' (lit. 'not [expecting a] Mahdī') is the name given to those sectarian groups in Indian Islām whose adherents believe that the Mahdī (*g.v.*)—the promised Messiah of the Muslims—has already come, and that, accordingly, the hopes which centre in the future advent of such a Divine messenger are now groundless and futile. Thus, in the District of Kirmān, Baluchistān, there still survives the tradition of an Indian Mahdī, Muhammad of Jaunpūr, who, it is said, appeared about the end of the 15th cent., was persecuted and expelled from India by the orthodox, and, after many wanderings, died in the valley of Helmand in 1505. In contrast to the orthodox—the Namāzi, i.e. those who observe the traditional *ḡalāt*-ritual—believers in this Mahdī call themselves 'Dhikrī' i.e. those who give preference to a kind of *dhikr* for the *ḡalāt*. Another sect of similar character is called 'Dā'ire wāle'; they live in the province of Mysore, and their faith is bound up with a Mahdī who appeared over four hundred years ago. In the 'night of destiny' (*lailat al-qadr*), hallowed in Muslim tradition,—the 27th of Ramadān,—they erect a stone-circle (*dā'ira*, 'circular wall'), within which they perform their peculiar ritual; and it is from this ritual of the *dā'ira* that their distinctive name is derived.

These Ghair-Mahdī sects display an intensely fanatical spirit towards orthodox Muslims, and, in fact, regard them as unbelievers. Their creed ends with the words: 'The Imām Mahdī has come and has gone away; whoso believeth not this is a *kāfir*'; and they find support for this article in the *ḡadīth*—saying, *man kadhhaba bi-l-mahdī faqad kafara* ('he who denies the Mahdī is thereby an unbeliever'). Sell is undoubtedly right in holding that the Mahdist pretensions of the 10th cent. A.H. were an outcome of millenarian expectations, and purported to be a fulfilment thereof. The rise of the sects which thus stigmatized all other Muslims as heretics is the subject of a *fatwā*, given by Ibn Hajar al-Haitamī († A.H. 973=A.D. 1505) against them, in which he called upon the Muslim authorities to take drastic measures against their adherents.

GIANTS.—At the present day there is no human race of 'giants,' taking that word to denote men greatly above the average human stature. There are, indeed, families or groups of exceptional height. In his *Anthropological History of Europe* (Paisley, 1912, p. 168 f.) John Beddoe observes, selecting Scotland as the home of the tallest Europeans:

'The men of the Merse are among the finest in Britain. Probably the average stature is about 5 feet 9 inches (1752 millimeters): the fishermen are not so tall as the peasantry, but 25 of the latter, of pure local descent, who were measured and weighed by Dr. Charles Stewart of Obhinside, yielded the remarkable average of 5 feet 10½ inches in stature (1784 millimeters), and 199 pounds in weight. Here the weight exceeds, though the stature falls short of, the huge proportions of the men of Balmaclellan in Upper Galloway, who as yet, I believe, hold the record as to stature among all tested communities in Europe.'

As Beddoe places the average height of the Balmaclellan men at 5 ft. 10½ in., or nearly 1790 mm., that may be taken as the highest stature of any race in Europe—leaving out of consideration the exceptional cases of individuals whose height is greatly above that of their kinsmen. Probably, also, the figures just quoted represent the maximum average height of any human family. The Tehuelches of Patagonia, although long regarded as of gigantic stature, are now ascertained to possess an average male height of 5 ft. 10 in., or 1778 mm. Some individuals among them are as tall as 6 ft. 4 in., or 1930 mm., but the same thing can be said of other races. The statements made by Bourne cannot be quite ignored, but the subsequent information supplied by more accurate observers points to exaggeration on his part. He thus describes the Patagonian natives:

'In person they are large; on first sight, they appear absolutely gigantic. They are taller than any other race I have seen, though it is impossible to give any accurate description. The only standard of measurement I had was my own height, which is about five feet ten inches. I could stand very easily under the arms of many of them, and all the men were at least a head taller than myself. Their average height, I should think, is nearly six and a half feet, and there were specimens that were little less than seven feet high.'

1 The *Giants of Patagonia: Captain Bourne's Account of his Captivity amongst the extraordinary Savages of Patagonia*, London, 1853, p. 29.

It is possible that at the time of Bourne's captivity (1849) a sub-division of the Tehuelches contained a larger proportion of tall men than can now be seen in any Patagonian tribe. His statements are very explicit, and he undoubtedly indicates a race exceeding, by several inches, the Balmacellian men reported to us by Beddoe, even if some allowance is made for exaggeration on the part of Bourne. In any case, however, the alleged stature of those Patagonians is not so much above that of normal Europeans as to entitle them to be seriously spoken of as 'giants.' Nor is there any other human race, existing at the present day, which has a greater claim to that title.

There are, however, many individual instances of abnormal height in modern times. The case of the Russian giant Machnov, who was exhibited in London in 1905, is perhaps the most striking. Although a well-made man, and free from the physical defects which often accompany 'giantism,' Machnov's stature reaches the amazing height of 9 ft. 3 in., or 2819 mm. A famous instance in the 19th cent. is that of Chang, the Chinese giant, who was 7 ft. 9 in., or 2363 mm., in height. Like Machnov, Chang was in all other respects normal, in mind and body. The same cannot be said of the 18th cent. Irish giant Magrath, whose great height (7 ft. 5 in., or 2261 mm.) was due to disease. Magrath lived only to the age of twenty-four, and he had the feeble intellect and figure associated with 'giantism' regarded as a disease.

In his book on *Giants and Dwarfs* (London, 1868), Edward J. Wood gives numerous cases of individuals of giant stature in the past. Thus, he refers to John Middleton, who was born at Hale, Lancashire, about 1572-1578, and who was commonly called 'the Child of Hale.' Middleton's height was exactly the same as that of the 20th cent. Russian Machnov, 9 ft. 3 inches. His portrait is preserved in the library of Brazenose College, Oxford. Then there is a painting by F. Zuccheri in Hampton Court Palace, representing a native of the Low Countries who was a household servant of Elizabeth of England, and whose height was 7 ft. 6 inches. Contemporary with him was a Piedmontese seen by Martin del Rio at Rouen, in 1572, who was 9 feet high. In 1581, Stow records in his *Chronicle* a Dutchman whose height was 7 ft. 7 inches.

Johannes Goropius Becanus, physician to the sister of the Emperor Charles V., in his *Origines Antverpianae* (1569), and *de Gigantomachia*, attests that he saw a youth nearly 9 feet, and a man almost, and a woman quite, 10 feet in height. The man lived within a few miles of the author's own residence in Flanders' (Wood, p. 94).

In considering the possibility of a woman quite 10 feet in height, one must keep in view the following statement:

'Styrie in his *Memorials* tells us that giants were introduced into May games, and that on May 20th, 1556, there was a game in St. Martin's-in-the-Fields (London) with, among other amusements, giants, which were in fact men on stilts' (Wood, p. 94). This suggests an easy explanation of the great stature of the woman referred to by Becanus, as well as of many other nominal 'giants.' Nevertheless, it will not explain every instance. There is no reason to suppose, for example, that John Middleton, whose portrait is preserved in Oxford, was anything else than a real giant; and, although his height was immense (9 ft. 3 in.), it is exactly paralleled by that of the existing Russian giant Machnov.

With the exception of Magrath, the giants here cited appear to have been quite healthy people. Their great stature was not, therefore, the result of disease. To what cause was it due? The usual explanation is that such abnormal stature is merely caused in the same way as any other exceptional development in the animal or vegetable world; that is, by a favourable environment accompany-

ing a happy combination of elemental forces. On the other hand, it is sometimes maintained that giants and dwarfs, of healthy body and mind, illustrate the atavistic tendency and actually represent a remote ancestor belonging to a very tall or a very small race. The probability of a race of giants having once existed is strongly advocated by Th. Zell, who, indeed, is so firmly convinced upon this point that he considers it beyond dispute. He argues that, assuming the races of average height to represent normal mankind, the fact that dwarf races have existed makes the hypothesis of giant races a necessary complement. He points to the discovery of dwarf skeletons alongside those of a larger race in the Neolithic station at Schweizersbild in Switzerland; and with these might be compared the skeletons found in the caves at Mentone, some of which represent a stature of from 6 to 7 feet, while others, of a very different racial type, show an average height of 4 ft. 6 inches. Zell further argues that, just as the folk-tales concerning dwarfs are now found to have a substantial basis (although with a superstructure of fantasy), so the traditions of cannibal giants are traceable to an actual race of men of primitive type who practised anthropophagy.¹

There is, at any rate, no doubt that a belief in the former existence of a race of giants is very wide-spread, indeed world-wide. It is quite possible that the origin of this belief dates from the time when two races of markedly different stature, such as those of the Mentone caves, were closely associated together. The memory of the tall race, whose stature might be increasingly exaggerated, would live on among the smaller race, and thus form the basis of many wild and impossible tales. In some cases, however, the tales are not radically incredible. A critical examination of various Hebrew, Greek, and Latin stories of giants seems to disclose nothing more wonderful than exceptionally tall or strong men.

'The Highland giants were not so big but that their conquerors wore their clothes,' observes J. F. Campbell, with reference to the *famhairan* of Gaelic legend; 'they were not so strong that men could not beat them, even by wrestling' (*Popular Tales of the West Highlands*, London, 1880, vol. i. p. xcix). Here there is no indication that the 'giants' in question were even taller than their opponents. Another Gaelic name for 'giants,' *samhanaich*, is similarly pointless, so far as regards stature. The word *samhanaich* is derived from *samh*, a fetid odour, and the people so designated obtained this name on account of their malodorous habits. J. G. Campbell records a West Highland story of a certain Tuairisgeul Mór, whom he describes as 'a giant of the kind called *samhanaich*—that is, one who lived in a cave by the sea-shore, the strongest and coarsest of any.' He adds: 'It is a common expression to say of any strong offensive smell, *mharbhadh e na samhanach*, "it would kill the giants who dwell in caves by the sea."'

Now, McAlpine, in his *Gaelic Dictionary*, translates *samhanaich* by 'savages,' and quotes a proverbial saying in which the word is introduced with this meaning—'you would frighten the very savages.' We have here a word, therefore, which in the opinion of one scholar indicates a race of malodorous savages, without any reference to stature, while another scholar understands that these savages were giants. Even the latter term, however, does not necessarily imply great stature. The large block of stone in the island of Hoy, Orkney, which bears the popular name of 'the Dwarfie Stone,' is so called because it was believed, according to one version, to be the home of a dwarf. But a writer of the year 1700² states that

¹ See Zell, *Polyphem ein Gorilla*, Berlin, 1901, pp. 8 and 10.

² *The Scottish Celtic Review*, Glasgow, 1885, pp. 62 and 140 f.

³ John Brand, *Description of Orkney, etc.*, reprinted at Edinburgh, 1883, p. 63.

'the common tradition among the people is that a giant with his wife lived in this isle of Hoy, who had this stone for their castle.' As the hollowed-out chamber, or bedroom, in which this giant was supposed to lie, is only 5 ft. 8 in. long, it is obvious that the word 'giant' did not convey the idea of a person of tall stature, in the minds of the common people. A similar problem is presented by the Gaelic word *famhair*, or *fomhair*, which J. F. Campbell and other translators of Scottish Highland tales render by the English word 'giant.' But O'Reilly, in his *Irish Dictionary*, defines it as 'a pirate, a sea robber, a giant.' The Irish forms of the word are *fomhor*, or *fomor*, with plural *fomori*. Sir John Rhys speaks of

'the *fomori*, so well known in Irish legend, which, however, does not always represent them as giants, but rather as monsters.' He further states: 'I remember hearing, however, years ago, a mention made of the *fomhóraigh* [an alternative spelling], which, without conveying any definite allusion to their stature, associated them with subterranean places. An undergraduate from the neighbourhood of Killorglin, in Kerry, happened to relate in my hearing how, when he was exploring some underground *raths* near his home, he was warned by his father's workmen to beware of the *fomhóraigh*.'¹

When it is understood that the dimensions of the underground structures referred to are often so low and narrow that large men have difficulty in entering them, it will be seen that here, again, we have the idea of 'giants' whose stature did not exceed that of medium-sized men. In modern Gaelic the word *famhair* (literally, 'mole-man,' or 'mole-fellow') is used to denote a mole-catcher, *famh* signifying 'mole'; and it is not unlikely that, in the old legends, it was a contemptuous nickname, given to a race of 'mole-men,' the builders and occupants of the underground dwellings, of which numerous specimens are still extant in Ireland and Scotland. Be this as it may, the foregoing references show that in Scottish and Irish tradition 'giants' are frequently noted, not for their great stature, but as being pirates, sea-robbers, cave-dwellers, savages, and offensively-smelling people. Cf. art. CELTS, iii. 281.

That giants were regarded in some vague way as abnormal is further indicated by Teutonic references. The Old Norse *jötunn* or *jotun*, Swedish *jätte*, Anglo-Saxon *eoten*, Scottish *etin* or *ettin*, represents a being whose attributes are only partly human. In the translations of the Scandinavian Eddas, where the *jotuns* occupy a prominent place, their name is usually rendered by 'giant' (Lat. *gigas*). Like the Irish *fomori*, they are associated with subterranean buildings. '*Etenes* bi old dayn had wrought it,' was said of the underground house wherein Tristan and Isolde lay (*Tristrem*, 3, 17). Grimm states that the *jotun*, 'when at rest, is good-humoured and unhandy, but, when provoked, gets wild, spiteful, and violent' (ii. 530). The *jotun-máper*, or rage of the *jotuns*, is strongly suggestive of the 'Berserk-fury.' Grimm further points out (iv. 1441) that one passage (*Saem. 55a*) describes the *jotun* as a pithecoïd being, '*Attrunnr apa*, simiarum cognatus.' The Red Etin of Northern Scotland is similarly remembered as a savage cannibal, scarcely human. Under other names, the 'giants' of Teutonic and Scandinavian tradition are intellectually inferior to men, Gothic *tunbo*, 'giant,' being translated by Latin *stupidus*. From many sides, therefore, there are indications that 'giants' differed from men chiefly on account of their more brutal nature, the question of stature being frequently left out of consideration.

How complex the evidence relating to giants is may best be realized by examining the data brought together by Jacob Grimm. 'There is no clear line to be drawn between giants and the wild hairy woodsprites,' he observes in one place (ii.

553); while on another page (ii. 536) he speaks of 'a giantess or merwoman, as though these two names were synonymous. Many of his statements support the view that the giants of Europe were a primitive race that preceded the modern European:

'The old giant race have to give way to agricultural man, agriculture is an eye-sore to them' (ii. 540). 'Eaters of flesh give place to sowers of corn, hunters to husbandmen. Giants consider themselves the old masters of the land, live up in the castle, and look down upon the peasant' (iv. 1445).

In pointing out their similarity to the 'wild hairy woodsprites,' he further remarks (ii. 553):

'In the woods of the Bingenheim Mark are seen the stone seats of the wild folk who once lived there, and the print of their hands on the stones. In the vale of Gastein, says Muchar (p. 137), wild men have lived within the memory of man, but the breed has died out since. . . . Their strength was gigantic. . . . Their dwelling was an inaccessible cavern on the left bank of the Ache, at the entrance to the Klamm. . . . To the inhabitants of the valley they were rather friendly than otherwise, and often put a quantity of butter and milk before their house-doors. This last feature,' he adds, 'is more of a piece with the habits of dwarfs and elves than of giants.'

The mention of the stone seats of those wild folk accords well with the ascription to giants of numerous stone structures of primitive character which are found throughout Europe. The names *enta burg*, *risón burg*, and *Hünen walle*, all denote giants' castles, and the Gaelic term *caiséal na fian*, found in Scotland, has the same meaning. It is of much significance that such names are specially, perhaps exclusively, associated with buildings of the character known as 'cyclopean,' in which the chief features are: the rudeness and size of the stones, the absence of mortar, and the use of the 'false' arch instead of the true or 'Roman' arch. The former is made by approaching the upper courses of the opposing walls together until the space between them is narrow enough to admit of large flag-stones being superimposed. Architecture of this kind is found in Palestine, Greece, Malta,¹ Sardinia, the Balearic Isles, and Scotland, its most striking manifestation being displayed in the three localities last named, in the form of the massive circular towers known respectively as *nurags* or *nuraghe*, *talayots*, and *brochs*. No fewer than 3000 of these towers are known to have existed in Sardinia, and 500 in Scotland. Besides these towers there are unnumbered megalithic structures above and below ground, of the same general order, not only in the localities just indicated, but throughout the Continent of Europe and in the British Isles. These are known by various names. The remarkable cairns, akin to dolmens, which are found in the province of Drenthe, in the Netherlands, are called *Hünen-betten*, or *Hunebedden*, while the similar structures in North Germany are known as 'Giants' Graves.'² There is great difference of opinion as to the age of these structures, some placing them within the Christian era, and others assigning to them a much greater antiquity. The cyclopean buildings in the Levantine region are believed to date from 3000 B.C. On the other hand, the *brochs* of Scotland are understood to have been built only ten or fifteen centuries ago. Both inferences may be correct, assuming that the more modern structures were built by the modified descendants of a more primitive race. Perhaps the most important point, in connexion with the present theme, is that in Greece, Sardinia, Germany, and the British Isles—presumably elsewhere—the builders of those rude stone structures are often, in popular tradition, regarded as giants. That that word is

¹ Reference may be made to R. N. Bradley's *Malta and the Mediterranean Race*. London, 1912.

² For an account of the *Hünenbetten* or *Hunebedden*, and of Hunen-folk associated with them, Grimm (iv. 1438) refers to Janssen's *Drentsche oudheden*, pp. 167-184. Other useful references are Ferguson's *Rude Stone Monuments*, London, 1872, and Munro's 'Megalithic Monuments of Holland,' in *Proc. Soc. Antiq. Scot.*, vol. xviii. (1888-84).

¹ *Celtic Folklore*, Oxford, 1901, pp. 286 and 432 f.

not invariably held to denote people of great stature is shown by the fact that some traditions speak of them as dwarfs.

Nevertheless, there is no doubt that the prevailing opinion with regard to giants is that they were beings of immense stature. It is possible that the term 'giant's grave' might have given rise to this conception. If a long mound of 15 or 20 feet once became known as a giant's grave, then the inevitable deduction would be that a race of men 15 or 20 feet high once existed. Out of this, beings of much greater stature and power might be evolved, in the popular imagination. From whatever cause, the existence of beings of great stature, called 'giants,' was once an article of faith in folklore. Innumerable instances of this might be adduced.

'We are often told,' says Grimm (II. 543), 'of two giant comrades or neighbours, living on adjacent heights, or on two sides of a river, and holding converse. In Ostergötland, near Tumbo in Ydre-härad, there was a jätte named *Tumme*; when he wished to speak to his chum *Oden* at Heranala, two or three miles off, he went up a neighbouring hill *Högatöft*, from which you can see all over Ydre. . . . Two hūnes living, one on the Eberstein, the other on Homburg, had but one axe between them to split their wood with. When the Eberstein hūne was going to work, he shouted across to Homburg four miles off, and his friend immediately threw the axe over. . . . The hūnes of the Brunsberg and Wittberg, between Godelheim and Amelunxen, played at bowls together across the Weser.'

The same kind of story is found in other countries. In R. Hunt's *Popular Romances of the West of England* (London, 1865, 1881), he shows that the Cornish people have parallel traditions.

'The giant on the Mount and the giant on Trecobben Hill were very friendly. They had only one cobbing-hammer between them, which they would throw from one to the other, as either required it.'

This is a Celtic tradition, of the Cymric family. Gaelic tradition in Ireland, Man, and Scotland tells a similar story. Whether those immense and impossible beings are wholly the creatures of popular fancy, or have been gradually evolved from a real basis, is a problem that remains to be solved.

Although certain localities have received special consideration in these remarks, it is not to be supposed that the question can be limited to those regions, or to Europe; for it belongs practically to all countries and all peoples. Hebrew references, for example, are in accord with those of Europe.

Giants in Hebrew story are variously known as Gíbborim, Nephilim, Rephaim, Anakim, Emim, and Zamzummin. The first of these terms, *Gíbborim*, although translated 'giants' in the Septuagint, is held to mean nothing more than 'strong men,' 'heroes,' or 'warriors.' *Nephilim* is a word of wholly uncertain signification. It is applied to an antediluvian race in the well-known passage (Gn 6⁴), 'there were giants in the earth in those days'; the word is retained as 'Nephilim' in RV. Most of the English translations have 'giants,' but John Rogers (1537) merely uses 'tyrants.' With regard to the *Rephaim*, or *Raphaim*, they are referred to as the descendants of '(the) Rapha,' a Philistine of Gath (2 S 21²²). It is not improbable that this Rapha is merely the eponym of the race. During the Philistine wars in the reign of King David, the Rephaim figure prominently, and indeed they are included under the term 'Philistine.' It is recorded that in a battle fought between the Israelites and the Philistines at Gezer, Sibbecai the Hushathite slew Sippai, one of the Rephaim, 'and they were subdued.' Again, in a subsequent campaign, Elhanan the son of Jair slew Lahmi, the brother of Goliath the Gittite, 'the staff of whose spear was like a weaver's beam.' In a third war there figured another of the Rephaim, 'a man of great stature, distinguished by the peculiarity of having six fingers on each hand and six toes on each foot, who was slain by Jonathan, the son of Shimea,

David's brother. These three, Sippai, Lahmi the brother of Goliath, and the unnamed warrior just described, are all said to have been 'born unto the Rapha in Gath.' 'And they fell by the hand of David, and by the hand of his servants' (1 Ch 20⁴⁻⁸). David's famous encounter with Goliath had, of course, preceded these events.

On more than one occasion 'the Valley of the Rephaim,' on the Philistian border, to the west of Jerusalem, was the scene of conflict (2 S 5^{12, 22}). This seems to be 'the valley of the giants' which is referred to in Joshua (15⁶ 18¹⁶ AV). 'The land of the Perizzites and of the Rephaim' (Jos 17¹⁰), an interesting conjunction of names, seen again in Genesis (15²⁰), indicates the more northern territories of Galilee and Bashan. The reference, however, apparently signifies nothing more than that the Perizzites were neighbours to the Rephaim. But undoubted kinship is shown in the mention of the *Emim* who preceded the Israelites in Ar of Moab, on the east side of the Dead Sea; for it is stated that 'the Emim dwelt therein aforetime, a people great, and many, and tall, as the Anakim; these also are accounted Rephaim, as the Anakim; but the Moabites call them Emim' (Dt 2^{9a}). This statement is repeated, with some amplification, in the same chapter (vv. 20, 21), where it is said of Ar of Moab: 'That also is accounted a land of Rephaim: Rephaim dwelt therein aforetime: but the Ammonites call them Zamzummin; a people great, and many, and tall, as the Anakim; but the Lord destroyed them before them; and they succeeded them, and dwelt in their stead.' In these references (Dt 2) the AV always renders Rephaim by 'giants.' Thus we have the names of Emim, Anakim, and Zamzummin (perhaps the same as *Zuzim*) variously given to tribes of the race of Rephaim, or giants, formerly inhabiting Southern Palestine, the Anakim occupying territory on the western side of the Dead Sea, and the Emim or Zamzummin inhabiting Ar of Moab, on its eastern borders.

The last refuge of the Rephaim was N.E. Palestine, in the land of Bashan. At the time of the Israelite conquest under the leadership of Moses, Bashan was called 'the land of giants' (Dt 3¹), and the latest representative of Rephaim sovereignty was Og, king of Bashan; 'for only Og king of Bashan remained of the remnant of the Rephaim.' The great stature attributed to him is demonstrated in these words: 'Behold, his bedstead was a bedstead of iron (is it not in Rabbah of the children of Ammon?), nine cubits was the length thereof, and four cubits the breadth of it, after the cubit of a man' (Dt 3¹¹). It is worth noting that these dimensions are consistent with the height ascribed to Goliath of Gath, which was about 11 feet, or 6 cubits 1 span (1 S 17⁴), and that consequently the Rephaim, whether in Bashan or in Philistia, were believed to be of that immense stature. In passing, it may also be remarked that the iron bedstead of the king of the Rephaim, and the iron chariots with which their probable kindred are credited (Jos 17¹⁶), point to a civilization superior to that of the Israelites. The same deduction may be made from the statement that the Anakim were, as a nation, 'greater and mightier' than the Israelites, having 'cities great and fenced up to heaven' (Dt 9¹⁴). The armour of Goliath—helmet, coat of mail, greaves, and javelin—was all of copper, with the exception of the spear-head, which was apparently of iron. Herein there was no special difference between the champion of the Rephaim and his Jewish opponent, who was similarly equipped. Nevertheless, the Israelites regarded their giant foes as

¹ Unless the meaning be, as many modern commentators think, a sarcophagus of black basalt.

superior to themselves in several of the qualities that imply civilization. This makes it all the more difficult to understand how the Rephaim were eventually conquered and exterminated by the smaller race. Had the former been mere savages, their great bulk and strength would have been of no avail if they had to fight against a people possessed of superior weapons. But, if they were more civilized than the Israelites, as well as much stronger in body, then the Israelitish conquest cannot be easily explained. It may be that the great height attributed to the Rephaim is merely an exaggeration of the Jewish chronicler, anxious to enhance the valiant deeds of his people by magnifying the difficulties which they had to encounter. That the Rephaim were of greater stature than the Israelites may be accepted, but the statements as to their height need not be taken any more literally than the assertion that their cities were 'fenced up to heaven.' Certainly no skeletal remains have been found, in Palestine or elsewhere, which testify to the past existence of a race of men standing 10 or 12 feet high.

It is unnecessary to refer in detail to other stories of giants, in Scandinavian and classic legend. Of these a number are obviously the outcome of imagination, such as the explanation of an earthquake as the movements of 'a giant pulsing under ground,' or the creation of a race of 'frost-giants' to account for the mighty influence of Winter. Cf., further, the following article.

LITERATURE.—This has been indicated in the article.

DAVID MACKITCHIE.

GIANTS (Greek and Roman).—The English word 'giant' is derived from the Greek γίγας, plur. γίγαντες; and γίγαντες was the name of a certain mythological group of beings. There is no mention of Gigantes in the *Iliad*. In the *Odyssey*, the word occurs three times.

(1) In *Od.* vii. 69 the king and queen of the Phaiakae are descended from a daughter of Eurymedon, 'who once was king of the haughty Gigantes; but he brought his infatuated people to destruction, and was himself destroyed.' This genealogy was presumably invented *ad hoc* by the poet; it serves to indicate that his Phaiakae belong to the same order of being as the Gigantes. The name Eurymedon ('wide-ruling'), here assigned to the Gigan-king, also looks like an invention of the narrator. The passing mention of the 'wickedness' and 'destruction' of the Gigantes implies that a story which had something at least in common with the later *Gigantomachia* was already known to the poet and his audience.

(2) In *Od.* vii. 201-206 the king of the Phaiakae says: 'The gods are wont to present themselves to us in visible shape, . . . without disguise; for we are near (akin) to them, as are the Kiklopes and the wild tribes of the Gigantes.'

(3) In *Od.* x. 120 the Laistrygonae, a tribe of man-eating savages of monstrous size, are described as 'not like men, but like Gigantes.'

To the poet of the *Odyssey* the Gigantes were a tribe dwelling upon earth in the distant past; they were mortals, but surpassed men in size and strength, and stood in close relation to the gods; they were wild and savage in their ways, and, having committed some great wickedness, they were extirpated.

In the Hesiodic *Theogonia* (185) we are told the origin of the Gigantes. When Uranos (Sky) was mutilated by his son Kronos, Gaia (Earth), impregnated by the blood-drops which fell upon her from the wound, gave birth to (1) the Erinyes, (2) 'the great Gigantes, flashing in armour, holding long spears in their hands,' and (3) the 'Melian Nymphs' (i.e. nymphs of the ash-tree). The three species here grouped together have little in common; but they are alike in this, that all three *rise out of the earth*. The Erinyes (originally the angry ghosts of murdered men) issue from the earth where it has been defiled by the spilling of blood (see art. EUMENIDES, ERINYES); the ash-tree grows out of the earth;¹ and the Gigantes

also sprang directly from the earth. The connexion of their origin with the mutilation of Uranos is, no doubt, a piece of deliberate systematization. But the notion that the Gigantes were sons of Earth stands on a different footing; it is based on primitive folk-lore, and forms part of the connotation of the term Gigantes throughout all later literature.¹

The notion is allied to a tradition as to the origin of men which was widely current among the Greeks, namely, that the first human generation grew out of the soil, like vegetables (cf. Paus. viii. xxix. 4). This tradition was largely overlaid by the prevailing tendency to trace back each human family to some divine ancestor; but the belief persisted that at least some of the Greek races were *autochthonous*, i.e. that their first ancestors had sprung from the soil; and the origin of the Gigantes was explained in the same way as that of other primitive races. A parallel instance may be seen in the legend of the Theban *Spartoi*, the men who sprang out of the earth (fully equipped for battle, like the Hesiodic Gigantes) from the dragon's teeth sown by Kadmos; and a variant of the same legend occurs in the story of Jason. The epithet 'earth-born' was suitable to the Gigantes for another reason also, when they came to be identified with personifications of subterranean Nature-forces; but there is no evidence that they were thus regarded in Hesiod's time.

In the prelude of the *Theogonia* (50) the Muses are described as singing first the birth of the gods and the rule of Zeus, and, next, 'the birth of men and of the mighty Gigantes.' The poet here distinguishes the Gigantes from men, and, no doubt, took them to be a species which had once dwelt on the earth, but had long been extinct; so that his notion of them is comparable with that of the 'Race of Bronze' described in *Works and Days*, 143 ff.—a race of fierce warriors 'sprung from ash-trees,' who occupied the earth before the age of the Homeric heroes, and perished by mutual slaughter.

So far, we have found no mention of the *Gigantomachia* ('battle of the Gigantes'), with the exception of the doubtful allusion in *Od.* vii. 59 f. But in all later times, the interest in the Gigantes centred in this battle. The story that the Gigantes made war against the gods, and were destroyed in battle by their divine opponents, was, no doubt, told in some of the later Epic poems which have perished; but the earliest positive evidence of its existence appears in certain vase-paintings of about 600 B.C. Xenophanes (c. 535-500 B.C.) speaks of 'battles of the Titans and of the Gigantes, and tales of the Centaurs,' as familiar themes; frequent references to the *Gigantomachia* occur in the poets from Pindar onwards; and its popularity is shown by the numerous vases on which it is depicted. But the first continuous and detailed narrative of it which has come down to us is to be found in the compendium of mythology which passes under the name of Apollodorus, and, in its present form, dates perhaps from the 1st or 2nd cent. A.D. That narrative (Apollod. I. vi.) runs as follows:

'Earth, in her indignation at the overthrow of the Titans, gave birth to the Gigantes; their father was Uranos. They were of huge bulk, of irresistible strength, and of frightful aspect; their hair and beards were long and thick, and they had scaly serpent-coils in place of legs. They were produced, according to some accounts, in Phlegra, according to others, in Pallene. They hurled rocks and blazing tree-trunks against heaven. Eminent above the rest were Porphyryon and Alkyoneus. The latter was immortal as long as he fought in the land of his birth. (He had driven off the cows of the Sun from Erytheia.) Now the gods had been told by an oracle that the Gigantes could not be slain by gods, but would meet their death if a mortal joined in the fight against them. Earth, informed of this, was seeking a magic herb, by which the Gigantes might be secured against death at the hands of a mortal also; but Zeus, having commanded Dawn, Moon, and Sun to withhold their light, gathered the herb before Earth could find it, and, by the agency of Athena, summoned (the mortal) Herakles to take part in the fight. Herakles first shot

¹ The fact that spear-shafts were commonly made of ash-wood, and that the ash-tree was, consequently, associated with bloodshed, may help to account for the juxtaposition.

¹ The Greeks accordingly assumed the name *Gigantes* to be derived from γῆ ('earth') and γίγας ('birth'). But this etymology is inadmissible. A derivation from the root of γίγας is possible, but has not been proved (cf. Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 147); and it is quite as likely that the name is of non-Hellenic origin.

down Alkyoneus with an arrow; and, as he revived through contact with the soil, Herakles, at the suggestion of Athene, dragged him away out of Pallene, whereupon he died. Porphyron assailed Herakles and Hera; but Zeus caused him to be seized with love of Hera, and, when he sought to do her violence, she cried for help; whereupon Zeus struck him with a thunderbolt, and Herakles killed him with his arrows. Ephialtes was hit in the left eye by an arrow shot by Apollo, and in the right eye by an arrow of Herakles. Dionysos killed Eurytos with his *thyrsos*; Hekate slew Klytios (with her torches¹); and Hephaistos struck down (Mimas?) with lumps of red-hot metal. Athene flung the island of Sicily upon Enkelados as he fled; she also flayed Pallas, and used his skin as a shield to protect herself in the fight. Polybotes, pursued through the sea by Poseidon, had reached the island of Kos, when Poseidon broke off a piece of the island and flung it upon him; the little island called Nisyros is the fragment which Poseidon flung. Hermes, wearing in the battle the cap of Hades (which makes its wearer invisible), slew Hippolytos; Artemis slew [Aigaion?]; the Moirai, [fighting?] with clubs of bronze, killed Agrios and Thoon. Zeus struck and destroyed with thunderbolts the rest of the Gigantes; and Herakles shot them all with his arrows as they were dying.

Here we have the fully developed story of the *Gigantomachia*—or, rather, the dry bones of it, stripped of the poetical flesh and blood. How did this story arise? The narrative is built up of discrete elements; most of the several incidents were current separately before they were included in the *Gigantomachia*. Thus, the combat of Herakles with Alkyoneus was known to Pindar (*Isthm.* v. 32, *Nem.* iv. 27) as an incident belonging to the story of Herakles, but unconnected with the battle of the Gigantes. Pindar's Alkyoneus has not yet become a Gigas; but in a lyric fragment of later date (Bergk⁴, iii. 713), Alkyoneus is called 'eldest of the Gigantes.' Porphyron was incorporated earlier, for Pindar (*Pyth.* viii. 12-17) speaks of him as 'king of the Gigantes'; but, since the name also occurs (Paus. i. xiv. 6) as that of a pre-historic king of a district of Attica, it may be inferred that his legend also had originally a separate existence.² Porphyron's assault on Hera is a replica of several other stories (cf. Ixion and Hera, Tityos and Leto, Orion and Artemis, etc.); it may be connected with a statement which occurs elsewhere, that Porphyron 'was subdued by Aphrodite' (schol. Aristoph. *Av.* 554, 1252). A combat of Athene with Enkelados is also included in early representations of the battle: and in some accounts (e.g. *Batrachom.* 283; Eur. *Kykl.* 7) Enkelados is singled out as chief among the Gigantes. The incident of Athene flaying her opponent Pallas and using his skin as a shield is another independent myth, a variant of which appears in the story of the *aigis*, as told in Eur. *Ion*, 987 ff. Poseidon's combat with Polybotes is a local tradition of Kos; the evidence of art-remains seems to show that its insertion into the *Gigantomachia* had already taken place early in the 6th century.

On general principles it may be presumed that every Greek myth was at first known within a limited district only. The guardians of some sanctuary, or the people of some one tribe or city, told a tale about their own special deity or hero. Some poet embodied the tale in verse, interwove it with other tales told elsewhere, and gave it wider currency; the process was repeated again and again, with fresh combinations, till the local tradition became part of the common stock of all Greek-speaking peoples; and the system of mythology summarized in Apollodorus is the final out-

¹ On the textual emendations here adopted, see M. Mayer, *Giganten*, p. 200 ff.

² The word *porphyron* meant a kind of water-hen. Why should a Giant be so called? It has been plausibly conjectured that the name is a popular corruption of *Porphyrion* ('fire-bearer'), and that the Gigas-king was originally a *υποπόσιος θεός*, a sort of Hephaistos or Prometheus. The alteration into a bird-name would the more readily suggest itself, because several other mythical persons bore the names of birds; cf. *Kyknoe* ('swan') and his father-in-law *Keyx* ('tern'), whose wife was *Aloyone* (*δαρυός*, 'kingfisher'). Porphyron and Alkyoneus, 'Giant Coot' and 'Giant Kingfisher,' pair well together.

come of this long development. Accordingly, we may suppose that the germ of the *Gigantomachia* was a tradition, current in some particular community, concerning a tribe named *Gigantes*, which had in some way offended against the gods, and had been destroyed in consequence. Parallels are not wanting; in Arcadia, for instance, a similar story was told of the Lykaonidai (Apollod. iii. viii. 1), and in Boeotia, of the Phlegyai (Paus. ix. xxxvi. 2). How the tale first arose, we can only guess. It may be that a race of invaders preserved in this form a vague tradition of their conquest and extirpation of the indigenous inhabitants (the conquerors would naturally assume their enemies to be also enemies of their gods). Or, again, it may have arisen out of a Nature-myth—a tale of conflict between the powers of light and darkness, or between the beneficent forces of Nature and the destructive violence of the thunderstorm, the earthquake, or the raging sea. We may safely assume that the Gigantes had at first no individual names, and were spoken of only collectively.

But numerous tales were also current concerning individuals in human or other shape who had fought against this or that god. Each of these tales had arisen independently, from Nature-myth or otherwise; but any such god-defier was liable to be brought sooner or later into the class of Gigantes, and thereby made to contribute a fresh element to the growing myth of the *Gigantomachia*. For instance, the *Odyssey* (xi. 305 ff.) tells of the Aloidai, two monstrous brothers, named Otos and Ephialtes, who, while still beardless boys, made war on the immortals: 'they strove to pile Mount Ossa on Olympus, and Mount Pelion on Ossa, that they might gain access to heaven'; but Apollo slew them. The Aloidai of the *Odyssey* are quite distinct from the Gigantes; but, as they had engaged in a similar enterprise, they were subsequently confused with them; and so we find the name Ephialtes assigned to one of the combatants in the *Gigantomachia* at an early date.¹

Again, the Hesiodic *Theogonia* (147 ff., 617 ff.) tells of three monsters, sons of Uranos and Gaia, named Briareos, Kottos, and Gyes, each of whom had a hundred hands and fifty heads. Their father, Uranos, horrified at their threatening aspect, imprisoned them beneath the earth; but, when Zeus was engaged in war with the Titans, he was told by Gaia that the help of the Hundred-handed Brothers would win him victory. Accordingly, he released Briareos and his brothers from their subterranean prison, and made a compact with them; and so, in the crisis of the fight, the monsters struck in on the side of Zeus and his adherents, and won the day for them. They hurled three hundred rocks at once with their stout hands, and darkened the air with missiles, and sent the Titans down to Tartaros, and bound them in grievous bonds: 'and there (keeping guard over the imprisoned Titans) dwell Gyes, Kottos, and Briareos, trusty warders in the service of Zeus.'

These monsters seem to be personifications of the forces of storm and earthquake (cf. EARTH, EARTH-GODS, § 4). Their abode is in the depths of the earth, in which they were imprisoned from their birth; they emerge for a moment to fight for Zeus, and then return to their home in the abyss. They side with the supreme god; yet a suggestion that they were by nature enemies of heaven appears in the statement that Uranos (who is ultimately a doublet of Zeus) imprisoned them in

¹ It occurs (in the form *Hépialtes*) as the name of one of the Gigantes on the vase of Oenoe. The word *ἰσχυρός* means 'assaulting,' and was used by the Greeks in the sense of 'nightmare.'

the depths. Storm and earthquake, in fact, admit of two different interpretations. They are clearly manifestations of conflict between superhuman combatants; but are these terrible forces brought into action by rebels against the ruling god, or by the ruling god himself against his enemies? In the Hesiodic story of the Hundred-handed Brothers, it is the latter notion that happens to have prevailed.

In the *Iliad* also (i. 403) Briareos appears as an ally of Zeus.

Hera, Poseidon, and Athene once sought to put Zeus in bonds; but Thetis summoned to his aid 'him of the hundred hands, whom gods call Briareos, but men name him Algaion: he is mightier than his father [viz. Poseidon?]. And he took his seat beside Zeus, exulting in his glory; and the gods feared him, and did not put Zeus in bonds.' The alternative name Algaion probably characterizes him as a sea-god and earth-shaker, of the type of Poseidon.

The Hundred-handed Brothers are, in early myth, clearly distinguishable from the Gigantes; for they are neither mortals nor opponents of Zeus. But, being powerful monsters of like nature, they too came to be regarded as Gigantes, and thus Briareos had a part in the *Gigantomachia* assigned to him. (The earliest certain instance is in Kallimachos, *Hymn. Del.* 143.)

Again, the Hesiodic *Titanomachia* (see art. TITANS) had something in common with the later *Gigantomachia*, since in both alike there was war between Zeus and a hostile power. Hence the distinction between the immortal Titans and the mortal Gigantes was often ignored in later literature; the words *τιτάν* and *γίγας* came to be used as equivalents (e.g. Eur. *Hec.* 472, *Iph. Taur.* 224); and the Hesiodic Titan Koios was enrolled among the Gigantes (Verg. *Æn.* iv. 179; Propert. iv. ix. 48).

The connexion of the Gigantes with the earth from which they had sprung was kept in view throughout the development of the myth; hence some pictures of the battle include a figure of Gaia, rising waist-high out of the ground, and vainly entreating the gods to show mercy to her sons.

The inclusion of various stories of single combats helped to determine the parts assigned to the several gods. Zeus holds the central position; among the rest, Athene is usually prominent; Poseidon also takes a leading place; and the picture is filled out with other deities. A conspicuous part in the conflict was given to Dionysos, especially in later times, when the warlike side of this deity's character came to be emphasized. But the aid given to the gods by the half-human Herakles was, from an early date, a point of special interest in the story; and we see him mounted beside Zeus in his chariot, or fighting on foot next to the supreme god. The legend of Herakles was at first a peculiar possession of the Dorian race, and remained in the background in the early Ionian Epic. In one passage of the *Iliad* (v. 385-404) he is even spoken of in terms of reprobation, as an audacious fighter *against* gods, and is coupled with the Alolidae. If this view of him had prevailed, Herakles himself might have come to be included in the list of the Gigantes. But the Dorian hero gained recognition among Greeks of all races; and, as it was the special business of Herakles to slay monsters and evil-doers, it was natural to give him a place in the battle in which a whole tribe of such beings was destroyed. Thus the task of fighting the Gigantes was added to his other labours, and he became, next to Zeus himself, the most prominent of the combatants (see Pindar, *Nem.* i. 67; Eurip. *Herc. Fur.* 177).

Yet another ingredient was supplied by the combat of Zeus with Typhoeus. A passing allusion in the *Iliad* (ii. 782) shows knowledge of this

myth; and the combat is described in Hesiod (*Theog.* 820 ff.).

After the overthrow of the Titans, Gaia, in union with Tartaros, gave birth to Typhoeus, a mighty deity, strong of hand and foot. From his shoulders rose a hundred serpent-heads with lolling tongues and fire-flashing eyes; and from those heads there issued manifold voices, now such speech as the gods use, and now sounds as of bellowing bull and roaring lion and yelping hound, or piercing hisses. And he might have been king of gods and men; but Zeus marked the danger, and sprang forth, and hurled his lightnings, and smote the monster's heads. Typhoeus fell; and the flame of the thunder-smitten enemy of Zeus shot forth among the mountain-dells of Etna,¹ and the earth ran like molten metal. Thus did Zeus hurl him down to Tartaros. And from Typhoeus spring the evil wind-storms which wreck ships at sea, and ruin the works of men on land.

Here the narrator is clearly conscious of the meaning of the Nature-myth. Typhoeus is the fire-fiend whose work is seen in volcanic eruptions, and in the blasting winds which were thought to be of similar origin; and the description of the conflict is probably based on accounts of some eruption of Mount Etna, transmitted by the Greek colonists of Sicily.

The resemblance of the Typhoeus-fight to the various combats included in the *Gigantomachia* (some of which at least had arisen out of similar Nature-myths) was sufficiently close to cause Typhoeus also to be associated with the Gigantes; and through assimilation to him and other such monsters the shape and aspect of the Gigantes underwent a change. In the earlier form of the myth (Hes. *Theog.*) they are armed warriors; and, as depicted on early vases, they are indistinguishable in appearance from civilized combatants. Later, they appear in the form of savage men, clothed in beast-skins, and using rocks and tree-trunks in place of weapons. But from the time of Alexander the Great they commonly take the shape described in Apollodorus; head, arms, and trunk are human, but in place of legs they have a pair of serpent-coils. (The serpent form was the more appropriate, because the snake was among the Greeks a symbol of the earth and of the powers beneath the earth.) They are sometimes also depicted with wings, after the analogy of the wind-gods—which is again a sign of their assimilation to Typhoeus, the father of wind-storms.

Moreover, it was probably through their association with Typhoeus that the Gigantes came to be specially connected with volcanic forces; and this notion led to fresh localizations. The scene of the battle was commonly placed in 'Phlegra.' But Phlegra ('Land of burning') was a mythical land unknown to geography. Each of the various myths which entered into the composite picture had its own original site, one in Arcadia, another in Attica, a third in Euboea, and so on; but a certain consensus arose in favour of Pallene, the westernmost of the three Chalkidic promontories on the north coast of the Aegean. We may suppose that the growing myth was carried to that region by the colonists from Chalkis in Euboea who settled there. Confusions between similar names may have helped to fix the site of the battle in the Chalkidic Pallene. (A personage named Pallas, who came to be included among the Gigantes, was known to local tradition in the Arcadian *Pallantion*, in the Achaian *Pellene* near Sikyon, and in the Attic district of *Pallene*.) Moreover, the place was well situated for an assault on Olympos, which stood in full view across the Gulf of Salonika. Thus it came about that, at least as early as Herodotus (vii. 123), Phlegra, the scene of the *Gigantomachia*, was identified with Pallene.

There are no conspicuous signs of volcanic action in Pallene. But, through the westward coloniza-

¹ The reading *Etna* here admits of doubt; but there is no doubt that the thing described is a volcano in eruption.

tion, the Greeks became familiar with two volcanic regions, the neighbourhoods of Etna and Vesuvius; and the settlers accounted for the outbreaks of subterranean fire by the fancy that some enemy of the gods lay buried alive beneath the soil. Thus, in the Hesiodic *Theogonia*, Typhoeus appears to be already located at Etna.¹ But the imprisoned monster might equally well bear other names, and was often identified with one or other of the Gigantes; hence comes, for instance, the statement in Apollodorus that Athene threw the island of Sicily on her opponent Enkelados. The volcanic district of the Campanian coast was, for like reasons, regarded as the scene of the *Gigantomachia*, and the name of Phlegra was accordingly applied to it (Polyb. III. xci. 7).

Again, after Alexander's conquests, the Greek emigrants carried their myths with them to fresh regions, and located many of them in their new settlements in the East. Thus Syrian Antioch, for instance, developed a local *Gigantomachia* of its own.

One incident in the Græco-Syrian legend will serve to illustrate the process of myth-making. The name of the city of Damascus sounded to Greek ears as if it were derived from the Gr. *dam-* ('conquer') and *askos* ('wine-skin'); hence was invented a Gigas named Askos, who was slain by Zeus or Dionysos, and was flayed by the victorious god to make a wine-skin (Phot. Bibl. 848. 13, ed. Bekker, Berlin, 1824-25; *Etym. Magn.*, s.v. ἀσκάριος).

The popularity of the *Gigantomachia* was increased by the readiness with which the story lent itself to moral and political applications; for it might serve as a type of any victory won by the forces of order and legitimate authority in conflict with lawless violence. A good example of such applications may be seen in the first *Pythian Ode* of Pindar. Addressing Hiero, the monarch of Syracuse, the poet deals with the story of Typhoeus; and in his hands the myth becomes a parable, in which Zeus stands for harmony, and Typhoeus for discord. Hiero is the human Zeus, whose life-task is to beat the monster down, and to keep him safely bound; that is, to maintain peace and prosperity against unruly factions within his realm; to crush the foreign foes who threatened Western Hellenism—the barbarous Carthaginians and Etruscans—and, further (so the poet hints), to see to it that within his own soul, too, the forces of order and harmony prevail; else, he whom men now praise as a king might come to find them curse him as a tyrant.

Pindar elsewhere (*Pyth.* viii. 16) couples Typhoeus with the king of the Gigantes. Under whichever name the enemies of the gods are spoken of, the significance of the story is the same; and it was with some such meaning that the myth of the Gigantes was repeatedly employed in plastic art. Thus the Megarians (c. 550 B.C.) sculptured the *Gigantomachia* on the treasure-house which they dedicated at Olympia as a thank-offering for a victory over their neighbours of Corinth. At Athens, before the Persian invasion, the same subject was already represented in the sculptures of the earlier temple of Athene on the Akropolis; after the Persian war, it was carved on the *metopes* of the Parthenon, and on the shield of Phidias' colossal statue of Athene; and it was depicted in the embroideries of the robe which the Athenians presented to the goddess of their city at each Panathenaic festival. The *Gigantomachia* was an appropriate subject for an offering to the warlike goddess, who was prominent in the story of the fight; but, at the same time, the Gigantes might

¹ The *Iliad* (II. 782) places 'the bed of Typhoeus' in 'the land of the Arimi,' a mythical country, which in later times (Verg. *Æn.* ix. 716) was sometimes identified with the island of Ischia off the Campanian coast. Pindar (*Pyth.* I. 17, viii. 16, fr. 92, 96) names Kilikia as the birthplace of Typhoeus or Typhon, 'the land of the Arimi' (i.e. Kilikia?) as the place of his defeat, and Campania and Etna as the places where he lies imprisoned.

be taken to represent the Persian enemy, and the battle-scene served to symbolize the victories won against barbarism and impious presumption in the fights of Marathon and Salamis. A *Gigantomachia* was also conspicuous among the sculptures of the temple of Apollo at Delphi (Eurip. *Ion*, 206 ff.).

The irruption of Gallic hordes into northern Greece and Asia Minor in the 3rd cent. B.C. suggested a fresh application of the story. Kallimachos (*Hymn. Del.* 174) speaks of the Gauls as 'late-born Titans' (i.e. Gigantes) from the furthest West. Attalus I. of Pergamon (Paus. I. xxv. 2), after his great victory over the Gauls, set up at Athens four groups of sculpture, representing respectively the battle he had won, the battle of Marathon, the *Gigantomachia*, and the flight of the Athenians against the Amazons; thus coupling his own victory with that of Marathon, and placing beside each of them a mythic prototype. So also the Battle of the Gigantes was the subject chosen for the decoration of the monument erected on the citadel of Pergamon by a successor of Attalus I. (c. 180 B.C.) to commemorate the defeat of the barbarous invaders by the forces of Hellenic civilization. This monument took the shape of a great altar; and along the sides of the rectangular block of building which formed the altar-platform there ran a continuous band of sculpture, over 400 feet in length, in which all the chief deities of the Greek Pantheon were represented, each engaged in combat with some special adversary. Of the Gigantes, who are falling stricken before the victorious gods, or offering hopeless resistance, some are in wholly human shape, and might be taken for idealized portraits of Gallic combatants; some are men with serpent-legs; some have wings springing from their shoulders; and here and there appears some more bestial monster.

References to the *Gigantomachia* are frequent in Latin poetry. Horace (*Od.* III. iv. 42 ff., II. xii. 6 ff.) found in it a type of the work accomplished by Augustus in suppressing the anarchy of the Civil Wars, and establishing the peace and order of the Roman Empire. Ovid began a poem on the subject in his youth (*Amor.* II. i. 11). In the last age of Pagan literature, Nonnos, in his *Dionysiaka*, makes numerous references to the myth, and (bk. 48) introduces an episode of his own invention, in which Dionysos single-handed fights the whole tribe of Gigantes, but refrains from destroying them, in order that something may be left for Zeus to do; Claudian (c. A.D. 400) wrote a Latin poem on the *Gigantomachia*, the first 129 lines of which are extant; and a portion of a Greek poem on the same subject has also come down to us under the name of Claudian.

The Cyclopes (*Kyklopes*), as described in the *Odyssey*, are giants in the sense in which the word 'giant' is used in our nursery tales; but they were not called Gigantes by the Greeks. The story of the encounter of Odysseus with the man-eating ogre Polyphemos is told in *Od.* ix. Polyphemos, a son of Poseidon and a sea-nymph (*Od.* I. 71), is one of a tribe of wild men called *Kyklopes*, who dwell on the coast of some unspecified land in the western seas. The *Kyklopes* are housed in caves; they do not cultivate the soil, but live on the natural products of the earth, and the milk of their flocks of sheep and goats. They are 'a lawless folk'; 'they have no gatherings for council'; each lives apart, 'giving law to his children and wives,' and 'they reckon not one of another.' So far, the poet might be describing a tribe of savages (cf. *Od.* vi. 5, where we are told that the Phaiakes migrated to Scheria, because in their earlier abode they suffered from the raids of the *Kyklopes*, 'overbearing men, who used to harry them'). But Polyphemos is distinguished from ordinary men

by his huge bulk and strength (he can lift a rock which could not be moved by two-and-twenty wagons), and it is implied that in place of two eyes he has a single eye in his forehead.

The Homeric conception of the *Kyklopes* persisted through all later Greek and Roman literature; e.g., Euripides adheres to it closely in his satyric drama *Kyklops*. In post-Homeric times the abode of these *Kyklopes* was localized on the coast of Sicily at the foot of Etna (Eur. *Kykl.* 20; Thuc. vi. 2). A later addition to the tale of Polyphemos was the story of his love of the sea-nymph Galateia, which was told in a poem of Philoxenos (c. 398 B.C.), and may have been invented by that poet.

But the name *Kyklopes* was also used in a different sense, which first occurs in the Hesiodic *Theogonia*. The *Kyklopes* there spoken of are three sons of Uranos and Gaia, born after the twelve Titans, and before the three Hundred-handed Brothers. The three *Kyklopes* are named Brontes ('Thunder'), Steropes ('Lightning'), and Argos ('Flash,' or 'Flashing Thunderbolt'); and 'they gave Zeus the thunder, and made for him the thunderbolt. They were like to the gods, except in this, that each of them had a single eye in the middle of his forehead. They had mighty strength, and were skilled in handicraft' (*Theog.* 139-146). Those parts of the narrative which have to do with the *Kyklopes* are somewhat obscure; but the meaning appears to be that they were imprisoned beneath the earth by their father, Uranos (*ib.* 154 ff.), and that Zeus, when about to fight against the Titans, released them from their bonds, and they, in gratitude, 'gave him thunder, thunderbolt, and lightning' (501-506). Armed in this fashion, Zeus warred against the Titans (687-712); and it is in the strength of the same weapons that he still rules over gods and men (506).

The Hesiodic narrative of the *Titanomachia* seems to have been constructed by interweaving two distinct versions of the story. In one of the two, Zeus owes his victory over the Titans to the help of the Hundred-handed Brothers; in the other, he owes it to the lightning-weapons with which he is provided by the *Kyklopes*.

The Hesiodic *Kyklopes* have nothing in common with the *Kyklopes* of the *Odyssey*, except that they are one-eyed. They are not men, but immortals; they are beings of the same order as the Hundred-handed Brothers; and their function is to supply Zeus with thunder and lightning. It is probable that they were originally demons of the thunder-storm, and were at first imagined as themselves thundering and flinging the lightning, but were afterwards subordinated to Zeus the Thunderer. The *Kyklopes* to whom sacrifices were offered on an altar in or near the sanctuary of Poseidon at the Isthmus of Corinth (Paus. ii. 2) were presumably storm-demons of this kind.

The Hesiodic conception of the *Kyklopes* survived in later literature side by side with the different conception of them which is presented in the *Odyssey*. As forgers of thunderbolts, they were associated with Hephaistos, the metal-worker of the gods (Orph. *Theog.* fr. 92, Abel), and were described by Alexandrian and Roman poets as workmen employed in his service (Kallim. *Hymn to Artemis*, 46 ff.); and the smithy in which they worked was located in some volcano (Lipara [Kallim. *l.c.*]; an island near Lipara [Verg. *Æn.* viii. 416 ff.]; Etna [Verg. *Georg.* iv. 173]). The immortal lightning-makers of the Hesiodic *Theogonia* seem to be confused with the mortal savages of the *Odyssey* in the story that the *Kyklopes* were killed by Apollo, who was angered with them because they had supplied Zeus with the thunderbolt with which he slew Apollo's son Asklepios (Hes. *Eoiai*, fr. 47, Götting; Pherekydes, schol. Eur. *Alc.* 1; Apollod. iii. x. 4).

The *Kyklopes* were also spoken of as the builders of certain ancient fortress-walls, especially those of Tiryns, Mykenai, and Argos (Pindar, fr. 169, Bergk; Eur. *Herc. Fur.* 15, 944, *Iph. Aut.* 1500; Strabo, viii. 372; Paus. ii. xvi. 4). As the walls of Tiryns were constructed of huge blocks of stone, it was natural to assume that their builders were beings possessed of more than human strength; and the notion that these builders were the *Kyklopes* may have been suggested either by the Homeric narrative, in which the *Kyklopes* Polyphemos heaves vast masses of rock, or by the Hesiodic conception of the *Kyklopes* as skilled artificers.

The origin of the name *Kyklopes* is unknown. The Greek word *kyklops* might mean 'round-eyed' (it was used by Parmenides as an epithet of the moon), but this meaning is not specially appropriate either to the one-eyed Polyphemos of the *Odyssey* or to the one-eyed lightning-makers of Hesiod. As to the notion of a being with one eye in his forehead, compare the description given by Pausanias (ii. xxiv. 5) of an old statue of Zeus in the citadel of Argos, which had a third eye in the forehead. This may have been a statue of a lightning-god; and it is possible that the god whom it represented may have been originally called 'Kyklops,' though in later times it was supposed to be a statue of Zeus. The 'one-eyed Arimaspoi' of Aristeas (*Æsch. Prom. Vinc.* 830; Herod. iv. 27) are comparable rather with the *Kyklopes* of the *Odyssey*.

It may be conjectured that the name *Kyklopes* was first used to signify demons of the thunder-storm, and that the poet of the *Odyssey* (or some earlier story-teller whom he followed), working into his narrative an old tale of an ogre outwitted and blinded by a bold and cunning hero, made the ogre a member of an imaginary tribe of savages, and transferred to this tribe the name of the storm-demons.

Among the many representations of the *Gigantomachia* in art, the following are especially noteworthy: Ionic Amphora from Oenoe, Louvre (Overbeck, *Kunstm. Atlas*, Leipzig, 1872-89, Taf. iv. 8); Megarian Treasury at Olympia (G. Treu, in Curtius-Adler, *Olympia*, Textband iii., Berlin, 1897, pp. 6-16, and Tafelband iii., Taf. ii. iii.); Vase of Erginos, painted by Aristophanes, Berlin, 2581 (Gerhard, *Gr. und str. Trinksch.* ii., iii.; Overbeck, v. 8); Amphora from Melos, Louvre (Ravaisson, *Monuments grecs*, Paris, 1875, iv.; *JHS* iii. 316); Altar-frieze of Pergamon, Berlin (Puchstein, *Beschreibung der Skulpturen aus Pergamon*, Berlin, 1896, *Die Skulpturen des Pergamon-Museums in Photographien*, do., 1908; Pontremoli-Collignon, *Pergame*, Paris, 1900, ch. 5).

GIFTS (Primitive and Savage).—I. General conception among uncivilized peoples as to the nature of the transaction of giving.—(1) It has commonly been assumed that the 'presents' of savages and barbarians are the outcome of the same feelings and intentions as those of the modern man. Our act in giving is (in theory, at all events) an act of spontaneous bounty without thought of a return. It springs from good-will, or generosity, or gratitude, or sympathy. But with the primitive man it is otherwise; and of him we may say generally what has been said of the western Eskimos, that of a free and disinterested gift he is absolutely ignorant.¹

(2) Of course, there are exceptions, real or apparent, to be found.

¹ J. Simpson, 'Observations on the W. Esquimaux and the Country they inhabit,' in *Further Papers relating to the recent Arctic Expeditions, presented to both Houses of Parliament, January 1855*, London, 1855, p. 928.

Thus Parry¹ tells us that on one occasion he received a present from a grateful Eskimo, who looked for nothing in return, although to give a counter-gift was the habitual practice of his people; and Howitt² says of the Dieri that they made presents to a white man whose advocacy had saved the life of one of their tribesmen. Finch³ states expressly of natives on the banks of the Caprivi River that they expected no return for their presents of food; and von Siebold⁴ gives a similar account of the Ainu of Yezo. The Aleut, if he makes a present, even to a wealthy man, is said to expect no recompense;⁵ and, among the Banaka and Bapuku, the donor can demand a counter-gift only when he is poorer than the recipient.⁶ Among the Bogos and Abyssinians, a gift called *majbetot* by the former and *kalatha* by the latter is given to a relative impoverished or ruined by war, on condition that the donor may recover it if he falls on evil days, or if the recipient recovers his position.⁷ Again, it is not unusual for a tribe on the occasion of a visit to a friendly tribe to make presents; and of this we have an instance in the gift-dance of the Wintun.⁸ But it is to be kept in view that the gift-dancers receive similar gifts when the visit is returned.

(3) Further, it is to be observed that amongst many peoples—the Yahgan of Cape Horn,⁹ for example, and some of the natives of North Queensland¹⁰—the distributor, in sharing food, keeps little or nothing for himself;¹¹ and it is a commonplace that the rudest savage is often profuse in his hospitality, which frequently includes a parting gift to his guest, it may be in the form of provisions for his journey (see 3 (9) below, and art. STRANGERS). But it does not follow that such conduct is due to a spirit of unselfish liberality. For, where the supply of food is uncertain, and procurable only by the joint exertions of the community, it is not unnatural that he who has a superfluity will give, on the understanding that he will receive a return when he requires it.¹² And, where there is no provision for public entertainment, to travel, especially if the country is insecure, would be highly dangerous, if not impossible, were it not for a hospitality based upon the experience that 'he who is the host to-day may be the guest to-morrow.'¹³

(4) In the vast majority of instances, however, the gift is given on the understanding or, at all events, in the expectation that the recipient will make a return, either by giving something, or by doing or abstaining from doing something.¹⁴

2. Return in the form of a material thing.—

(1) The New Zealander sometimes gave away every article which he possessed;¹⁵ but he always expected an equivalent, and frequently, like the natives of Tahiti, dropped a hint of what he wanted in return.¹⁶ The Yahgan are ready to share what they have with others. They desire to possess in

order to give.¹ At the same time, they know that they will be well repaid by counter-gifts.² In these circumstances, it is not wonderful that misunderstandings frequently arise with strangers who imagine that they have purchased some article for a trifle, while the natives think that they have given a present for which they have not received an adequate return.³ The case of the Andamanese is similar. Among them visits are usually the occasion of an interchange of gifts, 'the hosts taking the initiative; and a *fracas* not infrequently ensues, for donor and recipient are not always of a mind as regards the relative value of their presents.'⁴

Ir Amboyna, the recipient of a gift says, 'Friend, you have given me this; with what shall I recompense you?'⁵ and a note is taken of the gifts received at a funeral ceremony, so that, when the donors die, like gifts may be given in return.⁶

'They (the natives of Rotuma) have the *fakaoro*. If a man, say, wants a pig for a feast, he goes to another who has plenty, and asks him for one. He cannot well refuse, but in his turn is entitled to ask for something at some future time.'⁷

Again, the Drummond Islanders

'seemed to have no idea of receiving anything as a gratuity, but instantly made a return of something for whatever was given them';

and the inhabitants of other islands of the Kingsmill group

'never buy or sell, but, if any person desires an article which another has, he asks for it, and, if not too valuable or esteemed, is seldom refused. It is the general understanding that such favours are to be returned, and that the request should only be made by persons who can afford to do so.'⁸ 'Give' and 'give back' make the longest friends, if there is luck withal . . . gift always looks for return.'⁹

The 'potlatch,' or gift-festival, prevails among all the coast tribes of British Columbia. By a well-understood rule, which has the force of a law of honour, every recipient of a gift is bound to return twice its value at some future day; and in this repayment his relatives are expected to assist him; they are, indeed, deemed to be his sureties.¹⁰ So, too, among the Eskimos of Point Barrow, on the occasion of high festivals to which neighbours are invited, gifts are exchanged, especially among the wealthy, in expectation of a return.¹¹

Similar accounts are given of the natives of New Caledonia,¹² the Marshall¹³ and Caroline Islanders,¹⁴ the Samoans,¹⁵ the eastern islands of Torres Straits,¹⁶ the Tinguets and Haidas,¹⁷ the Salish and Déné,¹⁸ some of the Indian tribes of North

Carolina,¹ the Wanika,² the Waniamwesi,³ the Masai,⁴ and the Samoyeds.⁵

(2) Very frequently a small present is given in the hope of receiving a large one in return—a practice which illustrates the point of the saying 'beneficia non obtrunduntur.'⁶ In Nigeria the present which the king sends to the stranger is 'in every case to be regarded, not as an expression of good-will, but as the formal demand for a larger present';⁷ and Livingstone⁸ speaks of the practice near Senna, on the lower Zambezi, of making 'a very small gift, which is to win back to the donor at least twice its value.' If a native is asked to sell some article, he declines on the ground that it is *seguntu*—it is not for sale, it is a compliment. The Chiboque 'are in the habit of making a present and demanding whatever they choose in return';⁹ the Wakiacums offer presents, expecting three or four times their value in return.¹⁰

(3) While the donor always expects a return, he does not always stipulate for the precise shape which it shall take. Thus, at Wytoohee—an island of the Paumotu group—the inhabitants accepted with gratitude and delight anything given in return for the articles taken from them; and, although the Bakairi exchanged the specialties of one district for those of another, they knew nothing of the practice of bartering specific article for specific article.¹¹ Sometimes the savage throws out a hint of what he wants;¹² and sometimes nothing else will serve him but the article which has caught his fancy. In many cases, he is said to give some product of his industry or skill—the result it may be of the labour of months or years—for a mere trifle;¹³ while instances are not wanting of his shrewdness in making a bargain.

As to the savage's ignorance of or indifference to value, see J. Viehe, *Die Ovaherero*, ap. S. R. Steinmetz, p. 312; G. F. de Ovedo, *List. nat. et gén. des Indes*, tr. J. Peleux, Paris, 1656, pt. i. bk. v. cap. iii. p. 76a; D. Orantzi, l. 101; R. Schomburgk, *Reisen in Brit.-Guiana in 1840-44*, Leipzig, 1847, i. 175; A. Donaldson Smith, *Through Unknown African Countries*, London, 1897, p. 277 f.; O. Dapper, *Descr. de l'Afrique*, Amsterdam, 1686, p. 339; G. W. Stow, *Native Races of S. Africa*, London, 1905, p. 250. See also R. C. Temple, 'Beginnings of Currency,' *JAI* xxix. (1899) 101 f.; F. Schultze, *Psychol. der Naturvölker*, Leipzig, 1900, p. 215 ff.; J. Köhler, *ZVRW* xxii. (1908) 298; A. Sartorius von Waltershausen, 'Die Entstehung d. Tauschhandels in Polynisien,' *Zeitschr. f. Social- und Wirtschaftsgesch.* iv. (Weimar, 1896) 59 ff.

(4) Thus this primitive practice of exchanging articles partakes in some cases of giving rather than of bartering, and, in others, of bartering rather than of giving. On the whole, it seems best to regard the transaction as one of mutual gift, for the amount given is by no means exclusively

determined by purely commercial considerations.¹ See below, 5 (1).

3. Return consisting of an act or of an abstention from acting.—(1) We come now to the second class of instances—those, namely, in which the recipient makes a return, not by giving something, but by doing or abstaining from doing something. It is stated to be 'the universal custom of the East for none to present himself before a superior, more especially the king, without a present.'² Free-will offerings were brought to the chieftains of old Germany;³ and a similar practice prevailed in Mexico, and among the Chibchas, and has been observed in Tahiti and Fiji,⁴ in New Caledonia,⁵ among the Monbuttu,⁶ and in Sumatra.⁷ On the Lucalla, each district from which representatives attend the fair must give a present to the chief within whose territory it is held.⁸ Very frequently the protection of a king or headman, and his permission to enter the country, to trade within it, or to leave it, must be purchased with gifts (see art. STRANGERS); and it has been observed that the stranger may have less to suffer from beggars in a despotic than in a republican country, it being presumed that on his first arrival he had satisfied the greatest beggar of all—namely, the king.⁹

It may be noted by the way, that of the presents, of which the original purpose was to secure the protection of a superior, many lose in course of time their voluntary character. In Fiji, offered presents were made to *warus* by their hosts,¹⁰ and in New Zealand,¹¹ and among certain Kafir tribes,¹² chiefs on visiting expect to receive large presents from their entertainers, the revenue they derive being really a tax.¹³ Spencer points out that, where the political head assumes universal ownership, he recompenses his subordinates by giving them gifts.¹⁴ Thus, liberality is expected from the chief; so that, among the Abipones, for example, he must give what he has, even when asked for the garment on his back.¹⁵ 'We still have in vails and Christmas-boxes to servants, etc., the remnants of a system under which fixed remuneration was eked out by gratuities—a system itself sequent upon the earlier system under which gratuities formed the only remuneration.'¹⁶ The system to which Spencer alludes is in full force in the East. An Oriental expects not only to be paid for his services at the stipulated rate, but to receive a gift on leaving his employer; and this expectation prevails among persons in all ranks of society.¹⁷

(2) No one consults a prophet,¹⁸ or a priest or priestess,¹⁹ without giving presents; and, in New Guinea, the Toaripi tribesmen obtain the prayers of the sorcerer by means of gifts.²⁰ If bananas are not growing well, the Murray Islander takes some

of them as a gift to the *zogo le*, who makes a charm to ensure a plentiful crop;¹ and presents are given to the medicine-man for his services in treating the sick,² and, if the latter dies, in ascertaining whose witchcraft slew him.³ If he fails to cure, he must return the gifts.⁴

(3) Often the purpose of the gift is to procure the abandonment of rights. Among the Jekris, Sobos, and Ijos, the son-in-law gives his father-in-law a *dash* (i.e. a present) on the birth of the first child;⁵ while, among the Ba-Yaka, on a child's birth, the chief of the mother's village gives a gift of fowls to the father; and, as soon as it can walk, it is sent to the chief's village, to which it legally belongs, and from which the father cannot even purchase it.⁶ Again, there are cases in which the bridegroom is resisted, as he meets the bride, by his own kinsmen, until he gives them something, and cases in which the bride refuses to enter the bridegroom's house until she has received a present from his friends.⁷ Sometimes a present is given by the bridegroom to his mother-in-law, to signify that the bride is thenceforth separated from the home of her girlhood;⁸ and with this gift may be compared that given, among the Chamorro, by members of the bride's and bridegroom's families to the latter's mother.⁹ Somewhat similar is the case of the bride in Uganda. During the first month of marriage she veils her face; and the bridegroom is permitted to lift the veil only on giving her a goat to be eaten by her and her friends.¹⁰ A present of money procures a similar privilege in modern Egypt.¹¹

(4) Sometimes a gift serves as compensation for loss. Thus, among the Banaka and Bapuku, it is obligatory on a husband whose wife has died to give something to her family; while the kinsfolk of a dead man must make a present to the relatives of his mother.¹² The Déné recognize the former obligation.¹³

(5) In Ashango-land, if a stranger accepts a present from the natives, he is bound to make some stay in their district.¹⁴

(6) Crime is expiated,¹⁵ and peace is purchased,¹⁶ by making presents. Again, a tabu may be removed by a gift of food;¹⁷ and by presents the imposition of a tabu may be bought off.¹⁸

(7) It is a world-wide practice for the suitor to open his suit by making a gift, it may be to the

girl's father,¹ or to her family,² or to her and her relations,³ or to her alone.⁴ Sometimes this gift is handed to the girl's mother,⁵ or, where she does not belong to her suitor's tribe, to her father and to the headman and other principal men of her tribe.⁶ If the suit is unwelcome, the gifts are in many cases returned.⁷ Among the Lapps⁸ and the Siena,⁹ presents are given at every stage of the courtship to the girl and her relatives; while among the Bororo¹⁰ and the Orang-Ot of Borneo¹¹ it is the lady who begins the courtship by giving presents to the man of her choice. In Japan, the sending of presents by the intending husband forms one of the most important parts of the nuptial ceremony;¹² while, in many instances, present-giving seems to be recognized as the only solemnity.¹³

It may be noted that Westernmark (p. 395) and Kohler ('Das Recht d. Birmanen,' *ZVRW* vi. [1886] 167, 'Das Gewohnheitsrecht der Provinz Bombay,' *ib.* x. [1892] 80) are of opinion that the giving of bride-gifts is a relic of a previous custom of marriage by purchase; while Crawley (*The Mystic Rose*, London, 1902, p. 387; cf. Steinmetz, pp. 307, 319; Lane, p. 147) regards the latter as a development from the former—a view which seems to be supported by the evidence.

(8) At Tlingit feasts in remembrance of the dead,¹⁴ and at gift festivals held by the tribes south of the Yukon River,¹⁵ men gain rank and reputation by giving away their whole possessions. Similar facts are reported of the Ahts¹⁶ and the Western Eskimos.¹⁷ It seems that the desire to establish his position as a great man forms the motive of the Lekunen bridegroom's generosity,¹⁸ and, to some extent, of the host's munificence in giving presents to his guests in Scandinavian antiquity.¹⁹ Among the Carriers, strips of skin are distributed on the death of the head of the clan by his successor

'as an act of atonement for the death of the deceased noble, gifts of such sort being looked upon as wiping out the shame and grief of the mourners' (C. Hill-Tout, *Brit. N. Amer.*, p. 149).

(9) The custom of giving presents to the departing guest is wide-spread (see I (3) above). It was

practised in the world of Homer,¹ and in the northern countries;² and it is in observance in the Andaman Islands,³ among the Banaka and Bapuku,⁴ in New Guinea, and among the Aleuts,⁵ in New Zealand,⁶ and among the Ostiaks.⁷ It may be noted that a gift is sometimes given by the guest to the host.⁸

(10) It is to be observed that in some of the instances mentioned above the object of the giver is not so much to procure the performance of, or the abstention from, an act, as to create in the recipient a disposition favourable to himself. For example, a man may give away his property in order to impress others with his importance, or to gain a reputation for generosity (see 3 (8) above). The suitor's present to the girl's parents may be due to his desire to ingratiate himself with them (see (7) and (8) above); and the host's parting gift may express nothing more than a wish to kindle friendly feelings in the breast of his guest (see (9) above). We shall return to the consideration of this topic (see 4 (6) below).

(11) In connexion with the last two instances mentioned in the preceding paragraph, it is to be noted that the purpose of the donor—the suitor who gives to the girl's parents, and the host who gives to his departing guest—is not always and everywhere one and the same. The suitor gives sometimes to gain the goodwill of the parents, and sometimes to buy off their rights in their daughter; and the host gives sometimes to strengthen the ties of friendship, and sometimes, it may be, to secure a similar gift when it is his turn to be entertained (see 1 (3) above). These instances might easily be multiplied. Moreover, it is not to be forgotten that, in making a present, the donor may have in view more purposes than one. He may, for example, be seeking, by one and the same act, to obtain the donee's favour, to acquire a material benefit for himself, and to take part in the performance of a religious or magical ceremony.⁹

4. The ground upon which the donor rests his expectation that a return will be made.—(a) *Where the return is in the form of a material thing.*—It is obvious from the evidence which has been adduced that, among uncivilized peoples, gifts are given in the expectation that a return will be made; and the question at once presents itself: What ground has the donor for entertaining this expectation? In other words, What is it which induces or constrains the recipient to make a return? We shall take, first of all, the case of a material return.

(1) Now, it is strictly in accordance with primitive notions to regard 'the nature of anything as inhering in all its parts,'¹⁰ even when the parts are separated from it,¹¹ and to treat as part of a man's substance not only his blood, saliva, umbilical cord, sweat and other *excreta*, hair-clippings, nail-parings, and the like, but earth from his foot-

prints, the remains of his food, his name, his portrait, his garments, ornaments, weapons, and implements.¹ This conception has two important consequences. If the man is in all his parts, whether these are or are not detached from him, it follows that they may be the medium either of his action upon others or of the action of others upon him. A part may be so impressed with his personality—with his intention for good or ill—as to benefit or injure any one with whom it may be brought into contact. On the other hand, whoever gets possession of it will be able through it to work his will, at any distance, upon the man himself.² Accordingly, if A give an article belonging to him to B, he gives a part of himself—a gift which may be dangerous to himself, for, by giving it, he puts himself in B's power; or it may be dangerous to B, for A may impress upon it his will to injure him.³ Thus, in Morocco, if a person give food or drink,

'It is considered dangerous, not only for the recipient to receive it without saying, "In the name of God," but also for the giver to give it without uttering the same formula, by way of precaution. . . . It seems likely that the custom of not receiving payment from a guest is largely due to that same dread of strangers which underlies many other rules of hospitality' (E. Westermarck, *MJ* i. 590, 593).

(2) To give is frequently regarded as perilous to the donor. Thus, among the Australian tribes other than those of the centre, hair is never given by the owner, lest he should put it into the power of the recipient to injure him.⁴ Again, it is thought to be dangerous to give salt or leaven out of the house, for, if it pass

'Into the hands of any person who has the power of wishing, i.e. of bringing down harm on another by uttering an ill wish, the possession of it places the giver entirely within the power of the wish.'⁵

(3) In some cases a gift will ward off harm at the hands of witch or fairy. Thus, in Cornwall, in the Isle of Man, in Somersetshire, and in some parts of Scotland, it was customary for the woman who carried a child to be christened to give bread and cheese to the first person whom she met;⁶ and a refusal of the gifts was regarded as an expression of evil wishes towards the child.⁷ With this practice we may perhaps compare that of the Stlatlumb (or Lillooet), among whom visitors to the parents on the birth of a child receive presents from its father.⁸ In the Highlands of Scotland, if a stranger has looked over a cow, the dangers of the evil eye are averted by offering him some of its milk to drink;⁹ and in Australia a tabu is removed by a present of food. Thus, among the Unmatjera and Kaitish tribes, a widow is under a ban of silence after her husband's death, usually for many months, until she is released from it by the dead man's younger brother.

'When this takes place she makes an offering to him of a very considerable quantity of food, with a fragment of which he touches her mouth, thus indicating to her that she is once more free to talk and to take part in the ordinary duties of a woman.'¹⁰

(4) To accept a gift may be no less dangerous. It is said of the Tingits and Haidas that every gift is received with mistrust;¹ and the Annamese decline presents 'for fear of bringing ill-luck into the place.'² An offer of snuff unasked would be regarded by a Kaffir with suspicion; and, were he taken ill, it would be thought that he had been poisoned by the donor of the pinch.³ A somewhat similar risk is incurred by those who eat fairies' food; and the same idea is at the root of the drinking customs of Greece, Rome, and Germany.⁴ In Servia, it is usual, when sending an apple to a relative, to bite a little piece out of it, so as to show the mark of the teeth;⁵ and, in Melanesia, 'a native offering even a single banana to a visitor will bite the end of it before he gives it, and a European giving medicine to a sick native gives confidence by taking a little first himself.'⁶ Crawley⁷ cites an instance which makes clear the meaning of these practices:

'Amongst the Krumen, at a palm wine-drinking the goodwife of the house has to take the first and last draught herself, to show the guests that she has not been dealing in poison or witchcraft. This is called "taking off the fetish."⁸

(5) In other cases, a gift by a person whose evil wishes are feared seems to have the effect of rendering him innocuous. Thus, a Kayan stranger, who comes into a house where there is a young child, brings a gift with him, lest his appearance should frighten away its soul.⁹

The difficulty in deciding whether to take or refuse a gift is identical with the difficulty

'in knowing how to act when a witch offers to shake hands with us. No doubt there is some risk in accepting the courtesy, since the action entails on us all the ill she may wish us. Still it insures us equally all the good she may wish us, and therefore it seems a pity to refuse one's hand.'¹⁰

(6) How, then, are these dangers to be averted? We are told that, in New Zealand, when a chief has medicine administered to him by a European, he always demands payment;¹¹ and Hartland¹² informs us that, in Ireland,

'when a child is vaccinated, the medical man is not allowed to take lymph from its arm without giving some present, however trifling, in return.' In a case from Tipperary, the nurse reported that the child's arm was kept inflamed because the doctor had neglected, when taking the lymph, to put silver in its hand; and Hartland attributes this superstition to the belief in witchcraft.

'Payment,' he adds (*loc. cit.*), 'is always held to neutralise a witch's power over a person through something received from him, probably because what she gives in exchange would confer a like power over her, and hence becomes a hostage for her good faith.'

Accordingly, in order to avert these dangers in giving and receiving, each party to the transaction must both give and take. This principle is illustrated by the account which H. von Wissmann¹³ gives of his meeting with a dwarf people, whom he found among the Batetela. They gave him presents of which they implored his acceptance, and, on his taking them, they went away satisfied.

'They evidently acted in this way under the impression that my presents, if they did not return them, would give me some power over them. Such mistrust is quite a mark of the genuine savage.'

When the Spaniards at Cabo de Gracias a Dios would not take the articles set out by the natives, the latter laid down all that they had received near the sea, where the former found it the next day;¹⁴ and, in Tahiti, the islanders would not

accept Wallis's presents until his men had taken all the articles which they offered in return.¹ The islanders of Mannicola declined to accept presents when they had nothing to give;² and the natives at Astrolabe Bay deposited on the beach every morning fresh gifts for their European visitors, with whom they were on terms of enmity, and left untouched the articles placed there as a counter-gift.³

With these instances may be compared those supplied by popular superstition: the case, for example, of the Durham schoolmaster, who dared not give a knife to one of his pupils without receiving a penny, in order that it 'might be purchased, not given';⁴ and the widely prevalent belief that it is unlucky to give a knife or a pair of scissors, unless some return be made to the donor.⁵ We are told that, in South Germany, the dwarfs were always careful to make a return for anything which they had received;⁶ and that, in Altenburg and Silesia, if anything is given out of a house, the luck is given away unless some trifle, such as a needle, be given in return.⁷

(7) We have seen that the principle of exchange is that of giving in order to receive—that the gift is made in the expectation, if not on the understanding, that a return will be made. Further, the evidence adduced seems to warrant the view that this expectation rests, to some extent, at all events, upon the notion that it is dangerous to accept the thing given without giving something in exchange for it, and that, if each of the parties both gives and takes, the danger is averted. What then is the nature of this new relation? It is that of union, brought about by an interchange of substance—a union, therefore, of the most intimate character.⁸

The closeness of the connexion is illustrated by the fact that, among the Eskimos of Bering Strait, persons exchanging presents at the 'Asking Festival' are considered to hold a certain temporary relationship. Formerly they gave and received presents at the festival every succeeding year.⁹ A somewhat similar instance is that of the Tarahumara, with whom a purchase establishes a kind of brotherhood between the parties to it. 'Thenceforward they call each other 'nargua,' and a confidence is established between them much the same as that which subsists between 'compadres' among the Mexicans.¹⁰

(8) The duration of this substantial union appears to differ in different cases. Where, for instance, men have been made 'brothers' by an exchange of blood or by the use of some other rite, the relation so constituted is often a lifelong, and sometimes a hereditary, relation (see BROTHERHOOD [Artificial]). Among the central Australians, a connexion which appears to be temporary is created between those who are about to take part in an avenging expedition, by an exchange of blood, which has the effect of rendering treachery impossible.¹¹ So, too, where the union is brought about by an exchange of food or drink, or by eating together—which is regarded as virtually the same thing—it is often merely temporary. Thus Doughty¹² tells us of the Bedawin that by 'bread and salt' peace is established with the stranger for a time—for, that is to say, two nights and the intervening day—'whilst their food is in him'; and Burton¹³ adds that some tribes required the bond to be renewed every twenty-four hours, as

otherwise, to use their own phrase, 'the salt is not in their stomachs.'

(9) It would seem, then, that in every case of a breach of this union the wrong-doer lays himself open to the vengeance of the man whom he has wronged. But this is not the only or the greatest danger to which he exposes himself. For, where the relation is so intimate and so complete that each of the parties is, in a very literal sense, the *alter ego* of the other, its rupture may be productive of the direst consequences to him who is in fault; and these consequences are due not to the action of the injured party, but to that automatic retribution—in the form, it may be, of disease, or disaster, or death—which follows upon the breach of a tabu.¹

(10) If an exchange of presents can produce a union such as this, it is easy to understand why it is that the solemn occasions of savage or barbaric life are almost invariably celebrated by such an exchange. It signalsizes the birth of a child,² and it accompanies marriage,³ circumcision,⁴ initiation,⁵ and the constitution of such relations as those of brotherhood by choice (see BROTHERHOOD [Artificial]), and those between protector and protégé,⁶ and club and privileged stranger.⁷ In China, it has a place in betrothal,⁸ and in mourning ceremonies;⁹ and it is practised at intertribal assemblies,¹⁰ in the formation of alliances,¹¹ on the conclusion of peace,¹² and in evidence of intimate friendships.¹³ Visits are frequently the occasion of an interchange of gifts, as, for example, those made to a woman on her confinement;¹⁴ while, in the Luang-Sernata group, the female visitors, who bring presents to the young mother, are, at a later date, entertained by the father to a feast.¹⁵ Among the Mohawks, visits are always accompanied by an exchange of presents;¹⁶ and similar accounts are given of the Andaman Islanders,¹⁷ of the Eskimos of Greenland,¹⁸ of the Yahgan,¹⁹ and of the natives of Samoa.²⁰

On days of feasting and rejoicing the Jews sent portions to one another;²¹ and a similar practice was followed in the Homeric world.²²

In Ceram, a man is assisted in building his house by relatives and friends. He feasts them in return, and the former give him presents.²³ The

Lapps give and receive gifts on coming into the presence of a superior;¹ and, in Bhutan,

'an inferior on approaching a superior presents the white silk scarf, and, when dismissed, has one thrown over his neck, with the ends hanging down in front. Equals exchange scarfs on meeting, bending towards each other with an inclination of the body.'²

(11) This view of the operation of an exchange of gifts makes it readily intelligible why the refusal of a gift is generally regarded as in the highest degree insulting,³ or injurious.⁴ In old Germany, such a refusal had its special forms. Thus, in order to show that it did not proceed from selfish motives, it was accompanied by the invocation of a blessing upon the object returned—'got lāze in iuwer bouge beiden saelic sin.'⁵

(b) *Where the return consists of an act, or of an abstention from acting.*—We have seen that, where the return takes the form of a material thing, each of the parties to the transaction—donee as well as donor—gives part of himself to the other. Each puts himself in the other's power. There is an exchange of substance which creates a union. But, in the case which we are considering, neither act nor abstention from acting passes to the donor as part of the donee's substance. Suppose, for example, that an inferior makes a present to a superior in order to obtain his protection, and that the latter accepts it on the footing that he will see to the security of the donor's person and property. The acts which he performs in fulfilment of his engagement are not parts of himself which he gives to the donor in exchange for his gift. They are not elements out of which a union is created. They are, rather, results flowing from a union already in existence, of which the elements are the donor's gift on the one hand, and the donee's acceptance of it on the other. This operation of acceptance appears still more clearly in those cases in which the return consists rather in a state of feeling towards the donor than in an overt act or abstention in his favour. In this connexion we may recall those cases, which we have noted above (see 4 (a) (3)), where a gift to the person, or by the person, whose ill-will is feared averts the danger; and, further, we may refer to the world-wide usage in accordance with which a girl sends a gift to her lover, in order to transmit to him her feelings and to quicken his affections. The gift may be, as in the case of the women of Timor, a flower from her hair or a scarf-pin from her bosom,⁶ or an article, such as a head-band, which, having been 'sung,' acts upon the wearer as a charm.⁷ It seems that, in all these instances, the acceptance of the gift by the recipient as his makes it part of himself, just as it is already part of the donor. Donor and recipient are thus united in and through it, to precisely the same effect as they are united by an interchange of presents; and precisely the same relation of reciprocal goodwill is brought into being (see above, 4 (a) (3) (5) (6) and Crawley, pp. 90, 237, 239). If these views be sound, it is plain why presents are given on days of friendly intercourse or family reunion, as in China, where valuable gifts are made to parents and heads of clans on their birthday festivals;⁸ and why gifts are distributed as part of ceremonies in which the community is interested, as on the

admission of a child into a gens among the Kwakiutl;¹ at the initiation of novices into the secret societies of the Bismarck Archipelago and Solomon Islands;² among the Brahmans of the Deccan and Madras Presidency at ceremonies of adoption;³ on the bestowal of a family name among the Lekunen;⁴ and on the burial of a leading chief at Duke of York's Island.⁵ At a Yahgan burial presents are liberally distributed.⁶

5. The completion of the transaction.—(1) The primitive transaction to which we in ordinary parlance assign the name of 'gift' is thus really a bilateral transaction; and the position of the donor is really that of a person who makes an offer which he can recall, until it has been accepted. In many instances acceptance is signified by some trifling payment or present—a survival, it seems, of the return-gift of which we have so often spoken—once familiar under the name 'launegild,' 'guidardone,' 'guerredon,' 'galar-don,'⁷ and recognizable in the earnest,⁸ or the luck-penny,⁹ which is sometimes given in evidence of the completion of the bargain. Edmond de Bryon¹⁰ quotes from Harou, *Le Folklore de Godarville* (Antwerp, 1893), the statement that, in cases of sale,

'en échange d'un objet qu'on vous offre, vous devez faire un cadeau, fût-il de la plus minime importance. Ainsi il est d'usage de donner une pièce d'un centime ou une épingle lorsqu'on va chercher du petit lait à la ferme.'

Instances are to be found in which other methods are employed to complete the transaction, and to place the object transferred beyond the donor's or seller's reach. Of these a common one is that by which the recipient makes the object his own, or, rather, part of himself, by some act of appropriation. Thus, Cook says of the natives of Tahiti that 'they have a singular custom of putting everything you give to their heads, by way of thanks, as we conjectured. . . . When we gave things to little children, the mother lifted up the child's head to it. They also used this custom in their exchanges with us; whatever we gave them for their goods was always applied to the head, just as if it had been given them for nothing. Sometimes they would look at our goods, and, if not approved, return them back; but, whenever they applied them to the head, the bargain was infallibly struck.'¹¹ A similar practice seems to have prevailed in Fiji.¹² So, too, the Eskimos of Savage Island 'lick with their tongue everything that comes into their possession,'¹³ 'as a finish to the bargain and as an act of appropriation.'¹⁴

The significance of these acts appears clearly from the converse practice of the Eskimos of Bering Strait, who retain and, in some cases, swallow part of the article which they are trading, in order to keep possession of its essential essence, and so, through its agency, to obtain another article of the same kind;¹⁵ and from other instances.¹⁶ Again, it is not unusual for farmers, market-women, hawkers, and the like, to spit for

luck on all money received by them,¹⁷ probably for the reason given in Lemon's *Dictionary* (1783), viz. prevent its 'vanishing away like a fairy gift';¹⁸ and a like practice prevails among the Herbers of the Atlas.¹⁹ Interesting in this connexion is the advice given to those who receive money from a witch:

'Put it at once into your mouth, for fear the donor should spirit it away and supply its place with a round stone or slate, which otherwise she might do at pleasure.'²⁰

It was from neglect of some such precaution that a fiddler who had been paid in gold for his music by a party of mysterious dancers found that the pieces were really beech-leaves.²¹ Among the Masai, purchases and gifts are completed by spitting on the objects transferred.²² By German custom, if a horse was given, the donor dismounted, and the recipient mounted; if a garment was given, the donor took it off, and the recipient put it on; if a necklace was given, it was clasped by the donor round the recipient's neck; while, in other cases, the thing given was in some way or other attached to the person of the donee.²³ From this 'binding on' (*anbinden*), Grimm derives the expression *Angebende* ('present').²⁴

(2) In some cases a transaction of gift takes the form of a sale,²⁵ it may be to bring within the domain of law a transaction which lies beyond it,²⁶ or to avoid the risk of the cancellation of the gift,²⁷ or, perhaps, to escape the danger of giving, as in the case of the Durham schoolmaster noted above (see 4 (a) (6)).

6. Transition from the practice of exchanging gifts to that of barter.—(1) It has been pointed out above (see 2 (4)) that the primitive practice of making exchanges takes the form, in some cases, of giving rather than of bartering, and, in others, of bartering rather than of giving. Further, the evidence which we have already adduced shows that these exchanges take place sometimes between the members of the same clan or tribe, sometimes between the members of friendly tribes, and sometimes between strangers. Now, undoubtedly the most formidable obstacle to the extension of the practice of giving or bartering beyond the limits of the clan or tribe is the hate born of fear with which the stranger is regarded. To primitive man the little circle within which he lives forms the only possible world of social life. Beyond its limits lies an unknown country peopled by beings whom he fears and hates, and whose very existence he regards as a menace to his own. These beings have no part or place within this sphere, where alone right is recognized and enforced; and, accordingly, it is not robbery to strip them of their goods, nor is it murder to kill them. Rather it is a public duty to hunt them down and slaughter them like beasts of prey.

It is plainly impossible to lay down with any degree of precision the boundary-line where goodwill ceases and enmity begins.²⁸ Of the Yahgan of Cape Horn it is said that, outside of the family-group, the relation of man to man is doubtful, if not hostile:

'The bond of a common language is no security for kindly offices. A stranger and an enemy are almost synonymous terms.'¹

On the other hand, it has been observed by Spencer and Gillen that, among the tribes with which they are acquainted,

'there is no such thing as one tribe being in a constant state of enmity with another.'² 'The members of one tribe will tell you that a distant tribe, with which they rarely or never come into contact, is very fierce and bloodthirsty and given to making raids. The same tribe will be living upon most friendly terms with its immediate neighbours, and some of the latter will be doing precisely the same thing with the tribe of which your informants are afraid and suspicious. At the same time it is quite true that, if a member of an unknown tribe made his appearance, except, of course, he came accredited as a sacred messenger, he would most probably be promptly speared. Anything strange is uncanny to the native, who has a peculiar dread of evil magic from a distance.'

In many instances the conception that the stranger is a being to be feared and hated is held most strongly by that portion of the population which is most remote from and, therefore, least familiar with him. Thus, those of the Yahgan who have never met with the Ona regard them as mortal enemies; while those of them who are their neighbours intermarry with them and fall, to some extent, at all events, under their influence.³ So, too, it is said of some of the N. Queensland natives, that they will hunt down and slay and eat the stranger who trespasses on their territory; while those of their divisions which lie nearest the border live on such amicable terms with their neighbours that the tribal boundaries are not easily determined.⁴ Thus, the range of social feelings is widely different in different cases. In some, they reach beyond the clan or even the tribe; in others, they hardly cross the threshold of the family-group (see STRANGERS).

The dread with which the stranger is regarded is largely due to the universal belief in his magical powers. The Bakairi,⁵ for example, and some of the Australian tribes⁶ regard evil and sickness and death as coming to them from those who dwell beyond their borders. In short, the stranger is looked upon as belonging to strange gods, and as bringing with him strange supernatural influences.⁷ He is possessed, and one of the duties of the medicine-chief and a main purpose of the ceremonies of hospitality are to disenchant him—or, in other words, to remove the tabu.⁸

(2) In the case of certain peoples, exchanges take place only between members of a tribe who are known to one another. Thus, while the Yahgan,⁹ like many another people,¹⁰ celebrate the occasion of a visit to their friends by an exchange of gifts, they appear to have had no such dealings with their neighbours the Ona and Alacaluf; nor had they any notion of barter with the stranger until they had learned to practise it from passing voyagers.¹¹ Among the Andaman Islanders, it frequently happens that a head chief organizes a

large gathering in order to receive the members of some distant community who have offered to give an entertainment of dance and song.

Sundry implements or articles, which are more common in their community than in that of their hosts, are taken by the visitors on these occasions for purposes of presentation, or, to speak more correctly, of barter.¹ Still, their mode of negotiating is that of giving.²

Nor is the interchange of presents limited to friends and acquaintances; for strangers, if introduced by mutual friends, are always welcomed.³ A very similar exchange of specialties upon the occasion of friendly visits is stated to take place among the Samoans,⁴ but it is not clear from the account whether this exchange is or is not subject to the same limitations as the practice of lending, which occurs only between members of the same tribe or clan.⁵ The Bakairi are not themselves potters, and they do not possess the stone suitable for axes. Accordingly, they procure these articles from neighbouring tribes.⁶ Each tribe has its specialty, and these specialties pass from tribe to tribe; still, the form of exchange is that of gift followed by counter-gift. On his arrival the stranger presents to his host some article peculiar to his tribe or locality; and the latter, either on receiving him, or, more generally, on parting, gives him something in return.⁷ But, until our informant's visit to them, the Bakairi knew nothing of exchanging specific object for specific object. The guest expected to receive something, but it remained with the host to determine what he should receive.⁸ Again, it is said of the Indians of Guiana that each tribe has some special manufacture; and that its members constantly visit other tribes, hostile though they be, for the purpose of exchanging the products of their labour for articles which they themselves do not produce. These trading Indians are allowed to pass through an enemy's country without let or hindrance,⁹ traders being treated, for the time being, as fellow-tribesmen.¹⁰ New Zealand affords another instance of the circulation of property by exchange of specialties. The inhabitants on the upper Wanganui send preserved parrots and other birds which are considered a delicacy 'as presents to other parts of the country where they are scarce; and, in due time, a return present of dried fish, or something else not to be obtained easily in the inland country, is received.'¹¹ Of the Bushmen we are told that 'they had no contact with people beyond their own little communities, except in war, for they were without a conception of commerce';¹² while R. Moffat¹³ informs us that they supplied Hottentots, Corannas, and Namaquas with quivers, bows, and poisoned arrows. S. Passarge,¹⁴ relying on the information of a Bushman attendant, speaks of the commercial relations of the latter's countrymen with Bantu tribes, and adds that large prices were obtained for certain commodities; but as to the *modus* of these transactions he leaves us in ignorance.

The most remarkable example of this primitive traffic is afforded by the aborigines of Australia. In their case it seems to reach its highest point of organization among those tribes of Queensland of which W. E. Roth supplies an admirable account. He tells us that

'certain trade-routes laid down from time immemorial along their own or men's country are followed by the members of a tribe or tribes, along which each knows that he is free to

travel unmolested; these routes, of greater or less extent, are rigidly adhered to. The opening of the local market, so to speak, may take place at the instance of one of the elders or 'bosses' at one of the larger camps . . . where instructions are issued as to when to leave, to whom to go, what to take, and what to return with.¹

Roth gives a list of trade routes and of the articles bartered at the various 'swapping stations,' and observes that this intercourse is productive of an exchange not only of material things but of ideas.² In the case of the tribes of S. E. Australia, commerce is less systematic in form. Trade-centres exist among them, but barter takes place only on certain solemn occasions, such as the settling of a blood-feud, the celebration of an initiation ceremony, or the occurrence of a great tribal gathering;³ and it is worthy of note that the very tribes which frequent those resorts make annual expeditions to obtain pitcher and red ochre, during which they must be prepared to fight every inch of the way. But, besides this trading at recognized places, articles pass from one tribe to another by way of barter. Thus, the Yandruwunta obtained wooden shields 'from their neighbours higher up Cooper's Creek, who got them from tribes farther to the north-east';⁴ and, in the case of the central Australians, fighting clubs made by the Kaithish and Warramunga are 'traded down to the Macdonnell Ranges and right away to the south of the Arunta and Luritja'.⁵ In this way ornaments,⁶ shields,⁷ spears,⁸ pieces of greenstone (diorite),⁹ stone for axes and hatchets,¹⁰ articles of food,¹¹ red ochre, sandstone, slabs for grinding grass and other seeds,¹² and skins¹³ pass from tribe to tribe by way of barter—those tribes being, in many instances, widely separated from one another.¹⁴

There are two Australian usages with regard to trade which deserve special mention. Of these the first, called *yutchin*, prevails among the Dieri. 'When a black-fellow is going a distance from home, either to another of the Dieri hordes, or its lesser divisions, or to a neighbouring tribe, some one at his camp becomes his *yutchin*. . . It is then his duty to bring back with him articles for his *yutchin*, who while he is away also collects presents for him. Under no circumstances is such a pledge broken.'¹⁵ The second usage is practised by the Narrinyeri. When a tribesman has a child born to him, he preserves its umbilical cord, and gives it to a man of another tribe, who has children. In this way these children become *ngia-ngiampe* to the child first mentioned. He and they may not touch, or approach, or address one another; and, when they have arrived at adult age, they become the agents through whom their respective tribes carry on barter. Their estrangement is said to answer two purposes. 'It gives security to the tribes that there will be no collusion between their agents for their private advantage, and also compels the two always to conduct the business through third parties.'¹⁶ It is a matter of indifference whether the children do or do not belong to the same clan.¹⁷

(3) These instances from Australia establish the fact that the tribes of which Roth speaks possess a far more highly organized system of commerce than is to be found among the natives of the centre. They show us, further, that the S.E. aborigines engage in barter with strangers as well as friends at certain established trading-centres on certain recognized occasions; and they supply ample evidence of the passage of commodities from tribe to tribe, sometimes directly and sometimes through the medium of friendly tribes or of a

special class of persons. At the same time, it is obvious that, except perhaps in the case of the tribes first mentioned, such trafficking is exceptional. Yet the mere fact that it exists indicates that the parties to it have made a considerable advance along the path of commercial progress. The privileges accorded to the trader among the natives of Guiana point in the same direction.

The practice of exchanging guest-gifts has a wider range among the Bakairi than among the Andaman Islanders. Among the former, it may take place between strangers; among the latter, it takes place only between friends, or between a host and an accredited stranger. Accordingly, it is plain that in each of the three last instances we meet with a personal exception to the general rule of treating the stranger as an enemy—an exception, that is to say, in favour of the stranger-trader and the stranger-guest.

(4) Now, a large body of evidence attests the prevalence, both in the past and in the present, in almost every quarter of the globe, of a mode of trading which throws, it is thought, no little light upon the origin of this exception. This so-called 'silent trade' is, in its simplest form, a transaction by way of exchange between persons who are unseen by one another; and examples of it are supplied by European and Asiatic Russia, by many parts of Africa, by Sumatra, Borneo, and the Moluccas, and by North, Central, and South America.¹ Here we propose to consider only those instances which occur amongst peoples regarding whose life and surroundings we have adequate if not full information.

It has been said that this form does not represent the first beginnings of intercourse with the stranger—that it is, rather, a device adopted by traders of a higher civilization in order to overcome the suspicions and fears of those belonging to a lower civilization and to induce them to trade. It is undoubted that to many primitive peoples the practice of making exchanges with persons outside of their own clan or tribe was unknown until it was introduced among them or forced upon them by strangers of a culture superior to their own. Thus, while there is no evidence of exchange between the extinct Tasmanians or Botocudos or Seris with the tribes in their neighbourhood, it is reported of the two former that they engaged in it with the Europeans with whom they were brought into touch,² and of the last named that they learned to practise it from the whites of Sonora, with whose missions and military expeditions they came frequently into contact.³ It would be unjustifiable, however, in view of the evidence, to attribute the origin of this curious form to the ingenuity of civilized traders; for, while it is true that not infrequently such traders employ this method in dealing with rude peoples, it is no less true that in many cases it is practised by such peoples in opening a trade with those outside their borders.⁴

(5) The Veddas of Ceylon, the Sakais (Senoi) of Malacca, the Toälas of Celebes, and the Kubus of Sumatra are regarded by the latest authorities as related races, on the ground of the similarity not only of their somatological characteristics, but of their habits and modes of life;⁵ and, consequently,

¹⁶ Ourr, *loc. cit.*

it is of especial interest to us to find that all these peoples practise this method of exchange in its simplest form. Fa Hian is apparently speaking of the Veddas, when he says of Ceylon that

'it was originally uninhabited by men. Only demons, genii, and dragons dwelt there. Nevertheless merchants of other countries trafficked with them. When the season for traffic came, the genii and demons appeared not, but set forward their precious commodities marked with the exact price. If these suited the merchants they paid the price and took the goods.'¹

Many instances might be collected in which the merchant is said to have been uncertain whether he was trading with men or demons.² According to al-Biruni,³ the coast-people of Lañka (Ceylon) traded cloves in accordance with this method. It is possible, however, that his account applies not to Ceylon, but to those islands in the Indian Ocean where, according to Qazwini,⁴ a clove-trade was conducted in this manner. The method is still practised by the Veddas of Nilgala.⁵ Accordingly, the statement of Bailey⁶ to the contrary appears to be erroneous.⁷

Robert Knox's account⁸—which is corroborated by many other reports to the same effect—informs us that, when the Veddas want arrows, they

'will carry their load of Flesh in the night, and hang it up in a Smith's, also a leaf cut in the form they will have their arrows made, and hang by it. Which if the Smith do make according to their pattern they will require, they bring him more Flesh; but if he makes them not they will do him a mischief one time or another by shooting in the night. If the Smith makes the arrows he leaves them in the same place as the Veddas hung the Flesh.'

It may be noted that in the case of the Smoos and Twakas, who employ a similar method of trading, each article has affixed to it a sample of what is wanted in return;⁹ and a similar indication is given by the natives of the Rio del Norte in bartering with the whites.¹⁰

The wild Sakais of Perak, in trafficking with the Malays, either employ a 'tame' Sakai as an intermediary, or deposit their wares, which consist of jungle produce, on the banks of rivers, at certain times and places known to the trader. They then withdraw, and return after an interval to fetch the articles offered in exchange.¹¹ Hugh Clifford¹² speaks of the 'tame' Sakai only as exchanging with the Malays, who deposit the articles of barter at certain spots in the forest, whence the Sakais remove them, replacing them with their wares. The Toālas of Celebes formerly practised this mode of trading, laying down what they had collected at some place of resort, whence any one could take it on leaving something in exchange.¹³ Winter tells us that the Orang Kubu of Sumatra deposit such articles as rattan, bees-wax, resin, and ivory at a spot on a river-bank where they may catch the eye of the Malay trader, and then retire. They return from time to time; and, if they find that something which suits their taste has been laid down beside their offer, they take it away with them, leaving their barter for the trader to carry on board his proa.¹⁴

¹⁴ Quoted by Hagen, p. 118.

Hagen quotes de Sturla, Olivier, and H. O. Forbes to much the same effect. According to Olivier and Forbes, however, it is the Malay who opens the trade. Forbes¹ says that the Malay trader 'beats a gong in a particular manner so as to give notice of his arrival.' In Winter's time a person in need of assistance could summon the Kubus by striking a hollow tree so as to produce a certain series of sounds recognized as a call for aid. Whenever the Orang Ut of Borneo wish to gather the members of the tribe together, they beat upon a tree-trunk, and the Malays who trade with them use the same means to collect their clients;² and a very similar use is, or was, made of a gong or copper vessel in Buri.³ Bakuwi⁴ says that those who traded by this method with the people of Tibri—a country of the Sudan, distant about three months' journey from Segelmes—announced their approach by sound of drum.⁵

The Ukits, the Punans, the Buketans, and the Ot Damung of Borneo are said to employ a similar method;⁶ but a recent account of the Punans from Malay sources shows that, when bartering, they no longer keep out of sight of the trader.⁷ According to Chinese writers, it was at one time in use up country from Banjermasin.⁸

(6) A racial connexion, similar to that which is said to subsist between the Veddas and certain other peoples, is held by Schmidt⁹ to be established between the pygmies of Central Africa, the Bushmen, the Andamanese, the Semangs, and the Negritos of the Philippines. We have already referred to the modes of exchange practised by the Bushmen and the Andamanese (see 2 (1) and 6 (2) above). The Semangs are neighbours of the Sakais, and, although of a wholly different stock, exhibit a manner of life and a method of trading practically identical with theirs.¹⁰

The accounts of the pygmy peoples of Central Africa disclose an interesting variety of trading customs. The Akkas are grouped in small communities, and wander over the countries of certain of the Monbuttu tribes. They are hunters, and do not cultivate the soil; but they have a remarkable fondness for vegetable food, and not infrequently raid the fruit-trees of their neighbours.¹¹ 'After a successful hunt, when they possess abundance of food, they invade the banana groves, and for every bunch of fruit gathered they substitute a piece of meat.'¹² A very similar description is given of the Obongo of the Ogowe Basin,¹³ who are also said to employ the method of the 'silent trade.'¹⁴ The Batua are simple hunters, and know nothing of agriculture. They wander over the country of the Bakuba, Baluba, Bakaté, and other tribes, but are met with only on certain days at market-places situated within the virgin forest, and, in general, equidistant from the neighbouring villages. These spots are regarded as neutral ground, and are frequented by the pygmies in order

to exchange fresh or dried flesh for maize. As to the manner of the exchange, we have, unfortunately, no precise information.¹

The accounts of the trading methods of the Negritos of the Philippines are somewhat wanting in precision. We are told of the Aetas that they deal only with the Malay tribes which are their neighbours, in order to procure, for their honey and beeswax, such articles as arrow-heads, knife-blades, cloth, etc., which they cannot provide for themselves. It is said that they always, as far as possible, employ the same persons to conduct this traffic.² Further, it is stated by a recent American authority³ that

'In many places in the Archipelago to-day, especially in Mindanao, periodic commerce is carried on regularly on neutral territory. Market-places are selected where products are put down by one party, which then retires temporarily, and are taken up by the other party, which comes and leaves its own productions in exchange.'

Blumentritt's informants spoke of the Mamanuas of Mindanao as exchanging, but said nothing of the method of the exchange.⁴ The 'silent trade' is employed by the wild Apoyaos of Luzon in bartering their tobacco with the Christian natives.⁵

(7) Winter's description of the Kubus' mode of exchange is remarkably similar to Bell's account of that employed by the Smoos and Twakas of the Mosquito country.

'So much confidence have they in the honesty of transactions that I have frequently seen at the mouths of rivers a peeled and painted stick planted in a conspicuous position, and on landing have found hanging to the tree bunches of plantains, baskets of maize, rolls of *tonono* cloth, skins, etc., and attached to each article a sample of what was wanted in return, such as a fish-hook to one, a few beads to another, a pinch of salt to the next, and so on. These were placed there in the expectation that the coast Indians passing by on the main river would make the required barter. After a while, if they were found to remain untouched, the river Indians bring the articles to the coast villages.'⁶ The last sentence seems to show that the practice was declining.

(8) This method of trade is found among the Gorngai and Tungu, the original inhabitants of Kola and Kobroor, islands of the Arru Archipelago, and was formerly in use in Buru and Ceram.⁷ From Japanese writers dating from the first half of the 18th cent. we learn that the practice was employed by the Ainus of Yezo in trafficking with the inhabitants of Ki-itatsoub, one of the Kurile Islands;⁸ and by the Ainus of Saghalien in trading with the people of the Amur country.⁹ According to Paulus Jovius,¹⁰ the Lapps made exchanges.

'yet so that they flye the syght and coompaignie of all merchantes. For comparyng and laying their wares together and leaving their furies in a myddle place, they bargayne with simple fayth with absent and unknown men.'

(9) Similar accounts are given of peoples regarding whom we have little information. Thus, we hear of the practice at Mozambique,¹¹ and, if we credit a native story, at Amboyna.¹² It was employed by the Paloungs in exchanging their tea with

the Burmans;¹ and the legends of the invisible smith in Berkshire, and in 'the Æolian Isles of Lipari,'² find an echo in Denmark,³ in Westphalia,⁴ and other parts of Germany,⁵ and on the West Coast of Africa.⁶

(10) We are told of the natives of Cumberland's Island, by the writer of Martin Frobisher's second voyage to the north, that

'their manner of traffique is thus: they doe use to lay downe of their merchandise upon the ground so much as they meane to part withal, and so looking that the other partie with whom they make trade should doe the like, they doe themselves depart, and then if they doe like of their Mart they come againe and take in exchange the others merchandise, otherwise if they like not, they take their owne and depart.'⁷

It is not quite clear whether those who carried on this trade were mutually unseen, or whether this instance is an example of another form of the practice, in which the parties are seen by one another, but keep at a safe distance.⁸ Of the latter form many examples might be cited.⁹ In some of these a considerable interval separates those engaged in the traffic, while, in others, a mere line drawn on the sand is the only division between them.

(11) A very instructive instance of another form of the practice is supplied by Lander.¹⁰ His object was to obtain yams, and some of the natives with him proceeded well-armed to a town near the river, and returned followed by many armed people carrying bundles of yams. They were accompanied by an old woman, who seemed to be a person of authority. On arriving at the river, she directed the yams to be placed in distinct and separate bundles before Lander's natives, and ordered the owner to retire to a short distance. The purchaser then inspected the bundles, and, having selected one to his own satisfaction, placed beside it what he considered to be its value in cloth, flints, etc. The old woman looked on while this was being done, and, if she thought that what was given was sufficient, she took up the cloth and gave it to the owner of the bundles, the purchaser taking away the yams. If, on the contrary, she thought that the purchaser's offer was insufficient, she allowed it to remain a short time, so as to give him an opportunity of adding something to it. If he did not add anything, she directed the owner of the yams to move them out of the way, and left the purchaser to remove his cloth. 'All this was carried on without a word passing between the parties.'

With Lander's account may be compared what is said of the Aleuts:

'They never transact business with each other personally, but always through a third person. Whoever wishes to sell anything, sends it into another house by this agent, who, without mentioning the owner's name, says, "Here is the *tayak*" (saleable object). The buyer asks what is wanted in return, and sends as much as he thinks fit of what is required. The agent takes this to the seller, and, if he is satisfied, the bargain is concluded. If he is not satisfied, he asks for something in addition, or proposes a new exchange.'¹¹

This method of bargaining is remarkably similar

to that employed by the Eskimos of Bering Strait at the 'Asking festival,' of which Nelson¹ gives an account.

(12) M. H. Kingsley² supplies us with an example of yet another form of this practice, in which a divinity safeguards the rights of the traders. She tells us that, when walking along a bush path, far from human habitation,

'you' will 'notice a little cleared space by the side of the path; it is neatly laid with plantain leaves, and on it are various little articles for sale,—leaf tobacco, a few yams, and so on,—and beside each article are so many stones, beans, or cowries, which indicate the price of each article; and you will see either sitting in the middle of things, or swinging by a piece of tie-tie from a branch above, Egha, or a relation of his,—the market god,—who will visit with death any thief from that shop, or any cheating in price given, or any taking away of sums left by previous customers.'³

It has been contended by a recent writer, F. Somlo,⁴ that this mode of exchange is not, in any of its forms, a primitive mode, because it is not practised by primitive peoples. In his list of such peoples he includes the aborigines of Australia, the extinct Tasmanians, the Botocudos, the Fuegians, the Andaman Islanders, the Negritos of the Philippines, the Bushmen, the Seris, and the Veddas. He does not notice some eight or nine peoples whom the best authorities regard as primitive, and who practise the method in question. He admits that the Veddas employ this mode of trading, and offers the explanation, without, however, adducing any evidence in support of it, that they borrowed the practice from their neighbours.⁵ In dealing with the Negritos of the Philippines, he says not a word of the practice of this method at Mindanao and elsewhere; and, while he names the Kribus, he excludes them from his list, without stating his reasons for so doing. Further, he refuses a place in it to the Ainus of Yezo and the Akkas of Equatorial Africa, on the ground that they are agriculturists or are influenced by agricultural tribes; and he would probably have treated in similar fashion, had he dealt with them, the Todas, the Semangs, and the Sakais. It is quite true that the Ainu women cultivate small garden plots; but, as a people, the Ainus know nothing of agriculture.⁶ The Akkas, although they are hunters *καὶ ἐφ' ὅντι*, have an especial fondness for vegetable food, and frequently raid the fruit-trees of the tribes over whose lands they wander.⁷ The Todas of Celebes are now cultivators of the soil; but the remains found in the caverns which they inhabited until recently show that formerly they were hunters pure and simple.⁸ But few of the Semangs till the soil,⁹ while the tillage of the Sakais is of the rudest.¹⁰ We have already noted that the Paloungs and the Apoyanos grow respectively tea and tobacco (see 6 (8) and (9)). As to primitive methods of agriculture, see E. Bucher, *Die Entstehung d. Volkswirtschafts*,¹¹ Tübingen, 1904, p. 54 ff. It has been pointed out again and again that the fact that a people has made an advance in one direction does not necessarily exclude it from the class of primitive peoples.¹² Thus, for example, the aborigines of Australia are universally and rightly regarded as being within that class, although among many tribes commercial relations have been reduced to an organized system (see 6 (2) and (3)).

It seems plain, then, that the method of exchange under consideration is or has been known to and practised by many primitive peoples; and, accordingly, we are freed from the necessity of discussing the question whether a usage is to be regarded as primitive only on proof that primitive peoples practise it.¹³

(13) It is obvious that considerable light is thrown upon these curious forms of trading by the evidence which we have adduced as to primitive conceptions regarding the nature, incidents, and effects of exchange (see 4 (a)). The problem which confronted the savage was this, How was he to obtain from those who were the objects of his suspicion and fear, if not of his open enmity, certain articles which they possessed and he coveted? He was

familiar with exchange as practised within his own group, and he believed that the parties to it were brought into a relation of such a sort as to secure their good faith. Here, then, was a method to his hand. He would exchange with the stranger, and by keeping out of sight—by neither seeing nor being seen by him—would limit his contact with him to that effected by the exchange itself. The stranger would not dare to take his goods without making a return; and the good faith of both parties would be guaranteed by the nature of the relation which united them for the time. Thus, the method, in its simplest form, is an application of the principles which operate in exchange, as adapted to the special circumstances of the case. Among the Aleuts, the contact of the parties is limited to that implied in the act of exchanging; but, in other instances, the case is different. Sometimes the parties come into view of one another; sometimes they even approach one another; sometimes they transact wholly through intermediaries; and sometimes they take the additional precaution of keeping silence so long as the traffic lasts. Lastly, there are instances in which honest dealing and peaceable conduct are assured by fear, not of the mysterious retribution which follows upon a breach of tabu, but of the punishment inflicted on the cheat and the truce-breaker by the god of the market. It will be seen from the facts which have been adduced that the mutual avoidance of the parties, accompanying, as it does, the mysterious union which exchange creates, serves more than one purpose. It begins, so to speak, by being a safeguard, and it becomes a rite, without, however, in many cases at least, losing its primary character. It seems not improbable, notwithstanding Somló's observations¹ to the contrary, that the method of trading by means of tabued persons in use among the Narrinyeri (see 6 (2)) is to be regarded as a survival of practices formerly prevalent among the natives of Australia before they had reached the stage of commercial development which they now occupy; and a like explanation may hold good in the instance supplied by Melville² of trading through the medium of a 'tabooed Kannaka,' and in the case of the Aleuts and the Eskimos of Bering Strait already referred to (see 6 (1)).

In only one account of this method of trade, and that a very vague one, is it expressly stated that the place of its occurrence is regarded as neutral ground.³ This matter will be dealt with in art. MARKET.

LITERATURE.—This is indicated in the footnotes.

P. J. HAMILTON-GRIERSON.

GIFTS (Greek and Roman).—I. There was an old Greek proverb that gifts persuade the gods and the majesty of kings (Plat. *Rep.* 390 E). Besides testifying to the universal efficacy of gifts, it serves to mark a natural division of the subject-matter. Gifts made to the gods will form no part of the present article; for information concerning them the reader is referred to SACRIFICE. But, even if these are excluded, the giving of presents on particular occasions was often dictated by superstitious fears, as in the case of birthday gifts, which have survived from an immemorial antiquity to the present day, because that which was formerly accounted to possess a magic virtue has endured as a symbol of affection or a graceful act of courtesy (cf. BIRTH-DAYS). It is true that valuable gifts could never be out of season, when an enemy was to be won over or a friend had been estranged. Nevertheless, in heroic times the customs regulating the giving of presents had a

serious importance, which the growth of civilization subsequently effaced (Monro on Hom. *Od.* xviii. 282). This may be illustrated by the survival of ceremonious gifts in the East, as well as by the dealings of travellers or political agents with the chieftains of savage tribes (see preceding art.). The gift was not merely treasured as a compliment, but coveted for its intrinsic value.

In *Od.* xiv. 323 ff. the Theoprotian king is represented as showing to another the parting gifts which Odysseus had collected on his travels—bronze, gold, and iron enough to support one owner after another to the tenth generation. In *Od.* xv. 82 ff., Menelaus offers to accompany Telemachus on a journey through the Peloponnese, and assures him that from every homestead he may visit he will take away something valuable—a brazen tripod or a bowl, a pair of mules, or a golden cup. In *Od.* xviii. 282 the disguised Odysseus rejoices at the cunning shown by Penelope in procuring gifts from the suitors without any intention of choosing one of them as her husband. The most instructive case in Homer is that of the embassy to Achilles in *Il.* ix. The refusal of Achilles to accept the handsome recompense offered by Agamemnon is clearly contrary to public opinion, as expressed by Phoenix (496 ff.) and by Ajax (628 ff.). Even the gods are open to persuasion, if the sacrifices and vows made to them are adequate to the occasion; for Achilles to reject the gifts of Agamemnon is to repudiate the god-like honours which the Achaeans are anxious to bestow upon him. Even when a relative has been slain, if the blood-price is offered, no one persists in his resentment; but Achilles is stubborn and relentless after an inconsiderable affront.

2. In primitive times hospitality to the stranger is a binding obligation, enforced by the belief that his person is under the special protection of the gods, and that neglect to provide for his wants will be visited with divine displeasure. All strangers and beggars are favoured by Zeus; a gift, though small, is welcome, says Nausicaa to Odysseus (*Od.* vi. 207). It thus became a duty (*θέμις*) for the host to provide food and lodging suitably to his means for any stranger who arrived at his homestead; and such gifts were known as the guest-portion (*ξείνια, ξένηα*)—an offering which no prudent man would refuse (see *Il.* xi. 778, xviii. 387).

It is possible that the motive which originally inspired these acts of hospitality was not so much piety as fear. Plenty of evidence has been collected by anthropologists to show that strangers (*q.v.*) were regarded by uncivilized men as a source of danger, and that special precautions must be taken to guard against their influence. Hence the reception of the stranger with particular marks of honour may have been in its inception intended to exorcize the evil spirits surrounding him, or to counteract his magical powers. Instances of this kind from the practices of savage tribes are quoted by J. G. Frazer, *GB* i. 303; but the earliest civilization known to us in Greek literature has reached a much higher stage of development, and what was originally a mere act of superstition has become a religious and social duty.

The progress of civilization in later times tended to reduce to a formality the observance of hospitable relations; but that in critical circumstances the person of the stranger continued to be sacrosanct is shown by the story of Themistocles, when an outlaw, throwing himself upon the mercy of his enemy, the king of the Molossians (Thuc. i. 136). Normally, however, hospitality became less an obligation than a sign of good-will—a point of view which is illustrated by the sovereignty conferred by the Dolonci upon Miltiades, who had offered board and lodging to their envoys when passing through Athens (Herod. vi. 35).

3. Gifts were especially appropriate to the recurrence of particular occasions. The earliest allusion to a birthday feast is in the *Pseudolus* of Plautus, the original of which belonged to the year 309 or 308 B.C. But there can be no doubt that the celebration of birthdays prevailed at a much earlier date. For its special purpose was to invoke the aid of the Good Demon (*ἀγαθὸς δαίμων*) at a time when—on the border-line of two periods—evil spirits were especially prone to extend their in-

fluence. It may be inferred from *Æsch. Eum.* 7 that, at any rate as early as the time of Æschylus, presents were made to children on their birthdays (*γενέθλιον δόσιν*). At a later date there is plenty of evidence for the custom: as examples of such gifts we find the mention of golden rings and charms (Plaut. *Epid.* 639), a silver pencil-case (*Anth. Pal.* vi. 227), and a garland of flowers (*ib.* 345). In the same connexion it may be added that at the Amphidromia, a purificatory festival which took place five days after the birth of a child, presents were made by friends and relatives (*πολύποδες* and *σηπταί*, according to Harpocr. p. 15, 8), as at a modern christening. In Ter. *Phorm.* 13, the slave expects to have to give a present when the child is born, then again on his birthday, and a third when he is weaned.

4. Gifts made on the occasion of marriage require special treatment. In the Homeric age we find clear traces of the time when marriage was an affair of bargain and sale. Aristotle (*Pol.* ii. 8. 1268b, 41) testifies to the fact that the Greeks of old bought their wives from each other. The bride-price paid to the father by the suitor is called *ἐδνα* (*ἔδνα*) in Homer (*ἄρεσσία ἐδνα* [*Il.* xvi. 178]). The value of the bride is sometimes reckoned in oxen. In *Il.* xi. 243 the premature death of the husband prevents him from getting a return (*χάρων*) for the 100 oxen which he had paid down on marriage, with the promise of 1000 sheep and goats afterwards from the increase of his flocks. Hence the epithet 'oxen-earning' (*ἀλφειοβοῦσαι*) applied to girls who were able to fetch a high price (*Il.* xviii. 593). In exceptional instances, or as a special compliment, the father might remit the price, as when Agamemnon offered to Achilles one of his own daughters in marriage (*Il.* ix. 146, *ἀνέδνον*). In *Od.* i. 277, where the *ἔδνα* seem to come from the wife's family, we may detect a changing custom: the explanation is perhaps that they were sometimes expended for the bride's outfit, and to that extent were returned to the bridegroom. However this may be, it is unquestionable that, at least in the case of ladies of high rank, it was customary for their family to provide a suitable portion (*δῶρα*). In this sense Andromache and Penelope are *πολύδωροι* (*Il.* vi. 394, *Od.* xxiv. 294; cf. *Il.* xxii. 51).

When we examine the records of the Attic period, we find that an entirely different system has come into existence, though we have no evidence concerning the change by which the revolution in custom was effected. But the change is evidenced by the shifting sense attached to the word *ἔδνα* by the poets who still continued to use it. Thus in *Æsch. Prom.* 579 it is applied to presents made by the bridegroom to the bride to induce her consent to the marriage; in Pind. *Pyth.* iii. 94, to gifts made by those who were present at a wedding—like our wedding-presents; and in Pind. *Ol.* ix. 10 and Eur. *Andr.* 153, to the portion of the bride. The practice of providing a daughter with a dowry eventually became the rule in Greece. The terms *φερνή* and *πορτή*, generally interchangeable, were in use to denote a dowry; but some authorities hold that *φερνή* was originally limited to the outfit or *trousseau* of the bride, and that it must be so understood in Plut. *Sol.* 20, to be presently quoted. Aristotle (*Pol.* ii. 9. 1270a, 24) affords the curious information that two-fifths of the land at Sparta had passed into female ownership in consequence of the number of heiresses (*ἐπικληροί*) and the size of the dowries. There is evidence, however, that in early times a law of Lycurgus had severely restricted the right of giving dowries (*Ælian, Var. Hist.* vi. 6; *Athen.* 555 C). In Crete the amount of a dowry was limited to half a son's share (Strabo, 452). There

was no such limitation at Athens, except the law of Solon forbidding any woman other than an *ἐπίκλητος* to receive any *φερνή* in excess of a few clothes and articles of furniture. If *φερνή* is to be understood in the full sense, it is clear that the law soon became obsolete: for it was so general a custom at Athens to provide a dowry for daughters and sisters that a respectable Athenian was obliged to make sacrifices for that purpose (see *Plant. Trin.* 689; *Dem.* xi. 25). The reason was to be found in the facilities for divorce permitted by Athenian law. In such a case the wife's dowry became repayable to her guardian (*κύριος*), and the husband was often required at the time of the marriage to provide security (*ἀποσίμνημα*) by a mortgage of real property (*Dem.* xxvii. 17, etc.). The position of a dowress wife was not only precarious but degrading (*Men. Monost.* 369). The law required that an heiress (*ἐπίκλητος*) without estate must either be taken in marriage by her nearest male kinsman or portioned by him suitably to his means, if bestowed upon another (*Dem.* xliii. 54).

5. In these cases family pride and natural affection, apart from legal obligation, combined to supply the necessary motives stimulating to action. Otherwise there is little to show that liberality in giving was highly esteemed among the Greeks. The philosophers may be taken to stand upon a higher plane of morality than was attained by the average man, and Aristotle's account (*Eth. Nic.* iv. 1) of liberality (*ἐλευθεριότης*) is typical of the most elevated Greek sentiment. The action of liberality is thus described:

'The liberal man, being virtuous, then will give from a noble motive and in a right spirit; for he will give the right amount, and will give it to the right persons and at the right time, and will satisfy all the other conditions of right giving.'

But the Christian precept, 'It is more blessed to give than to receive' (*Ac* 20³⁵), ushered in an entirely new conception of liberality as founded upon love. Sir A. Grant, in an excellent note on *Eth. Nic.* iv. 1. 16, remarked:

'Aristotle's statement would be, "It is better to give than to receive, because it is more noble." . . . In Aristotle's whole account we do not find a word about benevolence or love to others as prompting acts of liberality. We find no other motive but the "splendour" (*καλὸν*) of the acts themselves.'

The strictly prudential attitude of the average man (*do ut des*) is clearly indicated by the common usage of *χάρις*, a favour or free-gift. The word constantly implies a reciprocal relation. He who has received a boon lies under an obligation to return it. Hence the phrase *χάρις καταθεῖσθαι* is 'to bestow an obligation, much as a deposit is made of a valuable property which on a convenient occasion may be reclaimed (cf. *Thuc.* i. 33). The philosopher may protest that a boon ceases to be such, if it is conferred with the ulterior object of prospective gain (*Arist. Rhet.* ii. 7. 1385a, 18), but is compelled to acknowledge that, so soon as the action is done, a return is contemplated; and the giver is as prone to overrate the value of his beneficence as is the recipient to disparage it (*Eth. Nic.* viii. 13. 1163a, 9).

6. Voluntary contributions to meet the needs of the State were known as *ἐπιδοσεις*. It seems, however, that, like the 'benevolences' of English history, the name was largely euphemistic. In a small community indirect pressure could readily be applied as a spur to the unwilling. From an inscription of the 3rd cent. B.C. (*CIG* ii. 334) we learn that a *minimum* and a *maximum* were sometimes prescribed—in that case 50 and 200 drachmæ respectively: the appeal was followed by a list of subscribers with the amounts given. *Isæus* (v. 37) tells of a man who, when challenged to subscribe, offered 300 drachmæ on a critical occasion, but failed to make good his word, and was posted with other defaulters. The mean man, according to the

description of Theophrastus (*Char.* xxii. 3), is apt to rise in his place as if to make an offer, but then quietly slips out of the assembly.

7. We pass to the juristic aspect of gifts (*δῶσεις*), although our knowledge of the provisions applied to them by Greek law is extremely limited.—(a) As regards gifts *inter vivos*, in view of the testamentary disability which prevented a man from disinheriting his children, it is necessary to infer, in spite of the absence of evidence, that the law could not be evaded by gifts made in the lifetime of the donor. Similarly, impediments were placed upon the alienation of their property by public officials who had not passed their audit, and by freedmen dying without issue. In the latter case the bar operated in favour of their former owners (*Ziebarth*, in *Pauly-Wissowa*, v. 1599). Bastards were not allowed to receive gifts from their putative parents in excess of the amount fixed by law, which was 1000 drachmæ (*Harpocr.* p. 133. 1).—(b) Gifts made in contemplation of death occupy a middle place between gifts *inter vivos* and testamentary dispositions. A valid gift of this kind could be made by the deposit of a sum of money or valuables with another, to be retained by him in the event of the owner's death, but to be returned if he should survive a journey or other adventure about to be undertaken (see *Dem.* lii. 23, 24).—(c) An early instance of what we call a charitable trust is to be found in the dedication by Nicias of a piece of land at Delos, which he had bought for 10,000 drachmæ, on condition that the revenue should be used by the Delians in defraying the costs of a solemn feast (*Plut. Nic.* 3). In the Græco-Roman age the endowment of foundations for religious or secular uses became increasingly common. Thus, the erection and maintenance of public buildings, such as theatres, baths, and gymnasiums, were often due to the munificence of rich private citizens. In such cases a corporation was formed to undertake the ownership of the property and management of the trust so as to secure its perpetuation. A right was sometimes reserved for the founder or his representatives to intervene, in case the management failed to carry out the terms of the trust; or the State might exercise a supervising control through its own officers.—(d) Gifts by testamentary disposition require only a brief mention here (see *WILLS* [Greek and Roman]). A general right of disposition by will did not exist throughout Greece, and is not recognized by the law of Gortyn; but there is evidence of its wide diffusion, at any rate in the Hellenistic era. Our information is naturally most complete in regard to Athens. The right of disposition outside the family, but subject to certain restrictions, was first conferred by a law of Solon. All citizens of full age and of proper capacity were competent to make a will, but no one could disinherit a son (*Dem.* xx. 102), or, if he had no son, leave his property away from his daughter, although he might direct that a particular person should succeed on condition of marrying her (*Isæus*, iii. 68). When a man had no issue, he was at liberty to adopt a son either in his lifetime or by will (*ib.* vii. 1). Subject to these limitations, legacies might be given to friends or relatives.

8. It was customary at Rome for presents to be made by friends and relatives to each other at certain of the annual festivals. The first of March was the beginning of the year according to the Roman religious calendar, and was also the *dies natalis* of the temple of Juno Lucina on the Esquiline. On that day, to which Horace refers in a well-known ode (iii. 8) as celebrated by married folk, husbands were accustomed to make presents to their wives (*Mart.* v. 84. 10). Juvenal (ix. 50) mentions green parasols and amber balls as gifts

which a woman is likely then to receive. After the year 153 B.C., when the beginning of the civil year was transferred to the 1st of January, it became customary to give New Year presents on that day. The feeling—no less universal than primitive, which underlay the custom—of the importance of an auspicious start is acknowledged in *Ov. Fast.* i. 178.

The gifts might be of trivial value—a gilded date (*Mart. vill.* 33. 11), like our Easter eggs; a dried fig; or honey in a white jar (*Ov. Fast.* i. 186). Especially, it was usual to tender small brass coins, as a symbolical gift of wealth. These gifts were called *strenae*; and the name, if not the custom, is preserved in the French *étrennes*. Suetonius (*Cal.* 42) describes Caligula, who had announced that he would accept *strenae* on New Year's Day, as standing in his porch, while a crowd of persons of every class pressed round him with their hands full of coppers. On the other hand, Tiberius often absented himself from Rome at the beginning of January in order to avoid the nuisance (*Dio Cass.* liii. 8).

Of all these occasions the best known to us is the festival of the Saturnalia, which lasted for several days from the 17th December, and was kept as a popular holiday, characterized by every kind of merry-making and licence. The giving of presents then was as common as it still is at Christmas, and there is no doubt that the sports of the Saturnalia have been perpetuated for afterages in the observances of the Christian festival. Martial's xvth book is entirely occupied with epigrams on specimens of rich or poor gifts suitable to the Saturnalia. The same poet (*vii.* 53) gives an appalling list of useless presents supposed to be sent to him at the Saturnalia, in order to remark in conclusion how much more simple it would have been to present him with the money which they cost. The *cerei* and *sigillaria* deserve special mention. The former were wax tapers (*funiculi cerei*), which may originally have had a symbolical reference to the revival of the sun's power after the winter solstice. They afterwards passed into the Christmas ritual of the Latin Church. The latter were little images made of earthenware, and sometimes of dough; Martial (*xiv.* 182) mentions the earthenware figure of a humpback (*gibber*). These also survived into Christian times; and even in England it is recorded that bakers made little images of paste at this season (*Brand, Pop. Ant.*⁴, 1870, p. 180).

The significance of the giving of presents on the Kalends of January and March is to be found in the same superstitious feeling which has already been mentioned as operative in relation to birthday-gifts. Magic influence must be excited in order to assist the passage from the old to the new year. The gifts at the Saturnalia were perhaps prompted by similar reasons, although the origin and development of that festival have not been ascertained with certainty.

J. G. Frazer suggested, from the analogy of the Carnival of modern Italy, that the Saturnalia was originally observed in February or March, and was transferred to December after the change of the Calendar (*GB*² iii. 144).

On the occasion of a birthday, which was celebrated by a feast in honour of the *Genius natalis*, friends brought with them presents of all kinds (*Mart.* x. 87). Nor was the custom restricted to the birthday of the head of the household. *Palæstra*, in the *Rudens* of Plautus (1171), mentions a golden *bullā* (i.e. a case containing an amulet which children wore round their necks) which her father had given her on her birthday.

9. A marriage was the occasion for a variety of gifts. At the betrothal (*sponsalia*), which sometimes preceded the marriage by a considerable interval, a feast to which friends and relatives were invited was given in the evening, and presents were made to the prospective bride (*Blümner, Röm. Privatalt.*, Munich, 1911, p. 348). Juvenal (*vi.* 204) is our sole authority for the custom of present-

ing the bride with a sum of money, gold coins of Trajan on a salver, on the day after the marriage. The Roman law of dower is elaborated in the writings of the jurists, and will be more fully treated elsewhere (see MARRIAGE); here it is sufficient to say that the provision of a *dos* by the wife was a customary duty, and that her father, or those who stood in his place, could be required to furnish it. The *dos* was under the control of the husband during the coverture, and he was entitled to receive the mesne profits. The capital he was liable ultimately to make good, and landed property could not be alienated by him. At the termination of the marriage by death or otherwise, the rights of other parties accrued, which were usually regulated by the terms of the dotal agreement.

Cicero received as part of the dower of his wife Terentia certain flats (*insulae*) on the Aventine and Argetum. After her divorce he retained these, in order that the rents might be applied towards the maintenance and education of their son (*Cic. Att.* xii. 32).

10. A special class of gifts were those made by men of rank to their clients or dependents. These were called *congiaria*, properly a definite measure of wine or oil, and were especially made by magistrates and candidates for office to their supporters or to the whole people. Thus in the year 212 B.C. (*Liv.* xxv. 2) a public distribution of oil was made by Scipio as curule ædile. Money was distributed in this way by provincial governors to their staffs and troops (*Mommsen, Abriss d. röm. Staatsrechts*, Leipzig, 1893, i. 300²). Julius Cæsar is the first of whom we hear as making a gift of money to the whole people (*Suet. Cæs.* 38). In Imperial times this was a customary act of munificence by the Emperor, either in his own name or through one of his family (*Tac. Ann.* ii. 42). The claim on the Emperor's generosity soon came to be regarded as a right, and any failure to make a suitable response was resented accordingly. For the lavish extravagance of Caligula, who squandered in this way the accumulated savings of his predecessor, see *Dio Cass.* lix. 2. The occasions for such distributions were various, including great public festivals, such as the accession of a new Emperor, and the celebration of private anniversaries belonging to the circle of the Imperial family. As distinguished from gifts to the people at large, extraordinary presents of money to the soldiers, which were sometimes also described as *congiaria* (*Cic. Att.* xvi. 8. 2), came to be known technically as *donativa*. This reprehensible practice, which must be distinguished from the division of spoils on the occasion of a triumph, appeared for the first time in the last century of the Republic. The earliest instance is associated with the name of Sulla, and his example was followed by Julius Cæsar, Octavian, and Brutus and Cassius. In Imperial times the donative to the legions, and especially to the prætorians, became a regular institution. A new Emperor invariably sought to ingratiate himself with the troops by a liberal gift, and the refusal of Galba to confirm the donative promised in his name was the immediate cause of his downfall.

11. In connexion with the gifts of rich men to their clients, the practice of the *sportula* deserves notice. In acknowledgment of the homage rendered by the clients who attended the house of their patron, and escorted him when he went abroad, it was customary to invite them to share the evening meal. Subsequently, under the Empire, those who attended to render their morning salutation also received a dole of food, which they carried away in a basket (hence the name *sportula*). This dole was soon commuted, as convenience dictated, for a money gift of 25 *asses*, or about 1s. 3d. (*Juv.* l. 120). An edict of Domitian enforced for a short

time the revival of the *cena recta*, or regular meal (Suet. Dom. 7; Mart. iii. 7).

12. The conditions necessary to a valid gift were minutely investigated by the Roman lawyers. A gift was a mode of acquisition by delivery arising out of a particular motive. It must be such as to increase the property of the donee and to diminish that of the donor, and must not, therefore, be confounded with a grant of freedom or of citizenship. But, when the lawyers endeavoured to distinguish the strict legal meaning of *donatio* from its looser acceptance in popular phraseology, they were often inconsistent. Thus it is denied that the surrender of an inheritance is a gift; but an alienation made to defeat creditors is elsewhere admitted to be a form of *donatio* which is not subject to the usual provisions applicable thereto.

The suspicion with which gifts were regarded and the restrictions imposed to hinder their extension are noticeable features of Roman jurisprudence. They were, no doubt, primarily attributable to the Roman spirit of *parsimonia*, which is amusingly illustrated by the account given in Polybius (xxii. 13) of the surprise excited by the younger Scipio's liberality towards the sisters of his adopted father—a liberality which consisted in paying down at once a sum of 25 talents to each, when he was entitled to spread the payments by instalments over three years. This niggardliness was the product of the hard conditions endured by the early agricultural population, and was unaffected by the prevalence of present-giving on particular festivals which has been mentioned above. These latter presents were generally trivial in value, and were considered as differing in kind (*munera, dona*) from voluntary benefactions. The growth of wealth and the increase of political ambition, which were the outcome of the Punic Wars, led to the passing of the *Lex Cincia de donis ac muneribus* in 204 B.C. on the proposal of the tribune M. Cincius Alimentus. This law prohibited advocates from receiving honoraria (Tac. Ann. xi. 5), and prescribed certain restrictions on the validity of *donationes*, if above a certain amount, and unless made in favour of a certain class of persons (*excepta personæ*). Outside those limits a gift must be perfected by the observance of certain formalities, as, e.g., that *res mancipi* must be conveyed to the donee by *mancipatio*. It should be observed that the statute did not impose penalties or annul gifts, but prevented proceedings being taken to enforce them. In later times a form of registration (*insinuatio*) was required for any gift exceeding 200 *solidi*, but Justinian (*Inst.* ii. 7. 2) raised the limit to 500. A mere agreement to give (*pactum donationis*) was not binding until the time of Constantine, who required it to be reduced to writing. Justinian, however, made it valid whether in writing or not, requiring the donor to complete the gift by *traditio*. In Imperial times, the object of stimulating munificence had become more important than that of repressing extravagance. It was provided, however, that gifts *inter vivos* should in certain circumstances be revocable, either (1) by the donor, if he could show that the donee had been guilty of specific ingratitude; (2) by the near relatives of the donor on a *querela inofficiorum donationis*; or (3) in favour of after-born children, when a childless donor had enriched his freedman.

13. A special branch of *donationes inter vivos* is that of *donationes ante nuptias*. Gifts passing between husband and wife, unless of a trivial kind like birthday-presents, were invalid. If the wife passed in *manum viri*, her property belonged to her husband; otherwise, she retained her previous rights so far as they had not been surrendered in relation to the *dos*. The latter was the contribu-

tion to the expenses of the marriage on behalf of the wife; and, as we have seen, it belonged to the husband, subject to an obligation to restore its value if the marriage came to an end. The custom which enjoined the making of a gift by the husband before marriage grew up in order to provide for wives who had no property of their own, and so could not contribute a *dos*. Hence the *donatio ante nuptias in dotem redacta*—a sum of money put into settlement by the intending husband, in order to provide for his wife, if she became the survivor. It was considered the property of the wife, but could not be alienated even with her consent. Justinian provided that these gifts might not only be increased, but might be first made, after marriage; and, accordingly, that they should be styled *donationes propter* (not *ante*) *nuptias*. Dowries were placed on exactly the same footing.

14. *Donationes mortis causa* are contrasted with *donationes inter vivos* as being gifts made upon condition that, if anything happens to the donor, the donee's title shall accrue; but, if the donee dies before the donor, the latter shall receive back the gift. The gift was always revocable at the pleasure of the donor. It differed from a legacy as being a disposition made in the lifetime of the donor, and not merely a charge on his inheritance, so that it would take effect altogether apart from the act of the *heres* on entering into possession. In other respects these gifts were placed exactly on the footing of legacies. Thus, (1) no one could make such a gift, unless he was of full testamentary capacity; (2) the property in question remained subject to the claims of the donor's creditors; (3) the heir could claim his *Falcidian* fourth from it: i.e., the provisions of the *Lex Falcidia*, forbidding a testator to give more than three-fourths of his estate in legacies to the detriment of the heir, were made applicable to the property subject to the gift. The English Law has adopted the doctrine of *donatio mortis causa* from the Roman, but has still further restricted it by insisting on the necessity of delivery, and making the immediate expectation of death an indispensable condition to the validity of the gift. The provisions of the Roman law concerning gifts made under a will are described in artt. INHERITANCE and WILLS (Greek and Roman).

Ant.*, London, 1890. For birthday customs, see Wilhelm Schmidt, *Geburtstag im Altertum*, Giessen, 1908.

A. C. PEARSON.

GIFTS (Hindu).—Gifts, especially religious gifts to Brāhmins, form an important subject with the early legislators of India. The receipt of gifts, according to the Sanskrit lawbooks, is one of the principal sources of income of a Brāhman. What has been once promised to a Brāhman may be claimed by him like an outstanding debt. Their greatest means of support consisted in the grants of land, including sometimes houses, tanks, gardens, etc., given in perpetuity to gods or the priests. There is no lack of special Sanskrit treatises on the subject of *dāna*, i.e. gifts to the Brāhmins. The gift of a man's weight in gold or silver, called *tulāpuruṣa*, was considered specially meritorious. Thus Chandeśvara, a minister of Mithilā (Tirhut), presented in A.D. 1314 an assembly of Brāhmins with his own weight in gold. Royal grants of land on copper-plates have been found in great numbers all over India, and have furnished many interesting historical dates. The

land was generally granted rent-free, and with other privileges. Many *agrahāras*, or villages occupied by Brāhmins, held either rent-free under special grants, or at a reduced rate of assessment, are still in existence. There is a rule that *devottar*, landed property, i.e. lands dedicated to an idol, to a temple, to the maintenance of Brāhmins, or to other religious purposes, cannot be subjected to payment of Government revenue, if they were so dedicated before A.D. 1765. Funeral ceremonies were a special occasion for making gifts to Brāhmins, likewise a marriage, a thread-girding, and other family festivals and religious celebrations.

GILDS.—There exist among many barbarous peoples certain systems of confraternity and association which are analogous to the guilds of mediæval Europe. The concurrence is inevitable in social evolution, but actual continuity cannot be established, as, for instance, it can be established in the case of the State or of marriage. An attempt has been made to trace the Teutonic gild to the blood brotherhood of the ancient Scandinavian peoples, in which occurred the ceremony of mingling the blood of the parties in a footprint.¹ This would connect the system continuously with the various methods of forming the brotherhoods which are a feature of the lowest wild societies (see BROTHERHOOD [Artificial]). But the thread is too slender.² Similar social impulses acting in different conditions and in different ages will produce similar forms of union. An earlier hypothesis has been discredited, viz. that the gild originated in the drinking feasts of the ancient Teutons.³ Herbert Spencer traced the origin of the gild system to customs of paternal inheritance;⁴ Maine, to customs of adoption.⁵ But it is merely analogous to these, as it is to the family itself. Alone among peoples other than the Western, the Chinese and Hindus possess a similar system. The comparison of the three groups suggests that the gild belongs to particular types of humanity at a particular stage of social evolution. It is generalizing somewhat too broadly to say that 'the conception of the gild belongs to no particular age and to no particular country.'⁶ The guilds of mediæval Europe were a growth from the crossing of Teutonic and Græco-Roman ideas and institutions. In this connexion it is to be noted that intercourse between the peoples of Europe and their knowledge of one another was, in spite of relative slowness and difficulty of communication, not less, but probably more, than it is to-day. Half a century later than the Code of Justinian, which takes cognizance of the classical *collegia opificum*, a craft gild of soap-makers was established at Naples, and in 7th cent. England the 'Laws of Ine' illustrate the conception of the frith gild. It has been suggested that the *corps des métiers* of early France were directly continuous with the Roman *collegia*.⁷ On the

other hand, the influence of the Christian Church is to be taken into account;¹ for an essential characteristic of the gild is the religious conception of brotherhood.

'When,' says Gross, 'the old kin-bond or *mægth* was beginning to weaken or dissolve and the State did not yet afford adequate protection to its citizens, individuals naturally united for mutual help.'²

The reference is to England in the 5th and 6th centuries, and we may compare the fact that the first mention of Continental gilds is in the Carolingian Capitularies of A.D. 779, and that Charlemagne regarded these 'conspirations' as dangerous to the State. It might be said that the early Christians were the first gildsmen.

Three classes of gilds are distinguished: (1) *social and benevolent*, often described incorrectly as 'religious' (religious gilds proper, such as were formed from the clergy, are a sub-species of the social); (2) *gilds merchant*; (3) *craft and trade gilds*. Roughly, this order represents the order of development. The second and third classes are not prominent until the 12th century. Even these, as perhaps may be said of every mediæval institution, had a strong religious element, and possessed the functions of social and benevolent gilds.

In the O.E. and O.N. terms several formations have apparently coalesced.³ The O.E. *gild* or *gyld* has the meaning both of 'payment' and of 'gild,' and also of 'offering' and of 'idol.' O.N. *giald* is 'payment'; Goth. *gild* is 'tribute.' The decision of the earliest meaning of the root is difficult; it involves the question whether gildsmen were originally those who contributed to a common fund or those who worshipped and feasted together.⁴ The question is perhaps irrelevant; in all likelihood the distinction was never made either in theory or in practice. The one function involves the other in all 'societies' formed in early Europe from classical times onward.

It is convenient to bear in mind the analogy already suggested of the Christian Church, while tracing the history of the gilds. They were its microcosms. In gilds of the social class, life generally, in its social aspect, was the main object. In other gilds other objects preponderated, such as the furthering of commerce, or of a craft; in short, livelihood was the main object.

A gild, in general, is 'a confraternity, brotherhood, or association formed for the mutual aid and protection of its members, or for the prosecution of some common purpose.'⁵ It is for Europe essentially a mediæval institution; other applications of the term are secondary or metaphorical; in several cases, as in Scottish burghs, the modern use is directly continuous with the mediæval. Such a confraternity in its social aspect performed functions similar to those of modern burial clubs, benefit, insurance, and friendly societies, the most important of the last-named being direct descendants of the mediæval type. The earliest included the payment of the *wergild*; all included the saying of Masses, and the holding both of religious services and of an annual feast. The majority had a saint as patron. In the commercial and craft gilds, the religious and social functions of the benevolent gild were retained, though the worldly ideal was predominant. This in the *gild merchant* was the best use of the monopoly of the town's commerce; in the craft gild it was the furtherance of the art or trade in question, the maintenance of good work, the fixing of a reasonable price, and the organization of employment on the system of apprenticeship. The gild was essentially a local institution; its members were neighbours.

The gild had a master and various officials. Each member took an oath, and paid an entrance

fee and annual subscription. Regular business meetings and an annual gild day were held.¹ The livery of the gild was worn at festivals and at all meetings of a ceremonial nature.² Small parish gilds met in a room or in members' houses. Large and wealthy gilds possessed a gild hall. Legacies and donations were received; loans were made to members, and gifts of charity to poor gildsmen out of the gild funds. The gild possessed a chapel or chantry, where its Masses were said, and where members met on the day of the patron saint. Schools and churches were financed or founded by important gilds. This last function has become the chief business of some of the great Livery Companies. Men and women alike were eligible for membership. Technically there was no distinction of classes. Henry IV. and Henry VI. belonged to the Coventry Gild of the Trinity. By the 14th cent. their numbers were enormous. Every town had many social, religious, and trade gilds.

(1) The *frith gild*, or *peace gild*, so called, refers to an occasional feature of town life in Northern Europe from the 6th century. The 7th cent. 'Laws of Ine,' and the 10th cent. 'Dooms of London,' are constitutions of frith gilds in substance, though not in form. The intention is to supplement defective law and constitution no less than to further national defence by local co-operation.³ A 'gild' is said to have been formed in Canute's time at Roeskild for the purpose of defence against the Vikings. The frith gild as such never crystallized into a formal institution.

'Brentano's commonly accepted story of a great network of frith gilds covering England, battling with lordly oppressors, founding town constitutions, etc., is merely a phantasm of the imagination.'⁴

There was no general development even of the *corps des métiers* in France or of the *arti* in Italy before the 12th and 13th centuries; while gilds for trade and commerce are unknown in England until after the Norman Conquest. The question has been extensively debated as to the character and number of the Anglo-Saxon gilds. It cannot be maintained that gilds were characteristic of the Anglo-Saxon period. The idea of them was implicit, and occasionally expressed, as in the gild of thanes at Cambridge, which gave its members assistance in the blood feud and provided the *vergild*.⁵ The oldest gild ordinances of Europe are those of Cambridge, Abbotsbury, and Exeter, belonging to the first half of the 11th century. It is often assumed that the Normans brought over to England the idea of craft gilds which had been so largely exploited in the Frank empire for three centuries. The Anglo-Saxon gilds themselves were of the social type, apart from a few traces of co-operation in monastic orders.⁶ But the fact that religious gilds proper flourished under the Anglo-Norman kings was due to the Normans themselves.

Among the most famous social-religious English gilds was that of Corpus Christi.⁷ Organizations of a gild type have been traced to a period prior to the 7th cent. among English monasteries. The modern Catholic confraternities are lineal descendants of religious gilds. Gilds of Kalendars, so called because the gild met on the first of each month, were formed among the clergy. Gilds of the higher clergy were major, those of the lower were minor.⁸ But the social gilds were strongly

religious; their ideal is an interesting continuation of early Christian principles. The object of association was

'not only devotions and orisons, but also every exercise of Christian charity, and therefore above all things mutual assistance of the gild brothers in every exigency, especially in old age, in sickness, in cases of impoverishment, if not brought on by their own folly, and of wrongful imprisonment, in losses by fire, water, or shipwreck, and by loans, provision of work, and, lastly, the burial of the dead.' It included, further, the assistance of the poor and sick, and the visitation and comfort of prisoners not belonging to the gild.⁹

Even the craft gilds had a religious tinge,¹⁰ or, rather, the framework of the organization was religious. The Tailors' and Shoemakers' Gilds had chapels in St. Chad's Church, Shrewsbury.¹¹ Wealthy gilds spent considerable sums on the embellishment and upkeep of their chantries and chapels. The annual pageant was in a sense a thank-offering for the year's blessings. Mass, or Morn-speech (*Mornspeche*), preceded the ordinary business meetings, as well as the feasts, as it preceded the day's work daily for all Christians. A mystery play often was a feature of the annual pageant.¹² It was probably as being a network of Catholic influence throughout the people that the gilds were abolished in Protestant countries on the ground that they were 'superstitious foundations.' In the 14th cent. Wyclif had condemned the abuses of the gilds. With their disendowment their important work of poor relief was taken from them.¹³ The craft gilds were technically only disendowed of their religion¹⁴ in the great suppression of the social and religious gilds in 1547. Their social services, however, were limited to their industrial side. The property of disendowed religious and social gilds was taken over by the Crown; gild halls became poorhouses. In Denmark and North Germany they were similarly affected by the Protestant movement. Modern social and religious 'gilds' are thus technically a revival, rather than a survival, of the mediæval.

(2) The *Gild Merchant*, or Gild of Merchants, was the dominant form of the organization of English commerce from the 12th to the 15th century. It is also closely connected with the growth of municipal government. In Anglo-Saxon times it had not been instituted. The Laws of the City of London, supplementing deficiencies in the law, exhibit 'a complete authority for the supervision of trade corresponding to the later Merchant Gild in nearly every particular.'¹⁵ But London, like certain other great cities, such as Florence, never developed a Gild Merchant. The 12th cent. was marked by the growth of towns, due to the impulse given to trade by the Norman Conquest. At first the chief difference between town and country was that the former possessed a Gild Merchant.¹⁶ Trade being the *raison d'être* of towns, and the chief burgesses being the chief merchants, they naturally combined to frame commercial regulations. Traces of such action are found as early as A.D. 1000; a Chapman Gild is mentioned in 1109.¹⁷ On the Continent the method was already established. It is presumed that the Normans introduced it into England.¹⁸

The Gild Merchant was an incorporated society of the merchants of a town or city, having exclusive rights of trading therein. They regulated the trade monopoly of the town, confirmed to them by royal charter of *gilda mercatoria*. This included the right of wholesale pre-emption of all trade coming to the town, and that of retailing, restricted to individual members. Free trade was allowed periodically at fairs. The great merchants

¹ The annual 'Show' of London's Lord Mayor is derived from such.

² Hence the name of the great London Livery Companies, the survivors of trade gilds.

³ Dover possessed a gild hall in A.S. times (Hibbert, 12).

were usually large landowners. The Gild Merchant was exempt from the town tolls, their chief obligation being that of 'scot and lot,' participation in the town assessments. On occasion they supplied the town with money. The majority of householders became members, but not all gildsmen were burgesses; the status of burgess depended on residence and burghage tenement. Many outsiders were in the Gild Merchant. The system worked well, and it is easy to see the possibility, often realized, that the Gild should develop into the Town Corporation.¹ But the Gild Merchant and Borough were not identical; the former may be regarded technically as being a department of the borough constitution, though it was never the basis or nucleus of it.²

During the 14th cent. mention of the Gild Merchant decreases. Trade and handicraft were becoming more complex, and it may be said that each creation of a craft gild or trade gild weakened the Gild Merchant. In its best days the latter included many artisans; by the 14th cent. the craft gilds began to supersede it. Each separate trade or craft was able to secure a monopoly from the Crown when it suited the Exchequer to grant it. Thus the new bodies, in one sense, specialized the functions of the once all-embracing Gild, and, in another, usurped them. But there was no actual struggle between the new gilds and the older body. Nor did the Gild Merchant give birth to the craft gilds; no real organic connexion can be established. The gild system was the system of the day; the process of devolution was as if small factories for special industries should be set up by private enterprise in towns which hitherto had possessed one general factory and universal emporium. Economically the process marks an advance in the scientific organization of the division of labour.

The Gild Merchant survived longest in the small boroughs. In some cases its religious framework alone remained; in others its only trace is an annual feast-day or show. In many cases the term survived as a designation of the totality of the craft and trade gilds. In some, it served to denote the Corporation, in which it was frequently merged. Or again in special cases, where it had become virtually the civic government, it remained as such, or as a 'select body' thereof. Its terms and title recurred in a Royal Grant to the Colony of Virginia in 1705.³ Cases where it simply disappeared are easy of explanation. But cases where a 'company of merchants' is found after its disappearance present the problem of continuity.⁴ However, the rise of the Merchant Staplers and the Merchant Adventurers really marks a new epoch in the history of English Commerce.⁵

One or two special cases are to be noted. In Coventry the Bakers' Gild had been established for more than a century before any Gild Merchant was created.⁶ It was authorized by the *Communa* in 1208, and still exists to-day.⁷ At Wisbech a religious gild was the precursor of the civic Corporation which obtained its charter from Edward VI.⁸ Such cases, as well as the following, simply show the universality of the gild principle. If we look at the principle, we may describe the mediæval civic corporations as being themselves, so far, gilds. But this is not to say that this religious or that trade or merchant gild became the municipal authority.

Scotland, as in other matters, so in the develop-

ment of municipal constitutions, was more strongly influenced than England by the Continent, and thus reproduced some special features of the history of Continental gilds. England was never subjected to the struggle between the Gild Merchant and the craft gilds which was so regular a feature of Continental municipal life in the 13th and 14th centuries. There was some friction in London, which was soon removed. In Scotland the large admixture of a Flemish element in the population led to a division of the inhabitants into *gildry* and *burgesses*, just as was the case in Bruges and Ghent, for example. The *gildry*, as elsewhere, were the mercantile aristocracy. Craft gilds did not become important till the 15th century. Each gild, as it was created, was regulated by a deacon appointed by the town. The craft gilds struggled during the 15th and 16th centuries for the right of electing their own deacons and for a share in the government of the burgh. They succeeded at the end of the 16th century. The privileges survived till 1846.¹ The term *gildry* is still applied to the municipal corporations of the Royal Burghs. By the 15th cent. the Gildry practically formed the Corporation. In Edinburgh, Glasgow, Perth, and Aberdeen, the 'Dean of Gild' is still elected by the Gildry; elsewhere he is chosen by the Town Council from its members. This Dean of Gild is technically the head of the Gild Merchant.²

(3) By far the most clearly defined, and historically the most influential, were the *craft gilds* and *trade gilds*. The former term frequently implies the connotation of the latter. Members of the same craft, industry, or trade, working in the same town, combined in association to protect and promote their common interests, but on principles very different from those followed by any modern industrial organization. Their lineal descendants in London are the Livery Companies, whose title retains the fact of the uniform worn by these gilds, and also one of two synonyms for the gild—'company' and 'mystery.' The latter is a reduction of the Lat. *ministerium*, and is frequent in the dual term 'craft and mystery.' *Gild* was the North German term, *Zunft* the South German, *métier* the French, and *arte* the Italian. They have been traced—not without success, as noted above—to the Roman *collegia opificum*. It is unlikely that they had any evolutionary connexion with the manorial groups of workmen. In the Frankish empire they may have been first formed as brotherhoods of artisan serfs. In England they are first mentioned in the reign of Henry I., and were probably due to Norman and Flemish influence combined. The Weavers of London, Oxford, Winchester, Lincoln, and Huntingdon, the Cordwainers of Oxford, and the Fullers of Winchester were among the first to be formed.³ In the 14th cent. they were extremely numerous, their number and importance growing with the growth of the respective trades. In Normandy, Flanders, and Germany they were prominent in the 12th century. They were

'first introduced into this country as royally authorized organizations among alien artisans settled in English towns. They appear to have been in occasional conflict with the town authorities, but by the beginning of the 14th century the causes of disagreement seem to have been set at rest, and the Mayor of London had succeeded in establishing authority over the Weavers' gild in 1300. From this time onwards gilds were organized among the inhabitants who worked at one craft, with the consent and approval of the municipal government, and were utilized for certain purposes of police and regulation by the town officials.'⁴

The Weavers' gilds were perhaps the earliest; the Lorimers' gild is heard of in 1261 as insisting on the Saturday and other half-holidays for its

brethren, providing against the enticing away of apprentices, and fixing terms of payment.¹ At their complete development, already attained in Paris by the 13th cent., the guilds comprised the three ranks of Masters having apprentices, Journeymen or Yeomen, and Apprentices.² An eldest son was free of the craft by patrimony. The central figure was the Master Craftsman, who owned his implements and sold his wares. The executive consisted of these and two Wardens, who had the duty of supervising the competency of apprentices and the right of search. There was a board of Assistants: two stewards, a clerk, and later a treasurer; with a beadle who summoned meetings and kept the door.³

The religious aspect of the guild has already been noticed. The town authority, the *Communa*, was careful to maintain control over the guilds (the history of this relation proceeded differently in Scotland and on the Continent). 'Compositions,' annual agreements, were made between them and the town. The latter, as a rule, did not encourage the guilds of building trades.⁴

The craft guild has no historical connexion whatever with the modern Trade Union. Nor was it at all similar in principles and aims. On the other hand, it is equally unconnected with the modern Employers' Association or Capitalist Syndicate. The guild represented capitalist, manual worker, and consumer alike.⁵ It has been described as an 'aristocracy of labour,'⁶ so far as the labour element was concerned. Considering all its elements, we can reach no modern analogy except the distant ones of Co-operative Societies and the trading Municipality, the latter resembling rather the older Guild Merchant. Large numbers of half-taught helpers and unskilled workers were connected with, but had no share in, or membership of, the guilds.⁷ At Newcastle and elsewhere the aggregate of craft guilds was spoken of as the Guild Merchant.⁸ In many towns 'the old Guild Merchant lived on, not so much as a distinct body, but in the life of the separate crafts into which it had been specialized.'⁹ In short, they 'can hardly be regarded as democratic bodies'; they were 'the élite of each trade,' closely attached to the interest of a particular town.

The economic principles which they expressed are significant of the age of their best work, most of which is the glory of their respective countries.

'The purpose of these guilds was the regulation of work in such fashion that the public might be well served and that the trade might therefore flourish.'

But, whereas nowadays the same purpose is carried out on the following principle that

'each manufacturer works to produce at as low a price as possible, and thus to force a sale for his goods by their cheapness [another avenue of profit being the exorbitant price of articles of the best material and workmanship, so-called luxuries], in old times,' continues our soundest student of economic evolution, 'the effort was to secure salubrious conditions for production—skilled workers and honest materials—and to ensure a price which should be "reasonable" to receive and therefore reasonable to pay for such wares thus made.'¹⁰

It was on these principles that all guild ordinances were framed. Hence the Warden's right of search, and the proviso in articles that members of the craft should be resident.¹¹ A guild was a police system, an association of *ateliers*, and a Christian brotherhood. Its members included consumers; its status and functions were closely connected with municipal government.

England was not, as Brentano supposed, the

birth-place of guilds,¹ but guilds passed through their phases of development on more typical lines in England than on the Continent, with which for this purpose Scotland is to be classed. First heard of in Italy, they became important in pre-Carolingian France. Not till the 11th cent. did they become important in Norway and the Netherlands, at which period their revival in France, after their suppression by Charlemagne, is to be placed. Denmark and Sweden developed them in the 12th and 14th centuries respectively.² The Guild Merchant on the Continent is the *Kopluide Gilde*, *Kopmanns-Gilde* of Germany, the *Comansgilde*, *Comannen Gilde* of the Netherlands and Northern France (*Hanse* is a synonym in both areas), the *Mercanzia*, *Università de' Mercanti* of Italy.³ Often identified with 'patrician governments,' these Guilds Merchant kept up a conflict with the craft guilds during the 13th and 14th centuries, a conflict extending from Italy to Scotland. The craft guilds in the end succeeded in obtaining a share of authority. Such a struggle, but against the nobles alone, was carried on in Florence by the *arti maggiori*.⁴

The Reformation, by disendowing the religious and social guilds and crippling the organization of the craft guilds, prepared the way for Poor Law reform and the changes in industrial evolution which were then shaping. An intermediate process remains to be noticed. In England during the 14th cent. the class of goldsmen known as *journeymen* or *yeomen* set up confraternities of their own. The movement was analogous to a struggle between workmen and employers. It was followed by a similar movement in Germany in the following century. The result was the formation of subsidiary craft guilds. 'Journeyman's companies' and 'Merchants' Companies' (the latter not to be confounded with the old Guilds Merchant) became important in 15th cent. England. Amalgamation followed in the 16th and 17th centuries, often resulting in a more or less definite identification of the guilds with borough organizations. The privileges of the craft guilds were not formally abolished till 1835, in Scotland 1846, some still surviving. But the new economic forces broke the old principles in the 16th and 17th centuries.⁵ The guilds of France were abolished in 1789; guilds of European origin survived in Constantinople till 1877. Their break-up, generally speaking, was more rapid and clearly marked in Northern Europe, where the new commercial and industrial factors had most influence.

GILDS (Greek and Roman).—1. Origin, etc.—The word 'gild,' which is here employed in default of a better, is in some respects unsuitable to the alliances which have to be considered, because it carries with it ideas which are foreign to the ancient world, as will presently appear. The Greek and Roman gilds had a long history, and their character varied greatly under the stress of the manifold influences, local and general, which were continually remoulding the social structure. Broadly speaking, the association of private origin is a feature rather of the later Greek and later Roman civilization than of the earlier. Few of these unions or brotherhoods or corporations (if a somewhat loose use of this designation be permissible) existed on the Greek side of the Mediterranean earlier than the 4th cent. B.C., and on the Roman side few were older than the Imperial age. It is natural to connect the vast outgrowth of private associations in both cases with the ruin of freedom. When the liberties of the Greek city-State on the one hand, and of the Roman burghesses on the other, were impaired, men naturally sought to compensate themselves by extending and strengthening social bonds of various kinds. But it is important to observe that in the Greek and græcized lands after Alexander, and in the whole Roman world after the inauguration of the Empire, peace became more stable, international trade increased with improved communication, and forms of cult spread from their centres of origin over ever-widening areas. Religion, trade, social enjoyment—these were the main sources from which the ancient gilds sprang, and these naturally became more productive as political and municipal liberty declined. In the romanized provinces a gild is usually named *collegium* or *corpus*. On the side of the Roman dominions where Greek influence was paramount, the titles were varied, and nothing like a common designation was in use. The evidence for the history of the Greek as well as the Roman corporations, in the period before they were wholly subjected to public control, is to be found almost entirely in a vast multitude of inscriptions, chiefly brought to light by very recent research. The details thus revealed are of intense human interest, as opening up secrets of social evolution of which literature betrays almost nothing. From the 4th cent. A.D. onwards the gilds were enslaved to the State, and participated in the universal misery. The severe regulations then enacted form a great element in the history of the age, and the Theodosian code supplies not a little information.

The ancient gilds were intimately bound up with the ancient municipality. In one of its most momentous aspects the old Greek and Roman world consisted of a vast complex of municipalities, each retaining some semblance of State sovereignty. The gild was a group within a town, and rarely had any links connecting it with similar groups outside. A notable exception is that of the 'Dionysiac artists' (*τεχνῖται*), a union of men who served the theatre and exhibitions cognate with it—actors, dancers, musicians, and the like. Exceptionally large gilds of these persons were early formed, and they gradually coalesced, until, in the Imperial age, they acquired an organization which covered the whole Empire. Their traces are found in almost all lands subject to Rome. The position of the gilds within the cities of the romanized West was more definite than that which they occupied in the communities of the hellenized East, and in all public ceremonials they had a precedence allotted to them. After the municipal senates came the peculiar religious bodies called *Augustales*, then the gilds, then the unorganized common people (*plebs*).

2. Classification.—The gilds may be considered with reference to their three main purposes. Some had religion as their chief bond, others trade or labour, others mere social amenity. But it is impossible to draw sharp lines of severance.

(1) *Gilds for religious purposes.*—On Greek soil the earliest voluntary unions came into existence for purposes of worship. There was often a certain divergence between the cults sanctioned by the rituals of the city-States and those beloved by the masses. Among cultured people, too, the advance of civilization brought with it a dissatisfaction with official religion, which is clearly reflected in the dramatic and philosophic literature of Hellas. Men, therefore, banded themselves together to satisfy their yearning after gods not publicly recognized. The attraction which a divinity introduced by foreign residents might have for the Athenians even in the great classical age, is illustrated by the mention of the festivity of the Thracian goddess Bendis in the introduction to Plato's *Republic*. But it must be noted that hardly any gilds, either Greek or Roman, were entirely dissociated from religion. As religion was primarily a municipal concern, and citizenship was intrinsically bound up with it, no organized body of persons within a town could live without a cult. But the degrees of importance which the religious element possessed in the organizations were very various. In some it was the principal, in a few the sole, interest. In most it was only one of the avenues to enjoyment which a brotherhood opened up to its members. Most of these institutions existed principally for the enhancement of the dignity of life and for the increase of its satisfactions. Religious ceremonies were mainly joyous, and the common sacrifice or offering was a natural occasion for the common feast. The whole story of the corporations which were predominantly religious is rich in attractions; but only a few of its points can find a place in this article. Such gilds are far more characteristic of Roman or romanized cities than of those which were or became Hellenic. An early propaganda, obscurely recorded, gave birth to many brotherhoods in regions where Greeks dwelt, which spread far and wide the ideas known as Orphic. Another remarkable movement began in the 2nd cent. B.C., in favour of cryptic and ecstatic forms of worship. It gave rise to many unions of men who described themselves as *mystæ*. It embodied a revulsion from unbelief similar to that which created the great drift of the Western world towards forms of pagan faith in the 2nd and succeeding Christian centuries.

At Rome the more antique brotherhoods which served the gods (*sodalitates* or *sodalicia*), apart from the great State colleges, were organized and supervised by the State. Such were the associations for the worship of the Great Mother, introduced from Asia in 205 B.C. In Italy, private religious groups were first called into life by Greek influence. Many societies for the veneration of Bacchus sprang up as a consequence of the passionate superstition which the disasters of the Hannibalic War engendered. The secrecy of these brotherhoods led the Roman government to regard them as criminal, and to believe the wildest allegations concerning them. In 186 B.C. and the following years the so-called 'conspiracy' was suppressed by judicial murder on an enormous scale. For a very long time the societies for the service of Oriental divinities—Isis, Osiris, Serapis, Anubis, Mithra, and others—struggled hard for existence in the West. It was not until the age of Sulla that any *collegium* of this type could live unmolested. The Jews were specially favoured in this respect both in and outside of Italy, al-

though the ordinary Roman deemed their creed an odious superstition. The persecution of Christian societies is partly to be explained by the fact that they appeared to be of a secret, and therefore a dangerous, character.

With religious gilds may conveniently be classed those which were maintained to provide for the decent burial of deceased members, whose spirits were treated with a veneration not unlike that accorded to divine beings. These were generally formed by the very poor, and sometimes even by freedmen or slaves, especially by the great groups of both classes which were in the Imperial service. The inscriptions (to be found in the work of Waltzing mentioned below) provide a vast amount of interesting and minute information about these *collegia funeraticia*, as scholars are accustomed to call them, though in the actual titles no ill-omened word is used. Many describe their members as worshippers of a particular divinity. In some cases these colleges are called officially 'health-giving' (*salutaria*). The regulations testify to the extraordinary depth of the desire among these obscure people, not only to secure a distinguished burial, but to make certain of remembrance after death. These associations were almost universal in the Western half of the Roman Empire, while on the Eastern side, in spite of the Greek scrupulousness about funerary rites, few were founded and most of those owed their existence to Roman influence. Strange as it seems to moderns, the burial clubs, like almost all others, subserved to some extent the purpose of common enjoyment. The place of interment provided by the contributions of the members often had attached to it rooms for reunions, in which feasts were celebrated, and meetings held to keep alive the memory of the dead. There was a bright and even joyous element in the ceremonials which is alien to the life of Christian times. It may be noted that many associations, not primarily burial clubs, paid some attention to the obsequies of members.

(2) *Trade gilds*.—When we turn to gilds formed by men of the same trade or occupation (and these constitute the largest section), we can observe a great distinction between the Eastern and the Western divisions of the Roman realms. In the West, unions of this class are to be found in abundance in almost every city. On the walls of buildings in Pompeii about 1500 scrawls have been discovered calling for the election of particular persons to local offices. Many of these appeals were issued in the names of gilds of artisans or traders. We find gold-workers, wood-merchants, mule-drivers, fruiterers, cooks, bread-bakers, confectioners, poulterers, fishermen, dyers, fullers, porters, tailors, barbers, and perfumers. In Roman Africa, by way of exception, the trade organizations hardly existed. Their social functions were carried out by associations based upon the political divisions of the citizens (into *curiae*). In the East, where the Greek spirit ruled, societies constituted by workmen or traders were sporadic before the days of Roman ascendancy; and, though they grew in number afterwards, they were never widely spread. In only a few cities was there a general organization by trades and occupations, in the Western fashion. In the city of Philadelphia, for instance, the corporations of workers were the constituent elements of the local body politic, as was the case with many mediæval communities (see Waltzing, iii. 51). At Thyatira, again, the manual labourers and traders seem to have been as completely organized as they were at Pompeii and in the generality of Western municipalities (see Waltzing, iii. 55). At Rome there was a legend which ascribed to King Numa the creation of the trade gilds. This was a mere

deduction from the fact that all gilds had a connexion with religion, of which Numa was supposed to have been at Rome the general founder. Romans and Italians possessed in a remarkable degree the faculty for self-government, and it was to this faculty that the gilds owed their origin. The associations of Roman citizens in foreign communities, to which the name of *conventus civium Romanorum* was given, testify to the Roman power of self-organization. It is a curious fact that the earliest inscription (*CIL* xi. 3078) relating to a trade gild is one which emanated from a college of cooks, natives of Falerii near Rome, who were domiciled about 200 B.C. in Sardinia. They employed their own peculiar dialect, the 'Faliscan.' It may conveniently be noted here that foreigners everywhere organized themselves after the fashion of the Roman *conventus*, for the protection of their common interests. Delos, for example, and Ostia possessed numerous gilds of foreign residents (see inscriptions in the works of Waltzing and Poland, mentioned below). In the later centuries of the Roman Empire associations of Syrian traders existed in many parts of the Western provinces (see Mommsen, *Provinces of the Roman Empire*, London, 1909, iii. 138). The spread of Oriental cults was, of course, much furthered by these foreign societies.

(3) A number of gilds existed mainly, and some solely, for the promotion of social recreation or enjoyment—a purpose from which, as has been said, no gild was wholly free. The organizations with which we now have to deal flourished almost exclusively in the sphere where the Hellenic spirit was potent. Athletic, gymnastic, and artistic brotherhoods were rare and exotic in the West, whereas on the Eastern side of the Empire they were a natural growth, and a city could hardly make the proud claim to be Hellenic if it did not possess them. Apart from these, many social unions, both in the East and in the West, must be regarded as ephemeral. Such are the numerous companies of 'life-comrades' (*συμφύτοι* in Greek, *convictores* in Latin), and also associations with eccentric titles, such as the 'sleepers' (*dormientes*) and the 'late-drinkers' (*seribibi*). The 'little thieves' (*furunculi*) and the 'assassins' (*sicarii*) remind us of the young men at Athens who called themselves by the name of a savage Thracian tribe, the Triballi, and of the 'Molochs' in London during the reign of Queen Anne. With the athletic gilds may be classed the organizations of boys for military training—boys who at that stage were called *ἐφηβοί*. These were not so much gilds as educational institutions originating with the State. From Athens they passed to every land where Greek culture was adopted. In many places, as their age advanced, the *ἐφηβοί* entered clubs of younger men (*ῥέοι*), and later on became members of elder men's gilds, which bore the designation *ῥεπορία* (to be distinguished from the municipal councils or senates which had the same name). The numerous 'colleges of younger men' found in the West (*collegia iuvenum*) may have originated in an imitation of Greek custom.

3. *Constitution and activity*.—We shall now give a brief sketch of the constitution of the gilds and of the manner in which their purposes were achieved, during their flourishing period. In their organization, the voluntary associations imitated that of the municipalities. The codes of rules which inscriptions have preserved resemble greatly the codes by which the cities were governed. Greek lines were followed in the Eastern half of the Roman Empire, Roman lines in the Western half. The gild always had officers elected by the members, just as in the towns local magistrates were chosen. The members paid regular contribu-

tions, usually month by month, into a common chest, and the general body sanctioned the disposal of the funds. Fines for neglect or malfeasance on the part of officers and members alike were laid down with much elaboration, as was the case in the municipal statutes. The office-bearers were, as a rule, the richer members. These were expected to contribute handsomely towards objects of common interest. Money might be given; or buildings, or statues, or other benefits for the enrichment or adornment of the society might be bestowed. In course of time such contributions were more and more regularized until, as in the towns, there was a tariff of payments to be made on accession to offices, whether of a sacred or of a secular character. Of course, there was no universal tariff; each city and each gild enacted its own. In this way there was a great continuous outflow of wealth from private coffers for the advantage of the gild, and especially of its less wealthy members. This is a great feature of the Roman Imperial age. Ambition led many holders of office to exceed the stipulated gifts, and generosity was repaid by many kinds of honours—in particular, eulogistic inscriptions, special titles, and statues. The towns were full of effigies of benefactors, and the mania for erecting them was a common subject of ridicule. Cassiodorus, in the 6th cent. A.D., spoke of the statues in Rome as surpassing in number the population. The resources of the gilds were further increased by a device commonly practised also by the municipalities. Rich persons were adopted as 'patrons,' and were honoured in proportion to their benefactions. The wealth of the gilds naturally increased when Marcus Aurelius made them legally capable of taking benefits under wills. We have many records of extensive endowments and rich properties acquired in this manner.

The expenditure out of the common chest was largely devoted to the gratification, in various ways, of the members by banquets, exhibitions of games, and other spectacles, and social enjoyments. In the case of the funerary gilds the main expense was incurred in granting sums to the representatives of the deceased, wherewith to carry out the obsequies. Benefactions to the associations, like those made to the municipalities, had the effect of enabling the poor to profit in a certain degree by the generosity of those better endowed. But the ancient gilds, unlike their mediæval counterparts, paid no heed to what we should regard as charity. In all the multitude of inscriptions which they have left behind them there is hardly one which records any benefaction in aid of the sick and needy (cf., further, 'Greek' and 'Roman' sections of art. CHARITY, ALMSGIVING). In this aspect the Christian societies from the first contrasted strikingly with those which were pagan, and they won thereby the admiration of their bitter enemy, the Emperor Julian. Indeed, the poorer the gild, the less likely was it to be the recipient of important gifts. The burial clubs, composed of the poorest of the poor, had hardly any resources beyond the contributions of the members. It is very notable that, when distributions of money (*sportulae*) were made on festal occasions, the members of a gild who were higher in social station received a larger sum than those of humbler rank, just as in Christian societies the priest's share was larger than the layman's.

As the gilds were not charitable institutions, so they were not societies for mutual benefits, like the modern provident or mutual insurance associations. Exceptions are rare. Some Greek unions which bore the name of *ἐπαγοί* advanced money for certain purposes, to be repaid by the recipients (see Poland's work, mentioned below). These societies

were characteristic of Attica and the Greek islands. Here and there similar practices may be traced in connexion with gilds bearing other titles, but not often. In the Roman army of the late 2nd and 3rd centuries the minor officers were allowed to form societies for mutual aid. Records of such unions have been found especially in Africa (Waltzing, i. 308). Expenses contingent on advancement or change of station were met out of the common funds. The institution provided, in effect, an insurance against possible sudden requirements.

Modern writers have often been tempted to compare closely the ancient gilds of artisans with the workmen's trade unions of our day, and with the gilds of the Middle Ages. There is hardly a single true point of comparison. By combining, the ancient workers might procure from local or central authorities advantages and immunities which scattered individuals could not have secured. But, apart from this consideration, it is not too much to say that the trade bond, which was vital in the mediæval gild, as it is in the modern trade union, was merely incidental in the ancient association. No league of artisans in ancient times made any attempt to force a rise in wages, to prescribe the conditions of work, or to regulate apprenticeship. Still less were the workmen's *collegia* companies for the carrying out of contracts, as has sometimes been imagined. The all too common modern phenomenon of the 'strike' was almost entirely absent from the society of the ancient world. Of course, the existence of slavery partly accounts for the fact. But among the free workmen, who were far more numerous in the cities than modern scholars often suppose, the strike was so rare an event that the known examples of it may almost be counted on the fingers of one hand. We have an instance (inscription of Magnesia in *BCH*, 1883, p. 504) of a Roman governor compelling the bakers of a city to return to work; but in the Imperial age the bakers were more and more under local or Imperial direction, in order that the supply of food might not be endangered. A decree of the island of Paros (*CIG* 2374e) tells how the people erected a statue to an official of the community who compelled the artisans to keep to their work and also forced their employers to pay wages without the necessity of legal procedure. What was the exact nature of the quarrel does not appear.

It may be observed that the inscriptions show not a few examples of freedmen, and even slaves, being admitted to membership of unions mainly composed of free workmen, and even to offices (Waltzing, i. 347). The fact appears less strange when we remember that, in the times of the Empire, capitalists often entrusted large operations to men who were technically slaves, but actually subordinate partners. Another noticeable circumstance is that women appear among the members of the funerary gilds; even in the earlier Imperial centuries they were not disdained as 'patronesses' (*patronæ*) of other gilds, and were sometimes given the title 'mother' of the gild (see Waltzing, iv. 369, 373).

4. Relation to the Government.—The process by which the gilds were, in the end, subjected to the most stringent control by Government fills a chapter in the history of the ancient world which is of the utmost moment. The earliest interferences with the freedom of private association were due to religious causes, as in the case of the so-called 'Bacchic conspiracy,' mentioned above, or to the misuse of liberty for political purposes. Numerous secret societies sprang up from time to time which were really dangerous to the common weal. Such were the 'comrade-bands' (*τραπέλαι*) at Athens during the Peloponnesian War, and the groups of ruffians organized by Clodius and others in the dying days of the Roman Republic. In 64 B.C. the Senate of Rome dissolved a number of these pernicious associations. Six years later Clodius passed a law which established complete freedom. This state of things the Empire naturally could not tolerate, and to the Senate was given jurisdiction over all gilds and private societies within the Roman dominions. Many of them record in their extant memorials that they possess the Senate's licence (Waltzing, i. 125). But in this field, as in all others, the Emperors could intervene, and did intervene with ever increasing frequency. Some of the letters which

passed between Pliny and Trajan (see *Epp.* 33, 34, 92, 93) have reference to this subject. But a vast number of associations subsisted without public sanction. So long as they were innocuous, the Government disregarded them; when they became a nuisance, it suppressed them. A club which was secret was *ipso facto* suspect.

A great change was brought about when public services were demanded of the different corporations. At first these services were elicited by rewards and immunities, particularly in the case of the gilds connected with the provisioning of the capital. Special exemptions from taxation were given by Claudius to those engaged in the bringing of corn from over the sea. Gradually this duty became compulsory, and what at first affected Rome alone afterwards befell the municipalities of the Empire in general. The terrible scheme of Imperial taxation, which, in the 4th and succeeding centuries, crushed out municipal freedom, was also fatal to the freedom of the gilds. It became extremely difficult for a man whose father was a member of a gild to escape from it; and a system of caste, of a kind, was created. The oppression which lay on the local senates and on the gilds alike, in carrying out their duty of producing revenue or supplying service to the Government or municipality, led the victims to attempt every method of escape. When a man fled, there was a substantial reward for his capture, and if this failed his property was forfeited. Thus the dwellers in towns were to a great extent in a state of serfdom, like that of the tillers of the soil, due to the same causes. The immunities granted at first to the Christian clergy induced many members of gilds to seek ordination, and the Emperors were compelled to cut short the privileges of clerics who merely wished to escape obligations. Thus in A.D. 365, Valentinian I. forbade clerical ordination in the case of the corporations of bakers. Other ordinances followed, and in 453 the law of 365 was extended to the members of all colleges. Means of production fell more and more into the hands of the central authority. A sign of misery is that in not a few cases the workers sided with the barbarian invaders against the Roman power (see an example belonging to 376 B.C. in Ammianus Marcellinus, *xxi.* 616). Yet, with all disadvantages, the gilds died out slowly. In Italy a number of them were vigorous in the days of Theodoric, who saw their value and tried to protect them. At Constantinople many gild-organizations survived down to the 10th century. It has long been a disputed question whether mediaeval municipalities and gilds can be affiliated to their ancient counterparts. The problem is not likely to be brought to an acceptable solution. Cf. preceding article.

The relation of the early Christian societies to the gilds is an interesting but still obscure subject. There were undoubtedly many Christian gilds which presented the appearance of funerary organizations, and so escaped Government control. Behind this screen these gilds were, of course, used for purely Christian purposes. Titles resembling those of the pagan corporations were avoided, and such names as 'brothers' or 'brotherhood' (*fratres*, *ἀδελφοί*, *fraternitas*, *ἀδελφότης*) were adopted. The Emperor Valerian, by his edict of 257, attacked the Christians through these associations, by withdrawing from them the protection of the law and rendering them illicit, and by sequestering the burial-places. The fact that Christians were very familiar with the pagan private unions, and adopted their forms in part for themselves, must have had influence on the early structure of the Christian institutions. But the extent of the influence is hard to define. The conclusions of Hatch, in his Bampton Lectures on 'The Organization of the

Early Christian Churches' (1880), are now generally supposed to be exaggerated.

LITERATURE.—The Greek gilds are exhaustively examined by F. Poland in his *Gesch. des griech. Vereinswesens*, Leipzig, 1909; the Roman, by J. P. Waltzing, in his *Etude historique sur les corporations professionnelles chez les Romains*, Louvain, 1895-1902. The survival of gilds at Constantinople is studied by A. Stockle, in *Spektrum*, *und byzant.*, Leipzig, 1909, which is an appendix to the journal *Klio*. A good survey of the subject is given in art. 'Collegium' by Kornemann, in the new edition of Pauly's *RE*. The position of the gilds within the municipalities is shown in W. Liebenow, *Stadteverwaltung im rom. Kaiserreiche*, Leipzig, 1909. See also W. M. Ramsay, in *IBD* v. 132. J. S. REID.

GILGIT DARDS.—See **DARDS**.

GILYAKS.—1. **Ethnology, etc.**—A tribe of unknown racial affinities living among many other native tribes, especially the Tunguses, in the northern part of Saghalien, on the shore of the mainland opposite, and on the lower course of the Amur (between 49° and 54° 4' N. lat.). The Gilyaks are below middle height; the average height of twelve men measured by Zealand was 162.2 cm. (5 ft. 4 in.); that of eight women measured was 150.4 cm. (4 ft. 11 in.). They are squarely built, with a short neck and well-developed chest, rather short and crooked legs, small hands and feet, a fairly big and broad head, swarthy complexion, dark eyes, and straight black hair, which the men plait in one tail, the women in two. The Gilyaks are of two types: the Mongolian or Tungus, and a type less far removed from the European, with a long-shaped face, moderate cheekbones, more open eyes, and more hair upon the face. There is every ground for believing that the original pure racial type has vanished owing to age-long crossing with various alien elements. What marks out the Gilyak among the Mongolo-Manchurian tribes by which he is surrounded is his language, which has nothing in common either with that of the Ainu or with that of the Tunguses. So far we can only say that certain grammatical peculiarities allow of our comparing Gilyak with the languages of the aborigines of N. America (see below, § 8). Ethnographers have accepted the view first set forth by Schrenck, according to which the original location of the Gilyaks was the Island of Saghalien, from which they migrated to the mainland. But the latest investigator of the Amur region, Sternberg, supposes that certain peculiarities of Gilyak life, survivals both in speech and in custom, and, finally, tradition, give us reason to suppose that the Gilyaks are immigrants from the distant north, from the Arctic regions. The most characteristic survival of this kind is the fact that on certain solemn occasions a Gilyak is compelled to use not the door but the smoke-hole of his pit-house, which among Arctic tribes serves as the regular entrance into the hut. The actual terms used to express the ideas of entrance (lit. 'diving down') and exit (lit. 'popping up out of') confirm this view of such survival. The modern name *Gilyak* is probably not of Chinese origin (as Schrenck, who derived it from the words *Kile*, *Kileng*, supposed), but rather spread to the Gilyaks from the Tungus tribes which bear the name *Gilyami*, *Gilyakha*. The Gilyaks' own name for themselves is *Nivukh*, *Nitsyvyts*, i.e. 'inhabitant of my place.'

The Gilyaks numbered in all, according to Sternberg's repeated enumerations made in the nineties, 4305 souls (2392 males, 1973 females); of these, Saghalien contained 1954 (1089 males, 865 females), and the mainland 2411 (1303 males, 1108 females). Since the appearance of the Russians the numbers of the Gilyaks have noticeably fallen off. Epidemics of smallpox, typhus, and measles in the sixties and seventies carried off 30 or 40 per cent. of

the population. Something must also be ascribed to periodic famines, along with the scurvy which inevitably accompanies them. According to tribal traditions, the nation of the Gilyaks would long ago have disappeared but for the constant immigration into its territory of solitary exiles and refugees from neighbouring peoples. These energetic immigrants, thanks to natural selection and to crossing, produced vigorous and healthy progeny, which delayed the process of extinction.

2. Mode of life, etc.—The Gilyaks live in settlements, whose numbers depend on the fishing conditions of the locality. There are small settlements with only five or six inhabitants, and large ones with two hundred. They follow a half-settled mode of life, changing their place of abode several times in the year, in accordance with the movements of the fish, their own occupations, and the seasons of the year. Their summer quarters are generally near the sea at the mouths of rivers; in the winter they move away from the sea to the edge of the *taiga* (Siberian jungle). Their winter huts are of two types. On the mainland and on the shore of Saghalien which looks towards it they have adopted a hut of the Manchurian type. It is a big shed-like house of timber, squared or unsquared, with a two-pitched roof supported by pillars inside, no ceiling, but windows filled in with fish-skin; along the walls under the sleeping-benches are run horizontally big heating pipes daubed with clay, and connected with two low stoves which are placed on each side of the entrance to the house. The pipes are generally made of whole trunks of hollow trees. Another type of winter quarters is the pit-house, half sunk in the earth, and having above its level only a pyramidal superstructure of timber with soil heaped upon it. In the middle of the pit-house is an earthen hearth surrounded by a low wooden fence. Above the hearth is the smoke-hole. The way into the hut is through a low movable door giving upon a vestibule. Round three sides of the hearth are the sleeping-benches, of which the one opposite the entrance is reckoned the most honourable. The summer habitation is either a wooden wigwam standing directly upon the ground or else a shed on high posts, which serves in winter as a store for preserved fish. The interior of the habitation is most unattractive: smoke, cold, darkness, dirt, and plenty of parasites.

The Gilyaks' chief occupation is fishing. Two species of the genus *Salmo* (*S. protokus* and *lagocephalus*) yearly visit their territory in countless numbers, and form the basis of their subsistence. Of the other kinds of big fish the most important are two species of sturgeon (*Acipenser sturio* and *orientalis*). They use the fish not only cooked but in a raw or frozen state. They catch them with hand-nets, hooks, cast-nets, and seines made of nettle-fibre; they also spear big fish. The second principal occupation of the Gilyaks is the chase of big sea-beasts. Their vegetable food consists of berries. Hunting is a secondary occupation. They kill bears chiefly in the time when the fish are passing, and the bears come down to the banks of the stream in whole crowds. Hunting sables, carried on by means of nooses, pitfalls, and traps, yields most of the money with which they purchase necessities.

The weapons of the Gilyaks are the bow and arrows with iron heads. It is particularly to be noticed that they use dogs for food, which is quite contrary to the custom of the other hunting tribes. Their means of locomotion are boats and, in the winter, sledges (*narta*) drawn by dogs. Their boats are of two kinds: (1) sea-boats after the Manchurian model; (2) river-boats of native production, dug-outs made from a whole poplar, with

round bottoms, long and narrow. The sledge is, like the boat, a dug-out, and very narrow, so that the driver sits astride upon it and his legs slide on snow-shoes on each side. The dogs, from five up to thirteen, get over as much as 12 *versts* (8½ miles) in an hour.

The Gilyak's winter costume is a tunic of dog-skin with the fur outside; from the waist to the knees there is worn above it a short skirt of seal-skin; besides this are fur thigh-pieces and boots of sealskin cut in the Chinese manner. On the forehead is worn a frontlet of squirrel tails, on the head a hat or bonnet of fur inside and out with ear-pieces—with the men these are separate; the women's form part of the bonnet. Their hands are covered with gauntlets of hare's fur. Their underclothing consists of a shirt of bought material and short drawers of the same down to the knees. The summer costume is nowadays almost exclusively of bought stuff, mostly red, blue, or black. Clothing of fish-skin and costly women's clothes of carp-skin, with numerous patterns embroidered in colours, are going out of use. Summer foot-gear is still made of fish- or seal-skin. The summer hat of the men is conical in form, and made of birch-bark with patterns on it; the women's is bought, and is of Chinese fashion. All the parts of their costume except the under-linen and the furs are edged and embroidered with the most delicate patterns. The Gilyaks are very skilful in carving wood: ordinary things, even cups of birch-bark, are adorned with very fine patterns. The modern Gilyak arabesque has developed gradually from the meshes of netting and the representation of various animals.

3. Family and domestic life.—The structure of the family among the Gilyaks has peculiar features. At first sight, marriage would appear to be absolutely individualistic. As a matter of fact, monogamy is the commonest form; polygamy is rare, and owes its occurrence to circumstances. According to the accounts given by the Gilyaks themselves, polygamy hardly exists at all either on Saghalien or on the estuary of the Amur or on the coast of the Sea of Okhotsk; it is fairly frequent along the course of the Amur; but, even where it is found, there are seldom more than two wives. A Gilyak buys his wives from outside his kin, and pays a bride-price for them, according to their value, in various precious goods. A Gilyak's wives and his children are reckoned his wives and children in the eye of the public; but at the same time there is a whole group of men—his younger brothers, cousins in every degree of kinship, and also the husbands of his sisters and his wife's sisters—who have the right to sexual intercourse with his wife. A group of brothers possesses the same right over all the sisters of the wives of each of them. Accordingly, any man who is joined in individual wedlock to any woman has rights over a whole group of women. Likewise, each woman who is married to a single Gilyak is at the same time participant in a group marriage with the whole group, consisting of the husbands of her own sisters and the brothers of her husband. This regulation of sexual intercourse, discovered by Sternberg in 1891, is in exact accordance with the words expressing relationship. Each man applies the word *an'khei* ('wife') not only to his individual wife, but to all his own wife's sisters and also to all the wives of his elder brothers; and the woman gives the name *puniva* ('husband') not only to her own individual husband, but also to the whole group of persons mentioned above. In the same way the terms 'father,' 'mother,' 'brother,' 'son,' and the like, are applied to whole groups of persons; the wives of brothers call each other 'sister,' and a daughter's husband calls his wife's father's sister 'mother.' The men of each kin

marry, for the most part (and formerly this was obligatory), the daughters of their mother's brothers, and women wed the sons of their father's sisters. The rules as to sexual intercourse among the Gilyaks can by no means be called immoral, inasmuch as towards persons in forbidden classes the strictest correctness is observed in all relations; with such not only jests, but even ordinary conversation, are forbidden. The position of women is one of subjection. Their marriage is often forced; betrothal is often arranged between children not yet weaned. The special sentiment of love is well known to the Gilyak. The death of a beloved wife, or the impossibility of marrying one's beloved, is often a motive for suicide. This sentiment is often the cause of women being carried off. Kinship among the Gilyaks is exogamous, founded on the agnatic principle; its signs are having: (1) the same hearth or lord of the hearth; (2) the same kin-gods and sacrifices; (3) the same kins into which the women are given in marriage, and from which the men take their wives; (4) the same common obligation of kin-vengeance; (5) the same cemeteries in common; (6) mutual rights of inheritance; (7) the bear-festival in common.

In spite of the agnatic principle, the Gilyaks do not recognize any patriarchal power of the elder. The elders of the kin or the richer members of it receive respect and exercise authority, but not power. Juridical relations are to a great extent regulated by the kin organization. By the agnatic principle only sons inherit, or, in their absence, brothers—preferably that one who takes over the wife of the deceased; but in any case the property does not pass out of the kin. Only by testamentary disposition can part of the property pass to daughters or to an outsider. A curious case of taking the law into one's own hands is the reclaiming, by force of arms, of a woman who has been carried off. But more frequently recourse is had to the decision of the kinsmen. An insult leads to a duel with sticks. Not long ago, if a kinsman was slain by an outsider, the kin of the slain man would all unite in sanguinary warfare with the murderer's kin, but the women and property were not touched. Sometimes such struggles ended in a peace, upon condition of the payment of a blood-price. Murder within the kin is not punished.

In general, juridical morality among the Gilyaks stands very high. Thefts are almost unknown; murders are never committed for the sake of gain. But the evil example of the Russian traders is beginning to have its destructive effect. The moral feeling which animates the Gilyaks is visible among them in the general propriety and in the modesty of the women. They live all together; but shameless nakedness is not allowed, nor the disgusting scenes which are met with among the Ainus. Of course, even among the Gilyaks, cases of unchastity outside wedlock occur; but the parents of a girl who commits such a fault treat her with severity; the mother, according to the Gilyaks, subjects her to corporal punishment; and the father, in case of an illegitimate child being born, tries to set the evil right by killing the child and hiding its body. The marriages, though based upon sale, generally run a peaceful course. As long as the wife is young, the husband guards her jealously, and she most carefully avoids giving him cause for anger. Moreover, both sides are kept in check by the fact that a husband who sends back his wife to her parents for any reason has no right to ask for the return of what he had formerly paid for her. If a wife leaves her husband of her own initiative, he can demand that the payment made for her be given back to him.

In allotting the labour of keeping up the domestic economy, incomparably the greater share falls

to the wife. The husband is responsible only for winning the most necessary means of subsistence. Hunting, fishing, trading, and the journeys connected with them, are the whole sphere of his activity. The time when the Salmonidae pass up the Amur in masses perhaps requires of him redoubled energy; but in this case, too, the woman gives him no inconsiderable help. When the fish has been brought to the bank, she has to clean it, gut it, split it, and arrange it on the drying stages to be parched in the sun. It is also the women, partly with the help of the children, that lay up, for the winter, stores of food derived from the local flora, and collect berries, roots, herbs, mosses, etc. The Gilyak children are kept in an extremely dirty state. The mothers wash them only in very rare cases. Nevertheless they are usually, at any rate in winter, well and carefully dressed. Their clothing exactly reproduces in miniature the adults' garb, down to the smallest details and all the ornamentation. From the belt which secures the coat and apron of the little Gilyaks hang all the same objects as the adults carry—tinder, flint and steel, pipe-cleaner, etc. In their amusements and games the children love to imitate the work and pastimes of their elders.

In cases of polygamy all the wives live together in one and the same room, and each has for herself and her children an appointed place on the sleeping-benches. All the wives have equal rights, and each gives her share of labour to the domestic economy. But the division of labour is not always equal. The wife who enjoys the special favour of the husband is generally given only the lighter work; the heavier is allotted to the rest. According to local testimony, a Gilyak often contracts a second or third marriage solely in order to render easier the life of one or other of his former wives, by putting at her disposal a fresh worker. Men of the richer class, who from sheer ostentation, in order to make a show of their wealth, allow themselves the luxury of several wives, not infrequently adopt another means of lightening the labour of the latter. They allot the heaviest labour about the house to slaves, usually female, but occasionally male, bought for this purpose. The Gilyaks have a special word for them, *krygkhrys'* or, according to their sex, *krygkhrys'-umgu* for women, and *krygkhrys'-utgu* for men. It is to be noticed that they have no slaves of their own tribe; and the number of slaves, especially male ones, is rather limited. The reason for this is the high price which they have to pay in getting them either directly from the Ainus, or Gólds, or, more frequently, from other Gilyaks at second hand. The price of a female slave is much higher than that of a wife. Slaves male and female are without any civil rights, and are entirely dependent on their lord; they are treated humanely only as far as the lord's own interests dictate, and he has perfect freedom to sell them whenever he likes. The business of slaves is to obey and to serve, but their chief suffering, especially in the case of the females, comes from their having no rights at all, and from the contempt with which they are treated by their masters, who do not allow themselves any human relations with them. Gilyaks are not allowed to marry female slaves, or have sexual intercourse with them; the latter rule, however, is not always kept by young unmarried men. But no Gilyak would ever allow himself to acknowledge progeny resulting from such intercourse. A child that comes into the world under such circumstances is reckoned to belong to its mother's tribe, and is the property of her owner. It is allowed to grow up along with its mother, and when it is adult it is kept or sold just like any other slave.

In view of what has been said about marriage, it is obvious that the right of inheriting extends only to persons of the male sex, and woman herself passes in inheritance like a chattel. The only direct heirs of a deceased Gilyak are his sons, however many they may be, on absolutely equal terms, no regard being had to seniority. The wife and daughters, whether married or single, have no rights in the inheritance. The only modification is when a man leaves behind him a wife with young children. The relict, along with all the property of the deceased, passes to his next eldest brother as his wife, whether he is single or married even to several wives. The levirate, however, is not quite obligatory. Any other person may, if he wish, marry the widow, with the consent of the brother-in-law and on payment of a certain sum. The children, according to custom, are not forbidden to follow their mother. Finally, if a deceased Gilyak leave neither sons nor brothers, the right to the inheritance passes to his nearest male relative. In the words of the Gilyaks themselves, the deceased is succeeded by his so-called *kall*. A clear distinction is made between relatives on the father's and on the mother's side. The former are called *ngafsk*, and are reckoned blood relations; the latter *amal*, 'friends.' It is only the former who are subject to the obligations connected with the so-called blood-revenge, which plays such an important part in Gilyak life. Like all primitive peoples, the Gilyaks hold strongly to the feeling that every shedding of blood requires a corresponding retribution exacted by the victim or his kin. Not less deeply seated in their minds is the belief that any one who omits to fulfil this duty inevitably pays for the omission by misfortune or even death. This belief, which is universal among them, has in the execution of blood-revenge a powerful, decisive, and permanent influence upon the conduct of both sides—the offensive and defensive alike. The execution of blood-revenge is partly facilitated, partly hindered, by the fact that not only the immediate principals take an active part in it, but also their kinsmen, who are actually subject to certain obligations. The latter do not extend to all relatives, but only to the *ngafks*, i.e. those on the paternal side. The laws of blood-revenge unconditionally require *ngafks* to avenge a kinsman who has been slain outright or has died from wounds received and cannot avenge himself. If his hurt is not fatal, he is himself the avenger, and his *ngafks* only help him. The same obligations are imposed upon the *ngafks* of the original aggressor. The feeling of solidarity in the matter of blood-revenge, which binds together all the *ngafks* of one and the same kin, especially a large one, serves as some guarantee against attacks being readily made upon any of them.

4. Government.—When Schrenck was on the Amur the Gilyaks were subject to no one, and paid no tribute either to China or to Russia. It is true that in the beginning of last century they were still to some extent subject to the Chinese power both on the Amur and on Saghalien. In the twenties of the 19th cent. this state of things was altered. The authorities of Manchuria chose headmen in many places from among the natives, and upon them lay the duty of collecting tribute, each in his own district, and delivering it at Deren. Later, the Chinese rule sensibly weakened in those parts, and concentrated itself exclusively in that region of the lower Amur which extends up the river to the Sungari. The Gilyaks and Olchas remained only nominally subject to China and paid no more tribute; when Schrenck lived among them, they were very conscious of independence and liberty, and there was no talk of any headmen

among them, so that Schrenck even failed in ascertaining the Gilyak name for them. In the fifties the Russians established themselves firmly at certain points of the Amur region, e.g. at Petrovsk, Nikolævsk, and Mariinsk. By the time of Schrenck nothing was left of the institutions forced upon the Gilyaks by the Manchuro-Chinese administration, while the Russians had not yet had time to introduce any new arrangements. Accordingly the people was left to itself, and within certain limits nothing interfered with its action. This was the most favourable time for studying its native manners and customs, and it is these we shall keep in view in our survey.

With the exception of the regulations concerning the family and the paternal kin, the Gilyaks have no legal rules or accepted organization to determine the course of self-government. They do not elect from among themselves any persons with authoritative power to preserve proper order in the community, settle any differences which may arise, or the like. Indeed, there seems no need for anything of the kind. They have no wars with their neighbours or internal strife; they make no predatory raids on neighbouring lands, and exact no tribute; hence they need no leaders or headmen or such governing persons. On the other hand, there is a sharp difference among them in the matter of material prosperity. A Gilyak is reckoned rich who can make frequent journeys to trade with the Manchus and Sizams (the Gilyak name for the Japanese), and among them get a store not only of all the necessities of life but of various articles of luxury. Further, journeys and intercourse with foreigners give the prosperous Gilyak such a breadth of view and experience, and make him so much more clear-sighted and logical, that, quite apart from his material importance, he acquires a great influence with his compatriots. Thanks to his wealth, he becomes, as it were, the soul of his village. It is his house that is chosen for the cheerful assemblies and feasts which accompany the bear-festival. The help a rich Gilyak gives to a poor one is not a matter of sending something or other to his house, but of supplying him with all the necessary means of subsistence gratis (in Gilyak *pai*). The chief ground of this is the communistic spirit which pervades all primitive peoples.

5. Calendar, etc.—The Gilyaks have no exact idea of time, and so they define it only very approximately. Besides the usual expressions like 'day' (*nuv*), 'night' (*urk*), 'morning' (*tyt*), and 'evening' (*padf*), the time of day is defined according as the sun is rising or setting (*keng-myrrch* or *padnch*, 'being born'; *keng-yugch* or *much*, 'dying'), mounting the sky (*keng-tytyrakh-boktrch*), slanting down (*keng-kottrch*), or standing at its highest point at noon (*keng-nuvutyh*). It is especially difficult for them to define some day long past but in some way memorable, as it is exactly like the whole series of similar days spent at one place amid the ordinary duties. In spite of this, they follow very attentively the phases of the moon. They have separate terms for full moon and new moon (*long-charnch*, 'the moon is full'; and *long-much*, 'the moon is dead'), its waxing and waning, and also for the various stages of these phases of waxing and waning. The year is divided into twelve months, but the names of the months differ in various parts of the country. Some are current among the Gilyaks living on the lower Amur and its estuary, on the western coast of Saghalien and on the south coast of the Sea of Okhotsk, while others are used in the interior and on the east coast of Saghalien. The following are the names of the months among those on the west coast of Saghalien and on the mainland:

January,	<i>Cham-long</i> ;	July,	<i>Maehn-ehrar-long</i> ;
February,	<i>Karr-long</i> ;	August,	<i>Lygn-vota-long</i> ;
March,	<i>Chrad-long</i> ;	September,	<i>Nyars-long</i> ;
April,	<i>Arkail-long</i> ;	October,	<i>Oni-lami-long</i> ;
May,	<i>Vallen-tengi-long</i> ;	November,	<i>Tlo-long</i> ;
June,	<i>Tenga-vota-long</i> ;	December,	<i>An'-long</i> .

The Gilyaks divide the twelve months very unequally into seasons, of which, strictly speaking, they recognize only two—winter (*tulf* or *tulv-an'*) and summer (*tolf* or *tolf-an'*), corresponding to the times that they live in winter-houses and summer-houses. In general their year falls into the following divisions: winter, consisting of five months, November to March; spring, one month, April; summer, five months, May to September; autumn, one month, October.

Seeing the daily rising and setting of the sun, they naturally think that the earth (*mif*) stands immovable and the sun (*keng*) moves round it; further, the circle of the horizon makes them imagine the earth as a disk. But as to where the sun hides when he has set and night has come on, they do not inquire.

'When I asked them about this,' says Schrenck, 'they laughingly answered my questions with others, such as whether I had perhaps seen somewhere or other the sun after he had set. The more intelligent of them, such as Yuchin and Ruigun, involuntarily began to revolve the problem of the regular succession of day and night, and there came into their heads the idea of the uninterrupted motion of the sun about the earth, of the succession of day and night on the other or lower side of the earth, and, as its direct consequence, that of the possibility that there, as here, animals and people may exist. I found it much easier than I expected to get the Gilyaks to believe that the earth is not a disk but a sphere.'

The stars also, in their opinion, revolve round the earth, just as the sun does. Indeed, in regard to the stars, the Gilyaks have got so far in their conception of the universe that they reckon them similar world-bodies to the earth, supposing that it is only their enormous distance that makes them appear so small. This can be seen from the fact that the words *ungkhyr*, 'star,' and *ungkhyr-mif*, 'star-earth,' are with them identical. For some of the constellations they have their special names: e.g., three stars in the tail of the Great Bear are called *charv(u)krich*; four others *nyagr-nyo*, 'the mouse's store.' A constellation with many stars, perhaps the Pleiades, is called on the Amur *tumr*, 'sable'; on Saghalien *tagkhr-nyo*, 'the store of the little beast (*Tamias striatus*),' and also *tamml-ungkhyr*, 'many stars.' Orion's sword is called *chekhoak*; the Milky Way, *tagkhopan-tif*, 'the unknown way'; and so on. One of the commonest questions of the Gilyaks concerns the existence of people on the stars. When Schrenck said that the stars are so far off that people on them, if they do exist, could not be seen even through a telescope, the Gilyaks always replied that the shamans do succeed in seeing them. According to the latter, it is positively known that upon the stars there grow tall trees and whole forests with plenty of all kinds of animals—sables, minks, foxes, bears, dogs—and, finally, people whom the Gilyaks call sometimes *ungkhyr-nibakh*, 'star-people,' sometimes *ungkhyr-mif-nibakh*, 'earth-people.' These people are of gigantic stature, with thick brows, long noses, and so on. The inhabitants of the earth occasionally meet the star-people, and the shamans know what to do in these cases.

6. Festivals, etc.—The bear-festivals take the first place. These are festivals for the rich, who secure the bears for this pastime. When the beast has been caught the hunters fetter him securely, and carry him home in triumph on a pair of sledges tied together. Old and young run out to meet him with joyful cries. In Gilyak villages there is nearly always to be found a place prepared for a bear; if there is none ready-made, it is erected without delay. This place consists of a square log-hut,

open above, with a small door fastened from the outside, and a small window-opening which is never closed. After dragging the bear into it by force and untying him, they cover the hut over with planks, and pile heavy stones upon these so that there is not the slightest possibility of the prisoner's escaping. From that moment the bear becomes the object of the care of the village, which is bound to look after him and supply him with food, so acquiring the right to participate in the bear-festival. Thus the bear-festival is entirely communistic. It unites all the members of the village, and thereby offers a kind of centre about which the whole village-life revolves. The day of the festival is commonly fixed by the original owner of the bear, i.e. the man who bought him or caught him at the time of the trapping. He also figures as the leader of the feast, keeping strictly to the customs consecrated by time. Besides the chief delicacy, bear-meat, the leader of the feast enriches the festive board with other culinary productions in the Gilyak taste. In his anxiety for greater splendour, he invites to the feast not only his kinsmen, but all his friends and acquaintances. After the close of the festival the bear's skin is allotted to the organizer of the feast. The feeding of the imprisoned bear proceeds according to well-established rule. The food is introduced through the window-opening; it consists of fish, raw or dried (*yukaly*), and *mosi*, a kind of thick gruel. At rare intervals the bear is brought out of his prison chiefly in order that the hut may be cleaned. Before he is put back into it, he is led round the village several times. The period for which the animal is kept depends upon his age. Grown-up bears are kept in captivity only a few months, but cubs for several years until they have grown and put on fat. Bear-festivals are celebrated in the winter months, as at that time of year the Gilyaks live on the mainland in roomy houses after the Chinese fashion. The greater part of the bear-festivals occur in the month *An'-long* (December). During the opening days of the festival the bear is led solemnly round the village; there is a farewell feeding of him; he is set up as a target; and, after he has been killed, he is cut up and skinned, and his head and skin are borne to the hut. The following days are given to feasting, games, contests, dances, singing, sledge-races, and other pastimes. Throughout the festival an original kind of music is incessantly produced by rhythmical blows of a stick on a hanging beam, to the accompaniment of humorous songs. The last act of the drama is the sacrifice of dogs, and the carting off of the bear's head and bones to the common resting-place for the remains of bears.

7. Religion.—The religion of the Gilyaks is pure Animism. Regarding all Nature as animate, they give to it a completely anthropomorphic expression. The island of Saghalien is regarded as a live creature, with its head at Cape Mary and its feet touching La Perouse Strait. Every more or less important headland or hill is a live creature, to which are attached many romantic and tragic legends of a purely human character. As he sees in inanimate objects of Nature a living anthropomorphic existence, the Gilyak takes a yet more anthropomorphic view of animals, regarding them as beings to whom are granted the highest reason and strength, and for whom the animal envelope is only a mask hiding a human being. Every element, every force of Nature, has its own lord, in all his attributes and social conditions similar to a Gilyak. These gods likewise, in their turn, occasionally take the form of some animal or another. The chief gods or 'lords' are the following: *Pal'-yz*, the lord of the mountains, jungle, and all that lives in them; *Toll'-yz*, the lord of the sea, an

old man with a long beard, who throws handfuls of fishes' roe about in all directions; *Tly-yz'*, the lord of the heaven; *Mŭ-yz'*, the lord of the earth; and others. All these lords are kindly beings, and to them from time to time sacrifices are offered in the shape of various sweet roots, rice, tobacco, etc. In more important cases the sacrifice is a dog. Often such sacrifices are performed in the jungle to the lord of the jungle, or on the sea or the river to the lords of these.

The Gilyaks believe in the existence of the soul, and in life after death. The soul is the man's double. After the death of its possessor it passes into the under world, through a special opening in the earth, and there continues exactly the same mode of existence as above ground. Poor people have one soul each, the rich and the shamans have two or three. In the underground world a man dies once more, and passes into yet another world, and so three times. The Gilyaks burn a dead man after dressing him in his best clothes (several suits). After the cremation they break his cauldrons and sledges and kill his dogs. Not far from the place of burning they set up a little house. In it they put a doll which represents the dead man, dressed up in precious stuffs. Above the doll they set a wooden representation of a cuckoo, and round about cups, plates, pipes, tobacco, sugar, and various things to eat. During the time immediately following death, before the dead man is settled in his new place, his kinsmen visit his little house at intervals, make libations, and present provisions.

Disease and death are regarded by the Gilyaks as the results of the wiles of an evil spirit, who either seizes the soul or gradually eats it away after having entered into the man's organism. The shamans are invited to drive this evil spirit forth. In social relations the shamans are not at all to be distinguished from common Gilyaks, but the gift of shaman-craft is ordinarily handed down from father to son.

The worship of idols among the Gilyaks must be regarded as borrowed from the Tungus tribes, Manguts, Gol'ds, and Orochi, and also from the Ainus. The Saghalien Gilyaks have scarcely any idols. Special reverence is paid to a representation of a bear which is kept in a toy-house, into which they also put a store of victuals—tobacco, sugar, etc.—and other things belonging to the sacred animal.

8. Language, oral literature, etc.—The Gilyak language stands lexically quite isolated among the languages of the old world; grammatically it is possible to compare it with certain American languages. It is full of special coronal and dorsal sounds, aspirates, nasal gutturals, and hissing sounds; its phonetics are among the most difficult to master of any language. The Gilyaks have no kind of writing. Their oral literature consists of: (1) heroic poems; (2) cosmogonic and mythological legends; (3) stories and tales of ordinary life; (4) historical traditions; (5) lyrical and humorous songs and catches. Their poems, though in prose form, are sung. The singing of Gilyaks takes the form of various guttural modulations and howlings, rarely passing into melodious chest-notes. The character of their singing has been influenced by the shaman's chants. The singers are supposed to be helped by a special spirit, who has his seat in the tip of the tongue. Poems are, for the most part, inspired improvisations. In the songs and poems are the rudiments of dramatic scenes. The Gilyaks delight in sitting up whole nights through, listening to improvisers, with perfect faith in the reality of what is being related. They delight in playing on home-made instruments, one-stringed guitars, pipes, and such like; and lately they have even

learned to play the accordion. They are eager for knowledge, and possess remarkable mental ability. Even in the poorly equipped missionary schools they make quick progress in learning. They gladly adopt from the Russians everything which is useful and applicable to their way and conditions of life. In many places they have learned to salt fish, plant potatoes, breed horses, and earn a living as drivers. Their capacity for adapting themselves to new conditions of life gives them every chance of preserving their nationality.

GIPSIES.—See GYPSIES.

GIRDLE.—A girdle in its modern sense is a belt or cord used to encircle the waist. In ancient times, however, the girdle had a much wider significance, and was employed not only as an article of clothing, but also as a sacrificial ornament, and as an amulet. The reason for its adoption by primitive races as an article of clothing is not far to seek, the waist being a natural means of support for the clothing of the lower parts of the body (see art. DRESS). When we attempt to explain the origin of its use in sacrifice, the question becomes more difficult and leads back to mythical times. Its use as an amulet for the cure of disease, and as an aid in childbirth, is so universal that it must be, like the former, of great antiquity; and, although the evidence at hand is somewhat fragmentary, it is probable that the amulet girdle was originally derived from the sacrificial cord of mythical times.

1. Girdles as articles of clothing and adornment.

—On account of the fact that the girdle is so generally distributed amongst peoples as a support for the lower garments, it is impossible to give more than a bare outline of the subject. Among the Egyptians in very early times a girdle was employed above the loin-cloth, and to it was fastened either a tail of some animal or an imitation made of leather.¹ Girdles are also indicated in the sculptures as far back as the IInd and IIIrd dynasties.² The ancient races of India appear to have employed the girdle in dress, and richly embroidered girdles still persist in Indian costumes; in ancient Norse mythology, e.g. Frigga's golden girdle,³ and amongst the Chaldeans and Babylonians (*Ezk* 23¹²) reference is also made to them.

Coming to Biblical girdles, it is necessary to point out that in the EV the word 'ezôr is frequently translated 'girdle,' whereas it is more properly rendered 'loin-cloth.' Such were the 'girdles' of Elijah and John (2 K 1⁸, Mt 3⁴, Mk 1⁶).⁴ The true girdle of the Bible consisted of a long strip of cloth wound round the waist above the tunic, with or without the ends hanging down in front; but, in other cases, it varied from a simple rope (Is 3⁴ RV) to the elaborate waist-belts of the priests and the 'golden girdles' of Rev 1¹³ 15¹. The 'curious girdle of the ephod' (*hêshebîh 'aphud-dâthô*) was 'of gold, of blue and scarlet, and fine twined linen' (Ex 28⁸); it was wound several times round the waist and tied in front, the ends

falling to the ankles.¹ The girdle also served as a sword-belt (2 S 20^b); as a purse (Mt 10^a RVin); and as a support for the inkhorn (Ezk 9^a.11). The application of the girdle in most cases in the Scriptures is used to indicate the completeness of the dress and readiness for action—e.g. 'gird thyself and serve me' (Lk 17^a).

Amongst the Romans, the girdle consisted of linen,² and was used to confine the *tunica*. It was worn by both sexes, and also formed part of the dress of the soldier and gymnast. The Grecian athletes also wore girdles in the games,³ and Hercules is depicted at Olympia as 'wrestling from the Amazon her girdle.'⁴ Among both Greeks and Romans the girdle was the usual receptacle for money. The *cinctus Gabinus* (so named from the town Gabii) was the term applied to the method used by the early Romans in warfare of wearing the toga, the end of which, instead of being thrown over the left shoulder, was drawn tightly round the body as a girdle, thus leaving the arms free.⁵ In Tibullus we read that at funeral ceremonies the garments were to be ungirdled.⁶ Gallo-Roman graves seldom contain girdles; on the other hand, beautifully ornamented girdles were found in those of the Franks and Burgundians. The Arch-Druids were clothed in a stole of virgin white, fastened by a girdle on which appeared the crystal of augury encased in gold,⁷ and the ancient Kings of Ireland on state occasions wore golden girdles inlaid with precious stones.⁸ Not till after the Norman Conquest, however, did the Anglo-Saxons adopt the girdle generally as a dress essential for both sexes. In the later 13th cent. the knight's surcoat was girdled at the waist with a narrow cord, and the great belt looped across the hips to support the sword. In the 14th cent. the girdles were worn somewhat below the waist, and were of exceedingly rich design. To the girdles of the 15th and 16th cent. were attached all the paraphernalia of the wearer, e.g. purses, daggers, keys, inkhorns, books, etc.; and laws were introduced to stop these extravagances: thus, priests were censured for wearing silver girdles with baselards hanging from them.⁹ In Skye 200 years ago we find that girdles were used to support the plaid, and the custom was, doubtless, general in the West at that time.

'The belt was of leather and several pieces of silver intermixed with the leather like a chain. The lower end of the belt has a piece of plate about eight inches long and three in breadth curiously engraved; the end of which was adorned with fine stones or pieces of red coral.'¹⁰

Amongst curious customs in regard to girdles we find that bankrupts used to remove them in open court, that in France courtesans were forbidden to wear them, while the expression 'belted earl' is derived from the ceremonial of the investiture in olden times.¹¹

Girdles are still used by many Continental peoples, who preserve their national customs, e.g. in Macedonia, Sicily, Brittany, and Norway. In German New Guinea, a girl is invested with the girdle only on reaching maturity,¹² and similar customs prevail in many lands. As an illustra-

tion of the various girdles in use as articles of dress the following may be cited: in Norway, fine old flagree silver girdles are preserved as heirlooms; the Lapps wear belts adorned with bear's teeth; the Uled-Nail women use a simple cord; the Swazis, Basutos, and Zulus, a beautifully embroidered band; Sarebas Dya women, hoops of rattan.¹ The girdle-wearing custom is also prevalent in the New World.

2. Girdles used in sacrifice and in religious ceremonies.—The earliest form of the sacrificial girdle was probably a cord worn round the waist by the priests. Later, it was worn on the right shoulder, and, finally, on the left shoulder. Such girdles, we shall see, can be traced in India, Umbria, and Mexico.² The structure of these sacrificial girdles and the part they play in the religious initiation ceremonies of various nations form a most interesting and comprehensive study in astrology and mythology, which would repay thorough investigation.

In the Zoroastrian ritual the sacred *kusti*, or girdle, with which every Zoroastrian child, whether boy or girl, is invested when about fifteen years of age,

'consists of a string, about the size of a stay-lace, which is first passed twice round the waist very loosely, over the sacred shirt, and tied in front with a loose double knot (right-handed and left-handed), and the long ends are then passed a third time round the waist and tied again behind with a similar double knot. This string contains six strands, each consisting of twelve very fine, white, woollen threads twisted together, or seventy-two threads in all. Near each end the six strands are braided together, instead of being twisted, and for the last inch they are braided into three separate string-ends of two strands each; these string-ends, therefore, contain twenty-four threads each, and form a kind of fringed end to the string. This fringe is a sort of remembrancer, as its six strands are supposed to symbolize the six Gahanbars or season-festivals, the twelve threads in each strand symbolize the twelve months, the twenty-four threads in each string-end symbolize the twenty-four kardaks or sections of the Visparad, and the seventy-two threads in the whole string symbolize the seventy-two hās or chapters of the Yasna.'³

The importance of the girdle in India is shown by the fact that its assumption, before which no religious rite may be performed, is the second birth.⁴ The rules regarding the northern Indians are noted below;⁵ among the southern Dravidian Brāhmins the girdle is made of three strands of cotton, in each of which are nine threads;⁶ and, similarly, a three-knotted girdle is worn by the Dervishes of S.W. Asia.⁷ The Vedic Brāhmins wear the girdle over the right shoulder, but during funeral ceremonies, when the customs connected with the living are frequently reversed for the dead (*ERE*, vol. iii. p. 658, vol. iv. p. 439^b, vol. v. p. 60), the girdle is removed to the left shoulder.⁸ At the annual May procession of the boundaries at Iguvium (Gubbio), a sacred girdle (*cringatiro*) was worn on the right shoulder.⁹

For different castes the girdle is of different materials.

'The girdle of a Brahman is to be made of a triple cord of *mūṣya* [*Saccharum mūṣya*], smooth and pliable; but of a *Kṣatriya* it (should be) a bowstring of *mūra* [*Sansavera Zeylanica*]; of a *Vaiśya*, a triple thread of hemp. If *mūṣya* cannot be had, (their girdles) are to be made of *kūṣa* [*Poa cynosuroides*], *āśmāntaka* [*Bauhinia tomentosa*] (or) *vājāya* [*Elettaria indica*], threefold, with one knot, (or) three, or even five.'¹⁰

The girdle of the Brāhman is composed of 3

strands of cotton formed of 9 threads, and the material must be gathered and spun by pure Brāhmins. After marriage the cord must have 6 strands, and may have 9; the months of March-June are the most favourable for the investiture, and begging is permitted to defray the heavy expenses of the ceremony.¹ The initiation with the girdle took place at 8 years old in the case of Brāhmins, at 11 years with Kṣatriyas, and at 12 years with Vaiśyas.² The following is the formula used at the ceremony:

'Here has come to us, protecting us from evil words, purifying our kin as a purifier, clothing herself, by the power of inhalation and exhalation, with strength, this friendly goddess, this blessed girdle.'

With these words thrice repeated, the girdle is tied from left to right thrice round; there should be one knot or three or five, and it is finally adjusted with the words: 'The sacrificial cord art thou. With the cord of the sacrifice I invest thee.'³ Further, the student has to repeat the verse 'Protecting us from evil word' and 'The protectress of right'; the initiator then makes a threefold knot in the girdle at the north side of the navel, and draws that to the south side of it.⁴ At funeral ceremonies the relatives of the dead wear their sacrificial cords.⁵ The Brāhmin who has been invested with the triple cord is called a *Brahmachārī*; the cord is called *yajñopavita* in Sanskrit, *jandemu* in Telugu, *punul* in Tamil, and *jenivara* in Canarese.⁶ Other Hindus share with the Brāhmins the honour of wearing the cord, e.g. the Jains, the Kṣatriyas, the Vaiśyas, and even the Panchalas.⁷

The oldest extant charm for a girdle is contained in *Atharvaveda*, vi. 133, and runs as follows:*

'The god that bound on this girdle, that fastened [it] together, and that joined [it] for us, the god by whose instruction we move—may he seek the further shore, and may he release us.'

Offered to art thou, offered unto; thou art the weapon of the seers; partaking first of the vow, be thou a hero-slayer, O girdle.

Since I am death's student, soliciting from existence a man for Yama, him do I, by incantation, by fervour, by toil, tie with this girdle.

Daughter of faith, born out of fervour, sister of the being-making seers was she; do thou, O girdle, assign to us thought, wisdom; also assign to us fervour and Indra's power.

Thou whom the ancient being-making seers bound about, do thou embrace me, in order to length of life, O girdle.'

Girdles were in use for religious purposes in the Greek and Roman liturgy, and Anastasius mentions in the 9th cent. *muræculæ*, or jewelled girdles in the shape of lampreys or eels.⁸ Zodiacal amulets in the form of girdles were known to the early Christians,⁹ and the girdle of the ephod must be again referred to (see above); its end when the priest was engaged in sacrifice was thrown over his left shoulder.¹¹ As early as the 5th cent. Pope Celestine (423-432) deprecated the frequent use of the girdle by the priests as an article of adornment and distinction in their dress.¹² Some mention must be made of the *orarium*, a kind of scarf worn on the left shoulder and passing diagonally downwards to the right side; it was permitted to be worn by the Romans as a favour by Aurelian. The fourth Council of Toledo directed that the *orarium* should be worn by deacons over the left shoulder.¹³ The application of the *pallium*, which was used as early as A.D. 514—in its earliest form a narrow strip of cloth, passed over the left shoulder,

then round the neck and over the left shoulder again, leaving the two ends free, one in front and one behind¹⁴—seems to the present writer to be connected with the *orarium*.

The girdle in its final form as an ecclesiastical vestment is a narrow band, usually and properly made of silk, but sometimes of cotton; white as a rule, it may be coloured. The esoteric meanings attached to it are: 'custodia mentis; discretio omnium virtutum; virtus continentiae; perfecta Christi caritas.' Properly it is about four yards long, and is used to secure the alb, the upper portion of which depends over and often hides the girdle.¹⁵ The 'stole' is the successor of the *orarium*, and consists of a strip of embroidery 2-3 in. wide, and latterly terminating in a cross.¹⁶ Deacons wear it over the left shoulder and secure it under the right arm, while priests cross it over the breast.¹⁷ The 'pall' is also probably derived, through the *pallium* and stole, from the girdle, while the *subcingulum*, now worn only by the Pope, was originally a girdle with a lozenge-shaped lappet depending on either side of it.¹⁸

In the Orthodox Greek Church the *ζώνη*, in the Armenian Church the *kodi*, and in the Malabar the *zunro*, are all girdles; and other vestments used in their ceremonies show traces of girdle origin.¹⁹ The girdle is also an important article in the dress of many religious orders. It is often of black leather, although a simple cord or rope is also common.²⁰

The above sketch of the part played by the girdle in sacrifice is by no means exhaustive. Little attention has been paid so far to the significance of the girdle in vestments; and attempts to trace the various metamorphoses which have taken place in its descent from mythical times are often vitiated by the omission by authors of accurate descriptions of the girdles and their mode of application.

Sympathetic magic appears in connexion with the girdle in the Germanic belief that a man can change himself into a werewolf (q.v.) by donning a belt of wolf's skin.²¹ According to Mahmūd Shabistari, who wrote his *Gulshan-i-Kāz* ('Rose Garden of Mystery') in A.H. 717 (A.D. 1317), the girdle signifies to the Sūfī 'the binding of the bond of obedience,' so that 'the knotted girdle is the emblem of obedience.'²² Perhaps influenced in part by some such passage as Is 11⁴ ('righteousness shall be the girdle of his loins, and faithfulness the girdle of his reins') or Eph 6¹⁴ ('having girded your loins with truth'; cf. also Ps 18³²⁻³³ 30¹¹ 65⁶), an Irish monk in Austrian Klosterneuburg wrote the curious hymn which may also contain some reminiscences of the pagan Celtic period:²³

'The girdle (*oris*) of Finnen is round about me, to protect me, that I walk not the way which encircleth the people; . . . against disease, against anxiety, against the charms of foolish women. . . . The girdle of John is my girdle, . . . it putteth to shame the wrath of men, it wardeth the charms of women. The girdle of the serpent is my girdle, the serpent is about me that men may not wound me, that women may not destroy me; to the stars it hath exalted me; at my hour it is about me.'

3. Girdles used as amulets for the cure of disease and for facilitating childbirth.—(a) *For the cure of disease*.—Girdles used as amulets for curing diseases are to be met with in many countries, and are employed in the treatment of multifarious conditions. No doubt they originally had some religious signification, but in the majority of cases this has been completely lost. Four in-

stances may be cited as examples of their use. The natives of the Island of Harris wore a girdle of sealskin about the waist for removing sciatica; and in Aberdeenshire one was employed to cure 'chin-cough' (whooping-cough). In Ardnarmurchan to this day, when a child is born, a rope of grass is wound round it to keep away many diseases; an incantation is used, and the grass must be pulled, not cut; some place the rope round the neck and chest in the form of a cross; and it is finally cut into nine pieces and flung into the wine.¹ Among the Niam-Niam and Gour Tribes of Bahr al-Ghazal in Southern Egypt, a tight cord is placed round the chest of a man suffering from pleurisy; to the cord cylindrical wooden charms are attached.² These must suffice as typical illustrations of the wide distribution of such beliefs and of the variety of conditions in which they are employed.

(b) *In pregnancy and childbirth.*—The application of the girdle during pregnancy and labour forms a curious ethnological problem. It is well known that the popular idea in most nations is that everything must be loosened in these contingencies: thus, husbands must not sit with their legs crossed, doors must be opened, knots of all kinds undone, and the hair even loosened. Whether the girdle idea arose as an offshoot of the sacrificial girdle or as a simple means of applying *vis a tergo*, one is not prepared to say with certainty, but the preponderance of evidence is in favour of the religious origin, as we shall attempt to indicate.

In the Brāhman marriage rites the bride is invested with a red and black woollen or linen cord with three amulet gems; this is not the sacrificial cord, which women were not allowed to wear.³ In popular Hindu birth-customs, a charm is bound about the belly of a woman in labour; this charm consists of an equilateral triangle or a collection of magic words arranged in three rows of three.⁴ In an Assyro-Babylonian fragment in the British Museum an incantation recited for a pregnant woman mentions 'binding being relieved.'⁵ The Bab. Istar is goddess of the pregnant and of those in labour, and carries as symbol the womanly girdle;⁶ Istar is, let it be noticed, comparable with Aphrodite and Frigga. Among the Greeks, a birth was forwarded or retarded by divine beings, the Eileithyiai, handmaids of Hera; there seem to have been two Eileithyiai, one advantageous and one unpropitious.⁷ According to Theocritus,⁸ the former is called 'the girdle-loosing' (λυσίγωνος). Later the two Eileithyiai were merged into one, who became the Roman Lucina. The Troezenian maidens had before marriage to dedicate their girdles to Apaturian Athene;⁹ and Athenian women pregnant for the first time hung up their girdles in the temple of Artemis.¹⁰ The Roman ladies bound the abdomen with a waistband-like girdle from the eighth month of pregnancy, and these bandages were probably made near the image of some god;¹¹ the girdle was loosened at the confinement; hence the goddess of birth came to acquire the epithet *Solvizuna*, 'the girdle-

loosing.' In some cases the husband seems to have tied and unloosened the girdle.¹²

It will have been perceived by this time that two or three variations of custom exist in regard to these girdles. In some cases, the girdle is applied during labour as a charm, in others as a means of pressure, and it is also applied, probably as a support to the abdomen, in the later months of pregnancy, and removed when labour approaches. This introduces us to an interesting philological curiosity connected with the last variety. The Latin word *inincta* means 'girded,' sometimes 'ungirdled,'¹³ and, in the vulgar tongue, 'a pregnant woman'; from this is derived the Italian *incinta*, 'pregnant,' Spanish *estar encinta*, 'to be pregnant,' French *enceinte*, 'pregnant,' and probably German *entbinden*, 'to unloosen,' and 'to deliver.' These words furnish excellent confirmatory evidence of the fact that the girdle played a most important part in pregnancy in early times. Amongst the Jews a girdle made of snake's skin or that of a she-ass was worn to prevent mishaps at birth, and the Turkish women hold similar beliefs;¹⁴ compare with the Jewish custom that of Brandenburg women, which consisted in binding the abdomen with a snake's skin to gain an easy delivery.¹⁵

The same beliefs are prevalent amongst the less civilized races; thus, in China, a belt is used during pregnancy and loosed at labour; the Japanese women wear a long and flowing silken girdle, and the custom is said to have been originated by the Empress Djin-go-Kogu about A.D. 200. The fifth month is selected for its application, and a girdle belonging to a woman who has had easy confinements is favoured and, therefore, borrowed, such a woman being referred to as 'the girdle-mother'; after the birth, part of the girdle is used to make some of the child's clothing.¹⁶ The Kalmuks, nomads of Mongolian race, buckle broad leather belts around the abdomen of the patient as soon as labour begins, and use pressure from above downwards;¹⁷ and the Burmese women wear a tight bandage from the 7th month onwards to prevent the child ascending too far.¹⁸ The central Australian tribes have curious modifications of these customs. A certain stone is believed to contain the spirits of children; by visiting it a woman becomes pregnant; and, by tying his girdle round the stone, a man can cause his wife to be withchild. Again, the Arunta husband removes his hair girdle, which is then tied tightly round the woman just under her breasts, probably with the idea of expelling the child.¹⁹ During a Zulu confinement a grass rope is tightly fastened round the middle of the woman to prevent the child slipping up again;²⁰ and, to judge from an illustration, the girdle is also worn during pregnancy.²¹ The Bantus of South Africa employ the girdle as an amulet for easy delivery.²² A very curious girdle is used by the Shangan women of Portuguese East Africa; it is of woven fibre, hinged in the middle so as to resemble a pair of callipers; but, as its height is only 6-7 in., one fails to understand how it is ap-

plied.¹ The practice is general among the American Indians, where the idea again seems to be pressure; the 'squaw belt' used by the Sioux Indians is of leather 4 in. wide, and has three buckles.² In Macedonian folklore, if one's girdle becomes undone, some woman of the family has just been delivered, and it is also an omen of easy delivery; girdles have also a place in their marriage ceremony.³

In historic times, and particularly among Catholic peoples, the belief in the efficacy of girdles in difficult labour has been, and is probably still, rife. In France, the girdle of St. Oyan; in England in 1159 that of St. Joseph, and that of the Abbot Robert of Newminster; and of the Holy Margareta in Swabia, have all been used for this purpose. In Germany a cord the length of the standing image of St. Sixtus was used about the 14th century.⁴ Spanish women tied their girdles or shoe-latchets about one of the church-bells, and struck the bell thrice.⁵ Further, we find in 1502, under the expenses of Elizabeth of York, a sum of money paid 'to a monke that brought our Lady gyrdelle to the Quene,' and the note that 'it was probably a relic from a monastery for her to put on in labour, as it was a common practice for women in this situation to wear blessed girdles.' Sometimes a long scroll containing the Magnificat was used. Dr. Leighton writes in a letter to Lord Cromwell (1537): 'I send you also Our Ladys Girdle of Bruton red silke, a solemn relike, sent to women in travail.' Other charms of a like nature were bound to the thigh.⁶

In the *Battle of Lora*, by Ossian (James Macpherson), the passage occurs:

'An hundred girdles shall also be thine, to bind high-bosomed maids, the friends of the births of heroes, the cure of the sons of toil.' Macpherson adds a footnote stating that 'Sanctified girdles, till very lately (1761), were kept in many families in the north of Scotland; they were bound about women in labour, and were supposed to alleviate the pains and to accelerate the birth. They were impressed with several mystical figures; and the ceremony of binding them about the woman's waist was accompanied by words and gestures which showed the custom to have come from the Druids.'

In commenting on this note, Laing believes that they were girdles consecrated by Irish saints and not by Druids,⁷ and one is inclined to homologate his criticism. These girdles still exist. Thus, in 1911, Henderson states that they are 'sometimes still worn by pious women . . . to "sain" the expected child as well as the mother from all harm, and to attach all good spiritual powers on her side.'⁸ That they are kept secret is evident, as the present writer has corresponded with several Highland medical men, none of whom can trace one.

Another modern survival of the custom exists in Brittany, where the Ursuline nuns of the Quintin convent send to any of their pupils who have married a girdle of white silk which has been touched by a relic of the Virgin and inscribed in blue letters with the words 'Notre Dame de Délivrance, protégez-nous.' The recipient hastens to put it round her body and compresses herself with it.⁹

Lastly, to bring the subject down to the present

day, the writer met with one of those girdles in Dublin; it was an ordinary leather belt, old and greasy, about 1½ in. broad and possessing an iron buckle; it was applied loosely round the patient's chest, and the writer was assured that it would hurry up matters; this it probably did, although the action must have been purely a psychological one. On inquiry of the person who owned it, no information could be got; but subsequently it was ascertained that it was a belt worn by people who are enrolled in a society of St. Augustine, and helps them in times of sickness and childbirth.

WALTER J. DILLING.

GIRNAR.—A sacred hill and place of pilgrimage of the Jains, with numerous ruined temples, situated in Kāthiāwār, Bombay; N. lat. 21° 30', E. long. 70° 42'. The hill reaches a height of about 3500 feet above sea-level, and includes five peaks, one of which was, till recently, a haunt of the loathsome ascetic Aghoris (*q.v.*). In the opinion of the Jains, the sanctity of the place is second only to that of Palitana, because it is associated with Neminātha, the twenty-fourth of their Tirthankaras, or deified saints. A rock at the foot of the hill is engraved with a copy of the edicts of Aśoka (*q.v.*); cf. V. A. Smith, *Aśoka*², Oxford, 1909, p. 129 f.), and two other inscriptions—one of the Satrap Rudradāman (c. A.D. 150), recording the construction of the Sudarśana tank; and a second its destruction and repair in A.D. 458 (V. A. Smith, *Early Hist. of India*², Oxford, 1908, pp. 129 f., 290).

The original name of the mountain was Raivata or Ujjayanta; and the Buddhist pilgrim, Hiuen Tsiang, describes it under the Pāli form of the latter title, Yuh-chen-to or Ujjanta (S. Beal, *Buddhist Records of the Western World*, London, 1884, ii. 269). The Jain temples, the largest of which is that dedicated to Neminātha, are fully described by Burgess in his Report. On the verge of the hill, at some distance from these temples, is the huge isolated rock, known as Bhairava-jāp, 'the place where charms are recited in honour of Bhairava,' Śiva in his destructive form. In former days, fanatics used to hurl themselves down the precipice, in the hope of gaining immediate entrance into the paradise of Śiva (cf. Crooke, *PR* ii. 169). Another interesting temple is that dedicated to Ambā Mātā, the Mother-goddess, now one of the many forms of Umā or Pārvatī, the consort of Śiva (see DURGĀ). Here newly-married Brāhman couples resort, have their clothes tied together, and present coco-nuts and other offerings to the goddess, in the hope that she will secure for them a continuance of wedded felicity.

LITERATURE.—The place is fully described by J. Burgess, 'Report on the Antiquities of Kāthiāwād and Kachch,' in *ASW* ii. (1876) 93 ff. Some further information is given in later *Progress Reports of the W. Circle*, esp. that for 1898-99, p. 16; see also *IGI* xii. (1908) 247 f.; *BG* viii. (1884) 441 ff.

W. CROOKE.

GLASITES (SANDEMANIANS).—A Christian sect founded by John Glas (1695-1773), and his son-in-law, Robert Sandeman (1718-1771). Glas was born at Auchtermuchty, in Fife, where his father was parish minister. He graduated at St. Andrews, and studied for the ministry at Edinburgh. Licensed by the presbytery of Dunkeld, he was ordained as minister of Tealing (1719), and soon attracted large congregations by earnest and effective preaching. He was led early in his ministry to study the Scripture doctrine of the Church, through 'being brought to a stand,' while lecturing on the Catechism, by the question, 'How doth Christ execute the office of a king?' The result

of his inquiry appeared as early as 1725 in the forming of a society 'separate from the multitude,' drawn from his own and neighbouring parishes. Glas taught that there is no authority in the NT for a National Church, or for a National Covenant, such as then existed in Scotland. He maintained that the magistrate as such has no function in the Christian Church, and that the use of political and secular weapons as a means of reformation, instead of the word and spirit of Christ, is wholly wrong. This is the argument of his most famous treatise (Edinb. 1727), *The Testimony of the King of Martyrs concerning His Kingdom*. When it became apparent that Glas was teaching the Scriptural authority of Independency he was summoned before his presbytery. In 1728 he was suspended from the discharge of ministerial functions, and in 1730 he was deposed.

As the members of his congregation adhered to him, the first 'Glasite' church was formed, and Glas ministered to communities of this order in Dundee, Edinburgh, and Perth. They observed the primitive custom of the kiss of peace; and the Agape was celebrated as a common meal with broth. From this custom they became known as the 'kail kirk.' Although the General Assembly removed the sentence of deposition which had been passed, Glas remained an Independent minister to the end.

At Perth, Glas was joined by Robert Sandeman, who had become his son-in-law. Sandeman gradually became the recognized leader of the churches of the order. He was responsible for drawing the charge of antinomianism on the Glasite churches. He taught 'that the bare death of Jesus Christ, without a thought or deed on the part of man, is sufficient to present the chief of sinners spotless before God.' He maintained that justifying faith is a simple assent to the Divine testimony concerning Jesus Christ, differing in no way from belief in any ordinary testimony.

Owing to Sandeman's prominence, the Glasite churches became known as 'Sandemanian.' Diligent endeavours were made to make these churches the exact reproduction of the NT type. Elders, pastors, or bishops, who were all equal, were chosen without regard to education or occupation. Second marriage was a disqualification for office. There was a weekly observance of the Lord's Supper, and a love-feast at which every member had to be present. The members at one time washed one another's feet. Things strangled and blood were prohibited as articles of food. Decisions of the church must be unanimous. The accumulation of wealth was regarded as unscriptural, and therefore wrong, and each member considered his property as liable to be called upon at any time to meet the wants of the poor or the necessities of the church.

There were about a dozen Glasite or Sandemanian churches in Scotland, and a few in England and America. Michael Faraday was for many years a member of the Sandemanian Church in London. The most rigid churches of the order have now become extinct, and most of the members have joined the Scottish Congregational or Baptist Churches.

D. MACFADYEN.

GNOSTICISM.—I. Name and character.—Under this name are included all the manifold systems of belief, prevalent in the first two centuries of our era, which combined the Christian teachings with a *γνῶσις*, or higher knowledge. According to Hippolytus (*Refut.* v. 6), the title of

'Gnostics' was assumed by the Naassenes; and we may infer that it did not originally bear the wider connotation which was given to it later. The pursuit of *γνῶσις* was so intimately bound up with the religious sentiments of the age that those who shared in it were unconscious of any close affinity, and did not think of calling themselves by a common name. But the eventual triumph of orthodox Christianity brought into clear relief the identity of principle which underlay the various heretical doctrines, and caused them to be grouped together under the general designation of 'Gnosticism.'

We have to deal, therefore, not so much with a definite scheme of thought as with a large and many-sided movement, which was continually changing. The nature of this movement has often been misunderstood through a failure to apprehend the precise significance of the term *γνῶσις*. It has been taken for granted that the Gnostics were the intellectual party in the Church, and that their object was to resolve the Christian message into a philosophy acceptable to cultivated minds. This estimate of the movement is not wholly erroneous. In working out their beliefs the Gnostic thinkers were led to construct highly speculative systems, which sought to explain the origin of evil, the nature of the Divine being, and the interaction of the spiritual and the material. In the words of Theodotus, as quoted by Clement of Alexandria (*Exc. Theodot.* 78), *γνῶσις* is 'the knowledge of who we were, what we have become, where we were, into what place we have been thrown; whither we are hastening, whence we are redeemed; what is birth, what is re-birth.' This definition, however, belongs to the later, more speculative phase of Gnosticism; and in any case it suggests the idea of a knowledge not attainable by ordinary intellectual processes, and only to be gained by a mystical enlightenment. To the term *γνῶσις*, as we meet it in Hellenistic writings, there always adheres this suggestion of a knowledge obtained supernaturally. The magical papyri describe their contents as *γνῶσις*. The word is constantly employed, by religious and philosophical writers, to denote an immediate vision of truth, as contrasted with a wisdom that comes by seeking. These two kinds of supernatural knowledge have both to be taken into account in estimating the purpose and character of Gnosticism. On the one hand, the Gnostic is in possession of an occult lore. He participates in mysterious rites, and is instructed in magical watchwords and secret names.

'By means of this *γνῶσις* a man receives power to overcome those very angels that made the world' (Iren. i. xxiii. 5). 'This is the book of the *γνῶσις* of the invisible God, contained in the hidden mysteries which show the way to the elect generation' (*Book of Jeu*, i. ch. 1).

On the other hand, he undergoes a mystical experience whereby he apprehends the true nature of God and enters into communion with Him.

'He who possesses a heart that is sanctified, and that shines with light, is blest with the vision of God' (fragment of Valentinus, quoted by Clem. Alex.).

The idea of *γνῶσις* is closely related to that of revelation. It is assumed in all the systems that man is unable of himself to attain to the higher knowledge, which is, therefore, communicated to him by a being from the heavenly world. This fundamental doctrine of Gnosticism has its classical expression in the Hymn of the Naassenes (Hippol. v. 5):

'Then said Jesus: Father, a searching after evil on the earth makes man to wander from thy Spirit. He seeks to escape the bitter chaos, but knows not how to flee. Wherefore send me, O Father! With the seal with I descend, travel through all Æons, disclose all mysteries, show the forms of the gods: the secrets of the holy path which are called "Gnosis" I will impart.'

Each of the sects claimed to be the repository of a secret message, revealed from heaven; and on the knowledge of this message, with its accompanying symbols and ritual, the entrance into the higher life depended. As there had been an original revelation, so, from time to time, there had arisen chosen spirits who had apprehended it with peculiar strength and fullness. Their record of it was contained in sacred books which had been handed down in the community of their disciples. The abundant literature of Gnosticism was for the most part pseudonymous. Sometimes the books were assigned to purely fanciful names, sometimes to prophets or heroes of antiquity, sometimes to disciples of Jesus who were supposed to have transmitted His secret teaching. Apart from this fabricated literature, the writings of the New Testament, and especially the Fourth Gospel, were transformed into Gnostic documents by means of allegorical commentaries. The revelation, however, was not wholly a matter of tradition. Gnostic teachers occasionally laid claim to an original insight into the mind of God, or even to a participation in the Divine nature. The Patristic references to cults that grew up around the persons of individual Gnostics (e.g. Simon, Epiphane) have often been called in question, but without sufficient reason. Probably in all cases the founder of a Gnostic sect was regarded with a veneration which would hardly have been paid to a philosophical teacher. He was not only a teacher but the medium of a revelation, and in some degree, therefore, a manifestation of God.

2. Relation to syncretism.—According to the Church tradition, the originator of the Gnostic movement was Simon of Gitta, the 'sorcerer' whom Peter and John encountered at Samaria (Ac 8²⁴). There is no reason to doubt that Samaria, with its mixed population, was an early centre of Gnosticism, or that Simon was a historical personage who was prominently connected with some important phase in its development. But the movement as a whole cannot be traced back to the activity of any individual teacher. It manifested itself under so many forms and in localities so widely separate that we can regard it only as the outcome of ideas and tendencies which were involved in the general life of the time. This is acknowledged by the Fathers themselves, who derive the heresies of Simon and his successors from Greek philosophical speculation; and the hypothesis has been accepted, in a modified form, by not a few modern scholars. Harnack defines Gnosticism as 'the acute . . . hellenising of Christianity' (*Hist. of Dogma*, i. 226). The Gentile mission entailed a rationalizing of Christian doctrine by means of the categories of Greek thought; and this process pursued its natural development in the work of the early theologians, and ultimately resulted in the orthodox creeds. But meanwhile there was the stormy episode of Gnosticism, when the Greek interpretation was pushed to an extreme limit by irresponsible thinkers. This view, however, cannot be maintained if we take 'hellenising' in its narrower sense of philosophical re-statement. It is true that in Gnosticism we meet with a variety of terms borrowed from philosophy, and in almost all the systems there is some attempt at a speculative construction. But, if Harnack's definition is to stand, we must read the widest meaning into the idea of 'hellenising.' The Hellenic spirit which so profoundly modified the Christian doctrines had itself been modified, in the most radical fashion, by influences from without.

For the true explanation of the Gnostic movement we must turn to the process of syncretism which accompanied the breaking up of the pagan

religions. This amalgamation of different types of national belief was carried out most fully in the first two centuries of our era; but we can trace its beginnings long before. Even in the period of the ancient Oriental monarchies, the frequent transplanting of peoples had led to a fusion of religions, as in the case of the tribes settled in Samaria, who 'feared the Lord, and served their own gods' (2 K 17²⁴). The fusion took effect on a large scale when Persia fell heir to the Babylonian Empire and imposed its dualistic religion on the various Semitic provinces. After the conquest of Alexander the tendency to syncretism became still more pronounced. The Hellenic culture, now diffused over the East, acted as a solvent upon the native forms of belief. Their myths and observances were interpreted in the light of Greek thought, and were at the same time thrown together in new combinations. The process was completed under the Roman Empire, which finally broke down all national boundaries and promoted a free intercourse of the Eastern races with one another and with the peoples of the West. Moreover, in the Roman period the influence of Stoicism became everywhere prevalent. The Stoic philosophy linked itself readily with the most diverse religious systems, and helped at once to disintegrate and to remould them. All over the East the syncretistic movement was in process, but it advanced most rapidly in the cosmopolitan centres, such as Antioch, Alexandria, and the great cities of Asia Minor. In each of these centres there arose a mixed religion, to which the local type of belief—Syrian, Egyptian, or Phrygian—naturally contributed the largest share. So far as the masses of the people were concerned, the syncretism was for the most part fortuitous, but there were circles in which it was carried out deliberately. From the time of Plato, the idea had obtained currency that a deeper wisdom was enshrined in the Oriental mythologies; and the beliefs now surging in from the East were eagerly embraced by eclectic thinkers. One man would often seek initiation into a number of cults, and would endeavour, with the aid of philosophical categories, to combine their teachings into a single system. We have thus to do with a fusion of religions which, to a great extent, was artificial—the result of conscious effort on the part of cultured and intellectual men. It was this that distinguished the syncretism of the 1st cent. from similar movements of which we have record elsewhere. It is this, too, that partly explains the strange mixture of crude mythology and lofty speculation in the typical Gnostic schools.

Judaism, more than any other Eastern faith, was a sharply defined religion, excluding on principle all foreign elements of belief. But Judaism itself had become involved in the general syncretistic movement. The Apocalyptic literature bears witness to the many alien influences which had affected Jewish theology during the period that had succeeded the Exile. At the time of Christ there were sects even in Palestine (e.g. the Essenes [7.v.]) which gave a place to foreign rites and speculations alongside of orthodox Judaism; and the communities of the Dispersion were much more accessible to influences from without. Of this we have the most signal, but by no means the sole, evidence in the case of Philo, who represents a studied attempt to bring the OT teaching into harmony, not only with Stoic and Platonic ideas, but with the native traditions of Egypt. The conspicuous part which is assigned in Gnostic speculation to OT legend and theology can, no doubt, be explained in great measure by its Christian affinities; but we have to allow for the probability that Judaism had made an impression

on syncretistic thought before Christianity had yet emerged. Indeed, it is possible—although of this we have no certain proof—that the Jewish contribution was of a decisive nature, and was one of the main factors which enabled Gnosticism to effect its alliance with Christianity.

The Gnostic movement, then, was the result of that mingling of diverse beliefs which had long been in process at many different centres; and it had developed itself, in all its essential features, before the Christian era had fairly begun. Of this pre-Christian Gnosticism we still have an impressive monument in the so-called Hermetic literature of Egypt—a literature which was compiled from sources that were certainly in existence in the 1st or 2nd cent. B.C. Not a few of the Gnostic systems described by the Fathers betray a pagan origin, although they have been artificially combined with Christian elements. Reitzenstein has succeeded in detaching a purely pagan document which underlies the Naassene teaching, as preserved by Hippolytus; and a similar analysis could probably be applied to the records of other systems with a like result. But, while we can thus speak of a pre-Christian Gnosticism, it was by no accident that the movement identified itself with Christianity in such a way that the earlier stages of its history became only the preparation for this, its characteristic development. From the Christian teaching it received a mighty impulse. The contact with a living religion gave a new vitality to pagan thought and compelled it to offer its own solution of the ultimate problems.

How was it that the syncretistic movement came to ally itself with nascent Christianity? A definite answer to this question is hardly possible. The tradition that connects the beginnings of Christian Gnosticism with Samaria may be well founded, for in the neighbourhood of Palestine the new religion would be first known and welcomed. But the same causes that led to its recognition in Samaria would operate independently in other centres where it was afterwards established. The Eastern religions were superficially akin to Christianity in their presuppositions and motives. They represented a striving after purity and redemption, and a belief that the true path to blessedness could be discovered only in the light of a Divine revelation. Earnest thinkers, in their effort to win the secret of the higher life, found in Christianity a wealth of spiritual conceptions which promised to aid them in their quest. The life of Jesus Himself was capable of an allegorical interpretation whereby it could be partially fitted into the prevailing mythology. In their eclectic scheme, therefore, they made room for the Christian message, and by its intrinsic power it gradually won for itself a central place. It must be remembered, too, that Christianity, when it first entered the Gentile world, was still in the process of free development. Within the Church itself its teachings were subjected to a constant revision, and the Hellenistic thinkers had little difficulty in modifying them yet further and adapting them to alien speculations. For that part, the assimilation of Christianity to the syncretism of the age was not effected entirely from the outside. In their endeavour to make their Gospel intelligible to the Gentile world, the missionaries had themselves clothed many of its conceptions in terms and imagery derived from the pagan cults. The cardinal idea of a salvation offered by Christ had been expressed, even by St. Paul, in a manner that easily suggested the current beliefs. Moreover, the Church was compelled, by deeper reflexion on its doctrines, to interpret them along the lines of Gnostic thought. The new religion, springing as it did from the soil of Judaism, was apocalyptic in character, and was thus

involved with conceptions that became more and more untenable. A reaction against the primitive millenarianism set in almost from the beginning; and the main task which was laid upon Christian thought after the end of the 1st cent. was that of transforming its apocalyptic beliefs into their spiritual equivalents. In the pursuit of this task it could not but avail itself of ideas which were already familiar in the religions of the time. Thus the alliance between Christianity and syncretism was a mutual one. At a later date the Church perceived the danger that threatened it from the encroachment of foreign beliefs, and required to free itself at the cost of a life-and-death struggle. But there was an earlier period when the boundaries between the Church and the contemporary cults were ill-defined, and influences could pass by many channels from the one side to the other. It was in this period that the Gnostic movement properly so called—the adoption of Christianity into the syncretistic system—took its rise.

3. Origin.—Gnosticism resulted from the fusion of a number of diverse beliefs, and the tracing of its origin is, therefore, beset with many complex problems. The attempt has been made by scholars in recent times to connect it more definitely with one or other of the religions out of which it sprang, but there are several considerations which make this attempt not a little hazardous. (a) 'Gnosticism' is a general term which covers a wide variety of religious thinking. It may be possible to assimilate one particular system very closely to a given religion; but the conclusions thus obtained cannot be made valid for the whole many-sided movement. (b) Certain features are common to many different Oriental religions (e.g. the Mother, the Redeemer, the Heavenly Man, the Serpent, the Ascent to a higher and the Descent to a lower state of being). The presence of these features in Gnostic systems affords us no clue to the source from which they are derived. They can be traced exclusively to one religion only by obscuring details in which they remind us of another. (c) Even when a characteristic element can be assigned, with practical certainty, to a given religion, we cannot be sure that it was borrowed directly from that source. A syncretism had been in process for a much longer time than we have means of following it; and the element in question may already have been incorporated into some later faith, from which it passed into Gnosticism. (d) In Gnostic thought the concrete is resolved into the abstract. Personal names are replaced by terms of philosophy, mythological figures are changed into qualities and attributes, and events into cosmical processes. It is next to impossible to make out the original colours and outlines of this blanched picture.

But, while we cannot determine, with anything like precision, the elements which enter into Gnosticism, some valuable light has been thrown on the problem by the investigations of recent years.

The work of Anz (*Ursprung des Gnostizismus*) was the first attempt at a scientific analysis. He discovered the central idea of Gnosticism in the ascent of the soul through successive stages of being, and sought for the origin of this conception. He found it in the astral religion of Babylonia, with its doctrine of a series of heavens, each under the rule of a planetary god, through which the soul must make its ascent by means of magical passwords delivered to the 'guardians of the doors.'

To this theory of Anz, at least, in the extreme form in which he presents it, there are several objections. (a) The doctrine of the ascent of the soul, though, no doubt, of the first importance, cannot be singled out as the whole message of Gnosticism. From some systems it is entirely absent, and, even where it occupies a prominent place, it is combined with other ideas no less essential. The derivation of this one element of Gnostic thought cannot be made conclusive for the origin of the movement as a whole. (b) In the 1st cent. A.D., and, indeed, for several centuries before, the Babylonian religion belonged to a remote past. It is true that many of its superstitions survived in the current astrology, but they had now

merged in the general belief of the time. To assume a Babylonian origin for any system of thought in which we can recognize them is to confuse our whole historical perspective. (c) The planetary gods, as we find them in Gnosticism, have an altogether different place from that which they occupy in the Babylonian religion. They are no longer supreme Divinities, but are inferior and antagonistic powers by which man is held in bondage. His one endeavour is to throw off their bondage, and thus to procure for himself true life. Admitting, then, that there are elements in Gnosticism which must have had a Babylonian origin, it seems necessary to hold that they came in by an intermediate channel.

Bousset (*Hauptprobleme der Gnosis*) has advanced strong reasons in favour of the view that this channel was the Zoroastrian religion. He lays especial stress on the altered position ascribed in Gnosticism to the planetary gods, and finds in it an instance of that 'degradation' which is not uncommon in religious history. The Persians after conquering the Babylonian Empire had allowed a place to the ancient gods, but had deposed them from their sovereign rank to that of subordinate demonic powers. To the Persian influence Bousset would attribute not only the Babylonian elements in Gnosticism, but most of its characteristic features, and, above all, the dualism which marks its theology as a whole.

It may be doubted, however, whether even the Persian influence was exercised directly. Not a few of the Gnostic doctrines are closely allied with those of Mithraism, which had branched out from the main stem of the Persian religion, and had already, in the 1st cent. A.D., become widely prevalent in Asia Minor. Mithraism had adopted the conception of the ascent of the soul through the planetary spheres, and had associated it with a sacramental and ritual system of a highly elaborate kind. As a mystery religion it powerfully attracted the votaries of *gnosis*. But the influences from Babylonia and Persia were combined with others, hardly less potent, which can be traced back to Egypt.

An Egyptian origin of Gnosticism was first maintained by Amélineau, who based his argument on fancied resemblances between the mystical symbols in the Coptic documents and certain hieroglyphic signs. Of late years, Reitzenstein and other investigators have adduced stronger evidence, derived from the inner affinities of Gnostic with Egyptian thought. It is significant that the Hermetic literature, our chief existing record of pre-Christian Gnosticism, was composed in Egypt and is impregnated with Egyptian ideas. On the ground of the parallels supplied by this literature, we can assume, with a fair degree of confidence, that the Gnostic thinkers were indebted to Egypt for their theory of the Pleroma, of the birth of the *Æons* by a process of emanation, and of the syzygies, or pairs of male and female gods. To Egyptian influence we may also assign the conception of an apotheosis, or absorption into the Divine nature, which in Gnosticism is the final goal of the ascent to heaven.

The main sources of the Gnostic beliefs must be sought in Babylonia, Persia, and Egypt; but other religions added their contribution. Phrygia had long been the home of a peculiar worship, mystical and ecstatic in its character, which had powerfully affected all the Hellenistic cults. It centred in the two figures of Cybele and Attis, the Mother and the Victim-Deliverer; and it was largely through Phrygian influence that these figures, although they have counter-parts in almost all the cults, were brought into prominence. They hold a foremost place in Gnosticism, and are conceived in a manner that constantly suggests the Phrygian myth; indeed, the Naassene document in Hippolytus appears to be borrowed directly from Phrygian sources. In later Gnosticism we begin to discern traces of influences proceeding from India. The Basilidean system, as described by Hippolytus, affords striking analogies to Buddhist thought in its negative conception of God and its doctrine of the Great Ignorance (*Nirvāṇa*) which will accompany the final consummation. The theory of the Parasitic Soul, as held by Isidorus, son of Basilides, likewise suggests a well-known Buddhist conception, and Bardesanes, the 'last of the Gnostics,' was confessedly influenced by his acquaintance with Indian thought. It is easy, however, to attach undue importance to the Indian contribution even in the later systems; in the Gnosticism of the main period it seems to have played little or no part.

The ground-work of Gnosticism was supplied, then, by a number of mythologies which had become fused together in the process of syncretism. Ideas that had come down from the astral worship of Babylonia were blended with Persian and Mithraic beliefs, and these, again, with the cults of Egypt and Phrygia. Other religions (e.g. the local cults of Syria) also made themselves felt, although their contributions cannot be identified with any certainty. It is more than likely that this mixture of Oriental beliefs had been partially leavened, even before the Christian era, by elements taken over from Judaism. As a result of the Gnostic alliance with Christianity the OT came to occupy an even greater place in the building of the various systems. Attention was directed, more especially, to the opening chapters of Genesis, which hence-

forth supplied the framework for the Oriental cosmologies. The whole mass of belief which had thus been compounded out of the débris of many religions was informed with the spirit of Greek speculation. What had been given as myth and legend was construed metaphysically. Theories concerning the nature and destiny of the soul were interwoven with the ancient traditions. But, while Gnosticism availed itself freely of the language and ideas of philosophy, the appearance which it thus assumed was for the most part deceptive. It was not a speculative but a mythological system. In spite of all efforts to read a deeper meaning into its hieratic doctrines, the material could not be made tractable to philosophical interpretation. As a movement which strongly influenced Christianity in its formative period, Gnosticism has an important place in the history of human thought, but in itself it remained sterile. For all its pretension to hold the key to a higher wisdom, it never really transcended the primitive mythology out of which it sprang.

4. Doctrine of redemption.—The affinities of Gnosticism are not with philosophy but with religion, and it has to be explained throughout in view of its practical religious motive. This is forgotten by the Christian polemical writers, who deal almost exclusively with the Gnostic speculations. In all the sects these, no doubt, occupied a large place, but they were at best subsidiary to the religious interest. The central idea of Gnosticism, as of all the mystery religions, was that of redemption. A *γνώσις*, or spiritual enlightenment, was offered to the elect, whereby the soul might be delivered from its condition of bondage. Redemption, as understood by Christianity, is fundamentally ethical, although the ethical meaning is obscured, even in the NT, by apocalyptic or speculative forms. But in Gnosticism the ethical aspect of redemption falls almost completely into the background. Here we may discern the chief peculiarity of the movement, which gave direction to all its thinking, and brought it finally into open conflict with the orthodox Church.

Two ideas are involved in the Gnostic doctrine of redemption. They are closely associated, or even identified, in all the systems, but were different in their origin, and need to be considered separately. (a) The redemption is a deliverance from the material world, which is regarded as intrinsically evil. Gnosticism based itself on the Persian dualistic conception; but, while in Parsiism light and darkness appear as two natural principles in eternal conflict, the Gnostics transformed the physical dualism into a metaphysical one. Under the influence of Greek speculation the contrast of light and darkness became that of spirit and matter—the lower world of sense and the higher world of pure being. Although these two are viewed as irreconcilable opposites, it is recognized that they have come to be mingled together. All the evil and misery in the world are set down to this forbidden intermixture of the antagonistic principles. This is the grand calamity which has made necessary a work of redemption.

In most of the Gnostic systems the Oriental dualism is frankly accepted, although we constantly meet with efforts to overcome it. The Naassenes conceived of a 'chaos poured forth from the First-born.' The later Valentinian school regarded the fall of Sophia as taking place within the Pleroma. Basilides, according to Hippolytus, resolved the history of all being into a single continuous process. Moreover, in a number of systems a mediating power is assumed between light and darkness (cf. the Sethian conception of *πρωτομα* as a fragrance everywhere diffused). To thinkers trained in Greek philosophy the mere opposition

of the two worlds was a standing challenge to discover some ground of unity. But the dualism is rather concealed than overcome, and may be traced more or less clearly underneath all the apparently monistic constructions. Indeed, it constitutes the basis apart from which the Gnostic type of religion has no purpose or meaning. A spiritual essence has come to be imprisoned within a sphere which is radically alien to it; hence the need for a redemption, to be achieved only by some supernatural power.

(b) But the idea of deliverance from the material world is blended with the further idea of escape into a world of freedom. To ancient Hellenic thought, necessity was the power above the gods (see FATE [Greek and Roman]); and at the beginning of the Christian era this mode of thinking had been immensely strengthened by Oriental fatalism. The conception of a *ελευμένη* imposed on all human action had grown into a veritable tyranny—all the more so as it was now connected with astrological beliefs which had come down from the Babylonian religion. The planets were regarded as the *ἀρχόντες* or *κοσμοκράτορες* to which the whole creation is subject. By their influences, controlling him from his birth, man is forced under the yoke of mechanical necessity, although conscious all the time of his vocation to freedom. Gnostic thought took its direction from these contemporary beliefs. Its motive was a genuinely religious one—to secure for the human spirit that liberty which is implied in its very nature. The deliverance, however, was sought for along the lines suggested by astral mythology. It was assumed that the soul was held captive by the planetary powers; and in order to win freedom it had to ascend through the spheres over which they ruled, subduing or deceiving the guardian demons by means of charms and pass-words. To this purpose of circumventing the hostile rulers the secret discipline of Gnosticism was mainly directed. The adept was prepared for his future journey by sacraments and lustrations, and by instruction in the hidden names of angels and the words and signs by which they could be overcome. All the resources of magical *γνῶσις* were called into play to effect the deliverance of the soul from the cosmic powers which had brought it under the bondage of necessity.

These were the two aspects in which the idea of redemption presented itself, and they merge into one another at every point. The escape into freedom is conceived at the same time as a rising out of the material into the spiritual world. As the goal of the redemptive process the Gnostic looked for a return of the soul to its original place in the heavenly light. A doctrine of the resurrection of the body, or even of personal immortality, was precluded by the fundamental conception of matter as evil. The soul, freed from its limitations, is simply to be reunited with the 'Pleroma'—the fullness of the Divine being.

It is characteristic of all Gnostic systems that redemption is anticipated for only a limited number of chosen spirits. This has sometimes been set down to an exaggeration of the Christian doctrine of election; but it belongs rather to the aristocratic tendency of all mystery-religions, heightened, in the case of Gnosticism, by the underlying dualism. As there were two worlds, so there were two classes of men, absolutely separate from one another. For the grosser type of men, God was not responsible; only the spiritual natures had sprung from Him and were destined for the higher realm of light. These spiritual natures alone were capable of the redeeming *γνῶσις*, and to impart it to others was a profanation. The earlier Gnosticism recognizes only two

classes—the *πνευματικοί*, and the inferior class which is variously described as *ψυχικοί*, *χοϊκοί*, or *ὀλικοί*. Later schools allow for three—*πνευματικοί*, *ψυχικοί*, and *ὀλικοί*, the intermediate class representing the ordinary Christians, who possess *πίστις* instead of *γνῶσις*. The Coptic writings divide humanity into a large number of different classes. These, however, are merely attempts to conciliate the Church by obscuring the distinction between the Gnostic and the orthodox believer. The distinction is really an absolute one: those who share in the heavenly light can have nothing in common with those who are denied it.

5. Praxis and mythus.—In its essential purpose Gnosticism was a method of redemption, and consisted not so much in the profession of certain opinions as in the practice of given rites, which were supposed to aid the soul in its effort to shake off its fetters. Although the extant documents are concerned chiefly with the Gnostic theology, we have one detailed account of the praxis in the so-called *Books of Jeu*, and further light is thrown upon it by Irenaeus' description of the Marcosians and the liturgical portions of the *Acts of Thomas*. As in the Christian Church, the act of initiation took the form of a baptism; but the Gnostic rite was more elaborate, and the ordinary baptism by water was supplemented by 'fire' and 'spirit' baptisms. The worship of the various sects seems to have been accompanied by a highly complicated ritual, intended, as in Mithraism (cf. Dieterich, *Eine Mithrasliturgie*), to typify and anticipate the ascent of the soul to heaven. Each sect had its own peculiar rites—lustrations, anointings, sacramental meals, repetition of magical phrases and formulae. Symbols with a mystical import were frequently marked on the body, or were engraved on rings and gems, which were worn as amulets. Above all, the secret names of angels and demons were carefully committed to memory, along with the spells and invocations whereby the different powers of the invisible world could be controlled.

How was this praxis, consisting, as it did, of the usual apparatus of contemporary magic, related to the speculative side of Gnosticism? The relation appears to have been twofold. (1) The speculative systems were the interpretation of the praxis. In the *Pistis Sophia* we can almost follow the process by which a mythical history was woven together out of the details of the ritual, which was then regarded as the symbolical enactment of the experiences of a Divine person. The worshipper could thus feel that he was participating, by a series of sympathetic acts, in a deliverance which had already been realized on a higher stage. (2) The mythus was developed as a supplement to the praxis. Speculative minds were unable to rest in the bare assurance that by partaking in a certain ritual they would secure redemption. They could not but ask themselves why a redemption was necessary, what was its scope and nature, and by what means it had become possible? The answer to those questions was given in the Gnostic systems. Originally they were something added to the *γνῶσις* proper, which was concerned entirely with the occult rites and formulae. But in course of time they became an integral part of the *γνῶσις*. It was taken for granted that redemption was in some measure conditioned by a knowledge of those higher speculations on the ultimate problems of being.

6. General features of the mythus.—In the details of their construction the systems are widely different, and cannot be fitted into any one general scheme. Yet there are certain elements which in one form or another belong to all of them, in view of the dualistic hypothesis that underlay the whole

Gnostic theory of redemption. It followed from that hypothesis (1) that matter was intrinsically evil—a lower world standing over against that higher one into which the soul sought to escape; (2) that the soul was native to the higher world, and had fallen from it, previously to its conscious existence, as the result of some cosmical disaster; (3) that the soul could be restored only by a Divine intervention, since its progress was hopelessly barred by its imprisonment in matter. The ideas which thus presented themselves to Gnostic speculation were set forth and elaborated in terms of mythus. It was assumed that man's spiritual nature was derived from a Divine being, who had fallen out of the world of light into the world of darkness. The process of deliverance involved, in the first place, the restoration of this fallen being, and the restoration could not be effected except by the voluntary descent of another Divine being, equal or superior in rank. Around these two beings—the fallen Divinity and the Redeemer—the Gnostic mythus in all its variations may be said to turn.

Allowing, then, for an endless diversity of detail in the manifold systems, the characteristic features of Gnosticism may be briefly indicated. At the head of the universe stands a Supreme God, who is not so much a personal Deity as the abstract ground of all existence. Sometimes (as in the *Pistis Sophia*) He is conceived as pure Light. Elsewhere He bears names which serve to emphasize His absolute transcendence—Father of All, Unbegotten, Ineffable, the Unapproachable God, the Abyss, the Unknowable. The Naassene and Barbelo systems describe Him as 'the Man' or 'the Primal Man,' and traces of this conception meet us even in Valentinianism. In view of the many analogies furnished by ancient religion (e.g. Parsism, the Hermetic writings of Egypt), we cannot assign it to Jewish or Christian speculation. It runs back rather to some primitive myth, the meaning of which can now only be conjectured, and which possibly underlies the imagery of Daniel and the Book of Enoch. From the Father or Supreme God there proceed a number of beings in a descending scale of dignity, who are arranged in pairs of male and female ('syzygies'), and in their totality make up the *Pleroma*—the fullness of all blessedness and perfection. Behind this conception of the Pleroma we can discern the purely mythological idea of a Pantheon, or family of gods; but in Gnosticism it assumes a mystical character. The Divine existences, while distinguished from one another, are the manifestations of the one God, who is Himself impersonal and unknowable.

In later Gnosticism—more especially in the teaching of Valentinus and his school—the members of the Pleroma bear the name of *Aëons* (q.v.), and are created in successive pairs by a process of emanation. This doctrine of *Aëons*, in which we can trace Mithraic and Egyptian ideas modified by Platonism, has often been singled out as one of the typical features of Gnostic speculation; but it is characteristic only of certain systems, and seems to represent an attempt on the part of later thinkers to overcome the dualism inherent in the movement. In a manner which partly anticipates the Neo-Platonic theory, the Primal Being is conceived as going forth from itself in a series of existences, each at a further distance from the centre, so that the interval between God and the world is partly bridged over.

The process of redemption becomes necessary through the fall from the Pleroma of the member that stands lowest in rank. To this *Aëon* or Power is usually assigned the name of *Sophia*, a name suggested by the OT conception of the

Wisdom by which the world came into being. In Simonian Gnosis the fallen Divinity is called Helena (a reminiscence of *Σελήνη*, the moon-goddess), while in one important group of systems she appears as Barbelo (ברבלו, 'in the four is God'). The conception of *Sophia* is related in many of its features to that of the Mother (Ishtar, Isis, Atargatis, Cybele) who in the Babylonian myth descends into the abyss, where she is held prisoner. But, whatever may have been its origin, the figure of *Sophia* underwent a complete transformation at the hands of the Gnostic thinkers, who sought by means of it to solve their crucial problem of how the Divine principle of light could enter into contact with darkness. According to one theory, *Sophia* fell by leaving her appointed place in her desire to attain to the supreme light. According to another, she was lured into the outer depth by a false reflexion of the light. In Valentinianism, as in the Barbelo system represented by the *Pistis Sophia* and the *Books of Jeu*, the figure of *Sophia* is doubled. The higher *Sophia* remains in the Pleroma, or in a sphere just outside of it, while the lower *Sophia* sinks into the darkness. The purpose of this duplication is apparently to account more easily for the fall, which was unintelligible on the strict dualistic hypothesis; but it also reflects a conception of *Sophia* of which we have traces in all the systems. A twofold function is attributed to her. She is the fallen Divinity through whom the light becomes immersed in darkness; and she is also the intermediary between the higher world and the spiritual nature which has been exiled from it. Thus she is regarded not only as the object of redemption, but as herself assisting in the redemptive process—watching over the light until the deliverance comes.

The fall of *Sophia* has for its consequence the work of creation. Hitherto the world of light had stood over against an utterly formless world of darkness; but the comingling of the higher principle with the lower evolves a cosmos out of the chaos. As the agent of creation, Gnosticism assumes a *Demiourgos*, who is usually represented as the son of *Sophia*. He is himself ignorant of the Pleroma above him, and governs the world created by him in the belief that he is himself the Supreme God; but unconsciously he transmits the elements of light which have come to him through his mother. The figure of the *Demiourgos* is due to a blending of mythological with philosophical ideas. On the one hand, it points back to the astral religion of Babylonia; the *Demiourgos* (who also appears as 'Ialdabaoth'—a name of uncertain significance)¹ is at the same time the first of the Archons, i.e. the planetary god Saturn. On the other hand, it reflects the conception which has ever and again found utterance in philosophy, that creation is the result of a blind intelligence. The *Demiourgos* is conceived not as an evil power, but rather as a cosmical force which acts unwittingly. But, since he thus represents a mechanical will, controlling the spiritual life of which he has been the unconscious vehicle, he becomes the tyrant from whose thralldom the soul craves deliverance.

A singular feature of Gnosticism is the identification of this inferior God with the God of the OT. It is possible, as Bousset conjectures, that this identification was prior to Christianity, and was inspired by hostility to Judaism on the part of neighbouring peoples. But it seems more probable that we have here an exaggerated reflexion of the attitude of the early Church. Christian thought from the beginning had been compelled to deny the validity of the Law, although its

¹ Hilgenfeld, *Ketzergesch.* 258, 248, suggests ברוך 'offspring of chaos.'

claim to a Divine origin and sanction was still acknowledged. In Gnosticism, the riddle which had perplexed St. Paul and the writer to the Hebrews was solved in the most drastic fashion. The God of the OT was regarded as different from the God revealed by Jesus, and in some sense hostile to Him. He was not, as the Fathers were wont to assert, identified with Satan, but he was clothed with inferior attributes and limited to the one task of blind creation.

The fall of Sophia breaks up the perfect harmony of the Pleroma, and this cannot be restored until the lost light is recovered from the darkness. An Aeon of supreme rank—the *Soter* or *Christus*—undertakes the work of deliverance. According to the Naassene hymn, this Divine being acts throughout on his own initiative, but elsewhere (e.g. *Pistis Sophia*, Ophites of Irenæus) he is moved by the urgent prayer of Sophia. He comes down through the spheres of the Archons, taking on himself the forms of the spirits of each world as he descends. Arriving in the world of darkness, he gathers to himself the scattered seeds of Divine light, and finally re-ascends along with the rescued Sophia into the Pleroma. The figure of the Soter is itself anterior to Christianity and has many counterparts in the Hellenistic cults. Its prototype may possibly be found in the Babylonian light-god Marduk, who descends unrecognized to do battle with Tiamat, the monster of Chaos. Further elements are borrowed from the myths of Attis, Osiris, and Mithra, although all the definite features are blended together and resolved into one abstract conception. The grand characteristic of Christian Gnosticism is the identification of the mythical Redeemer with Christ, with whose history the pagan traditions are interwoven. But the Soter always remains distinct from the historical Jesus, who appears simply as a man of pre-eminent spiritual nature, united for a given time with the heavenly Redeemer. The union takes place either at his birth (Naassenes and *Pistis Sophia*), or when he is twelve years old (Justinian sect), or, according to the usual view, on the occasion of his baptism. Before the crucifixion the Divine being, who is incapable of suffering, separates himself from Jesus (cf. art. DOCETISM). This distinction of the Soter and the historical Jesus is partly necessitated by dualistic theory; but it must be explained, in still greater measure, by the radically un-Christian character of the whole movement. The Gnostic Redeemer had originally no connexion with Jesus. He was simply an abstraction of features common to the mythological Saviours, and this abstract figure was combined artificially with the Jesus of history. It was on this account that Gnosticism was unable, in spite of all efforts, to establish any real identity between the Redeemer and Jesus. Before it could adapt itself to the Gnostic construction the Gospel history had to be revised throughout, with a loss of practically all the elements which gave it significance to Christian thought.

The task of the Soter is twofold—to deliver the fallen Sophia, and to rescue the seeds of light which have become mingled with the darkness, owing to her fall. This double activity is emphasized in some systems by a duplication of the figure of the Soter, while in others the work of redemption is separated into two acts—the first of them in the period before creation, and the second at the advent of Jesus. The redemption accomplished by Jesus is not connected with His death, which is transformed into a mere outburst of hostility on the part of the Demiourgos. The real purpose of Jesus, or rather of the Soter who used Him as his instrument, was to communicate the hidden *γῶσις*. By means of this knowledge, imparted by Jesus

and preserved in the Gnostic tradition, the higher natures were freed from their earthly bondage and restored to the kingdom of light.

The ethical system of Gnosticism, like its speculative construction, was grounded in the dualistic hypothesis. By this hypothesis the idea of morality, in the ordinary sense, was excluded. All material conditions were regarded as necessarily evil, and the aim of the Gnostic was to rise above them into the purely spiritual life. To this struggle for deliverance from the bondage of matter all moral endeavour was subordinated. As a consequence, the Gnostic rule of conduct was liable to take either of two directions. (1) In most of the systems it is strongly ascetic in character. The soul is required to free itself from earthly conditions by holding aloof from all sensual pleasures and reducing the needs of the body to the barest minimum. A strict ascetic discipline is conjoined with the possession of *γῶσις* as its necessary support and complement. (2) But the same motives that dictate this ascetic morality lead as easily to the opposite extreme of libertinism. Spiritual natures are called on to assert their independence of the material world by indulging in its pleasures without restraint. The libertine tendency is reinforced by the identification of the God of the OT with the Demiourgos—the inferior and tyrannical God. It is assumed that the moral law as laid down in the Decalogue is founded on his arbitrary will, and aims at the subjection of man's free spirit to the yoke of necessity. To defy the ordinances of the law, and thereby throw off allegiance to the inferior God, is a duty obligatory on the true Gnostic. Carpocrates and his son Isidorus sought to establish the libertine theory of conduct on a regular philosophical basis. It was represented likewise by the Nicolaitans, and in a still more marked degree by the Cainites, who applied their inverted standards of moral values to the characters of Scripture. Cain, Esau, Korah, and Judas were honoured within this sect as the champions of spiritual freedom. How readily the one extreme could pass into the other is illustrated by the opposite attitude of kindred sects, such as the Perate and Sethians.

7. The Gnostic sects.—The diversity of the Gnostic systems, as portrayed in the writings of the Fathers, may in some measure be explained by controversial motives. One of the strongest arguments against the heretical beliefs was their tendency to conflict with one another, and the Patristic writers take every means to emphasize the confusion. Local and superficial differences are made prominent; alternative forms of the same doctrine are set forth under specific names, as if they were held by separate schools. But, when we have allowed for this artificial sub-division, the variety of the sects is still bewildering. Gnosticism drew from so many sources and was so irresponsible in its methods of speculation that no uniformity of belief was possible.

The difficulty of tracing the affinities and ramifications of the systems is all the greater because of our ignorance of their historical development. For the leading Gnostic teachers we can roughly assign dates between 130 and 190—the age of the Antonines; but a large number of schools cannot be connected with any personalities, and bear no marks by which the period of their origin may be computed. In their fundamental features these anonymous systems are pagan, and we may, therefore, infer that they are of an early date—perhaps anterior to Christianity. But they have become overlaid with Christian elements, and we cannot tell how or when they assumed their final form. The most accurate dating of the systems, however, would carry us only a little way. During all the

history of Gnosticism there seems to have been a continual process of borrowing and adaptation and revision. An arrangement of the sects in historical order would be largely deceptive, for the movement in its most developed stages was constantly reverting to ideas of a primitive stamp.

Attempts to classify the systems were begun even in Patristic times. They were grouped by Clement of Alexandria according to their ethical tendency, as ascetic and libertine; by Theodoret according to their speculative character, as monistic and dualistic. It is evident that no true classification can be arrived at by either of these standards. Among the many modern scholars who have tried to group the systems, the following may be mentioned. (a) Neander laid stress on the relation of Gnosticism to Judaism, and distinguished between the friendly and hostile schools. (b) Baur applied this test in a more scientific fashion and divided the sects according to their prevailing Jewish, pagan, or Christian character. (c) Gieseler sought to determine the countries in which they originated—Egypt, Syria, or Asia Minor. (d) Lipsius also adopted the geographical division, but was content to make it more general and to recognize two great Gnostic schools—the Syrian and the Alexandrian.

These groupings are all unsatisfactory, since they fail to take account of that intermingling of diverse types of religion which belongs to the essence of Gnosticism as a syncretistic creed. Perhaps the most convenient classification is that which is now usually adopted, and which distinguishes the anonymous systems from those associated with a definite founder or teacher. The distinction is at best a rough one, and is open to at least two serious objections. (1) The ascription of a system to a given founder is often accidental, and is due to nothing else than the existence of some well-known work in which its doctrine was expounded. (2) The Fathers were anxious, wherever possible, to connect each heretical sect with a prominent name; thus in many cases their references to a founder are purely conjectural. But, with these reservations, the grouping may be accepted, and serves to bring out a real and important distinction. The anonymous systems may fairly be held to represent the more primitive Gnosticism, which grew up more or less spontaneously out of the pagan cults and had only a superficial relation to Christianity. When a system bears the name of a definite teacher, we can regard it as a comparatively late product, based on philosophical reflexion and more closely allied to Christian thought.¹

(a) The anonymous systems are brought together, in the controversial writings, under the general head of *Ophitism*. They comprise, besides the Ophites proper, the Naassenes, Peratæ, Sethians, Cainites, Archontics, Severians, Barbelo-Gnostics, Justinians, Nicolaitans, Docetæ, and other more obscure sects. The figure of the serpent, to which the name refers, seems originally to have had a cosmological significance; but in various Hellenistic cults it had come to symbolize the world-soul, or eternity, or the Divine redeeming power. Its import for religious thought was enhanced by the Biblical stories of the serpent in Eden and the brazen serpent in the wilderness. Among the Ophite sects the serpent was a favourite symbol, typifying sometimes a beneficent, sometimes a hostile, power. But the term 'Ophitism,' although convenient, carries with it no definition of the systems. From some of them the serpent-symbolism is entirely absent, and in none can it be regarded as central and characteristic.

The Ophite or anonymous group of sects is marked by certain broad fundamental features. All the systems included in the group are rela-

tively simple in structure, and have affinities with mythology rather than with Christian or philosophical speculation. The Æonic scheme, as we find it in later Gnosticism, is undeveloped or altogether wanting. The Godhead is conceived under the form of a Triad—the Supreme unknown Father, whose essence is light, and, associated with Him, the Mother and the Son. Other Divine beings have their place in the Pleroma, but the Triad appears so constantly that we cannot but feel that originally it was complete in itself. Beneath the higher world are the seven planetary powers—half gods, half demons—and at their head stands Ialdabaoth, who is identified with the God of the OT. He and the other six are throned above the lower world, which they have created out of the darkness, and in which the fallen particles of heavenly light have become imprisoned. The aim of the *γνώσις* is to enable these spiritual natures to free themselves and re-ascend to their native world.

As a typical example of Ophitism, the 'Gnostic' system described by Irenæus (*adv. Hær.* i. 30) may be reproduced in outline. It starts from the conception of a Supreme Being, 'the First Man,' from whom proceeds his son, 'Son of Man' or 'Second Man.' Along with these two there exists a third and female principle, 'the Holy Ghost.' Illuminated by the First and the Second Man, she produces another male principle, 'Christ.' But the overflow of the light communicated to her causes her also to produce the male-female Sophia or Pruniceus, who sinks into the depth and assumes a body. The heavens are formed out of her body as she struggles to rise, and, finally, she raises herself to her Mother. Meanwhile, however, she gives birth to a son, Ialdabaoth, who begets sons in his turn, and thus there arises the Hebdomad, or group of seven planetary powers, Ialdabaoth, opposed by his sons, begets from the lowest matter another son, Nous, who is formed like a serpent; and by him he is led to believe himself the Supreme God. But his Mother reveals to him the existence of the true God, and, in order to distract the attention of the other six powers, he unites with them in creating man. The man thus formed is at first inert and shapeless, but Ialdabaoth breathes into him the breath of life, and thereby empties himself of his power, while man is inspired with the knowledge of the Supreme God. The wrath of Ialdabaoth is kindled, and he endeavours to keep man in ignorance and subject him to his own ordinances; but man, on the impulse of Pruniceus, transgresses the will of the tyrant, and is driven by him out of Paradise. Henceforward the malign influence of Ialdabaoth moves through human history; but Pruniceus has pity on man, and the prophets whom she sends in a constant succession keep alive in him the knowledge of the light. Finally, at her prayer, her Mother requests of the Supreme God that Christ should come to the help of man. Descending through the seven planetary spheres, he unites himself at the Baptism with Jesus, the son of Mary, and through him proclaims the unknown Father. Ialdabaoth and his sons bring about the crucifixion of Jesus, but Christ and Sophia ascend to the higher world. The crucified Jesus is raised in a spiritual body, and for eighteen months reveals the mysteries of Gnosis to his disciples. Then he is exalted to heaven, where Christ sits at the right hand of Ialdabaoth, drawing to Himself all souls which possess the spiritual nature. The consummation is effected when all the lost light is gathered together and restored to the higher world.

This example will illustrate the character of the Ophite systems, and a few brief notices will suffice for the others. The *Justinian* mythus bears a marked resemblance to that which has been outlined, except that it reverses the part assigned to two of the chief figures. The female principle Edem (corresponding to Pruniceus or Sophia) is the hostile agency who seeks to thwart the beneficent influence of the creator Elohim. The rôle of Saviour is enacted by the angel Baruch. He enlightens a series of elect spirits (pagan as well as Hebrew) before he brings the final revelation to Jesus.

The *Naassene* sect appears to represent a highly primitive type of Gnosticism, the pagan features of which are thinly veiled by transferring to Jesus the attributes of the Soter. So far as we can gather from the confused account of Hippolytus (*Refut.* v. 2-5), the Naassenes assumed a Primal Being (First Man), in whom the whole universe (including the material world) potentially exists. His nature is threefold—material, psychical, and pneumatic—and the world-process consists in the segregation of these three principles. By the work

¹ De Faye holds, however, that towards the beginning of the 3rd cent. the great schools diminished in importance and gave place to a multitude of minor sects. In proof of this he urges (a) the prominence given to the anonymous Gnostics by Hippolytus, (b) the affinities of the *Pistis Sophia* and the *Books of Jeu* (late works) with Barbelo-Gnosticism, and (c) the anonymous character of the sects opposed by Plotinus. But the evidence appears to point to nothing more than a vigorous survival of the earlier sects alongside of the later.

of creation the Divine Being purifies Himself of the material and psychical natures, in order to attain to His true life as absolute Spirit. In man, as in the First Man, the three natures are united, and require likewise to be separated. The process whereby the spirit in man may be set free from the alien elements adhering to it is revealed by the Saviour Jesus. (In the Naassene hymn preserved by Hippolytus we have an authentic document of the highest value for the study of earlier Gnosticism.)

Closely related to the Naassenes were the *Peratæ*. Their name most probably points to an origin in the Euphrates valley, although it was explained by themselves as signifying that they had passed across the gulf of the transient and phenomenal. Like the Naassenes, they taught the doctrine of a tripartite being who had proceeded from the eternal Father. The Saviour was endued with the three natures, in virtue of which he carried out the work of separation alike in the cosmic realm and in the world of men.

The *Sethians* took their stand on the Persian dualism, and may originally have been a Zoroastrian sect. But along with the two opposing principles of Light and Darkness they allowed room for a mediating principle, the Spirit, conceived as a subtle odour diffusing itself through all things. Sparks of the heavenly light become intermingled with the darkness, and strive to free themselves with the aid of the Spirit. Their deliverance is at last effected by the Logos, to whom they are drawn like grains of iron to a magnet, escaping from the fetters of the body and the rule of the inferior God.

The so-called *Docetæ* conceived of the Primal Being as a seed, infinitely small and yet containing in itself infinite potentialities. There proceed from Him three root-æons, which, in their turn, give rise to others; and these, in their totality, constitute the world of light. The light shines down on chaos, and produces the souls of all species of living beings. From the reflexion of the Logos arises the God of creation, who forms bodies in which He imprisons the souls born of the light. The souls migrate from one to another of these bodies, until the Saviour descends and frees them from the circle of re-birth.

The *Barbelo-Gnostics* assumed an unknown Father, with whom is associated a female principle, Barbelo. A succession of Æons, in pairs of male and female, comes into being; but one of the Æons, Sophia or Prunus, is without a consort, and, in hope of finding one, leaps out of the Pleroma, where she produces the God of creation, who believes himself to be the sole God. Irenæus' account of the sect, which at this point breaks off, is of special interest, since there can be little doubt that the Coptic writings (*Pistis Sophia*, etc.) present a variety of the Barbelo-Gnosis. Indeed, it is probable that Irenæus derived his account from the recently-recovered *Gospel of Mary*.

(b) From the various systems of anonymous Gnosticism we now turn to those which are connected with the names of definite teachers. In the view of the Fathers, these are attached to one another by a regular genealogy; and, while this may be doubted, the systems in question seem to reflect the main development of Gnosticism in its alliance with Christianity.

The name of *Simon Magus* is uniformly placed at the beginning of the series. This may be partly due to the fact that Justin Martyr, the earliest heresiologist, was himself a native of Samaria, and would be particularly interested in the Simonian sect. But the figure of Simon, although obscured by legend, seems to be historical, and the narrative in the Book of Acts may embody a reminis-

cence of his efforts to ally Christianity with the syncretistic movement. Tradition makes him a disciple of Dositheos, and from this we may infer that he was a leader in the Dosithean sect, which seems to have existed in Samaria from about the time of the Maccabees. According to Justin (*Apol.* i. 26, 56, *Trypho*, 120), he was honoured as the highest God, and his companion Helena as the Divine creative Thought (*ἔννοια*). If this notice can be accepted, he must himself have come to occupy the centre of the system which is known by his name. The treatise entitled the *Ἀρχαῖαι Μεγάλη*, which is quoted by Hippolytus and attributed by him to Simon (vi. 6), was more likely an anonymous document of the Simonian sect. In the Simonian doctrine—which converges on the deliverance of the fallen Helena—there is little trace of Christian influence; and this is likewise true of the teaching of *Menander*, who, according to Irenæus and Justin, was Simon's fellow-countryman and disciple. A livelier interest in Christianity begins to manifest itself in *Cerinthus* (q.v.), towards the end of the 1st century. He appears to have been the first to promulgate the Gnostic conception of Jesus as a man of pure spiritual nature, temporarily united with the heavenly Saviour. *Satornilos*, the disciple of Menander, taught that the Supreme God created the world of angels, by seven of whom, with the God of the Jews at their head, the world was formed. They made man according to an image reflected from the Supreme God, who afterwards, in pity, bestowed on their creature a spark of Divine life. The Saviour descended for the sake of rescuing man from the oppression of the inferior powers, and was Himself a man only in appearance. Satornilos is important as the link between a more primitive Gnosticism and the elaborate speculations of Basilides and Valentinus; but prior to these speculations, and in the same country of Egypt, there appeared the remarkable system of *Carpocrates*. In this system, which reflects a Christianity strongly influenced by Plato, the antinomian ideas of Gnosticism are most fully developed. Good and evil are resolved into merely arbitrary commandments, imposed on man by the tyranny of the world-rulers. Freedom from these oppressors is given through Jesus. A man like others, but of exceptional purity of soul, He remembered what He had seen in the higher world, and received power from above to escape from the world-rulers. All souls that follow the path marked out by Him are endowed with the same power, and may even rise superior to Jesus. In order that they may pass through every phase of experience in their ascent to God, departed souls must undergo a series of re-incarnations; but the stronger souls are able in their lifetime to traverse all experiences, and so free themselves at once from the bondage of the lower law.

The teaching of the two great masters of Gnosticism forms a large and complex subject by itself, and is discussed in special articles (see *BASILIDES* and *VALENTINUS*). In the case of both of them the doctrine of the founder has to be carefully distinguished from that of his school. The nature of the original systems has been much debated; but, so far as we can gather from the scanty quotations, they had many points of affinity with the more primitive Gnosis—Basilides connecting himself with Satornilos, and Valentinus with the Ophite sects. Irenæus' account of Basilides is probably much nearer to the original than that of Hippolytus, but itself represents a later doctrine, in which an attempt is made to mitigate the uncompromising dualism of the earlier teaching. The theory that the Basilidean doctrine as set forth by Hippolytus is based on a 'mystification' has now

been generally abandoned. Not only is the system too profound and original to be the work of a casual forger, but it agrees in not a few important details with the teaching described by Irenaeus, and may well reflect a further development of that teaching in its progress towards pure monism. From the account in Hippolytus, too, we are enabled to understand why the Basilidean influence ceased to play a part in the later history of Gnosticism. The cardinal Gnostic positions had been gradually abandoned by the disciples of Basilides, and his Gnosis merged itself at last in the ordinary philosophical speculations of the age.

The Valentinian movement, on the other hand, while it freely admitted the philosophical element, never ceased to be faithful to the distinctive Gnostic ideas, and drew into itself practically the whole stream of later Gnosticism. Hippolytus recognizes two separate Valentinian schools—the Italic or Western, and the Anatolic. To the Eastern school he assigns Theodotus and Bardesanes; to the Western, Ptolemaeus, Heracleon, and Marcus. But the points of difference on which he insists appear somewhat arbitrary and superficial; and perhaps we arrive at a true division when we conclude that Gnosticism under the Valentinian influence, proceeded in three main directions. (1) The mythological and ritual elements were exaggerated—as in the Marcionian system, with its intricate machinery of symbolism, and mystical letters and numbers. Gnosticism in this phase of its development was ultimately absorbed in the magical and cabalistic lore of the later centuries. (2) The speculative tendency became predominant. Although the mythological scheme was retained and even amplified, it was subjected to a process of allegory. The history of the *Logos* was construed as a theory of the unfolding of the Divine consciousness. Ideas borrowed from Plato were interwoven with the mythical tale, and served, in great measure, to disguise their real character. (3) The Gnostic teachings were assimilated more closely with those of the orthodox Church. By so adapting itself, Gnosticism vastly enhanced the success of its project, and continued to survive, even when its original aims were finished, in heretical Christian sects. Of the phases of the movement the outstanding example is Marcion (p. 21). That he is legitimately reckoned among the Gnostics must be admitted, not only in view of his undoubted dependence on the Gnostic teacher Cerdon, but because of the distinction which he drew between the Supreme God (*dyabls debs*) and the Creator, and his consequent rejection of the OT. But the ground-work of his theology was Pauline; and it was mainly in the interest of an exaggerated Paulinism that he accepted the Gnostic positions. It is probable that a similar judgment must be passed on Bardesanes, the last of the great Gnostic teachers (A.D. 154–240). The true character of his system is hard to recover from the contradictory records; but the judgment of Eusebius may be accepted that he was at first a disciple of Valentinus, and then turned to Christianity without completely abandoning his former errors (cf. the discussion by Haase, *Zur bardesanischen Gnosis*). Unlike Marcion, he seems to have held fast to the conception of one all-creating God; but he combined the Christian position with ideas of an astrological nature taken over from Gnosticism. Whether the hymns preserved in the *Acts of Thomas* can be ascribed to Bardesanes is doubtful. It has been clearly proved, by the investigations of Preuschen and Reitzenstein, that they are adapted throughout from pre-Christian sources; and the work of Bardesanes, if he had a part in them at all, can have been little more than editorial.

8. Results of the movement.—From a very early time the danger that threatened Christianity from

the side of Gnosticism became apparent, and in the NT itself we meet with a polemic which was almost certainly directed against incipient phases of the movement. The false teachers who are condemned in Colossians appear to belong to a variety of Jewish Gnosticism. The heresies contemplated in the Pastoral Epistles and in the messages to the Churches in Revelation are even more evidently of a Gnostic type. The Fourth Gospel rests upon the thesis that 'the Word was made flesh'; and, in view of the close relation between the Gospel and the 1st Epistle of John, there can be little doubt that the writer is opposing some form of Gnostic docetism. It is the peculiarity of the Fourth Gospel that its underlying polemic against the Gnostic teaching is combined with a certain sympathy. We are enabled to understand how, in spite of misgivings, the Church was led to compromise with the heretical movement; and so to encourage the attempt at an alliance. In the opening decades of the 2nd cent. the alliance had become imminent, and the Church was fully awakened to its danger. The letters of Ignatius are marked by the sharpest antagonism to the new doctrines; and all through the century the conflict with Gnosticism is the dominant interest in the theological life of the Church. The objections most frequently urged against the heresy are (1) its hostile attitude to the OT; (2) its doctrine of a higher God who is other than the Creator; (3) its docetic view of the Person of Christ; (4) its ethical teaching, ascetic or libertine; and (5) its denial of the Resurrection. These, however, were only the particular errors on which the ecclesiastical writers laid hold for the purpose of controversy; and beneath all else was the sense that the very existence of the Church was imperilled. Unless it closed the door on the heretical teaching, Christianity would be dragged into the vortex of contemporary syncretism, and would disappear as a separate religion.

The struggle to overcome Gnosticism was fraught with momentous consequences. (a) It led to a strengthening of the Catholic idea. As against the open sects, which were always breaking up into new sub-divisions, the Church took its stand on universality; and by the strict enforcement of uniformity in creed and worship it sought to make its catholic character more fully manifest. (b) It hastened the development of the episcopal form of government. The letters of Ignatius illustrate in the clearest manner how the rise of the heretical sects enhanced the position and importance of the bishop. He was at once the representative of the true Catholic tradition, and the centre around which the Church could rally, in the face of disruptive influences. (c) It made necessary a *regula fidei*—an authoritative standard of belief whereby all innovations could be tested. Out of this rule of faith, with its brief summary of the cardinal doctrines, arose the great creeds of succeeding times. (d) It contributed, more than any other cause, to the formation of the canon of the NT. The Gnostic sects were prolific in forged literature, which presented their own teachings under the sanction of consecrated names. To guard against this evil, and at the same time to define its own position more clearly, the Church was compelled to sift and collect the genuine documents of the primitive age. (e) It secured for the OT its permanent place as a sacred book. The causes which led the Gnostic thinkers to reject the Jewish Scriptures were operative within the Church itself; and in course of time would have brought about the same result. It was the conflict with Gnosticism which prepared the way for a truer appreciation of the OT. The Scriptures of the old religion were adopted by the new, to the enrichment of its spiritual heritage.

his romance relations with space nor with his life. Amidst his intellectual developments, Goethe maintained his interest in literary activities and plastic art; his official duties deepened his studies in science. Then came the years 1786-1788, wherein his life was made up of Italian sojourning, of which more will be said later.

After an absence of nearly two years in Italy, Goethe returned, and soon afterwards married a humble but winsome maiden, named Christiane Sophie Vulpius, in whose love he was happy. The years 1794-1805 were marked by the truly beautiful, and extremely striking, friendship of Goethe with Schiller. For the men were opposites, and did not readily draw to each other. Each was at first adversely critical of the other's work. In 1789, Schiller wrote that it would make him unhappy to be much with Goethe, who seemed egotistic; and for five years their friendship saw no advance. But, once an interesting start was gained, it remained faithful and fruitful to the end. Their despicable detractors they scourged in the *Xenien*, which varied very much in their quality. Goethe wrote to Schiller that their first cordial intercourse had been an epoch in his life; Schiller wrote of Goethe to the Countess Schimmellmann, in 1800, that 'there are in his nature a lofty integrity and truth, together with the highest earnestness on behalf of what is right and good.' Their correspondence shows how each was the complement of the other, and how each reinforced the other. When their union of hearts was broken by Schiller's death in May, 1805, it was an irreparable loss to Goethe, and his grief was great. A time of political troubles and distresses followed, until the peace that was concluded between France and Prussia in July 1807. Goethe's activities continued—official, literary, scientific, artistic. Years of revived life passed, but at length, in 1832, he had a serious illness, with slow recovery. Recovered, however, he spent the years 1833-1835 in ceaseless activities, but 1830 was the death of his son, August. In 1832, his marvellous literary industry was ending. When he had put the finishing touches to *Faust*, he said to Eckermann that he considered the rest of his life a free gift. In the following year (22nd March 1832) he gently passed away. His dust was laid beside that of Schiller—in death not divided.

2. Works and characteristics.—With Goethe's relations to religion and ethics we are here concerned in a particular manner, without in any way overlooking literary aspects. It may be remarked that his religion took the pantheistic form of a world-spirit unfolding itself into the whole and various forms of life and being. But the most characteristic thing in his pantheism is its sense of the cohesiveness of Nature—its universal unity. Nature is to him self-renewing, self-multiplying, self-loving, and self-revealing—a unity coherent, and growingly conscious of itself. His grasp of Nature proceeds from no casual mechanism, but from a unity, revealing itself in manifold ways. Anything like a machine-like conception was entirely foreign to his point of view. Nature was to him an infinite ocean, restless and heaving, or a boundless field of ceaseless, glowing life. He would have had the skilled analyses sought to be imposed upon him to him the all-and-ever-living, exempt from application of mechanical and mathematical categories. Nature was to him God, and God Nature; man was a maned living in this God-Nature, enjoying it to the full, however many might be the metamorphoses through which he should be called to pass. In the *Weltanschauung*

Goethe found the unity which for him marked the world of Nature. In these two worlds—the Nature-world and the Spirit-world—the Divine was for him the source of all harmony, pantheistic as the foundation of a union might be. *Faust's* development is an instructive illustration. Goethe's *Faust* is yearning for an inner comprehension of the secrets of Nature; he shows him as for a sense of oneness with her life, such as intellectual and the sensuous spheres alike shall be transcended; he depicts him as demanding to get above the limitations of human nature, and to share, though still as man, the inmost life of Nature. Goethe the whole vesture of man's thought was but a parable or likeness of the eternal infinity of Nature—that *unendliche Natur* at whose breasts all things are nourished.

The philosophic thought which underlay Goethe's Nature outbursts was that of endless transformations of eternal substance in a universal activity, for the spell of the Spinozan ethics never ceased for him. But his Nature-contemplation was touched to joyous strength by Leibnizian optimism. In his indomitable study of Nature as one whole, he was led to anticipate organic unity, and to reject everything of the nature of final discrepancy or perfect isolation. His evolutionary instincts led him, in his studies of organic Nature, to lay fundamental stress on the type. Indeed, his aim was precisely for final unity, and he expressly said that the harmony of the whole makes every creature what it is.

In the literary work of Goethe, the creative and the critical functions were conjoined in a conspicuous manner, even if we should be obliged to hold that his creative spirit suffered in its results from the chill reflectiveness of the critical mind—from the prevalence of philosophic thought over the passionate springs of nature. He distinctly recognized that there is a destructive criticism, and also a criticism creative or constructive; and he took the poet's aim, and the measure of its fulfilment, to be the supreme tests in criticism. His was the well-known and felicitous summarizing of criticism in the formula *im Ganzen, Guten, Schönen resolut zu leben*—'to live resolutely in the Whole, the Good, the Beautiful.' Great as was Goethe's literary achievement, it must not for an instant be supposed that he reached the highest level of excellence in all the various kinds of work which he attempted, for that was by no means the case. Everywhere in his work there is high literary distinction, but not always, or perhaps anywhere, supreme excellence. The real ground of the profound impression which he made as a literary figure we shall see later.

time, we take critical account of many of his important literary efforts. His *Götter* were juvenile but captivating drama, attracted the attention of Scott, and was not without success on *Ivanhoe*. It sets before us the ideal of man in rude and natural forms of active and he will, battling against circumstance, and asserting its independence, under a native sense of justice. A like cry for freedom—the freedom of the artist—marks Goethe's *Prometheus*, which contains passages of living interest.

Of Goethe's superb power as a writer of ballads, instances are seen in 'The Song of the Lark' (*Die Braut vom Kuckuck*), 'The Song of the Lark' (*Der Gott und die Welt*), 'The Song of the Lark' (*Der Gott und die Welt*), which witness to his reaching the most subtle charm of expression, and in elements of beauty and mystery.

Goethe's sojourn in Italy, passed in rapt contemplation of Art and Nature, developed in him the spectatorial attitude rather than that of practical activity. This attitude, with its own conception of the world, is reflected in his *West-östliche Divan*.

drama *Iphigenie*, his refined play *Torquato Tasso*—neither of which, however, proceeded from a Shakespeare—and in his serious work, *Wilhelm Meister*. Of the last we shall presently speak, but meantime remark of his *Tasso* that he found it hard to complete this fine and penetrative piece of work. But he said to Eckermann that the play was bone of his bone and flesh of his flesh. The *Tasso* of the drama, it should be said, is in certain respects not at all like the *Tasso* of historic fame. In the same way, Goethe's *Egmont* differs in many respects from the *Egmont* of history, and is ruined by his inability to read hostility where it exists. There is something not quite admirable in Goethe's treating a noble figure of history, not only without any idealizing, but with positive reduction of moral stature. For all that, there are many fine things in the work. His *Iphigenia*, already mentioned, is a figure admirable and pathetic, drawn by Goethe's Hellenism with characteristically Greek reserve. Not less delicately drawn are the figures in his *Hermann und Dorothea*, which, while truly individual, are significant of the typical. Redolent of the Greek spirit they may be, but they remain genuinely German. Artistically, the piece is perfect.

Goethe's ethical attitude, to which reference has already been made, is a rather difficult subject, as is seen in his resolving morality into systematized self-expression and self-realization, even in the case of the self-development of *Faust*, wherein are incidents not easily brought within the ethical sphere. But Goethe's own moments of aggressive paganism are not to be forgotten, and they cast a significant light on his rather absurd impatience with what he regarded as Christianity's ascetic chastisement of the senses. This is not to overlook the fact that he felt the force of Kant's thought with respect to practical problems of ethics. It was in one of his later stages that he took Christianity to be a religion inculcating reverence in three kinds—for what is above us, for what is below us, and for equals—and this Neo-Christianism, if it may be so termed, consisted in the fusion of these three elements.

The artistic view of life finds expression in Goethe's *Wilhelm Meister*, which has no lack of wealth of life and thought, though wanting in artistic finality. Culture, or *Bildung*, sums up his aim, and the work has been aptly styled an *Odyssey* of culture. The world is for him harmonized in cultured society. In spite of ethical and artistic drawbacks not difficult to find, many have been able to learn much from it. It presents the world as a 'vast quarry' of materials, which it is for us to reduce to an ideal form in virtue of the creative power within us. Thus a vague and formless idealism will be supplanted, under life's disciplinary processes, by definite and well-chosen activity. It is as a philosophical realist that Goethe so speaks, his own happiness being, in some sort, a religion to him. But the work insists that man shall develop his sentient and perceptive powers, no less than his powers of moral culture, in order to the harmonious working of all the powers of his nature. All these teachings, as to the wisdom and strength of life, are set forth in a manner as far as possible removed from didactic or moralistic presentations, in the rich and varied guise, indeed, of animated description and thrilling romance. This is not to say, however, that the work is not dull and prosaic enough in places.

In 'The Sufferings of Young Werther' (*Die Leiden des jungen Werthers*), Goethe gave utterance to that reaction against the domination of the understanding which marked the 18th century. He made the work expressive of the high sensibility, and the feeling for Nature, which were

being in new ways developed in his Werther was too given over to the feeling of sensibility to have it, as in Goethe himself, controlled and regulated by reflective reason. The work has little healthiness of tone, and is infected with the malady of the age—the excessive sentimentalism of the closing 18th century.

Goethe's 'Elective Affinities' (*Die Wahlverwandtschaften*) is a fine prose work, telling of the tragic significance of the relations which he calls 'elective affinities,' under given circumstances. The book is marked by great feeling, high imagination, and deep knowledge of man and the world.

As in *Wilhelm Meister*, so in the 'Poetry and Truth' (*Dichtung und Wahrheit*), the culture idea is emphasized. The work is an autobiographic record of somewhat unusual and informal character, but it presents, in light and graceful style, more than personal experiences of his early life; it even reflects the national currents of thought and feeling. Friend as Goethe was of world-literature, he here complains that national subjects had practically no treatment from the friends of his early days. It contains, too, in a noteworthy way, his scorn of the 'melancholy, atheistical twilight,' wherein Nature is viewed as mere eternal and unaided movement of matter.

On the development of *Faust* we have already touched, but it remains to remark that *Faust*, as a work, is unique and incommensurable. It may be said to be philosophic for the way in which it embodies criticisms of life. The power and prestige of Goethe as a critic of life are extraordinarily great. In Germany itself *Faust* has been styled a world-epic, or *Welt-epos*, because of its vast range and wondrous universality. Great, however, as it is, it is scarcely to be taken as the most characteristic product of Goethe's genius, so marked by factual tendency and breadth, as of an inductive philosopher. But even in this work, knowledge of a true sort is to come, in its author's view, through direct living, and wondering contemplation of Nature—looking 'into her breast as into the bosom of a friend'—and not through dry thinking or analysis. To know life in its concrete variety, pressure, and fullness is to be able to appreciate *Faust*. Here Goethe's religion is 'the religion of the deed,' which, in his pagan moods, he elsewhere describes as a kind of religion of healthy-mindedness, if that may be so termed which consists in sheer absorption in the world and its joys. But his religious attachments are characteristically vague. In an advanced part of *Faust* we find the 'religion of the deed' reappear, when it is announced that we have power to redeem 'him who labours ceaselessly striving.' It is to be noted that in *Faust* the problem of evil was what engrossed Goethe—whether to be regarded as an essential element of the universe or as a merely negative thing, a transient appearance to be overpassed. The attitude of *Faust* is that two souls dwell within his breast, the one fain to separate itself from the other. Should evil be destined to be overcome, Goethe would take *Faust* to represent the triumphant process. This is where the ethical worth of *Faust* is to be found, in its manner of typifying or embodying the modern spirit or tendency: in *Faust* is set forth the essential man—bold in aspiration, all-consuming in desire, hopeless in fallen condition, and exultant in ultimate salvation—so as to foreshadow the destiny of the human race. He expressly aspires to take up into himself what is portended among the whole of humanity. The whole drama has profound symbolic significance. In its course the claims of the individual and the social spirit will mayhap be harmonized in an ideal of practical culture. Its basal thought is that evil is not a positive power, but merely some-

thing negative—the interpretation of moral evil, it must be said, of too optimistic a character, and one which is not quite clearly and satisfactorily wrought out, so far as the *Läuterung* (the purification or rectification) of Faust's character and development is concerned. The progress is wanting in inwardness of character. It is in the Second Part of *Faust*—often partially misconceived and greatly undervalued—that we see the triumph of humanity in Faust, mounting the heavens after his soaring ideal. The Second Part lacks, of course, the passion of the First; its erudite air is more felt; its philosophic intent and prolonged manipulation are more evident; its thought is less sapid and spontaneous; but, in spite of these and other defects, it has abundant genius, and does not fail to prove itself the completion of the First, as the present writer has elsewhere shown ('The Philosophy of Faust,' in *Essays Literary and Philosophical*). Goethe has contrived to introduce geology, optics, and chemistry into *Faust*; but such didactic attempts to combine science with poetry must always remain hazardous, if only because science cares nothing for the individual, while individuality is of the essence of art. *Faust* has, at any rate, given the world a supreme, unforgettable lesson as to progressive development being the essential mode whereby such conditioned beings as we are may hope to reach the ideal—the perfection of love.

The famous *Zueignung*, or dedication, now used as Introduction to Goethe's poems, is of unsurpassed loveliness in German literature, impressing one, it has been said, as a lofty vestibule, with the awe-inspiring grandeur of the temple to be entered. Its lovely message leads up to the self-revealing of the Divine form of poetic Truth, who gives him a veil, and tells him how to use it.

Goethe's 'Italian Journey' (*Italianische Reise*) was worked up thirty years after the journey itself, from journals and letters belonging to that time. The book presents, in a most vivid form, the features of delight and charm that mark Italian travel; but it is even more interesting for its psychic experiences and revelations. On 6th September 1787 we find Goethe writing from Rome:

'So much is certain: the old artists had as great a knowledge of Nature, and as certain a notion (*Begriff*) of what can be represented, as Homer had.' And, further: 'These high works of Art have been, at the same time, supreme works of Nature, produced by men according to true and natural laws; all that is arbitrary or imaginary falls away; here is necessity, here is God' (*Ital. Reise*, ed. Düntzer, Berlin, 1877, p. 396).

The way to perfect Art, in form and content, seems to have lain for Goethe through looking into the depths of Nature and Man. He held that in Art and Poesy personality is everything, and that the artist, to create something fit and capable, must be himself fit and capable. The comprehensive character of Goethe's interests and powers of observation needs no mention, but his strange limitations are not always clearly known and understood. His intense dislike of Byzantine and Gothic architecture; his huge indifference to the early art of Italy; his lack of interest in Mediæval and Christian Rome; his supreme neglect of historical associations, as outside the realm of *Anschauung*, or intuition—all, in diverse ways, mark limitations due to a sense of form which kept from him the power of appreciation. Greek sculpture, Renaissance painting, architectural Rome—these were things that caught up, in significant fashion, his sense of artistic form. The Classicism to be found in Goethe was, it seems warrantable to say, more the result of this Italian journey and his study of antique Art than of direct contact with the ancient Classical Literatures. It is not meant, in saying this, that his Hellenism had in it any-

thing of the nature of a literary pose. The chief result of his Italian sojourning on Goethe's work was the plastic quality imparted to it. When he says that Art and Nature are only one, that is because Art is for him the highest manifestation of the working of Nature. Goethe's world is the world of the eye. His evolutionary instincts led him to view the single specimen in its relation to the organic whole. We find him writing to Herder from Naples on 17th May 1787, that the *Urypflanze*—or grand type of all plants—is the most marvelous thing in the world, 'which Nature herself might envy me' (*Ital. Reise*, 308).

The 'West-Eastern Divan' (*West-östlicher Divan*) is concerned with the life of the East, and is not now to be dwelt upon; it must suffice to say that the work was largely a fruit of his study of the Persian poets, and is rich in its own varied metres, and wise, beautiful poems. It proved a well of inspiration to Rückert, Platen, and other poets.

3. Influence.—We cannot now pursue the study of Goethe's works further, but must be content to appraise his genius, work, and character in more general and comprehensive terms. The vitality of his ideas is very striking; the range of his activities was certainly extraordinary. Activity was to him life. The great principle of activity was woven into his philosophical conception of the universe. For he raised himself to contemplate the whole range and scope of man's existence, and pierced by his insight to the central core of reality. Thus he came to fashion the *Weltanschauung* which was his own (see the present writer's 'Goethe as Philosopher,' in *Literary Essays*). Sane and discerning as a literary critic, pre-eminent in genius and gifts as romancer, dramatist, and lyrical poet, Goethe yet did not escape originality in science, and in the criticism of Art. Emerson quaintly said of him that 'the old Eternal Genius who built the world has confided himself more to this man than to any other' (*Works*, vol. i., London, 1899, 'Goethe, or The Writer'). It seems to be just in the totality of his achievement that Goethe's power and fascination lie; his career embodied a deeper synthesis of life—more of his own ideal of life in the Whole, the Good, and the Beautiful—than men had before seen; and all this, in spite of those limitations, shortcomings, mistakes, futilities, and pessimisms, which are, even in his case, not at all to be denied. Striking as is the influence of Goethe on the whole German nation, he exerts an influence hardly less strong on the cultivated classes of Britain and America. Still, his aims were too intellectualized; and his striving was really too restless. He thinks restless activity proves the man—*nur rastlos bethätigt sich der Mann*. One might almost apply to him what Marmontel said of Voltaire, that repose was unknown to him. Not even the calming power of Spinozism greatly helped him here. His will was not sufficiently invigorated by moral affections. He also lacked spiritualized unity of conception. But, in the sphere of intellect, he towers sublime, with amazing vigour and persistency in his intellectual performances. His ideal is *reine Menschlichkeit*, or humanity purified of every hampering element. In his latest years, at any rate, he cherished a belief in immortality; and it seems in some ways rather a fine thing that he declared the weightiest ground for that belief to be the fact that we cannot do without it.

LITERATURE.—The following selected list may be consulted: J. Lindsay, *Literary Essays*, Edinb. 1912, also *Essays, Literary and Philosophical*, do. 1896; E. Dowden, *New Studies in Literature*, Lond. 1895; J. R. Seeley, *Goethe, reviewed after Sixty Years*, do. 1894; J. Gostwick, *German Culture and Christianity, 1770-1880*, do. 1882; A. H. Japp, *German Life*

and Literature, do. 1880; H. Düntzer, *Life of Goethe*, Eng. tr., New York, 1884; H. H. Boyesen, *Goethe and Schiller*, do. 1879; R. H. Hutton, *Essays, Theological and Literary*, Lond. 1877; K. Fischer, *Goethe's Faust*, Stuttgart, 1893; J. Minor, *Goethe's Faust*, do. 1901.

JAMES LINDSAY.

GOKARN (Skr. *gokarna*, 'cow's ear').—A famous place of pilgrimage on the W. coast of India, in the N. Kanara District of the Bombay Presidency; lat. 14° 32' N., long. 74° 19' E. The name is based on a legend that Brahmā produced four sages to carry on the work of creation, which they refused to undertake. He then formed Siva from his forehead. Siva hesitated to create the universe until he could devise measures to render it imperishable. So he dived into the ocean and remained for many ages in meditation. Brahmā, weary of the delay, moulded the earth and filled it with life. When Siva heard of this creation, he was wroth, and, rising through the water, struck the land. He attempted to force his way through it with his trident, when the earth-goddess, taking the form of a cow, begged the angry god, instead of destroying her, to rise to the surface through her ear. Siva accordingly passed through her ear, and rose on the Gokarn beach, where a cave, known as the *Rudrayoni*, or 'Rudra's passage,' marks the spot. A story of the same type tells how the hero Paraśurāma, 'Rāma with the axe,' by severe penances and propitiation of Varuṇa the sea-god and Bhūmī Devī the earth-goddess, was allowed to claim as his own as much land as could be covered by his axe when flung from Gokarn, which was then the Land's End, into the southern ocean. Thus was created the land of Kerala, reaching from Gokarn to Cape Comorin, which now stands at the S. of the Peninsula. These legends seem to embody a tradition of land elevation in pre-historic times, which is confirmed by modern geological researches (*Manual of Travancore*, 1906, i. 212 ff.).
